AMERICA'S INTEREST IN INDIA

By DR J T SUNDERLAND

PART I

THE claim is not infrequently made that India's affairs are solely "domestic concerns of Great Britain" therefore they should be left to Britain alone and any suggestions concerning them or criticism of the manner in which they are managed is "meddling" is an impertinence and a wrong. In other words with regard to everything that pertains to India Britain has a right to say to the world "Hands off! It is none of your business."

Is this claim valid? After Poland had been seized by Russia Germany and Austria and divided up among them was then Poland's right to liberty a mere domestic question of her captors? And had other nations no right to object? If so why at the close of the Great War did the Allies set her free and restore her to her old place among the nations?

If to-day China were grabbed by Great Britain or Japan or France would the question whether that great country ought to be held in subjection by a foreign power be merely a domestic affair of the nation that had done the grabbing? If so why did our own and other nations object to Japan's keeping Shantung? On its very face is not the idea either the extremest folly or sheer insanity that the political freedom or slavery of a great nation like India of 320 millions of people—one fifth of the population of the entire world—can in any true sense whatever be called a domestic affair of a little nation of 15 millions—one-eighth of its numbers—wholly unrelated to it, and located at a distance of one third the circumference of the globe? The plain truth is there is no

great question now before the world which has less right to be considered a domestic matter or which more justly demands to be recognized as a world concern than that of the freedom or the enslavement of India. And for three reasons.

1 Great Britain demands to have the largest navy in the world and to control the seas. Why? Primarily in order that she may be able to keep India. No one can deny that the possession of such a navy and of such sea control is a world concern of the first magnitude.

2 Nearly all the wars of Great Britain for a hundred years and more in all parts of the world (and she has fought far more than any other nation) have been caused directly or indirectly by her possession of India. These wars have all been matters of world concern.

3 The greatest danger now threatening the future of mankind is a conflict between Asia and Europe—the yellow and brown races with the white. What makes this danger imminent is Europe's treatment of China, Persia, Turkey, Syria, Arabia, Egypt and above all Britain's possession of India. If here we have not a matter of world concern then nothing can be such.

To say that England's right to control India is a domestic question which no other nation has a right to deny and with which none may interfere is virtually to declare any nation has a right to rule any other nation if it has the force which is to give up the whole principle that nations have a right to freedom and self-determination and that just government rests on the consent of the governed.

If and when any of us in America protest against Britain's tyranny in India, the

reply is sometimes made by Englishmen and not without reason. Physician heal thyself. Men living in glass houses should not throw stones. Sometimes the reply takes the form of a question. Would you Americans like it if we Englishmen protested against your negro lynchings and your holding of the Philippines against the will of their people? I think the answer we ought to make is. Whether we like your question or not it is just and entirely proper on your part and even if for the time being it makes us mad as it will be likely to in the end it will do us good. If such questions were asked Americans oftener than they are they would set us wondering whether it would not be wise for us to substitute for our glass houses other houses less fragile. The fact is observations by nations of other nations—observations of their superiorities and their defects, outspoken recognition on the part of nations of the excellencies of other nations and also criticisms of their short comings and wrong deed if made in the right spirit if made not cynically or bitterly or to set one's self up above others but courteously constructively and with the purpose of helping to bring about better conditions for mankind—these are among the most valuable things in the world.

The truth is the world is one in all its deeper and real interests. Every nation is related to every other and all are related to the whole. No nation can do another wrong without all suffering. None can be injured without all the rest to a greater or less extent being injured. None can prosper without the rest being benefited. In the very nature of things political freedom—freedom of nations and peoples—is a matter of world concern. Every nation held in bondage just so far limits the world's freedom and thus makes the world a less desirable place for all the other nations to live in. On the other hand every nation that is free adds just so much to the general freedom of the world and thus makes world conditions better for all other nations. Therefore when any civilized people which is held in subjection by another enters upon a struggle to gain its freedom every other civilized people has a just and necessary interest in the struggle and ought for its own sake and for the sake of the cause of freedom in the world to extend to the struggling people its sympathy and moral support.

We cannot assert too emphatically the broad truth important to all humanity that freedom for nations and peoples is not and in its very nature cannot be a mere domestic question of the nation holding the struggling people in bondage. It is a matter which the whole world should and must trust itself in if freedom is to make progress among mankind. So long as there is one important nation or people in the world held in bondage by another the peace of the world is imperilled. That oppressed and wronged nation or people is a volcano which at any moment may burst into an eruption of revolution and war and the war may spread. No one knows how far.

Says Bishop Charles H. Brent

Moral questions have no boundaries. The world of to-day is still revealing itself to be a world of identical moral interests. If we exploit abroad the downfall of the exploited will eventually become our own downfall.

(Aodh) is right when he says that

For a present condition of bondage and helplessness hurts not only India not only England but the whole world.

India held in subjection by Great Britain works much injustice to the United States of America. It ought not to be overlooked that India is a great and important nation with which the United States has a right to have and would be much advantaged by having free and unobstructed commercial industrial cultural and other intercourse. This we could have if India were free but we can not have it with her controlled by any foreign power. For England to hold her in subjection carry on her government, and manage her affairs with British interests supremely in view and to prevent her from having commercial and other relations with us and other nations except under conditions which are fixed by England and which give English men advantages over all others is unjust. It is unjust to us and to every other nation in the world. I repeat, India is a vast land—almost a continent—rich in resources of nearly every kind—agricultural products forests fisheries minerals. In the nature of things all the world has an interest in these. Why should they be controlled by a single power in the interest of a single power and that power not India? India is a great market why should that market be controlled by a single nation instead of being open to all nations on an equality? India has a great foreign commerce why should that commerce

be managed and shaped to the disadvantage not only of India but of all other nations except Great Britain, and to the primary advantage of Britain alone?

What would Americans say if we were obliged to transact all our business with Japan or China or Russia or Germany or France under conditions fixed by Great Britain and shaped for the benefit of Great Britain? Would we endure such injustice? Yet the wrong done us would be no worse than that to which we are subjected now in relation to the great and important nation of India. Britain has no more right to control our business with India and herself monopolize the trade and commerce of that vast country, than she has to control our business with Japan or France, or monopolize the commerce of those nations. Thus Britain's robbing India of her freedom and nationhood and holding her in subjection to British control is not only an immeasurable wrong to India herself, but it is a great injustice to this country and to every other nation in the world, an injustice to which neither the United States nor any other nation should submit.

The United States Government called an International Conference in Washington to consider reduction of armaments and also certain other important matters regarding the Pacific Ocean and the Orient. It was essential that India the second largest nation in the Orient should be represented. Was she represented? No. Our Government was mocked by having sent to us, by India's foreign masters so called representatives of India who did not represent India at all, who were not chosen by India. True, they were Indian by birth, but they were selected under the authority of Great Britain to represent British interests and not the interests of India. If this was a wrong to India it was also a wrong to the United States and to all the nations represented in that Conference.

The possession and forcible rule of India by Great Britain, has probably been the most powerful single influence in the modern world against democracy against just government based on the will of the peoples governed, and in support of autocracy, imperialism, government by force. It has been so because it is by far the most imposing and conspicuous example in modern times of a great nation conquered, ruled, and exploited by and for the benefit of another nation. We may

almost say that it is the *mother example* of the kind in the modern world. India is so great, both in area and in population, its place in the history of mankind has been so prominent, its wealth and its resources in the past have been so vast, and the wealth that it has yielded to the nation which has ruled and despoiled it has been so immense, that its domination for nearly two centuries by a foreign power takes its place not only as an event of first magnitude in modern history, but as the greatest political crime of modern times,—because it affects more people is more wide reaching in its influence, and has been more disastrous to the progress of political liberty and justice among modern peoples, than any other political crime of the modern world.

I have called Britain's conquest and domination of India a *mother example* of its kind. And a terrible *brood* it has brought forth. For it has set a precedent so conspicuous that all the world has had its attention drawn to it, and so dazzling so attractive and so appealing to the lower passions and ambitions of nations that it has been irresistible, it has caught and spread like wild fire until all the leading nations of Europe have felt its influence, and have had aroused in them ambitions to follow to conquer for themselves dependencies, in Asia, in Africa, in the islands of the sea (and in America except for the Monroe Doctrine) and thus gain for themselves wealth and prestige and power, as Britain has done in India. Even our own nation has felt it. Except for Britain's Indian career the United States would never have gone away to the coast of distant Asia and seized the Philippines. Everybody, who remembers those days knows that our militarists and imperialists held up what Great Britain had done in India as their strongest argument and justification. And even more than that. It is well known that some of our most prominent leaders not only military men but political leaders at that time contemplated and actually advocated in high government circles the procuring for ourselves of a 'good fat slice of China' urging as our justification for so doing the example of the European nations in Asia and especially that of Britain in India. And there seem to be reasons of considerable strength for believing that had it not been for the honorable and inflexible opposition of John Hay, at that time our secretary of State, we actually

would have proceeded to capture and take permanent possession of a section of China.

No other event in modern history has kindled so much envy and jealousy in other nations as Great Britain's creation for itself of a vast empire in Asia, and therefore no other has had so powerful and wide spread an influence in causing other nations to say

'We too! Why should we not do what England has done? If she may capture and rule and despoil great India, why may we not conquer and exploit any land in Asia or elsewhere that is not strong enough to resist us? And if Britain claims that her motive is India's benefit of course we will proclaim just as loudly that our motive is the same.'

This subject need not be pursued further. It is enough simply to emphasize our contention that England's domination of India has been in the past, and continues to be still the greatest of all destroyers of the spirit of democracy in the world. If in the future the spirit of freedom is to make any headway among the nations, by far the most important single thing to be done is the creation of a world wide public opinion which will condemn and drive out of existence the shocking spectacle of the oldest and second largest civilized nation in the world held in subjection by a foreign sword.

Many Americans are troubled by what seems to them the marked growth in this country within recent years of an imperialistic spirit. Such a spirit is manifesting itself as appears to them in many insidious unexpected largely unnoticed but real and threatening ways. Some of these ways are—in the increase in the number of persons among us who speak lightly of democracy and wonder if a more aristocratic and autocratic form of government is not better who took with more or less favour upon Mussolini and the Fascist movement in Italy and the rise of dictators in several other nations who scout the ideas of the human equality found in our Declaration of Independence who boast of ancestry and aristocratic or distinguished blood wherever they can find the slightest peg to hang such boasting on whose highest ambition is to get admission to British aristocratic society or to be invited to a function at Buckingham Palace or above all to marry a daughter to an English lord or other foreign titled person who regard the world as having been made for the white race and especially for Nordics and look down on all the other races

and who would like to have Britain and America unite against the so called "yellow peril" and brown peril that is unite to dominate Asia and as far as possible the rest of the world. I say this imperialistic spirit, this anti democratic spirit, this aristocratic and arrogant spirit (which nearly everywhere allies itself with militarism and largely with capitalism) seems to many thoughtful persons to have been insidiously but steadily growing in this country for some years past.

From what source does it come? It is believed that it comes largely, indeed mainly from England. Not of course from the nobler truer England the England which in the days of our American revolutionary struggle pleaded for justice and freedom for America and which to day would give justice and self rule to India but from that England which in 1776 sided with George III and Lord North against the rights of the American Colonies and which to-day is determined to retain India in its grip as then it was determined to retain America.

Every student of English history knows that this undemocratic spirit this aristocratic autocratic imperialistic nabob spirit, is not indigenous to England. England got it from outside and within the last two centuries. From what source? It is more and more believed by those who look into the matter, that the true answer is, she got it mainly from her conquest and rule of India. The evil spirit of arrogance domination pride of class indifference to the rights of others imperialism which the men who have gone to India and spent half their lives in autocratic rule there have instinctively imbibed there has been brought back by them to England on their return from their plan of autocratic rule abroad to poison the ideals and the political and social life of England.

Nor could this evil spirit—this poison—be confined to England. It was inevitable that it should spread especially that it should come across the sea to us because of our close relations with England. It has done so and it will continue to do so to poison our ideals and our life as long as England continues to dominate India by force and therefore as long as that unjust domination continues to poison England's own ideals and life.

This is one of the reasons why India is America's concern and why American public opinion ought strongly to demand India's freedom. We should demand it in self

defence and so should every nation in the world

PART II

Those who claim that British rule in India and India's struggle to escape from that rule are solely the domestic concern of Great Britain with which no other nation has a right to meddle should do a little reading of history. As a fact have nations struggling to free themselves from the oppression of a foreign yoke never received sympathy or encouragement from other nations? Have we ourselves never extended sympathy or aid to such struggling nations? Has Great Britain herself never done the same? The fact is the true spirit of both America and England has always been that of wide interest in liberty and sympathy with nations and peoples in any and every part of the world who were struggling to shake off alien despotisms and gain for themselves freedom and nationhood. England's record in this respect has been very noble. Let us glance at it.

We in America can never forget the sympathy extended to us by several of England's greatest statesmen and also by many humbler people in our Revolutionary War. Nor can we cease to remember that in our Civil War too working people of England to a remarkable degree stood by our national government even against their own interests because they believed our national cause to be the cause of human freedom.

When Greece early last century went to war to throw off the yoke of Turkey the English people took a very deep interest in the struggle. They did not for a moment think of it as a mere domestic affair of Turkey in which they had no right to interest themselves. Lord Byron's dramatic espousal of the Greek cause attracted the attention and was the admiration of liberty lovers in all lands.

With Italy's struggle to free herself from the yoke of Austria England warmly sympathized and showed her sympathy by the strong public utterances of Gladstone and other public men and also by giving shelter and aid to Italian refugees Mazzini, Garibaldi and many others—who were driven into exile on account of their efforts to obtain their country's freedom. The enthusiasm with which Garibaldi was welcomed to England after his patriot army had won its entry into Rome was not less than that which greeted Rossini in America after his heroic

struggle for liberty in Hungary. A personal witness thus describes the great scene in London:

It was one of the number who had the honor and pleasure of giving welcome to the brave Garibaldi when he came to London after his glorious victory in freeing his country. He was met at the railway station by tens of thousands of young and old rich and poor and escorted through the streets to the Duke of Sutherland's mansion. It was such a spectacle as seldom if ever has been seen in London before or since. I can not describe it. When we arrived in front of the horseguards those nearest Garibaldi's carriage unhitched the horses and the carriage with the help was dragged the rest of the way by thousands who delighted to do him honor. It was the enthusiasm of a liberty loving people for the work done by that one man not only for Italy but for the whole world—a victory won for freedom over tyranny.

These facts and incidents show the noble and true England the England that did not regard the struggle of Greece and Italy as mere domestic concerns of Turkey and Austria. If this England had always been in power India would never have been conquered and enslaved. If this England were in power to day India would soon be set free.

Turn now to America. The United States assisted as she was by other nations in obtaining her own freedom has manifested throughout a large part of her history an earnest sympathy with nations wherever located who were struggling to throw off a tyrannical yoke and to establish for themselves governments based on principles of justice and liberty. Said Washington in a notable public utterance delivered the same year as his Farewell Address:

My sympathetic feelings and my best wishes are irresistibly excited whenever in any country I see an oppressed nation unfurl the banner of freedom.

When the South American nations were engaged in their struggle to throw off the yoke of Spain and gain their independence the sympathy for them in the United States was ardent and almost universal. Nobody thought of their struggle as a mere domestic affair of Spain in which we should not interest ourselves. Ours was the first nation to recognize the new republics. This did not occur until 1822 but as early as 1816 Henry Clay urged that we should carry our national sympathy so far as forcibly to intervene in their favor.

President Monroe in his annual message

to Congress in 1822 expressed in unmistakable language his own sympathy and that of the American people with Greece in her struggle for freedom. One memorable evidence of America's sympathy is seen in the fact that the eminent Boston philanthropist and educator Dr. Samuel G. Howe, later the husband of the equally eminent Julia Ward Howe, went to Greece (as did Lord Byron in England) and rendered distinguished service to the Greek people in their war for liberty.

With the revolutionary or semi-revolutionary movement in Germany in 1818 to establish liberal government in that country the United States manifested profound sympathy from the beginning. Our minister to Berlin, Mr. Donelson, was instructed to keep in close touch with the movement and give it any encouragement he could without diplomatic discourtesy or offence to the Berlin government. He was informed from Washington that an important part of his mission was—

to manifest a proper degree of sympathy (on the part of America) for the efforts of the German people to ameliorate their condition by the adoption of a form of government which should secure their liberties and promote their happiness.

He was instructed that it was the

cordial desire of the United States to be if possible the first to hail the birth of any new government adopted by any of the German States having for its aim the attainment of the priceless blessing of freedom.

The profound sympathy of this country with the struggle of Hungary for freedom under the leadership of Kossuth in 1849 is well known. President Zachary Taylor showed his own interest and that of the American people in the struggle by appointing a special agent with authority to recognize the independence of the new State promptly in the event of her ability to sustain it. In his annual message (of 1849) President Taylor declared that he had thought it his duty

in accordance with the general sentiment of the American people who deeply sympathized with the Magyar (Hungarian) patriots to stand prepared upon the contingency of the establishment by her of a permanent government to be the first to welcome independent Hungary into the family of nations.

The feelings of the American Nation are strongly enlisted, he declared, by the sufferings of a brave people who have made a gallant though unsuccessful effort to be free. On the failure of the Hungarian revolution Kossuth and his companions took refuge in Turkey. The American Congress

passed a joint resolution (which was approved by the President March 3, 1851) declaring that the people of the United States sincerely sympathized with the Hungarian exiles, Kossuth and his associates, and concluding as follows—

Resolved by the Senate and House of Representatives of the United States of America, in Congress assembled that the President of the United States be and hereby is requested to authorize the employment of some of the public vessels to convey to the said United States the said Louis Kossuth and his associates in captivity.

Accordingly an American frigate was sent to bring the exiles from Turkey. Kossuth arrived in this country in October, and his stay here was an uninterrupted triumph, exceeded only by the welcome given to Lafayette twenty-five years before. He was greeted with enthusiasm at the National Capitol by both Houses of Congress. President Fillmore received him most cordially and invited him to dinner, and Daniel Webster made the principal speech at the great Washington banquet. Said Webster:

We acclaim the pleasure with which we welcome our honoured guest to the shores of this far land, this asylum of oppressed humanity. Let it be borne on the winds of heaven that the sympathies of the Government of the United States and of all the people of the United States have been attracted toward a nation struggling for national independence, and toward those of her sons who have most distinguished themselves in the struggle. Let it go out, let it open the eyes of the blind, let it be everywhere proclaimed what we of this great republic think of the principles of human liberty.

It should not be overlooked that the United States Government was the first to recognize the French Republic in 1818 and also the present French Republic inaugurated in 1870.

One more marked illustration of our hatred of tyranny and our sympathy with liberty abroad should be noticed. I refer to the historic fact that in 1867 our President and Congress compelled Napoleon III to abandon his effort to set up in Mexico an imperial government contrary to the will of the people of that country. In this case we did not stop with expressions of sympathy with Mexican freedom, but we went so far as to offer military aid in its defence.

Such are some of the notable occasions and ways in which throughout a large part of our national history the people of this country through our most eminent and honored leaders have expressed our sympathy with nations and peoples struggling for

freedom I have set forth the facts in some detail so that the true tradition of America in the matter may clearly appear.

Says Dr E B Greene Professor of History in the University of Illinois

A study of American history shows that the well established tradition of the Republic has been that of sympathy with popular government abroad, that this sympathy has repeatedly been declared in public utterances of our official representatives and that we have never felt ourselves bound to suppress in the formal documents of our Government our deep interest in free institutions and our sense of the essential unity of the cause of liberalism and self government throughout the world.

Have these facts of the past no bearing on struggle for freedom going on in the world now? Have they no bearing upon the greatest of all such struggles, that of the people of India to free themselves from a foreign yoke? If Washington and Monroe and Clay and Webster were alive to-day would great India in her brave and just struggle for freedom and nationhood lack friends, sympathizers and defenders in America? Who can believe it? Our fathers did not regard the struggle of any oppressed people anywhere to shake off their yoke and obtain freedom as the mere domestic affair of the oppressing nation. They regarded it as a matter of world concern which ought to enlist the interest and sympathy of every liberty loving nation and person in the world. In an address delivered before the

India Society of New York in February 1906 Mr Oswald Garrison Villard Editor of *The Nation* said

I believe that what is going on in India is of such enormous import to America and to the whole world that no American has a right to overlook it. I think the world needs nothing so much to-day as to see the Indian people set themselves with all their minds and with all their strength to the task of self government however great the odds with which they must contend. I believe that the heartfelt sympathy of Americans yes even those Americans who love England and as I do should go forth to the people of India in all their aspirations.

In such words as these we hear the voice of Washington of Jefferson of Franklin of the Adamses of Patrick Henry of Webster of Garrison of Channing of Sumner of Lincoln of all the men who have done most to make this country illustrious and honored by the world as a leader in the cause of human freedom.

Nothing can be more clear than that the true tradition and spirit of America as manifested in all our noblest history is that expressed in the ringing lines of our honored poet James Russell Lowell —

Men whose boast it is that ye
Come of fathers brave and free
If there be on earth a slave
Are ye truly free and brave

Is't the Freedom but to break
Fetters for our own dear sake
And with leathern hearts forget
That we owe mankind a debt

No true freedom is to share
All the chains our brothers wear
And with heart and hand to be
Earnest to make others free

THE DOCTOR'S VERDICT

A Story of Commodore Perry's Expedition to Japan

By KAWAKUCHI

(TRANSLATED BY TAKAO IWANASHI AND JOHN L. BRALSFORD)

1

A calm beautiful day. On Izu Peninsula lingering tints of cherry blossom tell that the spring is hardly over while on the slopes gay patches of yellow rape flower are ready to welcome the summer. The

waters of Sagami Bay have taken on a more sombre blue beneath a mist that stretches as far as the eye can see. A stream of white volcanic smoke issues from the Isle of Oshima on the horizon.

Near the seashore two samurai with faces

set and drawn. Their expression is almost that of a mad dog. Each has the ancient head dress of his class the big *chomage*. One is short and has a sword scabbard across one cheek. His nostrils are distended and the corners of his eyes wrinkled up with an expression of anger and tenseness. On his hollow cheeks a rough growth of whiskers. His whole appearance betokens weariness. The other a dark skinned man with bushy eyebrows looks as weary as his companion.

The short man Torajiro Yoshida is wearing the typical *samurai* garb. His friend Jujuro Kaneko has his figure concealed beneath a sort of overcoat.

The American ships had come and for more than a week the two had been loitering about in the hope of getting aboard. First they induced boatmen to row them out to the ships anchorage in Kanagawa Bay at night but just as they were about to steal aboard the boatmen betrayed them. Another time they smuggled themselves aboard one of the boats that took coal and water to the strangers but there were *yosai* (old style policemen) in charge who prevented them from boarding the American vessels.

Then they heard that a party of the Americans was to land at the village of Yokohama and they hastened there from their inn at Hodogaya intending to hand them a letter addressed to the officers in command pleading for permission to come aboard. But when they reached Yokohama they found nothing but excited gossiping crowds. The Americans had already returned to their ships.

One day they stole a boat intending to row out to the anchorage at night—Kaneko being handy with an oar. But when they returned after dark the boat had gone. They stood in despair while the noise of the waves and the yelping of stray dogs seemed to mock them.

I'm just beginning to learn that stealing is not as easy as it looks, said little Yoshida with a sigh but with no thought of yielding. Then the rain began to pour down and they were drenched when they got back to their inn at midnight.

They spent two days at the dirty country inn gnashing their teeth in helpless chagrin. The next night they understood would be their last chance. The day was gloriously fine the beauty of spring seemed to have spread to the ocean. As they waited for night to come suddenly there was a move-

ment on the ships' decks. The black monsters weighed anchor and made off in the direction of Yedo (Tokio) greatly alarming the Japanese officers who had been commissioned to watch their movements. However after approaching the Yedo coast they turned towards the open sea. The rumour spread through the village that one of them was returning direct to America and the rest making for Shimoda. In the bitterness of their disappointment Yoshida and Kaneko cried aloud. However having ascertained where the ships had gone they set off on foot from Hodogaya to follow them, passing through Kamakura Odawara and Atami. On the 17th of the month they sat out from Atami for Ito and as they set down to take their lunch in an orange grove near the beach about three miles from Ito—where the fragrant orange blossoms were already bursting—they heard voices.

'Look look! The *senjoku* (thousand ton) ships. An bigger than *senjoku*. See there are two.'

Yoshida looked towards the sea and caught a glimpse of the black monsters far out furiously plunging into ocean and belching black smoke—the ships they could not forget even in their dreams with sails set and their big paddle wheels turning carrying them over the ocean like huge whales.

'Look how splendid!' said Yoshida for getting his patriotic resentment for the moment in the enthusiasm of admiration.

'They're wonderful people these Westerners,' answered Kaneko, adding with patriotic fervour. 'To hell with them chasing over our sacred seas as if they owned them. He stamped his foot as if bemoaning that he had no wings to fly.'

Yoshida took a mouthful of rice from the bowl he had brought from Atami and said:

'Never mind mate. Just wait a few years. I'm going to America. I'm going to learn their art of warfare. They will teach me—and then I'll drive them out with their own weapons—see? Ha, ha ha!'

II

They entered the town of Ito the following morning. The two steamers they had seen were at anchor in the harbour. Having taken a room in an inn they went to the officials of the port and asked questions in a casual manner. They learned that these two ships had come in advance of the main

squadron, bringing no interpreter able to speak either Japanese, Chinese or Dutch, so that there was much difficulty in arranging even for their supplies of coal and water. Our adventurers decided that it was hopeless to try to approach the Americans without interpreters. There was nothing to do but wait.

The next morning Yoshida noticed that the rash which had appeared on his fingers and wrists was coming to a head. He had first noticed it when they were leaving Kamakura. Each day those tiny pimples itched intolerably, as if innumerable little insects were

crawling over his skin. He scratched and and scratched, but the scratching brought him nothing but more itching. As the days passed, not only did the rash spread, but the itchiness became more intense, so that he could not sleep at night. The disease spread to his abdomen and loins and, with less virulence down his thigh. He knew then that it was scabies. He thought he had caught it from a person at the Hodogaya inn, who

had scratched the hands frequently. He tried not to worry about it, but the attempt was in vain. He could not but fume to think that so small a thing as this itch might stand in the way of the accomplishment of his great ambition. He would try to cure it while waiting for his chance to board the fleet. He was encouraged to hear that the hot springs at the village of Rentanj, about three miles from Shimoda, had a great reputation for curing skin diseases. He went there and took the waters.

The next day the Powhatan, with Commodore Perry aboard entered the harbour, followed by three other vessels. From the 21st to the 26th of the month Yoshida and Kaneko schemed day and night to get aboard. Once they followed some of the foreigners, who were roving in the suburbs of Shimoda

and handed them the letter previously prepared. Each night they would leave their inn, pretending that they were going to stay at Shimoda and would go down to the shore to seek some means of reaching the American ships. When the night was far advanced, they would settle down to rest in the open.

On the night of the 25th they stole a boat from a stream that runs through Shimoda, but the sea was stormy and they found it impossible to reach the offing. They were well nigh exhausted when they got back to shore at Kakizaki. Taking shelter in the Benten shrine there, they were soon asleep.

In the meantime Yoshida's scabies, so far from disappearing, was ripening into great patches of white-headed pimples. It seemed such a trifling thing, compared with their great plans, that he tried to make nothing of it—to forget the torment—but to forget was precisely what he could not do.

On the evening of the 27th when they came down to the beach at Hakozaki they found that the Mississippi had

changed her anchorage and was less than two *cho* off shore (A *cho* is about 120 yards). And the flagship, the Powhatan, was only about half a *cho* from the Mississippi. At this good luck Yoshida and Kaneko felt that they were walking on air. And there on the beach below the shrine were two boats, which seemed to be asking to be stolen. They hurried back to the inn at Rentanj, took supper and made their preparations, pretending, as usual that they were going to spend the night at Shimoda.

Yoshida packed his few clothes, two Dutch grammar books and a small selection of Chinese poems into two packages. He did not attempt to take anything more.

When they returned to the beach after nightfall, the sea was surprisingly calm, and the dome of heaven was lit with a myriad

Yoshida and Kaneko—Drawn by Kei

twinkling stars. They stood the great black forms of the six ships, like islands, each with a blue light swinging at the masthead. Their hearts throbbed for joy. It was disappointing to find that they could not move the boats, which had been left high and dry with the ebbing of the tide, but they settled down to rest in the shrine, awaiting the rise of the tide. Waking about midnight, they could see by the starlight that the water was up to the foot of the shrine. It was full tide. They ran eagerly to the boats, with never a thought but to seize the chance of reaching the stranger ships. But their troubles were not over. The long sculling sweeps with which the boats were worked were there, but the little pivots, without which the oars were useless, had been broken. They tried both boats. The one was as bad as the other. By way of makeshift they tied the oars to the gunwale with their cotton *obi* (sashes). These soon wore through under the strain, and the strong outer *obi*, made of *kojura* silk, had to be used.

The sea had looked very calm from the beach, but in the offing it was quite rough and they were in no little danger. Moreover, as Yoshida had no experience of rowing, he put forth tremendous exertions to very little purpose, rather spoiling the work that his mate was doing. The boat turned this way and that, now headed straight for the Mississippi and a moment later showing the lights of Shimoda or the trees of Kakizaki above its bow. Their arms ached at first and at length became almost numb. But at last they were alongside the Mississippi. "Hallo, Americans," shouted Kaneko, placing one foot aboard the ship.

They heard strange voices calling shrilly to one another and saw outlines of human figures appear and disappear above them. Then a glass lamp was lowered over the side. Looking up they could see several foreigners' faces.

Yoshida took out his *yatate* (portable ink pot and brush-pen) and wrote in Chinese characters.

"We wish to go to America. If thou hast kindness I pray thee introduce us to thy Commodore."

Holding the paper, he climbed up the accommodation ladder.

Unfortunately, there was no interpreter aboard. One of the foreigners took the paper and wrote something in a foreign

language on it, then pointed to the Powhatan making signs to Yoshida to go there.

Although he understood what was meant, Yoshida felt it was impossible for them to row out to the flagship, well-nigh exhausted as they were by the effort of reaching the Mississippi. He pointed to one of the ship's boats and by signs asked the sailors to lower it and take them to the other ship, but the request was not granted.

There was nothing for it but to face the waves again. The further they went out the rougher the sea became. Tired, and with hands badly blistered, they could not get the boat to go as they wished. When, after a long struggle they reached the Powhatan and were struggling to get to the lee side, they were driven in between the rudder and the hull, and the waves banged their boat against the side of the ship with a thump that was sure to be heard by the men on watch. Quickly came the black figure of a foreigner clambering down the rudder. He held a boat-hook with which he tried to push their boat off, shouting and railing at them as he did so.

Quick as thought Yoshida leaped on to the rudder, and Kaneko tried to hand him a painter. But the foreigner interfered. So Kaneko also jumped on to the rudder, dropping the line in the confusion of the moment.

The boat drifted off, with their swords and other belongings. But they had not a moment to think of their loss. They were aboard the flagship.

The sailor, thinking they wanted to see the novelties aboard, showed them the compass and other things. They shook their heads and made signs that they wanted writing materials—theirs had gone with their boat.

Soon came Williams, the interpreter. He asked them to follow him and led them to a cabin, where a big lamp was burning. Bright as day it seemed to them, as they contrasted the radiance of the lamp with the glimmer of a Japanese *andon* (black paper lantern).

Two men were there besides the interpreter—Davis, the Lieutenant Commander of the Powhatan, and Watson, the ship's doctor. Dr. Watson was able to speak and read Dutch and he had some knowledge of the life of Oriental peoples.

They gave Yoshida a quill pen. He had never used one before but he wrote in Chinese that it was their earnest wish to go

to America. Williams looked at what he had written and asked in fluent Japanese what language was that.

"It's Japanese," said Yoshida.

"Looks more like Chinese to me," said Williams laughing.

His familiarity with Japanese delighted them. Indeed they were pleased beyond words with their good luck—like a baby that has found its mother's breast after long seeking.

Their scheme had become a passion. Here was their chance to fulfil it.

III

A conference was called in the Commodore's room to discuss whether the request of the two Japanese should be granted. Commodore Perry and his staff officers, the Commander of the Powhatan and Lieutenant Davis, Dr. Watson and Mr. Williams, the interpreter, were present. It was already after 11 o'clock, but so unusual an affair had created much excitement. Davis was more deeply stirred than any, having caught something of the enthusiasm of his visitors, which had impressed him as soon as he saw them.

The conference seemed inclined to go against them.

"Is that your idea, then—that we ought to turn them down?" asked Davis, in an argumentative tone.

"Well, I guess it's no use running the risk of complicating things between the two Governments over a little affair like this," said the Commander, who had taken this attitude from the beginning.

Davis rose from his chair saying, "No, No! Excuse me Commodore, but I can't see it that way. Even if it should cause us a little trouble, it's the fair and decent thing to do. I couldn't help admiring them when we got that letter of theirs the other day—clever, too! I'm for them. I like their enthusiasm. I never knew before that there were fellows like these among the Orientals. And their letter was so reasonable. Don't you think so? Say, chief, wouldn't it be just fine to take these fellows back to God's own country and show them a bit of civilisation! Eh? You'll do it, Commodore, won't you?"

Davis rapped on the table as he spoke and his eyes shone with the enthusiasm of youth. He was little more than thirty years old.

"Take a reef in boy, you're getting excited. We've got to be a bit careful you

know. Better look at the thing from both sides, don't you think?" So spoke the bearded Commander, as if soothing a youngster. "We can't tell what there may be behind this little affair. These Japanese have made a pretty appeal to our sympathy, but what's their little game, I'd like to know. They may be straight or they may be out to get the best of us some way. Even in the little time we've been among these people, we've found out that they're as keen as mustard—real cunning. Ever since we got their letter, I've been wondering whether these two were not spies. Isn't there every reason to think that the Government would employ men who can write in such an appealing way? It looks a sure thing to me that the Government has sent them here—disguised as poverty-stricken beggars—in the hope of tripping us up. You remember what that big highbrow Hayashi told us at Yokohama—that it's against the law of the country to go abroad. So, you see, if we help these young fellows, we'll be running up against the Japanese law, and I'm inclined to think they've been sent here by the Government just to see if they can catch us. See? If we took them away there'd be a hell of a fuss made about it and they might smash up the treaty and everything."

"Oh, no, Cap'n. You're too suspicious," said Davis. "You haven't seen these two. You couldn't think that way if you did. Gee, how their eyes shine at the thought that they're going to see America! No—you could never believe that they were dirty spies. Their clothes are soaked and their hands covered with blisters—they must have had a dence of a struggle to get here. If they were spies I guess they'd have found an easier way than that. And in getting aboard they lost their swords, and you know what that means to these samurai fellows—almost worse than losing dear life. They're all right. They want to go to America and they were ready to risk anything for it."

Commodore Perry, who had maintained a dignified mien, now began to speak in a grave tone.

"Yes I'd like them to come with us, and my reason for balking at it isn't quite as you think, Davis. It's this way. We go to a dence of a lot of bother to get a treaty signed and our Government and their Government bound by it—and then these two fellows come along and want us to help them to break the law of Japan. We'd like

to do it, sure, but it's not a fair thing. Don't you see? I hope to see the day when any young Japanese can come to America and learn all he wants to. But the time will come all the quicker, I reckon, if we turn down these young fellows in their attempt to sneak out. Anyway, I hope so."

Davis thought for a moment and then returned to the charge.

"Thanks, Commodore. You're just about shut me up. But listen. Just let me put this to you—What's going to become of these fellows? They want to come to our country—they're in dead earnest—not a bit of doubt about that. Well, suppose we turn them down—what does it mean? They'll have their heads backed off, both of them. If we put them ashore, the police will arrest them, and there won't be any mercy shown. Why, it's like driving them up to the executioner ourselves. What's their crime except that they got excited over our coming here, took a fancy to us and wanted to see more of our civilisation? That's all. And after all, were we sent here simply to get a formal treaty signed? Wasn't there some idea of waking up these people to their sleepy little island? And here we've got a couple to wake up—the first of the crowd—and what are we going to do with them? Isn't it the easiest thing in the world, if we make up our mind to it, to take them back to America without letting any of their own people know? We wouldn't hurt anyone's feelings. Say Commodore, isn't that the real American thing to do? Can't we let 'em stay'?"

Davis's eloquence carried his hearers with him. Even the commander of the ship who had been so obdurate, remained silent. A flush of emotion appeared on the face of Commodore, and it was evident that he was inclined to turn in favour of the young Japanese. He lifted his face and looked around those present.

"Well, gentlemen? Williams? Watson what do you say?"

Dr Watson suddenly recalled the skin disease which he had noticed on the wrist and fingers of one of the Japanese as he was writing under the lamp.

"Well Commodore," he said, "It's up to me to speak as a doctor. I noticed that one of the Japanese had scabies on his hands. Scabies is a disease we don't have much to do with, but I don't think it's a safe thing to have aboard the ship. I guess I ought to let you know about that—though I

don't want to be hard on the young fellows."

This took the wind out of Davis's sails. Another change came over the face of the Commodore. Now he had good reason to disregard the compunction and regret which the thought of refusal naturally aroused. After a long silence, he said:

"You see how it is, Davis. I have as much sympathy as you with these two Japanese. But here is something we've got to take into account before our feelings. It's doubtful whether it would be any kindness to let these men stay. Gentlemen, you will all agree with me—we must consider the health of our men first well, Williams, put them ashore, please. Smooth them down as best you can. Davis, order a boat out for them, will you please?"

The order was soon carried out. Dr Watson watched the two Japanese climb down the ladder. That was the end they yielded to their fate, finding that it was in vain to appeal to the Americans, even with tears. The Doctor observed that, once they knew the refusal was final, they accepted their fate in manly fashion, with good grace.

The Doctor retired to his room—but not to sleep that night.

IV

Two days later Dr Watson went ashore in the morning with another officer. It was a fine day. After strolling on the beach, they walked to the rear of the town. Many children followed them, keeping close behind with the grimmest tenacity, despite all efforts to shake them off.

They came to a building that looked like a barrack, with a soldier keeping guard at the gate with a spear-like weapon. People were crowding up to the fence and peering through. They moved off as Watson approached, as if afraid of him. He looked through and saw, about two yards from the fence, something like an animal's cage. He could distinguish something moving about in the gloom, and, as he continued gazing, he made out the figures of two men. Two pale faces appeared at the bar and smiled at him with teeth gleaming. He was horror-stricken. Only slowly did he recognise the faces. But they were unmistakable. There was scarcely room for the two in the cage, and they were crunched face to face. The Doctor felt as though a darkness had come over him. Without thinking, he called out in English:

"By God, what are you doing there?"

Of course they did not understand, but their faces gleamed with joy as they saw they were noticed by the officer. One of them—he of the scabies—struck his hand to his neck at right angles to signify what their fate was to be. At the same time he laughed defiantly. His dauntless attitude, which seemed even more stoic than that of Cato, the Roman patriot, made a deep impression on Watson. He felt a quiver run through his hands, which were gripping the fence. He began to think what he could do to save their lives.

Then the young prisoner who had smiled so dauntlessly, made a sign that he wished to write. Watson searched his pockets and found a pencil, but no paper. However, a Japanese boy brought a thin piece of wood from somewhere. Watson could not hand it to the prisoner, as the distance was too great. But, as he was looking for a way out of the difficulty, the old man in charge of the cage came to his assistance.

The prisoner, after looking curiously at the foreign penoil began to write with a flowing hand. After a quarter of an hour the board was brought back to Watson by the same old man. Every inch of space on it was filled. After nodding a farewell, Watson hurried back to the ship, appealing to Heaven to have mercy on them. He sought out the Chinese interpreter, La Shiu—a Cantonese, who gave a translation of the writing on the board. It stated:

"If a hero fails to achieve his ambition, all his deeds are regarded as the deeds of a robber or political miscreant. Such has been our destiny. We are shut up in a gloomy prison, and the people come around to mock us in our captivity. Even the aged folk of the village smile at us with the smile of contempt. Torture! Loneliness! Scorn! Despair! That is our whole life now.

Freedom to wander all over our country, this little island of the Far East could not satisfy our longing for the great freedom. We had planned to travel around the wide

world. But now where is that long cherished hope? Ah, it is cruel that this plan for which we had worked so long has so suddenly come to nought. And here we are imprisoned in a narrow cage, with no freedom to eat, no freedom to rest, no freedom even to sleep. Escape is impossible. What shall we do then? Weep? That would be too silly. Laugh? No any rake can laugh. What then? Silence? Yes, silence be ours, now and evermore."

Commodore Perry and all the other officers who had been present at the conference heard the interpreter's translation and were deeply moved. "He's a brave man—and a philosopher," the Commodore said, as if to himself with a sigh.

Then came a burst of sobbing. All looked round in surprise. It was Davis. The Commodore came up and patted him on the shoulder.

"Yes, Davis, you were right after all. Go ashore now, quick. See what you can do to save these men—whatever you think best—I'll back it."

Davis was much gratified and went off in high spirits.

Not so the Doctor. His agony of mind increased. He could not rest. Had he done right or not in speaking as he had done—as a doctor? He thought to ease his mental torture by studying the information about scabies in his books. He plodded from his cabin to the ship's library—a sad man.

[So ends the Japanese novelist's story. Every Japanese knows that the two in the cage were saved on that occasion from the executioner's sword, though Yoshida afterwards paid with his life for having his own ideas of patriotism. Neither of the two ever saw America or any other foreign land]*

* The story of Torajiro Yoshida a popular hero of Japan, is known to many from the essay of Robert Louis Stevenson. Here his unsuccessful attempt to get passage to America with Commodore Perry's fleet in violation of the laws of his country is the basis of a sketchy tale by a well known Japanese novelist.

SIND IN THE EIGHTIES

By NAGENDRANATH GUPTA

VI

GERMAN THOROUGHNESS

ON one occasion when I was going to Karachi from Bombay by sea one of my fellow-passengers on board the steamer was a German. He was a Doctor of Science about forty years of age, good-looking and had nice manners. He used to sit by my side at table and also on the deck. He had been sent out by Prince Bismarck to report on Indian agriculture and the Post Office in India. He had letters of introduction from the Secretary of State for India. In Bombay he had stayed with the Governor and at Karachi he would be the guest of the Commissioner in Sind. He could not speak English fluently and sometimes broke off with a smile when he could not find a suitable word. But I had no difficulty in understanding him. He spoke with awe of Prince Bismarck, that giant of a man whose large, bulging eyes appeared to see clean through a man. My German acquaintance had an insatiable curiosity and his inquiries covered a wide field. On arrival at Karachi he went to the Government House, but the next day he called on me with a note-book in his hand and interviewed me in the fashion of a newspaper reporter. He was greatly interested in the Congress movement—he called it “motion”—and took down my answers covering several pages of his note-book. He inquired minutely into the genesis of the national movement in India, its aim and scope, how far it had leavened the feelings of the people and at what rate it was spreading. He put questions about the existing relations between the Government and the people, the social conditions in different parts of India, the employment of Indians in high offices, the relations between Hindus and Mahomedans. He took me methodically through almost every Indian problem and pumped me dry. I do not believe he had any sinister or ulterior motive, or that he was thinking of ‘der Tag’ while he was engaged in extracting from me as much information as possible. Prince Bismarck might have been a man of “blood and iron,” but he was far too wise

and clear-sighted to be obsessed by any ambition of a world empire, or the conquest of India. After the Franco-Prussian War of 1870-71 he was all for consolidating the German Empire and maintaining the peace of Europe and the world. The official whom he had deputed to India had definite instructions to enquire into the methods of Indian agriculture and the working of the postal system in this country, but since he was out for getting information he made it his business to collect as much information as possible on all subjects connected with India. It was merely an example of German thoroughness.

SIR DONALD MACKENZIE WALLACE

After the retirement of Lord Dufferin from the Viceroyalty of India Sir D M Wallace continued as the Private Secretary of the next Viceroy for a few months, but he soon resigned his appointment and on his return to England was appointed Foreign Editor of the London “Times.” His book on Russia was considered a standard work. When leaving India Sir Donald passed through the Persian Gulf and travelled overland through Persia, Turkey and Russia. From Bombay to Karachi he came by a British India boat in which I also happened to be a passenger. Dr John Pollen, who was then stationed in Bombay, came on board the steamer to see Sir Donald off. Dr Pollen was very pleased to meet me and introduced me to Sir Donald. Sir Donald stayed all day on deck and at night he had a hammock hung up on the upper deck and slept in it. He abstained from wines at meals and had a big bottle of Rose’s Lime Juice Cordial, which he offered to the other people at table. During the two days that we had to pass on the steamer I had frequent conversations with Sir Donald. Upper Burma had been annexed by Lord Dufferin and King Theebaw and Queen Suppalat were kept as state prisoners at Rutnagiri in the Bombay Presidency. Sir Donald defended the annexation on the ground that it was inevitable. I strongly

protested against the application of the appellation of docoits to the Burmans who were resisting the British and the excesses that had been committed by the invaders Sir Donald would not enter into details but maintained the time would come when Lord Dufferin's policy would be justified in history. He went on to say that he had met a well known Calcutta journalist and had no difficulty in convincing him of the soundness of the policy pursued in Upper Burma. He was clearly referring to Sambhu Chandra Mukerji of the *Reis and Rayyat*. Sambhu Chandra had been invited to meet Sir D. M. Wallace and Lord Dufferin. From that time he attacked the Congress and defended Lord Dufferin's policy in Burma. He became a personal friend of Lord Dufferin who subsequently wrote some letters to Mr. Mukerji.

LADIES AND LANGUAGES

A few months after my arrival at Karachi I brought over my wife and first child from Calcutta. Hiranand followed my example and his wife gave birth to a daughter some time later. A third young lady also came for a short time to stay with her husband in the house. These young ladies had no common language for carrying on a conversation. My wife spoke a few words of Hindustani but Hiranand's wife did not understand a single word of that language. Hiranand took upon himself to teach his wife a little Bengali and my wife a little Sindhi but his class of two pupils did not make much progress and he gave it up after a month or two. As however my wife had constantly to come in contact with Sindhi ladies and visited Hyderabad more than once she learned to speak Sindhi quite fluently in a few months. Sindhi and Cutchhi are almost identical languages and both are very difficult because although the words are mostly of Sanscrit origin the construction of sentences follows the Persian method and adjectives and verbs have masculine or feminine genders in accordance with the subject. I understand Sindhi perfectly but never learned to speak it well because I met only men who spoke either English or the broken Hindustani used throughout the Bombay Presidency. Ladies then observed strict *purdah* and I had no occasion to speak to them.

METEORIC SHOWERS

In 1885 and the following year in the month of September we witnessed at Karachi

an extraordinary phenomenon. Meteors or shooting stars are seen about this time of the year or in the summer. But I do not remember having ever seen anything like what we noticed for two successive years at Karachi. About 9 o'clock in the evening I saw meteors flashing through the sky in quick succession. I called out Hiranand and we sat up nearly the whole night watching the meteoric shower. The whole sky seemed to be alive with rushing meteors leaving behind them a trail of light. As the night advanced the shower increased in intensity and reached its height about midnight. There was not a minute's cessation and the sky appeared to be full of living luminous serpents darting swiftly across the heavens. There was no moon and the dark background of the sky with the glimmering stars intensified the effect. It was an impressive and awe-inspiring sight and I could appreciate the accounts I had read of savage tribes falling down in terror on their faces and shrieking aloud when they witnessed a meteoric shower. Gradually the meteoric shower diminished and finally ceased at about 3 o'clock in the morning. I wrote about the phenomenon in my paper and some people including some Europeans discussed the subject with me. Next year about the same time the phenomenon was repeated but the shower was not so thick as in 1885.

B. M. MALABARI

Behramji Merwanji Malabari was editor of the *Bombay Indian Spectator*, a weekly journal and also the *Voice of India*, a monthly periodical founded by Dadabhai Naoroji. The *Voice of India* was a small publication containing extracts from the chief Indian papers on different questions with a page of introduction. The *Indian Spectator* was a cautious and carefully edited paper. The paragraphs which were attractive were well written and were often humorous. These were mostly written by Malabari himself. There were one or two leading articles which were usually written by others. The *Indian Spectator* was what may be called an acceptable paper. In a lecture delivered in Bombay by Sir William Lee-Warner, Secretary to the Government of Bombay, he held up the *Indian Spectator* as a model critic. As Sir William Lee-Warner was a typical bureaucrat of the spreadeagle order his appreciation was significant. Latterly Malabari used to write in the first person

singular, following the example of Mr W T Stead in the *Pall Mall Gazette* and the *Review of Reviews*. He appeared in the role of a social reformer in 1885. He wrote two notes on Infant Marriage and Enforced Widowhood and circulated them for opinion, and the opinions he received whether in personal letters or in newspapers were published, sometimes with running comments in the *Indian Spectator*. In orthodox Hindu quarters Malabari's social reform campaign was strongly resented on the ground that he was an outsider and had no concern with Hindu society. Malabari felt himself ill-used and wrote several times that he was "only a Parsi." Humanity, however, is higher than communalism and a Parsi, or a Mahomedan or a Christian would be perfectly justified in raising his voice against an evil Hindu custom just as a Hindu is entitled to protest against a Parsi, Mahomedan or Christian social evil in the name of humanity. Whether he can obtain a hearing or not is another question. But there is a great deal of difference in the experiences of a social reformer from inside and another from outside. Malabari was severely criticised by some Hindu newspapers, but hard words break no bones and Malabari had no bitter experiences like those of Pandit Iswara Chandra Vidyasagar or Karsandas Mulji. There was no tangible outcome of Malabari's agitation. It had no relevant bearing on the Age of Consent Act. The most stalwart supporter of that measure in Bombay was K T Telang who in a series of admirable articles in the *Indu Prakash* then edited by N G Chandavarkar, supported the Bill and traversed the arguments of Sir Romesh Chunder Mitter, who had opposed it in the Imperial Legislative Council. I corresponded with Malabari before we met and I stayed with him twice for a few hours in Bombay when he was living in Hornby Road. At one time Malabari had an idea of starting a daily paper. He wrote to me asking for a rough estimate and suggesting that I should take up the editorship of the proposed paper. Some correspondence passed between us but nothing came out of it. I met Malabari again in Lahore and Calcutta and I had a letter from him a few days before his sudden death at Simla. Malabari told me himself that the *Indian Spectator* never paid its way and there was a small loss every month but he had other sources of income and left a considerable fortune amounting to

several lakhs of rupees. Malabari was in high favour with successive Viceroys and Governors of Bombay, and when Lord Raadolph Churchill visited Bombay Lord Reay sent him to Malabari's house to meet a select gathering of Indian leaders. He never attended the Indian National Congress even when it met in Bombay and called himself a recluse. Malabari latterly established a monthly Magazine called *East and West*.

P M MEHTA

Pherozeshah Merwanji Mehta was a striking and imposing personality in the public life of India and on the Congress platform. In Bombay he was considered the first citizen and no other person filled the presidential chair of the Bombay Corporation with such ability and distinction. He was an M A, of the Bombay University and a barrister with an extensive practice in Bombay. In the Bombay Legislative Council and later on in the Imperial Legislative Council he was an outstanding figure. He was a Rupert of debate and his brilliance in repartee and his flashing rapier play in argument have rarely been rivalled. In conversation he had a frank and hearty manner and he had very high qualities of leadership. When he was elected—the word then officially used was 'recommended'—as a member of the Imperial Legislative Council he disconcerted the official members by his outspokenness and crushing rejoinders. The non-official Indian Members of Council at that time were always in a hopeless minority and they never could carry anything against the solid phalanx of the official majority, which faced them like a stone wall. Referring to this unfair pose in the Council Pherozeshah Mehta, addressing the official members, declared on one occasion, 'we may have the balance of reason on our side but you have always the preponderating weight of votes.' On another occasion he spoke with such fearless independence that Sir James Westland, then Finance Minister, complained that the tone adopted by Pherozeshah Mehta had never before been heard in the Council Hall. Commenting on this incident I wrote in the *Tribune* of Lahore, which I was then editing, that Sir James Westland was right because the voice of Pherozeshah Mehta was the voice of the people and had never been heard in the Council Chamber so long as the Indian members had owed their place in Council to nomination, that is, official favour.

Pheroze Shah Mehta had been elected, or 'recommended' by the Bombay Presidency Association. He read the paragraph in the *Tribune* and wrote to me at once that I had rightly interpreted the note of Westland's Wail." For his great services in the Bombay Corporation Pheroze Shah Mehta was knighted but he was not the man to seek official favour at any time in his life. When the Congress was threatened with a split in 1906 in Calcutta which actually took place the next year at Surat much of the bitterness was directed against Pheroze Shah Mehta personally. He was jeered at as a knight and flouted as a dictator. At Surat he was assailed with foul abuse and the Deccani shoe which fell in the lap of Surendranath Banerjee and was preserved by him in a glass case was really hurled at the Parsi leader. The cleavage in the Congress marked the parting of the ways but it reflected no dishonour on the older leaders who had served the country according to their lights and who could not appreciate or sympathise with the imprisoned call of a new nationalism. The statue of Pheroze Shah Mehta in front of the office of the Bombay Corporation and the naming of the Haaging Gardens of Bombay after him are fitting memorials of his distinguished and untiring services to the city of Bombay.

PROSECUTION AND IMPRISONMENT

In 1889, when I was editing the *Phoenix*, I was prosecuted on a charge of defamation. That was the only occasion that I had to face a trial during my long association with journalism. Frequent complaints appeared in the paper about the ill treatment of prisoners in the Shikarpur jail. My correspondent was a teacher in the Government school at Shikarpur. He afterwards became a successful pleader at Sindh. In a short newsletter of two paragraphs it was stated that the death of a prisoner in the Shikarpur jail was suspicious and there were rumours of foul play. If there was any insinuation it was against the Jailer, who however did not take any action himself. Instead the Superintendent of the Jail, who was a medical officer, applied for sanction to proceed against me. The Bombay Government in sanctioning the prosecution stated that if the Editor gave out the name of his correspondent and satisfied the Commissioner in Sind that he had acted in good faith the case against

him need not proceed, nor was it necessary to proceed against the correspondent if he tendered an apology. It was obvious that the Government of Bombay did not consider the matter very serious. A copy of the Government Resolution was sent to me. I was not called upon to offer an apology, but I could not dream of giving out the name of my correspondent, whose good faith I never doubted for a moment. It was a very ordinary case and the only thing noticeable about it was the number of hearings it involved in various Courts before it was finished. The case was first tried by Mr. C. E. S. Steele, the Sub-divisional Magistrate of Sindh, an able and accomplished officer. In a case of this kind it was impossible to get any evidence from the jail itself. The defence was that there was no intention of defaming the Superintendent of the Jail and the suggestion in the newsletter was for an enquiry by higher authority. Evidence on both sides was taken and the Magistrate discharged me without framing a charge. I knew, however, that I was by no means yet out of the wood. An application was made before the District Magistrate to set aside the order of discharge and to order a fresh trial. The District Magistrate held that of the two paragraphs of the newsletter one in his opinion was not defamatory but the other he considered libellous and he directed a new trial by another Magistrate. Against this order an application was made in the Sindh Court before Mr. Macpherson. The wisdom of this course was questionable on account of Mr. Macpherson's well known attitude in criminal cases but my legal advisers and other friends relied on the well reasoned judgment of Mr. Steele discharging me in the first instance. Mr. Macpherson might have simply rejected the application on the ground that he took the same view as the District Magistrate, but he went further and deliberately declared that both paragraphs of the newsletter were libellous. He did not pause to consider that this would seriously prejudice me in the new trial because the Magistrate was bound to be influenced by the opinion of the highest Court in the Province. The case was next tried by an inexperienced, young Civilian who bluntly asked me the name of the correspondent. I refused to disclose the name and the Magistrate, who displayed both impatience and temper during the trial, sentenced me to simple imprisonment for

two months and a fine of five hundred rupees Dayaram Gidumal happened to be officiating District and Sessions Judge of Shikarpur at the time and I was released on bail the same evening. But Dayaram declined to hear the appeal himself and fixed a date for the hearing when he would cease to be Sessions Judge and revert to his substantive appointment as Assistant District and Sessions Judge. In simple gratitude I should mention that throughout this long drawn-out and protracted trial Tahilram Khomchand and Harchandrai Kishiodas stood by me unflinchingly. They neglected their professional work for defending me, they raised funds for the defence, they appeared in every court where the case was taken and their vigilance and sympathy never wavered or faltered. Any man would be proud and deeply grateful to have such friends. The new District and Sessions Judge had the reputation of being somewhat eccentric. When the appeal came up before him Tahilram and Harchandrai engaged Mr Russell of the Bombay Bar to appear for me. Mr Russell who afterwards became a Judge of the Bombay High Court, had come to Karachi in connection with another case, but was persuaded to stay on for a few days to argue my appeal at Shikarpur. Mr Russell was an Irishman and a persuasive and eloquent advocate and he did his best for me. But the Judge upheld the conviction and sentence alleging among other grounds that the circulation of the paper had increased on account of my prosecution. There was not a shred of evidence on the record to justify this assumption. I was conveyed to the jail at Shikarpur and was assigned a separate cell for myself. On the second or third day the Superintendent of Police came to visit the jail. At his suggestion I was given a cell. Another visitor was Mr Jacob, Inspector of Schools, Sind, whom I knew very well. He told me I should have given out the name of the correspondent, but I replied that that was out of the question as he had not acted in bad faith. The jailor showed me great consideration and I requested him to obtain permission for me to do some literary work during my imprisonment. He promised to write to the Inspector General of Police to obtain the necessary sanction. The warders and such of my fellow-prisoners as could have access to me were very good to me. Meanwhile, Tahilram and Harchandrai did

not let the grass grow under their feet. They applied for revision in the Sadar Court through Mr Russell who was still at Karachi. Luckily for me Mr Macpherson was on leave and Mr Hosking, a very able and conscientious Judge, was officiating for him. The Manager of the "Phoenix" filed an affidavit declaring that the circulation of the paper had not increased. Mr Hosking quashed the sentence of imprisonment but upheld the fine. Tahilram sent me a telegram at once informing me of the order and an Amil prisoner came running to me, evidently pleased to be the first to congratulate me. He was followed a few minutes later by the jailor himself with the open telegram in his hand. He seemed to be both pleased and relieved that it would not be necessary for him any longer to have me on his hands. I told him that he would have to wait for a copy of the judgment before he could let me out. He said it was not at all necessary and if he got a telegram from the Registrar of the Sadar Court confirming the information I had received he could release me at once. He proposed to send a telegram, reply prepaid, to the Registrar at his own expense and I could repay him afterwards. This was done and in anticipation of the reply the jailor took me out of the inner jail and had a bed put up for me in the comfortable verandah of the jail hospital. The reply arrived at about 9 o'clock at night and I was released at once. It was the tenth day of my imprisonment. As a memento of my life in jail I bought a small carpet from the jailor and sent him the price along with the cost of the telegram. There was a carriage waiting for me and I drove to the house of Dowlatram Sarat Singh Government pleader. The next morning I got a telegram from Harchandrai asking me to stay another day at Shikarpur as they were arranging a suitable reception for me. I telegraphed back that there should be no demonstration and I did not propose to delay my return to Karachi. I left Shikarpur the same evening. At the station while I was waiting for the train with a number of people around me Dayaram Gidumal came in and I conversed with him up the platform to have a quiet talk. I told him he should not have hesitated to hear my appeal himself. His reply was that my case had affected his personal feelings and it was impossible for him to be in a judicial frame of mind. He added that Mr Steele should have acquitted me instead of discharging me, and in-

that case the Bombay Government would not have appealed against the acquittal. At Karachi the platform was crowded when the train arrived and some of my friends protested that I should have let them have their way as the people of Karachi were anxious to show their appreciation of my conduct. I pointed out that there was absolutely nothing to make a fuss about and although I was very thankful to be back again among my

friends I should be allowed to return home quietly. But they all insisted on accompanying me to my house in procession. As I have previously stated there was nothing remarkable about the case except that it was heard no less than seven times before different Magistrates and Judges.

I left Karachi and Sind in May, 1891 to take up the editorship of the *Tribune* at Lahore.

ECONOMIC CONDITION OF THE SOMALIS OF FRENCH SOMALILAND

Dr N. S. BANOA, B. Litt (Oxon)

DJIBOUTI is the capital of French Somaliland. There is the Governor General to govern this province of the French Republic. There are about 400 Europeans, 200 Arabs, 100 Indians and 20,000 Somalis in this town. There is usually very little rain and this place is very hot and there is scarcely any vegetation. It was only ten years ago that the gardens around the palace of the Governor were decorated with artificial trees but at present there is a very good supply of water which is brought from an inland place and so a few trees could be grown in the gardens. For all outward purposes there are all the signs of western civilisation such as electric light, fans, ice water supply, motor cars and horse carriages. A Frenchman boasted that his Republic has converted the desert into a civilised town.

A responsible person once told me that the French Government was losing very heavily on the railway to Abyssinia, on the harbour at Djibouti and on the whole of the government establishment. And it is still true to day. Yet it maintains its so called trust for the world's civilisation because it is anxious to maintain the balance of influence in the politics of Abyssinia at which the French, British and Italian Governments look with covetous eyes. The recent rapprochement between the last two governments are watched with great anxiety by the people of this place.

Abyssinia is the centre of all interest to

every one of this place. If the French Government allows the other Powers to get full control of Abyssinia then the economic organisation of this place will be completely dislocated. At present piece goods and other manufactured goods are imported into Abyssinia and it is worthy of mention that most of the cloth sold in the Abyssinian market is imported from Japan and merchants find the Indian cloth to be too expensive. Djibouti imports horses (those used in the town are worth only Rs 30 in Abyssinia), cattle, beef, fruit, hides, coffee and goats.

Nothing is produced in Djibouti. Rice and other food stuffs of very inferior quality are imported into this place from India via Aden. The horse carriages are brought from America and the hand carts from Austria. A few Italians and Greeks are interested in the import and export business but the export business in coffee and hides is mostly in the hands of Arabs and a few Somalis. The number of Somali merchants has been on the increase since the last six years and there are now three leather merchants, two coffee merchants and a few shop keepers.

Small donkeys are used to transport sand and earth. But men are employed to pull the hand carts working in groups of 4 or 6 coolies and it is these workers who transport everything to and from the railway station and the docks. They get on the whole about 8 francs each per day of twelve hours work in the hot sun. It is noteworthy

that women are not engaged in this sort of work as they are in Madras and Delhi. The workers who are employed in the store houses of leather to air and clean leather are paid 6 to 7 francs each per day of 12 hours and those who are employed for the month are paid only 220 francs. The workers at the railway station are paid 6 francs per day per head if they are bachelors and 7 to 8 francs a day per worker if they are married people. They work for 10 hours a day. The postmen are paid 300 francs per month per person. A Policeman is paid 200 to 275 francs plus board and lodging per month. Porters in a hotel are paid 150 to 200 francs plus food per month per worker and two boys who are of 15 years of age are paid 50 francs each per month with food and another boy who is only 12 years of age is paid only 40 francs. Somalis who ship things are paid one rupee (15 francs on 20th July 1926) each per day of 12 hours while their brother workers of Aden are paid Rs 18. These and other workers go to fish in the sea whenever there is no work in the town and earn on the whole about 5 francs each per day. The drivers of the horse carriages are paid 5 francs per hour and each of them is able to earn on the average 15 francs per day.

Only women are employed in cleaning coffee and even though this is a very slack season for coffee business as many as 250 Somali women were employed on the 17th July. Even girls of 8 years of age and above are employed in this work and they earn nearly as much as women. These workers work between 6 A.M. and 6.30 P.M. with a short break at dinner time. They are paid 5 francs for cleaning one sack of coffee seeds of 20 kilos and an ordinary worker is able to earn only 5 francs a day. Though this work is done in dusty and dirty factories the workers are not provided with special uniforms to be worn while working and the women are obliged to wear the same dirty clothes at home and in the factories. It is very unhealthy for girls to work in these ill ventilated factories.

Still many Somalis are unemployed for many months in the year. Some Frenchmen say that there is no unemployment in this place and that the Somalis are very lazy and do not want to work if they have some money. But the Somali and Indian merchants assure me that the Somalis are as industrious and ambitious a people as any other I

met more than 6 Somalis who went to France and worked as Garçons in the hotels and returned with their savings. One of them who is a Garçon in the Hotel Des Arcades said that he used to get 30 francs a day with food and a room at Lyons while he is now paid only 175 francs per month with food. He said he could not earn more in the Djibouti hotels as there is not much work in the hotels. He understood better the reasons for the lower wages and unemployment of Somalis than many Europeans of this place.

STANDARD OF LIVING OF SOMALIS

Every commodity consumed by the Somalis is of the most inferior quality and an Indian urban worker refuses to consume the sort of rice, chillies, red grams and cholam which are sold in the local markets of this place. The Somali's daily food consists of boiled rice, chapati (thin bread) made of cholam and rice flour, fish or a little meat and little or no ghee. Though every Somali is very fond of ghee and though it is cheaper here than in Bombay as it is imported in large quantities from Abyssinia, Somalis are unable to get it except on festive occasions. A small plate of boiled rice is sold at 50 centimes, a plate of very bad meat and soup at one franc and 2 chapatis at 10 centimes in an Arab restaurant where many prosperous Somali workers eat. A worker eats rice, meat and 8 chapatis and pays 1 franc and 90 centimes per meal and any one who has seen this food will testify that it is not enough to keep a human being in proper working order. Yet a Somali is obliged to work for 12 hours a day and maintain his wife and two children.

A kilo (about 2½ lbs) of inferior rice is sold in the retail market at 4½ francs and better sort of rice at 6 francs, cholam at 2 francs, redgrams at 5 francs and salt at ½ franc. A cup of very inferior coffee with a little sugar in it and without milk is sold in a Somali restaurant at 12 centimes. It is heart breaking to see these Somali women begging a few grains of rice etc. in addition to the quantity already paid for. Every night there are crowds of boys around the European hotels to beg morsels of bread and some Europeans drive them away as if they were flies. Starvation is a common feature of many Somali homes and most Somalis suffer from insufficiency of food.

Many Europeans complained that the idea of comfort of the Somalis is very low and that they do not need and do not want shoes, caps and shirts. But many of the drivers of the horse carriages earned enough in Europe to buy their carriages and they take genuine pride in the clean cushions of their carriages and they wear clean and nice clothes. The Somali women who are employed as maids by Indians dress themselves in better and cleaner cloths than other women because they are paid better. Somali women wear a long skirt, a cloth to cover the breasts and another to cover their heads. These cloths are imported from India and are of very inferior material. Men wear a lungi, a shirt without sleeves and no cap. I saw only very few women who wore shoes and others do not wear them because they cannot afford that luxury.

Most of the Somalis live in small huts made of palm leaves. The floor has no coating of any kind and so the house is very dirty. In such a house we find only one or two cots and one or two stools with mattresses. In the evening the house is practically

dark and very few people keep lights in the nights. Most of them have no private water pipes and lavatories as the Europeans have. They have to bring water from the few public water pipes and no wonder that they do not bathe every day while the Europeans bathe twice a day. They have neither electric fans nor ice and their houses are full of flies. There are no streets as in the European quarter and there are no street lamps. The narrow but long lanes are dusty and dirty and no one cleans them. There is always a very bad smell in their quarters. The local hospital serves the interests of the Europeans better and the venereal diseases contracted from the Whites and the other tropical diseases are not cured by any medical help. An intelligent Somali said that the so-called civilisation is not introduced for their sake but for the comfort of the Governor General and his administration and that the Somalis are never made able to enjoy any benefits under the now civilisation. Where are the Factory Acts and where are the Conventions of the International Labour Office in Somaliland?

BRITISH INDIA AND INDIAN STATES

I have seen it asserted by persons in authority and holding responsible positions in Native States, who are naturally supposed to be well acquainted with the relations which exist between the Native States of India and the Government of India, that the status and position of British India is in no way better than or superior to the more important Native States of India, or that "British India is but a State like other Indian States." They go even so far as to say that "The Emperor of Japan has as much power as any ruler of an Indian State." Or in other words the powers of a ruler of an Indian State are in no way inferior to those of the Emperor of Japan. For instance, Rao Bahadur Sirdar M. V. Kibe, a Minister of the Indore State makes the following bold statement which is neither justified by Science of Politics nor by the Indian Treaties on which Sirdar Kibe takes his stand and lays so great

a stress. Unfortunately few have studied the Treaties with the Native States or followed the subsequent developments. It is, therefore, no wonder that such baseless statements should go unchallenged. Sirdar Kibe has the courage and confidence to declare —

But the criterion for admission to the League of Nations is to be found in the status of its members. British India has been admitted as a member of the League in its relations to the Government of Great Britain. British India is a State like other Indian States. While the relations of the latter with the former are governed by instruments known as treaties, its powers are defined by Acts of Parliament. Like all other Indian States it cannot make peace or war, independently of the British Government, moreover, even its finances are under the control of a member of the British Cabinet. In a word as stated by the Marquess of Curzon one of the most famous and masterful Governor General and Viceroy of India, the Government of India is a subordinate Branch of the British Government. Moreover, unlike the Indian States as regards judicial matters it is not self-contained. Yet in spite of all these drawbacks, it has

been admitted as a member of the League. Those Indian States therefore whose disabilities from the point of view of Sovereign States are not greater *de jure* than those of British India cannot but be eligible for the membership of the League.

Before exposing the fallacy and ignorance of the first principles of Political Science which this statement betrays, it cannot be denied "that the treaty position has been changed and that a body of usage in some cases arbitrary, but always benevolent has insensibly come into being." That "there is no doubt that with the growth of new conditions and the unification of India under the British Crown a political doctrine has constantly developed." The political doctrine or political practice so developed enables the Government of India to punish a Native State with fine by loss of salutes and other honours by depreciation of judicial powers, and even by deposition of their rulers. In spite of their being "Self contained" in judicial and financial matters, they are subject to the Court of Enquiry which can be appointed by the Viceroy to enquire into the misrule of a State which may be the effect either of misuse of judicial powers or of the finances of the State. It is safer to rely on Acts of Parliament under a constitutional system in which the Native States are at present, than on inaccurate references to International Law or to a position which is afforded by mere arguments drawn from use or abuse of the phrases and which is enposed to be secured to the Native States by their Treaties. A State in its perfect form has in virtue of its independence, complete liberty of action, and that liberty of action is not destroyed by the fact that it has concluded agreements fettering its action, provided that such agreements are terminable at any moment or upon stipulated notice or provided that they are not of such nature in themselves to necessarily subordinate the will or the power of the State to that of another power or State. By their Treaties the Indian Rulers got the right, though they never had the power to denounce the treaties. The forms of International law are to some extent maintained, though the conditions which gave validity to those forms had disappeared long ago on the conclusion of the subsidiary treaties. By these agreements the Native States entered into a habit of obedience to a political superior, and from this point ceased to be *sovereign* and they lost *independence*

The Native States of India are neither sovereign, nor semi sovereign, nor part-sovereign. They are non-sovereign while British India is part sovereign. Doctor Lawrence says —

"The questions connected with *Part Sovereign States* next demand our attention. Though as a general rule the domestic government in a political community exercises over the members of that community all the powers of sovereignty, it is obvious that it might exercise a portion of them only, the remainder being vested in the government of another country, or given to some central authority or even suspended altogether. When the powers thus shared concern internal affairs International Law has nothing to do with that case, neither has it when the home government deals with internal affairs and some other authority possesses complete control of foreign relations though both cases are important to the student of Constitutional Law and must be carefully classed by him. But when the external affairs of a community are directed by another country, International Law recognises in that community a state unlike fully independent states, seeing that the rulers cannot exercise all powers of external sovereignty and yet capable of being ranked among its subjects, seeing that the local government does control some portion of the relations with states. Communities of this kind are generally distinguished from independent states by the epithet *Semi Sovereign*, but as the term seems to imply an equal division of powers of sovereignty between the local and foreign rulers we will use instead the adjective *Part Sovereign*, since it more correctly describes a class of communities in which any proportion of the powers of external sovereignty from nearly all to almost none may be possessed by the home government."

The Native States of India are in the habit of obedience to a political superior, the King Emperor, therefore they are not *independent*, nor are their rulers possessed of *sovereignty*. They possess no external or foreign relations and rules of International Law do not apply to them. Their authority inside the State is *divided* between the ruler and the British Government. As such they are subjects of Constitutional Law and not of International Law.

Doctor Lawrence defines a *Part Sovereign State* as

"Political Communities in which the domestic rulers possess a portion only of the powers of political sovereignty, the remainder being exercised by some other political body or even suspended altogether. When a State is neutralised by a great international treaty and is therefore deprived of the right of making war for any other purpose than the defence of its own territory from attack, it is in a condition of *Part-Sovereignty*. We thus obtain three divisions of *Part Sovereign States* and it will be convenient to consider each division separately. But before we do so we must exclude altogether from our classification such communities

as the Native States of India and the Indian tribes of North America. The former are some times spoken as independent states but in reality they are not even part sovereign in the sense given to that term in International Law for they may not make war or peace or enter into negotiations with any power except Great Britain.

If Sirdar Kibe had studied the question of sovereignty and had known the connotation of the term Part Sovereign he may not have objected to the eligibility of Austria or Bulgaria for membership of the League of Nations because Bulgaria is bound by a treaty to accept certain financial and military restrictions or because Austria is bound not to have treaty relations with certain foreign states. He forgets that they have not, like the native states of India, lost *all* control over their foreign relations, and as such they are still recognised as subjects of International Law.

The Native States of India are allowed to exist, under British supremacy, in the British dependency, India. Their rulers though they owe political allegiance to the King Emperor, as his subjects are yet permitted to manage their own affairs as far as possible. The Government of India is part sovereign while the Native States are not sovereign. The Government of India, though subject to the control of the British Government in its foreign relations is master of its own house and is free in its internal government. The Native States have no foreign relations, and their authority of internal government is divided between their rulers and the British Government. The foreign relations of British India or the Government of India are its own though controlled and limited. It is dependent or inferior, while the British Government which controls its foreign relations, is its superior. It is practically supreme over its subjects, but not being a member of the international society, it is not externally sovereign or rather fully-sovereign. Its position can be described as one of semi-sovereignty or part-sovereignty, it being not necessary for a state to be independent in order to be a state of international law. The Government of India does not stand side by side with the British Government as its equal. Nor is it in Corporate Union with it for internal purposes, although for international purposes they both with others form the whole, one domain represented abroad by the British Government. The Government of India through its Foreign and Political Department deals

with foreign powers such as Persia, Nepal or Afghanistan, and controls the relations with the Indian Ruling Princes and Chiefs through Residents and Political Agents.

Let the Princes be not misled by such spacious arguments, and imagine themselves in a position which is neither warranted to them by their treaties nor by usage, nor is the Science of Politics willing to concede it to them. The plain truth is that they owe their present position to British protection and can continue their existence by British policy. The policy, in the words of Sir John Strachey, which saved them from Dalhousie's doctrine of lapse and consequent extinction, has been as follows —

"The matines of 1857 showed conclusively that the Native States of India are a source to us not of weakness but of strength. In the words of Lord Canning "These patches of Native Government served as a break water to the storm which would otherwise have swept over us in one great wave. With hardly an exception they remained faithful in circumstances of severest trial and difficulty. Before Lord Canning left India a *Sanad* was issued to each of the Principal Chiefs assuring in the name of the Queen that on failure of natural heirs the British Government would recognise any adoption of a successor by himself or by any future Chief of the State."

Though the times are changing, the Princes can continue their political existence only through the good will of the British Government, their loyalty to the British Crown, good government and contentment of their people. There was a time when the authority of the British Government depended on its prestige the force of arms, and the alliance of ruling dynasties. But in the future, it may have to seek allies not in the Princes but among peasants. It may have to appeal to the appetites of the lower classes, while the Ruling Princes and the territorial magnates of British India who may lose or fear to lose dues and services, may try to oppose the new order. The Princes and the Great Zamindars cannot expect the British Government, with as much patience with no sense of human dignity, with no feeling of pathos of the common lot, to lack the sound and able gifts which sweeten and inspire public life. It will have to depend on the internal support of the populace and on appeal from farce to conscience. The alliance of the British Government with the Princes, though admirably adapted for its immediate purposes, might be considered as directly opposed to the cause of liberty and to all the feelings and tendencies which the Reforms in British

India have encouraged in the thinking class. Although the British Government may be able to fascinate some of the older Sirdars or even intellects of the Native States the heart and brain of the younger generation of these states as well as British India whose aim is national unity are sure to be ranged against the policy of inaction stagnation or reaction. The future agitation will be a movement of peoples rather than a coalition of princes which may result in an outburst of passion for political liberty in the people who inhabit the Native States in the shape of a demand for "Roman Citizenship on a claim to be placed on the same level as His Majesty's subjects in British India. This passion when once stirred will have the support of public opinion all over the world and which both the Princes and the British Government will find themselves helpless to extinguish. The simplest remedy in the

hands of the suzerain power against recalcitrant or refractory princes or their coalition will be to espouse the cause of their people when the tall talk regarding the personal loyalty of their people or their popularity among their subjects will vanish and the princes will find themselves alone and helpless though we know the British Government will never have recourse to such methods. The time is gone when the British Government could declare that it had

no manner of concern with Maharaja's subjects with respect to whom he is absolute. The improved means of communication and especially extension of Railways have brought about great changes throughout India and the people themselves in the Native States are no longer as helpless and silent as they once were. They are becoming alive to the fact that in the last resort they can appeal with British Government for protection against oppression.

THE KADVA KANBIS AND THEIR PECULIAR MARRIAGE CUSTOMS

By CHHAGANLAL THAKURDAS MODI

AMONG the Hindus generally the marriages are celebrated in certain months almost every year. They altogether avoid only the year of Sanbhashta i.e. every twelfth year when Jupiter is in the sign of Leo. There are only two sections of the Hindus that have the peculiar custom of celebrating marriages at certain intervals of 9 11 12 15 years, and these sections are the Kadva Kanbis and the Bharwads (Shepherd class) of Gujarat and Kathiyawar. The Motla Brahmins residents of the Surat District and the nagars of Junagadh in Kathiyawar celebrate marriages every third or fourth year. The native place of these Motla Brahmins is Mota a village in the Surat District and their population is not large. The nagars of Junagadh celebrate marriages every 3rd or 4th year and the day of marriage is the same for all families, and fixed by some wealthy and respectable member of the caste. They adopt this custom chiefly with the object, it is presumed of spending as little

as possible in marriage festivities. Such a curious custom does not appear to be prevalent and general in most of the other castes.

In this article detailed information is consequently given only as regards the Kadva Kanbis and the Bharwads.

THE KADVA KANBIS

The Kadva Kanbis are mostly the inhabitants of the following districts and States —

- (1) Baroda State—in the districts of Baroda, Kadi, Amreli and Navsari.
- (2) Districts of Gujarat proper—Ahmedabad Broach Kaira, Panch Mahals and Surat.
- (3) Kathiyawar States—Jhalvar prant, Gohilwada prant, Halar prant and Sorath prant.
- (4) Cutch, Mahikantha, Palanpur and Rewalantha.

The total population of Kadva Kanbis in all these districts comes to nearly four lakhs and a half. Of these nearly one lakh

and eighty thousand claim to be the subjects of H. H. the Maharaja Saheb Gaikwar of Baroda. Again 91 pc of these inhabit the Kadi district only and about 9 per cent only live in the other three districts. Of the remaining population of nearly 2 lakhs and 70 thousands the largest population is in Halar prant (nearly 84000 i.e. 30 pc) while Ahmedabad district, Mahikantha and Sorath prant claim respectively 62000 37000 and 30000 i.e. nearly 23 14 and 13 pc of the whole. The population in other places vary from 500 to 18000 the least being in Catch and Panch Mahals.

The chief occupation of this caste is cultivation of the soil, as nearly 90 pc. of the actual workers are agriculturists.

This community appears to be most backward in education. In the Baroda State owing to the introduction of the system of free compulsory education those who possess some knowledge of reading and writing must be about 50 pc., but in the districts of Ahmedabad Broach and Kaira, the total population of Kadva Kanbis in which is 72000 the male and female literates according to the census of 1921 are 36 and 4 per cent while the illiterates are 64 and 96 per cent. The number of English knowing males there-in was only 413 and that of females 103. The Halar prant, which boasts of nearly 84000 males and females hardly contains 20 pc of male literates while the female literates not even the percentage of literates in Ahmedabad Broach and Kaira districts.

Different interpretations are given as to the origin of the Kadva Kanbis. Some trace the origin to Kush the second son of Jamchandray and give the story as follows—

Lava and Kusha the two sons of Ram-chandray came to Sidhapur a town in the Kadi district of the Baroda State about 64 miles north of Ahmedabad and on the Rajputana Malwa Railway line on a pilgrimage and thence went over to Unjha a village of the Sidhapur Taluka about 8 miles on the south for the worship of the Uma Mata. There they saw some Sudras in an extremely poor condition and so appointed some of them to perform the worship of the Goddess. Those settled there by Lava were called Lavas and those by Kusha were called Kadvas.

According to another story the Kadvas all spring from clay figures fashioned by Uma or Parvati the wife of Shiva at the

request of Uma inspired the figures with life and founded for them the village of Unjha in Sidhapur Taluka of the Kadi district. Here a temple was raised in Uma's honour. Of this same story another version is given as follows—Shiva was one day performing austerities while Uma or Parvati amused herself with making 52 (Bavan) pairs of images of males and females. At her request he inspired them with life and so originated the 52 divisions of the Kadvas for whom he founded the village where they installed another Umaji as their Kula Devi and their descendant visit the temple from even the most distant localities in fulfilment of their vows.

Some again say that the Kadvas were so named because they had been created from the perspiration of the head (waist) and they derive the word Kanbi from Kan B, Kan grain and B, seed the seeds of grain being required to maintain themselves.

Kadvas are said again by others to be "har grahus"—one of the six divisions who took hold of by the hand and carried away one of the six girls for marriage. In Bhavishya Uttara Purana, the portion called Sudratpatti contains a chapter about the origin of Keshi, Valas and these are said to be the same as the Kadva Kanbis.

As stated above the total population of the Kadva Kanbis is said to be nearly four lakhs and a half and they are distributed over all the five districts of Gujarat and Katiyavar and Baroda State. They are found chiefly in Ahmedabad district Kadi district and Halar prant. These Kadva Kanbis almost without exception consider the village of Unjha with the temple of Uma Mata there as the chief seat of their tribe and they resort to it from long distances as said above to fulfil their vows. Except in Surat there are no subdivisions among Kadva Kanbis who have restrictions about intermarriage.

The village of Unjha which is the chief seat of the Kadva Kanbis contains even at present the temple of Umamata the Kula Devi of this community. The present temple is a large one erected in about 1858 A.D. It is surrounded by a lofty brick enclosure. It is in this temple that the principal members of the Kadvas in Unjha village meet and get settled the year in which the whole community everywhere should celebrate the marriages. It is said that every 9th 10th or 11th year they inquire of the Goddess as

to when they should celebrate the marriage rites in their tribe and lots (Chitthis) are drawn to decide whether the solemn marriage day is to be in that year or the next.

Different periods viz 9 to 12 years are mentioned by different gentlemen and writers about the interval that passess or should pass between the seasons for celebrating marriages among the Kadra Kanbis but the interval most commonly observed is 9 10 or 11 years. As far as human memory goes they do not celebrate marriages within a period of 8 years neither do they wait for 12 or 13 years for the same.

On inquiry from different sources it is found that during the past 126 years marriages took place mostly in Vaishakh month in the following years —

Samvat	A. D.
1830	1799
1866	1810
1876	1830
1880	1830
1896	1840
1907	1851
1916	1860
1927	1871
1936	1880
1946	1890
1957	1901
1966	1910
1978	1922

As referred to above the year in which marriages could be celebrated is settled in the temple of Umaji in Unjha. Two headmen of the village with Bramhin Astrologers go to the temple in the 9th or 10th year of the last marriage season. It is said that they first worship the Mataji and then they draw lots (Chitthis) as to the year which is regarded as propitious by the Mataji the patron Goddess of the Kadvas, and according as the lot falls, the particular year is declared as the proper time for celebrating marriages. When the year is thus known the astrologers name a special day and this is always selected from the latter half of Chaitra masa or from Vaishakha masa. As the Goddess is supposed to have granted permission (Devi Bol—Goddess gave the order) for the celebration of marriages in that particular year all persons of the kadra kanbi community perform marriages in their families on that day wherever they may be.

Another day is also chosen for the marriages of those who are prevented from sickness, inability to get a suitable match etc., from performing the marriages on the general day. The day thus chosen is about

a fortnight later than the first and is called 'Mandaw Rat.'

The two days thus fixed are communicated by the Unjha headman to the heads of their Ahmedabad castemen and thence they are communicated to different places wherever this community resides.

The general belief among the Kadvas is that marriages of all girls over 40 days old should be celebrated on the particular day in the particular year fixed and if any girl remains unmarried she cannot be married for 10 or 11 years more i.e. before the next season found propitious for the same. Owing to this impression, the parents feel very much concerned and become anxious to find out suitable husbands for their marriageable daughters so case they are not able to secure such bridegrooms by the date fixed, they resort to different expedients. The most common expedient is to arrange to have a proxy bridegroom. To this man is married one or more girls for whom eligible husbands have not been found so time and he is paid a certain sum in lieu of the consent that he gives to undergo such a marriage. This man is called Bayvar (बयवर) i.e. hired husband. This Bayvar may be either married or single. The day after the marriage the man is paid a certain amount of money and is made to renounce his claim on the bride or brides he was married to as Bayvar and consequently such girls are considered as widows from that time. In case such a proxy bridegroom is not forthcoming or when the proxy is dispensed the other alternative is to marry the girl to a bouquet or ball of flowers which is treated as an actual bridegroom. The flowers are thrown into a well the next day, the Kankans (Marriage bracelet) are taken off from the hands of the bride and she is made to bathe Sachai Lasna—with clothes on and from head to foot, and she is supposed to have become a widow and free to re-marry. As widows can re-marry at any time in this caste by undergoing the ceremony of "Natra" or second marriage the parents find eligible husbands for them at leisure.

The marriage day being common to the Brahmans who perform the marriage-rites, are very busy and they cannot attend to all families in a village or town. The consequence is that the brides and bridegrooms in different streets are brought in one place and the ceremonies are there gone through. This being the case it is said that one man gets through as many as a hundred cere-

monies The ceremonies, performed in this hurried way by such Brahmans, who are moreover, for the most part not versed in Sanskrit lore hardly resemble the real rites enjoined by Hindu Shastras

Inquiries made in several directions to trace the origin of the present custom among the Kadva Kanbis of thus celebrating marriages after 9, 10, or 11 years, do not lead to any satisfactory explanation There are some works, large and small, in which the custom is referred to, but in none of them is given the cause of adopting such a custom Looking to the periods intervening the different marriage seasons of the past 126 years, as given above, it appears that no man living from among the Kadvas can definitely state when such a custom was introduced and what the real reason of the same was Very old men of orthodox opinions as well as young men educated in modern ideas have not been able to explain satisfactorily when or how the custom originated or the reason of adopting it They at the most say that they celebrate the marriages in this way because it has been the custom in their caste from time immemorial Different inferences are consequently made as to the origin of the custom or the reason of sticking to it One of these is that the Kadvas are mostly agriculturists and they have to attend to their field work and labour for producing grain and grass They thus cannot afford to spare much time every year in marriage affairs at their own place or in such functions at their friends, and relatives, without some loss Some of the wise and prudent men of the caste, in consequence, it is stated, decided to have one month only for celebrating the marriages and that at certain intervals The month of Vaishakh (or between Chaitra 15th to Vaishakh and 16th) has invariably been the month in which the marriages take place, and that is the month in which cultivators are comparatively free from work connected with tillage

The other probable reason appears to be the matter of expenditure When all families of a single caste have to celebrate the marriages of their eligible daughters on the same day, they are not compelled to invite guests—their relatives etc—for dinner or processions, and expense on account of dinner and other minor matters is thus not incurred by them Each one therefore can manage to spend very small amounts in marriage

festivities without incurring any obloquy, and the custom thus finds favour with them, all, rich or poor, high or low. These Kadvas have no restriction about widow marriages, and excepting in a few families of high birth or respectability, the widows generally do marry Consequently, the community as a whole do not feel it a great hardship or very serious inconvenience to wait till the solemn day of marriage is fixed or to see the young female members of the family becoming widows at a very early age All this evidently shows that there is no religious idea underlying the custom No religious restriction appears to prevent them from celebrating marriages in different years when the grown-up girls are of marriageable age, as is the case amongst other castes but it simply appears to be reverence—very likely blind reverence to maintain the custom, the origin of which they are not able to trace, nor do they care to know the reasons, as it does not substantially affect them, but on the contrary benefits them monetarily to an appreciable extent.

Some years ago Seth Bechardas Ambaidas Laskari of Ahmedabad a leading member of the Kadva Kanbis tried to move the Government to reduce the period of interval at least to seven years instead of 9 to 11, but many of his caste people did not like the idea and did not give him support in inviting Government interference. He had consequently to give up the attempt

THE BHARVADS

Amongst the Bhavads marriages are celebrated at intervals of a certain number of years. Some say the period is not fixed, some give a period of 10 years and some say that the period is of 12, 15 or 25 years In the year 1895, the Bhavads had celebrated marriages in the Navanagar State in Kathiawar, after an interval of 24 years, and over 770 Bhavad couples were married on this occasion.

The population of this community in the four districts of the Baroda State, in Ahmedabad district and in Kaira district is about 32000 The number of literates amongst them is insignificant.

As a general rule, the Bhavads meet and celebrate the marriages of all brides and bridegrooms in one place One of the leaders of the community arranges to erect a maudap and a marriage pillar—an ornamental wooden post—and incurs the expenditure of feasting the assembled people In lieu of

this trouble and expense incurred by him, the parents of the bridegrooms each pay him a sum of Rs. 12 8 0 (some say Rs 33). They do not celebrate marriages in the place once utilized by them, and for that purpose the wooden post is erected on the spot.

As the marriages are celebrated at certain intervals, girls are to be wedded in their young age. Polygamy and widow marriage are allowed in this community, the younger brother of the deceased husband having the first claim. Except in some parts of Gujarat divorce is also easy among them.

As in the case of Kadva Kaobis, the Bhavads appear to follow the custom of celebrating marriages at certain intervals with no religious idea, but simply out of reverence for a long prevailing custom and for the sake of convenience.

The Bhavads have no patron Goddess just as the Kadvas have, and have thus not to depend on, or follow the "order" of, any Mataji. How this custom originated amongst the Bhavads is not known and is not explainable, but one of the chief reasons of adopting it or sticking to it must be the question of expenditure.

A PREFACE TO THE HINDU CATEGORIES OF INTERNATIONAL LAW

By BENOY KUMAR SARKAR

SECTION 4

INTERNATIONAL JURISTS OF THE SUKRA CYCLE

(a) Pre-Grotian

AN account of Hindu international law and custom on the lines indicated above, such as might correspond to Cybiebowski's *Das antike Voelkerrecht* or Taenbler's *Imperium Romanum (Staats Verhaege und Vertrags verhaeltnisse)* is not possible in the present undertaking. We are here concerned with *Sukramiti*. It is a book of political philosophy and has hardly anything to do with positive law and custom, at any rate, until certain solid evidences be forthcoming to point to the objective, historical character of some of the passages. For the present we are interested in the categories of international law such as the Sukra authors developed in the course of their speculations on the *saptanga*.

An important technical question arises at once. Are we justified in employing the term international law, or the categories of this branch of jurisprudence, in the analysis of the philosophical speculations of the Sukra cycle? The question naturally has its European counterpart. And it may be worded, as it

has often been done by Western scholars dealing with Western topics, as follows — Can the concepts and categories of international law be credited to the philosophers, jurists or politicians who preceded Grotius (1583—1645)?

It will be noticed that the problem before us is but parallel to the one discussed in the previous two sections. Only there the subject-matter was actual international law, the positive customs. In the present instance, on the contrary, the subject-matter is the theory of international law. Whereas the other question was primarily historical, the present one is mainly philosophical. The scepticism in regard to the existence of positive international law in the pre-Westphalian periods is matched by the scepticism in regard to the existence of a philosophy or speculation on the same subject in the pre-Grotian world.

Curiously enough, Grotius and Westphalia imply virtually the identical date in culture-history. Grotius died in 1645, just three years before the Peace of Westphalia. And his book on the laws of war and peace appeared in 1625, the seventh year of the Thirty Years' War.

Now, in the realm of institutional

achievements of a legal or constitutional character Hindu India is pre Westphalian. In my *Political Institutions and Theories of the Hindus* the conclusion has been reached that whatever be the actual dates of the political institutions in the Hindu states substantially speaking i.e. in terms of quality they are pre modern (i.e., preindustrial revolution in certain respects and even pre Renaissance in certain others). To characterize the entire corpus of Hindu achievements in public law as pre Westphalian would therefore be in the main quite appropriate.

In regard to the Hindu philosophy of politics in all its branches the conclusion is identical. Whatever be the exact chronology of the authors of the legal financial economic constitutional and other texts their thoughts and ideals are essentially pre modern. The point has been emphasised again and again in the present publication as well as in others. The speculations of the Sukra cycle in regard to international law will be found on examination to be pro Grotian.

(b) The Grotian Complex

The term 'pre Grotian' is being employed here in a strictly technical sense. We are taking Grotius for the purposes of this book not as the individual Dutch philosopher who lived from 1583 to 1645 and published his great book in exile at Paris in 1625 but as a synonym for all those ideas and ideals no matter who the promulgator was in which the foundations of modern international jurisprudence were laid.

This philosophical complex comprises for our present purpose four other names besides that of Grotius and covers about two centuries biographically speaking from 1480 to 1660. To this group belong two Spaniards (1) Vitoria (1480—1546) the Dominican monk and (2) Suarez (1548—1617) the Jesuit Father. Of the other two one is an Italian Gentilis (1552—1608) who because of protestantism the new religion to which his father became convert had to live the life of an exile and enjoyed a successful professorial and legal career in England. The last name is that of Zouch (1590—1660) an Englishman professor lawyer and judge. It is evident that with the exception of Vitoria all the others were contemporaries of Grotius, Suarez and Gentilis being but seniors by age.

Not all these names* are of equal importance in the history of legal philosophy. Posterity at any rate has not assigned the same value to the work of the five different thinkers. But ideologically speaking they belong together and should be regarded as constituting but one group.

In regard to one name that of Gentilis at any rate the judgment of scholars has been very flattering. He has often been appraised as almost a co-founder with Grotius of modern international law. His *De Jure Belli* or Law of War (1588—1598) is considered universally to be the best work on war previous to Grotius's book which came about a generation later. Hautefeuille in his *Histoire du droit maritime* goes so far as to say that if the human spirit had not produced Grotius's work Gentilis's treatise on war would have remained until to day one of its greatest masterpieces.

In recent judgment Grotius and Gentilis have more and more appeared not so much as rivals as complements to each other. For where Grotius is weak Gentilis is strong and where Gentilis is weak Grotius is strong. Gentilis is fundamentally historic and positive in spirit whereas Grotius is essentially a philosopher and idealist. Contemporary practitioners in positive international law find therefore greater points of contact with Gentilis than with Grotius. On the contrary those jurists who wish to investigate the basis and fundamental principles of the law of nations find Gentilis entirely disappointing. To them Grotius is the veritable master. For our present purpose therefore, we are justified in including Gentilis in the Grotian complex as but part of a whole.

Why now do we bring in the theologian Suarez § into the same group?

It is because although he is by profession as non political as possible his work on law *De Legibus* embodies in eminently modern conception of international law (which he calls *jus gentium*) and more especially that of a community of states.

However perfect is self sufficient the

* For all information about these five founders of international law I am indebted to five of the ten monographs in *Les Fondateurs du Droit International* (Paris 1904) with a preface by the editor A. Pillet professor of the history of treaties at the University of Paris.

† For Gentilis see *Les Fondateurs* pp. 89-91.

§ The merits of Suarez are discussed *Ibid* pp. 100—101 103 110—117 119 123.

communities may happen to be says he none can live without the help of the others. The states themselves are sociable beings. And in order to establish this conception of a society of a state Suarez does not have recourse either to Roman law or to Canon law. Rather he establishes the need of certain new laws and customs called *jus gentium* that can regulate this international community.

These two principles formulated by Suarez were unknown in the ancient and medieval world. But it is on these postulates so to say that the Grotian system is philosophically founded.

It is for the same reason that the other Spaniard and Church Father Vitoria,* although his work is about a century older than Grotius's is being accorded a place in the Grotian system. In his *Relectiones Theologicae* or Theological Lectures (1557) the term *jus inter gentes* i. e. law of nations is used for the first time in the history of legislation. And this term he uses in his definition of *jus gentium* (international law).

Further in the same spirit as Suarez Vitoria announces the interdependence of states. There is a *societas naturalis* a natural society of nations says he. "It is not permissible to a Frenchman to forbid the Spaniards to travel or even live in France and vice versa. The juridical organization of an international community is suggested by Vitoria. And this is to include non-Europeans and non-Christians as well as the American Indians and Moslems as clearly explained by him on various occasions.

Thus although a theologian he happens to be the laicizer of international law. And this both from the standpoint of the relations between Christians and non-Christians as well as from that of the Pope's relations with the sovereigns of Christendom. Vitoria's modernism is equally manifest in many of his principles of war. These have become commonplace in and through the international deliberations of the present generation. Last but not least he has the credit of proclaiming the principle of independence for the American Indians a principle which the African Conference of Berlin (1885) has placed on record in our days.

In philosophical workmanship it is difficult to analyze the depth and extent of a thinker's

spiritual indebtedness to others. One does not know precisely how much of his ideology Grotius owes his senior contemporaries and precursors in the same line. The work of Suarez is perhaps unknown to him. But Vitoria he knows intimately. And as for Gentili Grotius has not only made use of his writings but has also liberally borrowed of them the references to past history. The Grotian complex can therefore be described as a philosophical unit in no arbitrary sense.

Now remains Zouch* to consider. He wrote a number of books on problems of international law but his originality is considered to be virtually nil. According to Wheaton Zouch's chief merit consists in paraphrasing the work of Grotius.

Grotius was unpopular or rather hardly known in England for by the *Mare Liberum* (1609) he advocated the freedom of the seas a thesis not to be swallowed by the English people to which indeed Selden (1581-1654) the English publicist wrote a reply *Mare Clausum* (1635). It is the constant reference of Zouch in his *Jus Feciale* (1650) to the theories of Grotius that made the Dutch philosopher popular among the English students of international law. It may be said therefore that 1600 is the date by which Grotius became a British commodity and since he owes this "conquest of England to Zouch the latter's contribution to the Grotian complex will be conceded to be quite considerable.

It may be added finally that the term international law was as we have noticed in a previous section coined by Bentham in 1790. But to get it by translating the phrase *jus inter gentes* which occurs in Zouch's work. One must not however give Zouch the sole credit for this expression for as we have seen it can be traced back to Vitoria. In any case as it is to Zouch that the modern world owes the term through Bentham Zouch has another claim to be associated with the Grotian fathers of international law.

(c) Modernism in the Ancients

It is beyond the chronological limits thus established for the ideological system known

* See the chapter on Zouch *Ibid.* pp 321-322 328-330. It may be mentioned incidentally that although he is the popularizer of Grotius his work is more historical than philosophical. He belongs like Gentili to the positive school of law.

* Vitoria's contributions to "Grotianism" may be seen *Ibid.* pp 7 8 15 19 34 36.

as the Grotian complex that we have to locate the speculations of the Sukra cycle in international law. But it will have to be noticed very often that the Sukra jurists employ categories that belong to the Grotian world. Even in the matter of substantial contributions the conceptions of *Sukra* will once in a while appear very 'modern'. The Hindu professors of international law who are responsible for this treatise speak at times the language as well as the thought of Grotian fathers from Vitoria to Zouch.

The distinction between the ancient and the modern is as a rule deep indeed and yet it is not always quite sharp and clear. The "survivals", persistences of the primitive the innate universals, the eternal verities the fundamental uniformities etc., are too many and too conspicuous to be ignored or minimized in the history of philosophical evolution. Even although as curious identities or resemblances between the past and the present deserve observation and study in an analysis of the manifestations of the human psyche.

We have seen how in the field of institutions the French Revolution could not do anything but abolish the *droit d'aubaine* unjust and inhuman as it was and go back to the "primitive Roman law of aliens (*peregrini*) as embodied in the *jus gentium*". In other words the modern conception of equality had to be imported by Europe from the example of the ancients. Or rather the ancients knew how to solve certain problems and the moderns have but learnt to do alike.

Similarly, the old Hindu law of *Stridhana* (women's property) established an institution the like of which has been attempted by modern mankind only so late as in 1886 (The Married Women's Property Act of England). Another instance of how a human achievement chronologically primitive may still be substantially modern.

The history of public finance will furnish an interesting case in the Middle Ages as Brissard tells us in his *Histoire du droit public français*: "taxation as an institution all but disappeared. The lords or *seigneurs* knew only tolls or fines such as could be exacted from vassals or serfs for the use of the masters' properties. It was not before the birth of the nation states in the fifteenth and sixteenth centuries as a public function

of the state; i.e. as the right of the ruler to compel the citizens to pay out of their property began to be established in Europe. And yet in India under the Mauryas and the Cholas * and likewise in the Roman Empire the rulers knew how to demand "taxes" from their subjects as subjects; i.e. not merely as tenants or vassals on their personal estates. Modernism is thus an ancient phenomenon.

Such instances can be multiplied. They will not serve perhaps to disprove that the dynamic march of history has cumulatively established a state of things which *ensemble* is fundamentally different in form and spirit from that prevailing in the older epochs. But they none the less can serve to convince us that one should not be surprised if here and there certain items be brought forward in which the moderns and the ancients appear but as doubles of each other †.

It is only in this sense that the following judgment of Pillet in the general preface to *Les Fondateurs du droit international* is acceptable. Speaking of the pro-Grotians he says: "The law of nations as a scientific doctrine is not the fruit due to the progress of our epoch nor even a product of the French revolution or of the religious reform of the sixteenth century. The law of nations is much older than all this and if it is impossible in spite of Grotius to retrace it back to the Greeks and the Romans its origins must have to be sought if one is to be just in the remotest time of the Middle Ages."

The international jurists of the Sukra cycle have had no Hindu Grotuses to continue and develop their work until today. So far as Hindu thought is concerned it would therefore be absurd to claim for its creators a retrospective continuity from the moderns backwards just as Pillet does for the medieval thinkers of Europe. But in an impartial examination of the laws of war and peace as developed in the Sukra cycle the touchstone of the Grotian complex will not fail to furnish us with many significant data regarding the juristic sense and political tendencies of the medieval mind.

THE PSYCHOLOGY OF THE KU. KLUX. KLAN.

By A K SIDDHANTA MA STM (Harvard)

1 INTRODUCTORY REMARKS

An impartial statement on the K K K. is very difficult to obtain from the press because the secrecy of the Klan combined with the temper of the modern press would not allow that.

Placing the anti Klan Hearst (American) publications on one side and the secret Klan literatures on the other one can however see the two extremes

As an alien who has no interest in acquiring an American Citizenship the writer has found it rather easy to see the Klan from an impartial view point. A few illuminating articles in that famous American Weekly, The Outlook (by Stanley Ernst) and Prof Mecklin's book on the subject have helped the writer to strike the golden mean. The Klan literature handed over to the writer by a Klan member were of the greatest help (especially the Ashville Report, July 1923)

To be frank the Klan in spite of its strength has not appealed to the writer with any amount of real strength. To a sensible American the Klan will not be thought of as a national help. It is a good protestant fraternity for whites alone but when it talks of America as a whole it reminds one of the mother of two who will not allow one of her children to enter its home because she loves the other one alone.

2 THE HISTORICAL BACKGROUND

According to the latest edition of the 'Webster International

The Ku Klux Klan is a secret political organisation in the Southern States (U S A) a live for several years after the close of the Civil War and having for its chief aim the regaining of the political power of the freedmen after this organization had come to be chiefly made up of the more restless and lawless elements and had committed numerous outrages the Government in 1871 by the passage of the Enforcement Act (popularly known as the Ku Klux Act or Force Bill) took steps to suppress it and thereafter its activities gradually ceased.

According to Prof J M Mecklin (his recent book "Ku Klux Klan"), in 1873 the Klan was outside the South, a synonym for the most sinister and dangerous forces in American life. No one dared to prophesy at that time that within less than half a century this secret oath bound order, which was once associated in the North with clandestine murder and masked rebellion, would be resuscitated and spread to every section of this great country. Such however is the fact. From the original 34 members with which Mr Simmons started in 1915 the number has now (1924) reached more than five millions*. All the principal journals and papers in this country are daily printing lines, columns or pages which are directly or indirectly concerned with the Klan.

When however we enter into the topic we must first distinguish between the two stages of the Klan organisation that have occurred during the last ten years (1915-1924)

3 1915-1924, THE KLAN KIEZEN

The Modern Klan was organised by William J Simmons in 1915, enjoyed a precarious existence for several years, suddenly assumed proportions of national importance in 1920 (after the Clarke Tyler conjunction) survived the attack of the powerful 'New York World' and a searching investigation by a committee of Congress and today boasts of a following that approximates more than five millions.

(a) SIMMONS CLARKE REGIME

The first stage of the modern Klan life starts from Oct 16 1915 when Colonel William Joseph Simmons together with 34 friends (three of which were bona fide members of the Old Klan) signed the petition for a charter. The charter was issued by the state of Georgia Dec 4 1915 and a special charter was granted by the superior court of Fulton county Georgia July 1 1916.

The following is taken from the Constitution

* The number is however now 1926 on the decline

and By laws of the Order—a Summary from the Klan pamphlet—'Yesterday, To day and Forever' by the Imperial Wizard

(OBJECTS AND PURPOSES) ARTICLES II (SECHMARISTO)

Section 1 The object of the order shall be—a common brotherhood of strict regulations for the purpose of cultivating and promoting real patriotism toward our Civil Government, to practise an honorable clanishness toward each other to exemplify a practical benevolence to shield the sanctity of the home and chastity of womanhood to maintain white supremacy, to teach and faithfully inculcate a high spiritual philosophy through an exalted ritualism and by a practical devotedness to conserve, protect and maintain the distinctive institutions rights privileges principles and ideals of a pure Americanism

Section 2 To create and maintain an institution by and through which the present and succeeding generations shall commemorate and memorialize the great sacrifice chivalric service and patriotic achievements of our original society—the Ku Klux Klan of the Reconstruction Period of American history

Section 3 This order is an institution of Chivalry Humanity, Justice and Patriotism, its peculiar object being *first* to protect the weak and the innocent from the lawless and the brutal *2nd*, to protect and defend the U S A constitution and law *3rd* to aid and assist in the execution of all constitutional laws to do the duty without fear and without reproach

As to what it is—the Klan is, according to Emperor Simmons's words a standard fraternal order promulgating fraternal conduct and not merely a social association. It is a duly incorporated legally recognised institution honest in purpose noble in sentiment and practical in results that should command the hearty respect of all real Americans throughout the nation. It is not encouraging or condoning any propaganda of religious intolerance nor racial prejudice. It is an association of *Real* men who believe in *Being* something in *Doing* things worthwhile and who are in all things 100 per cent *Pure* American yet it is vastly more than merely a social fraternal order

As to the prerequisites to citizenship in the Invisible Empire, the Imperial Wizard's statements may be boiled down thus —

(a) This order is not an intra exclusive institution but its membership is composed of 'picked' men (b) The member of the order must take his oath seriously must swear an unqualified allegiance to the U S A government, its flag and its constitution

(c) No man is wanted in this order who does not esteem the government of U S A. above any other government, civil political or ecclesiastical in the whole world

(d) Only native-born white American citizens who believe in the tenets of the Christian religion and owe no allegiance of any degree or nature to any foreign government nation political institution sect, people or person are eligible

(e) The organisation stands for such principles as — maintenance of law and order among themselves

suppression of graft by public office-holders preventing the cause of mob-violence and lynching sensible and patriotic immigration laws separation of church and state and freedom of speech and press a freedom of such that does strike at or imperil nor government or the cherished institutions of our people

(f) The Klan has no intention to make any fights on the Roman catholic church as a religious organisation but it opposes any attempt to combine the church and state in the U S A Further the Klan does oppose the attitude of the Catholic church in our public school system

The Klan is not anti-Jewish it is strictly a Christian organisation and hence Jews cannot sincerely be a part of it

The Klan is not anti negro only it believes in the god given inferiority of that colored race, so long the negro stays by itself without claiming social equality and intermarriage he will be left undisturbed

(g) The white race is the ruling race by right of inheritance and so long it has not to surrender this right or to compromise it with any other race black red yellow or brown it won't bother with the others Let all the non white race understand that in the long run the white man is the truest friend and safest counsellor of all other races

The first five years of the Klan life (1915-20) were very slow in growth The Imperial Wizard Simmons had proven himself to be a capable "spellbinder" but an unpractical dreamer with little organising ability His society was in financial straits and it had a membership of not more than five thousand At this juncture two expert organisers joined Simmons Mr Edward Young Clarke and Mrs Elizabeth Tyler were both experienced organisers and proceeded to 'sell' the Klan to the American public (to use Prof. Meckler's phrase) That was in June, 1920 And by the next year (October 1921) when the Klan was investigated by Congress the Klan had grown to about 100 000 members

This period of remarkable expansion was accompanied by a wave of lawlessness and crime which rightly or wrongly was associated with the Ku Klux Klan The New York World, in spite of its altruistic intentions could not prove conclusively the accusations brought before the Congress against the Klan The World's exposure was published in 18 leading dailies, including such southern papers as the New Orleans Times Picayune Houston Chronicle, Dallas-News, Galveston News, Columbus (Ga) Enquirer-Sun, and the Oklahoman

Perhaps the secrecy of the order and the loyalty of its members towards the Klan saved itself from an untimely death

For the want of definite legal proofs no ground for Federal action against the Klan was established. The Klan, in consequence, got a better footing and ever since that year (1921) it has flourished like a green bay tree and to day (1924) there are about five millions of Klan people.

(b) THE EVANS' REFORM.

The Congressional inquiry, the exposures in newspapers and magazines and the storm of condemnation which followed nearly broke Simmons' heart. He understood it very little as Stanley Frost puts it ('Outlook' Dec 26, 1923). Although the Klan was so organised that he could never have been ousted, he resigned, undoubtedly under pressure from the Evans' crowd.

If Colonel Simmons was a preacher and a dreamer, Dr Hiram W. Evans, a Texas-dentist was a practical man. About the first thing that Evans did when he took charge two years ago was to cancel Clarke's contract—a contract with Simmons whereby this clever organiser of drives was getting 80% of the initiation fee of \$10 (ten dollars) each. Clarke had built a splendid home in Atlanta but Evans lived for a while in a \$65 a month flat and his present home is a modest one. When Evans took charge, the Klan treasury held about \$100,000. The finances by the way, as Stanley Frost puts it, are under complete control of the Wizard. By July 31, 1923 the treasury held assets of \$1,087,273 and liabilities of \$1,705 only.

After attending to the graft question Dr Evans took up the question of lawlessness. The practical mod of Evans discovered that 'non violence' would strengthen the Klan cause considerably in the North. First he attended individual cases of violence and when he found out that this was not enough, called a meeting last July (1923) at Asheville North Carolina. The full text of all the papers read at this July meeting of Grand Dragons (i.e. State heads)—which have been kindly lent me by a Klan member reveals a new light. Of those 26 or 27 papers read in that meeting some are as bright and cheerful as the others are gloomy and dangerous. There is the same stress given on the white skin on its non-Jewish and non Catholic but its protestant side, the racial ideals e.g. 'we stand for white supremacy' and that 'we must keep this a whiteman's country' were preached to the extreme, but more thought was given

to make the Klan a solid and widely expansive body. Among the constructive program placed before the meeting the one read by the Grand Dragon of Oregon (on the Junior Klan question for boys) seemed something very interesting to me and I shall critically examine it in a new section later. But it remembered here, the Evans' regime did not change the ideal originally set by Simmons which I have already quoted partly all what Evans did was to re-word them only in a few cases and follow a practical and safe method to achieve the end. Evans accepted the Simmons' ideals purposes, and organisation and tried to achieve success in a better method with this attitude. Evans had naturally to retain all the weaknesses that were present in the Simmons' Klan.

4 THE OLD EVILS IN THE EVANS' REGIME.

We have already noted the several prerequisites to citizenship in the Invisible Empire and I have quoted to the effect that the Members of the Order must take the oath seriously. This Oath of allegiance to the Klan is covered by four sections with 'blank' spaces to be filled up by the intending member. The sections are on (i) Obedience, (ii) Secrecy, (iii) Fidelity, (iv) Klan-ness. Anyone interested with the actual wording of the Oath may apply to any Klan offices which are in these days (1924) open almost day and night or can see part of it quoted by Stanley Frost in 'Outlook' (p. 21) of January 2, 1924.

When General Forrest, the Grand Wizard issued an order which dissolved the original Klan in 1865 after its four years of life the idea behind his act was the abolition of 'an Organisation of Terror'—an organisation which was so effective that its creators destroyed it carefully and completely.

Yet this is the organisation which the new Klan has imitated and of which it claims to be the heir. This is the tradition it took over. What is worse the new Klan (Simmons' and Evans) has added to the formulas and purposes of the older order, which drew no line against Catholics, Jews or alien borns, consequently, some members of the older Order now opposes the Klan as started by Simmons, systematised by Clarke and polished by Evans. One such member wrote, (quoted in 'Outlook' Jan. 2, 1924)

This outfit is a plain imposter. There is nothing of the Old Klan about it but the name and nonsense. ** The old Klan had Catholics in it and Jews

No man who loves the memory of the confederacy is going to join a crowd that would bar not (1866) Judah P. Benjamin General Beauregard and a dozen like them No Sir!

Thus we see the twentieth century Klan which as Simmons says (Meeklin P 4) he took twenty years to think out as to how to launch, came out after all in 1915 as a very narrow organisation—narrowed down to native born, white Protestants only. From the protestant point of view Simmons' attempt might have had its bright side, but from the national—may from the really Christian point of view it was very narrow indeed. As a 'crusade' as a 'curing agent' within Protestantism itself, the Evans' Klan has undoubtedly its value but the Christian 'brotherhood of man' does not necessarily mean white Protestant brotherhood only. The Klan is claimed to be a white Protestant fraternity with its own secrecy and ritual. Talking of secrecy, however, the Klan differs from the secrecy maintained by others in that it hides its members as well. Yet this 'hiding' is very necessary for the success of the Invisible Empire: quick and effective work is thereby easily attained. Time is perhaps coming when the hoods and masks will be replaced by that 'Klon bottom' all the time. The invisibility of this Klan Empire make itself utterly irresponsible except to the consciences of Klansmen: it is a great risk no doubt, the public would naturally oppose a 'power' which has unlimited scope and power in the dark. Further, the implied threat of the mask is a weakness to Klan structure itself. The mask itself is a threat and public opinion would naturally reach against it, besides, an irresponsible adventurer or a disguised criminal can find an easy shelter within this masked band if, of course he has the tact to retain his disguises carefully within the Order.

Further, in a democratic country like America the Empire idea with an emperor at its head is not very encouraging. The power and autocracy with which the Imperial Wizard reigns and controls the funds does certainly not suit the mind of America: the form of organisation therefore must be changed. The old 'order' need not be adopted now. Why adopt those grotesque and ludicrous names and language? Strainy Frost says, By official title its officers are an array of mythological monsters and nightmare absurdities which just naturally startle chuckles (P 22 Jan 2 1924 Outlook). For example, gathered round the Imperial Wizard,

are a Kloneilium composed of the following: "genu" all "imperial" —Klaff, Klazik, Klukard, Kludd (chaplain) Kligrapp (secretary) Klabe (Treasurer), Kludd Klargo, Klexter, Klousel, Night Hawk and four Klokan.

The proclamation of the Klan constitution reads:

"To all Genu Grand Dragons and Hydras Great Titans and Furies Giants Exalted Cyclops and Terrors and to Citizens of the invisible Empire etc.

The days of the week in the Klan Kalender are, "dark, deadly, dismal, doleful, desolate, dreadful and desperate", the weeks are "woeful, weeping, wailing, wonderful and weird" and the months are bloody, gloomy, hideous, fearful, furious, alarming, terrible, horrible, mournful, sorrowful, frightful and appalling." Thus the revised Klan constitution (by Dr Evans) was officially proclaimed on Nov 29, 1922 or on the Doleful Day of the Weir Week of the Terrible Month of the year of the Klan LVI" (original Klan dates to 1866).

All this symbol of 'alarm' and 'terror' is not only funny to the public mind but quite unpsychological for an intelligent member to take seriously as he ought to. It was asserted by Dr Evans that all these difficulties together with many others are partly or wholly real ones and that he was making attempts to remove or modify them. But the Imperial Wizard defends the mask and hood very earnestly because they are very valuable as advertising features and are impressive to the average mind at least. All this is necessary to gain more and more members: thousands are being initiated at every initiation ceremony so that before the November election (1921) the order might control members enough to control the helm of the government by ousting all non protestants and non-whites.

Is the Klan trying to bring out the Kingdom of God in America on a strictly sectarian basis? All Americans have to face this question with an open and a critical mind.

5 THE KLAN-MIND

Eliminate the 20 millions of Catholics, the 12 millions of Negroes, the two or more millions of Jews and 20 millions of foreign born 54 (or so) millions in all, and from

* Fortunately for U S A the Klan people did not succeed as well as many outsiders expected.

among the 50 millions that is left find out your Klan member

The Imperial Wizard Evans openly declares that the Klan is mainly for the average people and hence the background, rituals and work of it would be such as to impress such a class more than the others. It is true that the Evans regime of the Klan boasts of a pretty good number of the better sort of people—protestant preachers, businessmen or students, but most of them do not react on the 'popular' external aspect of the Klan as the others do. The preachers who think of Catholicism as nothing but a bundle of old type formulae, the businessmen who need some protection from the more efficient business like Jews, and the students who want to see more of life through a big organisation or who were brought up in an uncritical homogeneous atmosphere—such people would naturally add to the members of the Klan. The presence of such an element might do the Klan some good in the long run when the better side of humanity, the really moral side that is now lying hidden in such 'qualified' folks would take the upper hand and change the Klan wholly from inside or destroy it altogether when the time comes.

The Klan originated in the south and even now it has its stronghold in the south where the majority of the native whites are intensely protestant. Originally Presbyterians they are now mostly Baptists and Methodists (Meeklan P 100). It is no wonder then why the Baptists—not all of them—are not anti Klan. Why criticise the Roman Catholics? These Southern Protestants are no better than the Catholics so far as the strength of 'unreasoning loyalty' goes. Uncritically and loyally these Southern Protestants swallow the crude ejaculations of Mr Bryan and the Fundamentalists against Evolution and Modernism in religion.

It is this mental background with its provincial fear of all things foreign and its uncritical but loyal Americanism which places the people in a better situation to fill the Klan—through. The strength of the Klan lies in that large, well meaning but more or less ignorant and unthinking middle class whose inflexible loyalty has preserved with uncritical fidelity the traditions of the original American stock. Let the truly patriotic American, the American who believes in a true Democracy find out if the most

dangerous weakness in a democracy is the uninformed and unthinking average man!

But the Klan is not confined to the South it has spread considerably to the North as well. It is so because there are Psychological factors which are common to the mind of America as a whole.

This organisation with its mysterious signs, its queer name its fantastic costume, and its ritual offered some relief from the deadly monotony of small town life. Its moral idealism which is so superficial and cheap from the international and intellectual point of view, fills a need not met by business or social and civic life. Poor dry souls! Has Protestantism been failing through its want in rituals etc. Why not go then to Catholicism and take something from them as the Church of England has—instead of going away from it to find something akin to it in some unreligious way? Sinclair Lewis, through his "Main Street" portrays the dreariness of small town life in the middle West (U S A). No wonder the Klan is popular in parts of this region as in the south.

Thus we see that the Klan has learned, as its inveterate enemy, the Catholic Church, learned long ago, the power of the appeal to the spectacular and the mysterious. Are we entitled to draw the conclusion then that 'the Klan is a refuge for mediocre men, if not for weaklings and for obvious reasons'?

The Klan talks of 100 p.c. Americanism and so one finds on every page of the Klan literature an insistent, imperative and even intolerant demand for like mindedness, the eternal quarrel of the Klan with the Jew and the Negro is that mental and physical differences seem to have conspired to place them in groups entirely to themselves so that it becomes to all intents and purposes impossible for them to attain with anything like completeness this like mindedness synonymous with 100 p.c. Americanism.

Behind this like-mindedness of the Klans' insistence there is a measure of *democratic commonsense* however. The modern Klan, more or less a post war organisation, undoubtedly represents the natural reaction of conservative Americans against the perils of revolutionary and un-American ideas. It is a militant attempt to secure team work in national life (Meeklan P 111).

Back however, of the Klan's crude insistence upon like mindedness there is a shallow and superficial thinking. To the average Kiansman what appears on the surface

of things to be alike is alike what appears unlike is unlike The mere accident of a black skin is a great excuse for the negroes total elimination from the charmed circle of 100 p c. white Americanism

That it is God's wish that a Negro be a subordinate citizen to his white Chnrch brother and that every Catholic and Jews are consciously or unconsciously alien in nature—these are too sweeping generalisations for a thoughtful mind to accept All the Klan asks is a superficial conformity—says Prof Mecklin on this point

The problem of the Klan is the problem of stubborn uncritical mental stereotypes Thousands of Klan members have stereotyped conceptions of all foreigners as Bolshevists of labor unions as socialistic of men with black skins as essentially inferior to men with white-skins, of the Pope as the Anti Christ of the book of Revelation and of every Catholic as an actual or potential traitor to his country Much might be said in defense of stereotypes as part of our mental furniture. They are useful in that they are economical The average man for whom the Klan is ever open is saved by the mental stereotypes of all the mental wear and tear which would otherwise have been a bar to his progress But our stereotypes should at all times be our mental servants and never our intellectual tyrants Does the average Klan folk go any way better than the Catholic Churchman in this respect?

Lastly the part played by the feelings aroused by the war must not be ignored in the Klan Psychology The war with its hymns of hate its stories of poison gas and human carnage its secret spyings upon fellow nationals its account of Belgian atrocities, its imprisonment of radicals its fearful tales of Bolshevik designs upon American institutions had opened up the fountains of the great deep of national feeling (Macklin P 122) The Klan offered just what the war torn distraught emotions of the nations demanded The irrational fear psychology that followed on the heels of the War has had a great influence on the Klan The fear of the Negro in the south the fear of the Catholic in power the fear of the Jew in business—all these fears have compelled the Klan to build a fortified wall round its protestant boundary The fear Psychology has taken a great part in America's modern Immigration policy America is a great business country The highly individualistic protestant has a

lower position in this business world than the Catholics and the Jews—the latter two having better co operative instincts guiding them Is the Klanism then just an attempt to make the protestants morolike the other two enemies in unity and co operation in business?

6 KLAN AND AMERICA

America is more like India than it is like England at least in one aspect I mean in its heterogeneity of race mixtures On my way to America from England I met with the world represented in one boat These people who have been coming in great numbers so long and would still be coming on now though in lesser number I have to be assimilated If there are non assimilable elements they must not come here those who have already come but have been living so long as aliens must either be assimilated or suffer the consequences That is what may be termed the sentiment of a fullblooded American

The Klan's attitude towards the Immigration policy of U S A is very natural and justifiable The patriotic motive of the Klan man is very praise worthy he is right when he pleads for a reduction of the number of immigrants but when he pleads for the superiority of the nordic race and the inferiority of the mediterranean races there is some doubt in our mind as to the real motive of the Klan man behind such ideas

Further when the Klan mind goes to Americanise America by pleading for abolishment of all parochial schools it is going a little too far the sentiment of the Catholics is as valuable as that of any others If the Catholic father feels that there is no religion in America's modern public schools he has a right to break his boy or girl in a more suitable atmosphere Religion does not keep a man from being patriotic The American Catholics are not Roman Catholics in the strict sense of the term To a Catholic the Pope may be great but in times of need and call—the country comes first This was exemplified in the last war America fought with Germany and yet many German Americans fought against their fatherland As a country itself America has a great assimilating power The welcome the new comer gets here (The black skins alone excepted) the privileges and liberty he enjoys in this country turns him at once as one of the many Any one who has worked in an American

Catholic home knows how different is be from the others of his faith outside America. The aged alien may not easily assimilate but his children could if only they are not discouraged. The Klan is now thinking of opening a Junior order for the American boys. Such an act would but prepare America for another civil war in the future—a War between the Protestants and non-Protestants. The Grand Dragon of Oregon in his speech in the July meeting (at Asheville, last year) said, the boys of America have been much neglected so far. The Y M C A The Boy Scouts of America, the De Molay and various Church organisations have done much but have all fallen far short of the wholesale achievement and permanent service which the growing needs of the boy require. Then the Oregon Dragon describes what the Junior Order of the Klan could do in this line: the gospel of hate would be preached complete and the future American would grow up in a narrow atmosphere if he is allowed to feel differently about the non-Protestant and non white from the very childhood. The international bond of love and fellowship that is so well fostered by the 'scouting' and other Kindred Organisations can never be surpassed by a sectarian, narrow fraternity. If the Klan feels for America first and for America as a whole, it should think twice and see how the different elements up here can live more in peace and harmony. All what Dr Evans and his associates need now is a little bit of thinking in the truly Christian way.

The Klan in politics is a very interesting figure in these days. As there are both Democrats and Republicans who are Klan members, it cannot come forward and have a platform of its own because in such an attempt as that it will destroy itself. So all the Klan can do now is to name its 'pet' candidate*. The Klan is trying to capture the whole country by and by, and the first step to that effect is to enlist as many members as possible. The quality of the membership has naturally now been deteriorating everyday and when the elections are over, if Dr. Evans eliminates most of the undesirable elements that are now pouring in the Order there will come a danger to the Klan itself from all such rejections as has already come from the Simmons-Clarke pact.

If however all members be retained inside the Order without question then too the danger is there the worse types will contaminate the better ones and hence the quick dissolution might come as it came in 1869 so suddenly.

7 CRITICISM AND CONCLUSION

The Klan gives its first importance on the 100 p.c. Americanisation. Well, the conditions of nationality are: 1) Homogeneity of mind (2) inter communication (3) Leadership (4) a clearly defined national purpose (5) international rivalries (6) administration of backward people (7) continuity of existence. Let us see how far is the Klan helping America to form a real nation.

(1) The American Government through its laws, liberty and principles of education is doing its utmost to produce a 'bomo' out of the 'hetero' geney, but the K K K is trying to produce a white protestant homogeneity on a principle which does not back the broad principles of the Government which is for the people and by the people. In its wording of its principles the Klan does not preach hate but outside its circle it amounts to that narrow sectarianism can not lead to a universal brotherhood.

(2) If by 'national life' is meant the white protestant life of America, there is the 'freedom of communication' there, but between the K.K.K. and the non protestant world there is a thick wall.

(3) Lack of good leadership has been a great factor in the Klan so far. Time will show if Dr Evans is a good leader, to me he is all right as a Klan man and might do well as a President of Klan America but certainly not of the broader and more sensible America.

(4) The Klan has a clearly defined purpose but it is hardly national. The Klan ideal is only for 50 p.c. or less of America. If the Klan wants to unite the white protestants it might be a great success but let it please stop talking of the national policy of America as a whole.

(5) Through rivalries alone the Klan might be doing a great good to the country if, of course such rivalries lead through the proper channels. Through rivalries, each organisation might find its good and bad side with reference to the whole (which is the 'Constitution of America' in this case) and could lead itself towards the common goal.

* In the last U. S. A. elections they did support their pet candidate but not very successfully.

We shall wait for the coming constructive programs of the Klan. But the danger comes when the rivalry is based on religion or on some such delicate issues.

(6) This action would do itself good if instead of letting go the Negro problem, ie instead of being either bitter or indifferent to them the Klan takes up the problem in a constructive mood. When the Klan comes forward and stops all those lynchings when it seeks to give the Southern Negroes their share of education then only it would be doing a great 'good turn' to the nation.

(7) America so far has been a very new country and it can assume its future continuity of existence through a common co-operative thinking—a step which is impossible for the Klan of to day.

So taken as a whole the Klan is not doing so much of patriotic service to the country as it thinks it is. It is a great white-protestant experiment for average people and as such is a blessing to such people but so long it stays on its narrow unchristian level America as a whole does not much expect from it except as a menace

to the other loyal American citizens who are outside the Klan. Its attitude towards the color of the skin is ignorant and amusing, its arguments for a white-supremacy is unscientific and unhistorical. (For ex it says "Distinction among races is not accidental but designed") its sentiment for keeping America a white man's country is rather a late effusion and is paradoxical. The economic life here wants Negroes to come but they must stay as ignorant and obedient people thus the Klan pleads for a subordinate citizenship for the Blacks. 12 millions of these blacks have so much scared the whites! The purity of blood' question is a great thing and the Klan can start the work by first educating the white males and then the blacks as well. The right type of education and not laws and external regulation can only stop the intermixture of blood.

In short, when the Klan attempts to make the average white protestants unified in business Church life and in politics—it might be a success but it should not talk of attempting anything higher so long it sticks to its present ideals.

STATUS OF INDIANS ABROAD

(A HISTORICAL SKETCH)

By R. DAYAL, i c s

[Communicated by the President Indian Unity League Cambridge]

INTRODUCTION

THE problem of the Indians overseas is of vital importance not only to India but to the whole human race. For India it is a question which affects her honour and self-respect but for the rest of the world its right and just solution means the stability of peace and harmonious relations between different peoples. The Indian problem is only a part of the greater and more complex inter-racial problem—the problem of the whites and the coloured. The general racial prejudices are in no slight degree responsible for the embitterment and resentment felt towards the just aspirations of the Indians to acquire equal rights with the Europeans

racers wherever they happen to live together. They are almost completely resident in the different parts of the British Empire and only a small number are in foreign countries. But the problem involves not only the status of the few millions that are resident abroad but the status of the whole Indian race.

The question splits itself in two parts. The first refers to conditions regulating the admission of Indians to other parts of the world in particular to those of the British Empire. The second bears on the disabilities of those Indians who are actually domiciled in those parts.

I

To take these two aspects in order we

shall first deal with the Emigration of Indians. From 1800 onwards Indians crossed to Sumatra to work on the sugar, spices and cocoanut plantations. The emigrants mostly belonged to the working class and thus has much to do with the later complexities of the case. The officially assisted emigration dates sometime after the abolition of slavery in 1833. In 1830, some 150 emigrants were taken over to Bourbon by a French merchant. The abolition of slavery was unfortunately followed by its worse (because it was disguised) version in the form of 'indentured labour system'. One need not be surprised if the private diaries of British statesmen in these times were to reveal that the prospect of commanding a large number of Indian labour had much to do with the acquiescence in the abolition of slavery, accorded by the British colonists and planters. The French, the Spanish, and the Dutch colonists depended on Negro labour and so did the British for a long time. But when once in possession of a great country like India the British got an advantage over their commercial rivals in respect of labour. Did this influence the British lead in the matter of Abolition of Slavery? Perhaps. Be that as it may, it is interesting to notice the chronological sequence, slavery abolished in 1833, the system of indentured labour that has been regularly described as semi-slavery was started in 1834.

The Emigration Act of 1837 permitted emigration to Mauritius, British Guiana, and Australia, later it was extended to Jamaica, Trinidad, Natal and Fiji. The Indentured labour system was looked down upon by the emancipated negro, and always pricked the conscience of the Government of India, as also of the Imperial Government. This is evidenced by the numberless committees appointed to look into the abuses of the system, the various suspensions and resummptions of the system. A few dates will help to see clearly how the abuses of the system were apparent from the beginning and now yet the system was allowed to continue, under protests and petitions of the planters. In Mauritius, the system was introduced in 1834, suspended in 1837, resumed in 1842, again suspended in 1844, resumed in 1849, finally abolished in 1911. In British Guiana the system was introduced in 1837, suspended in 1838, resumed in 1844, suspended in 1848, resumed again in 1858, and finally abolished in 1917. In Natal it

originated in 1860, suspended in 1869, resumed in 1872 and finally abolished in 1911. The evils resulting from this system of semi-slavery in the form of degraded economic, moral and political condition led to its abolition altogether in 1922. The Emigration Act of 1922 provides for the assisted emigration of the unskilled only on such terms as the Governor-General in Council may specify after they have been approved of by the Indian Legislatures.

Ceylon and Malaya are exempted from the provisions of this act. Deputations from Fiji and British Guiana visited India after the passing of the act and laid schemes for the future settlement of the emigrants in the colonies. The Indian Legislature consequently appointed a Committee to report on the conditions in British Guiana. The Report makes a very sad reading. It is not unanimous. The majority report of the Indians is strongly against the resumption of emigration unless material improvements are made in the conditions of the colony, and unless the colony gave (i) a guarantee of equality in political status, (ii) extension of educational facilities, (iii) a recognition of Hindu and Muslim marriages, (iv) better housing especially for married emigrants, and (v) improvements of the supply and quality of drinking water &c. The English member saw nothing objectionable in the conditions in British Guiana, and thought that emigration affords Indians a good chance to improve their material condition. The Indian Community in the Colony does not favour emigration from India till 1930, as they want 'time to settle down and raise themselves from the present state of backwardness. They are opposed to a purely 'labour scheme'. Under these circumstances, it is unlikely that emigration to British Guiana will be resumed, but the report brings out the main points about the Indian situation. It may be remarked that the conditions in the other Colonies e.g. Fiji, Jamaica and Trinidad are equally bad.

There are two facts which may be noted in this connection. The first is that the Colonial Government has always showed itself solicitous of the interests of the planters only. The colonies are really commercial concerns. Questioned about the inadequate housing provisions for the married people and the immortality prevalent, one of the sugar magnates of British Guiana said 'Sugar plantations being business

concerns have to be run on business lines and that they had to consider proposals involving additional expenditure recurring or non recurring from that point of view etc. The penalties imposed on labourers for trivial offences and the general treatment meted out are deplorable. The state interference when and if it comes is in the interests of the planters. Thus it is that more than 250 000 coloured people 125 000 of which are Indians are kept by about 10 000 Europeans in a state slightly better than that of slaves. The favourable scheme put forward in 1920 was repudiated by the Colonial Government in 1922 when the Indian Deputation arrived there—because the economic boom of 1919 had been superseded by a depression in 1921 and the planters had no need of any emigrants. The flow of Indian labour is thus to be regulated by the need of the European planters and their conditions of life there are to be judged and decided by them.¹

The second fact is the great difference between governmental professions and governmental practices. In some cases Indians suffer from no disabilities on paper but in actual practice they do not enjoy the privileges they deserve in virtue of citizenship and constitution of the Colony. The Indian is considered to be of an inferior race and is described in the official records as of the Coolie race. It is a matter of satisfaction that after an injustice done to India for over a century the system of indentured labour is now abolished.

So far the question of Indian emigration has been dealt with. It rested with the Indian Government, which was responsible for its introduction and which has now abolished it. The right of entry into other parts is at the disposal of the respective governments and we shall now see how Indians have fared in that respect.

Except for the few colonies where the European members are still anxious for immigrant labour the other dominions of the Empire have shut out the Indians. Australia, New Zealand, Canada and South Africa have been fighting for the policy of white dominions for long and have been fairly successful. The United States of America have after a long time joined in the racial strife and is determined on shutting out the Asiatics. The reasons for such an attitude are given in different forms by different governments and may be briefly considered here.

The whole question of immigration came

forward in an urgent form in Australia in 1896. Several of the states had already passed laws restricting the immigration of the Chinese and in that year agreed to extend these anti Chinese laws to the other Asiatics as well. Bills for the object were prepared by the states and sent up for the approval of the imperial government. New Zealand and Tasmania however exempted Indians from the provisions of the bills. The imperial government reserved the bills and discussed the whole matter at the colonial conference in 1897. Mr Chamberlain described these bills as unsatisfactory and approved of only the Natal Bill. While fully sympathising with their desires to check the influx of these people whom he described as alien in civilization, alien in customs, alien in religion and alien in traditions, he said that to exclude by reason of their colour only all Her Majesty's Indian subjects would be an act so offensive to those peoples that it would be most painful to Her Majesty's government to sanction it. It may be noted that the Imperial Government had no idea of disallowing the bills and what Mr Chamberlain cared for was simply the form under which exclusion could be secured. He wanted in fact, the states to frame bills similar to the Natal Bill.

Now the Natal Bill embodied a test of being able to write in a European language besides excluding of course paupers, idiots, diseased persons, criminals and prostitutes. According to Mr Chamberlain's wish several states passed laws on the lines of the Natal Bill in a couple of years.

On the coming into existence of the Commonwealth a General Immigration Act was passed in 1901 which provided for a language test, and this amended in many particulars in 1910 is still in force. This however is rarely applied for the mere existence of the test keeps out coolies and further an informal agreement between the Government of India and the Commonwealth in 1904 allows free entry to merchants, students and similar people who do not desire to settle down in the country permanently. But even a domiciled Indian cannot get permission for his wife and children to stay in the country if they have not legally acquired as residents a domicile in the Commonwealth.

CANADA

In Canada British Columbia is the cause of disturbance of peace. Since 1897

Canada had been trying to restrict immigration of the Japanese and Indians, but could not successfully do it till 1908. The laws previously made were disallowed and declared void by the courts. The Japanese Government agreed (in that year?) to see that not more than 400 Japanese went to Canada every year, the Canadian Government agreeing on its part to allow admission to every Japanese with a passport. The Government of India did not accept any system of restriction. Determined to prevent the entry of Indians, Canada framed rules which, in effect though not in form completely shut out the Indians. The rules require for instance that a would-be immigrant must travel to Canada by a continuous travel from his original place or purchase a through ticket in advance must possess 200 dollars in his own name and must not belong to the artisan or skilled or unskilled labour class. Now there is no direct steamship service between India and Canada, and thus no Indian can go and stay there, except for temporary purposes such as study business and travel.

SOUTH AFRICA

Natal passed the Immigration Act in 1897, and mention has already been made that it was accepted as a model for similar acts by the Australian States. The Cape Colony followed in 1902, and introduced the dictation test in a European language. In Transvaal Indians were efficiently kept out of the country after the Boer War by the use of wide powers under the Peace Preservation Ordinance of 1902. One of the first Acts of the responsible Government of Transvaal was to pass in 1907 an Immigration Act which absolutely excluded the entry of any Indian not already domiciled there. It also gave the minister in charge wide discretionary powers, to remove from the Colony any person, deemed to be dangerous to the 'peace order and good government.' The imperial government assented to the bill after assurances being given in respect of the entry of visitors of ruling chiefs, distinguished persons and high officials, and also in respect of legislative restrictions on the use of the discretionary powers by the minister. The Orange Free State excluded Indians freely.

After the Union of South Africa came into existence the Government of India decided to stop all immigration to S. Africa from July 1911, on the ground that there

was no security that Indians would be allowed to become citizens of the Union, if they so desire, after the expiration of their indentures. On the other hand, the Union Government passed an Immigration Act on the usual lines, with a short language test. Free immigration of the Indians among the different parts of the Union was not allowed. There were no Indians in the Orange Free State, and it was felt to be most undesirable that either there or in the Transvaal State it should be possible for the large population in Natal to penetrate. It was forbidden to meet some of the grievances put forward by the late Mr Gohale an Immigration Regulation Act was passed in 1913. It defined the prohibited persons as 'persons or class of persons deemed by the minister, on economic grounds on account of standard or habits of life to be unsuited to the requirements of the Union or any particular State thereof,' or persons who are 'unable by reason of deficient education to read or write any European language to the satisfaction of the Immigration officer.' The same year the minister of the Interior declared all Asiatics to be unsuited to the requirements of the Union and the validity of this declaration was upheld by the Supreme Court in 1923. The act permitted the entry of the wife and children under 16 years of age, of any person who was legally domiciled including the wife and children of a lawful and monogamous marriage duly celebrated according to the rites of any religious faith outside the Union. Now, when the occasion came up for the application of this principle as in the case of one Nalsan Bibi the courts declared her to be not eligible for entry into the Union although she was the wife of a person domiciled therein, and held that no Indian marriage could be deemed monogamous if by the religious faith of the Indian in question he could have more than one wife without illegality. Feelings of resentment were roused, and this interpretation was described by Sir Narayan Chandavarkar as a legal fraud, if there could be any, and he argued that if such a marriage could be polygamous so could be a Christian marriage, since a Christian may marry another after divorcing his first wife. Mahatma Gandhi restarted his Passive Resistance Movement to get redressed this as well as other grievances. The question was referred to a Commission with which the Passive Resisters, non co-

operated. The Union government accepted the findings of the Commission and passed an act in 1914. The Act provides for the appointment of a priest of any Indian religion as a marriage officer to solemnise marriages which will be recognized as legal marriages and respected as such. It provides for the registration of the marriages which are *de facto* monogamous. It further authorises the introduction into the Union of the wife and children of any domiciled person notwithstanding the religious faith of the person allowing him to have several wives on condition of course that he is not married to a person in the Union.

The question of the admission of Indians to other parts of the Empire was considered at the Imperial Conference of 1917 and 1918 and the resolution adopted runs as follows —

1 It is an inherent function of the Governments of the several Communities of the British Commonwealth including India that each should enjoy complete control of the composition of its own population by means of restrictions on immigration from any other communities.

2 British citizens domiciled in any British country should be admitted into any other British country for visits for the purpose of pleasure or commerce including temporary residence for the purpose of education such a right shall not be extended to a visit or temporary residence for labour purposes or to permanent settlement.

3 Indians already permanently domiciled in the other countries should be allowed to bring in their wives and minor children on condition that not more than one wife and her children be admitted for each such Indian and that each Indian so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian.

In virtue of the first part of this resolution the Dominions have adopted various restrictions already mentioned or better these restrictions are now endorsed by the resolution. New Zealand prohibits entry of any person who has not received in advance a permit from that Government and this is refused to persons unsuitable to settle in that dominion. Newfoundland imposes no restrictions. India on her part has assumed power to regulate the admission of immigrants from any other parts of the Empire or foreign countries by means of passports and a Reciprocity Bill was passed in

February 1923. Under this Bill the Governor General in Council is empowered to make rules for securing that persons not being of Indian origin domiciled in any other British possessions should have no greater rights or privileges as regards entry into and residence in British India than are accorded by law and administration of such possession to persons of Indian domicile. The Bill excludes from its scope persons in service of the Crown.

THE CROWN COLONIES

With regard to Crown Colonies and Protectorates the Government of India has always maintained the attitude that there is no justification for placing any restrictions on the immigration of British Indians which are not placed on other British subjects. The Colonial office acts up to this whenever it is convenient. The question has mainly cropped up in connection with Kenya. The White Paper on Kenya issued in July 1923 while professing that racial discrimination in immigration would not be in accord with the general policy of His Majesty's Government said that some further control over immigration in the interests of the Natives of Kenya is required. The primary duty of the Colonial government is the advancement of the African and it is incumbent upon them to protect him from an influx of immigrants from any country that might tend to retard his economic development. Further the White Paper defined undesirable economic competitors as small traders subordinate clerks in Government and private employ and mercantile labourers. What a strange coincidence that this definition covered the Indians. Is the exclusion on racial or economic ground? We cannot answer the question better than in the words of Prof Keith. The restrictions of Indian immigration and the refusal to the resident Indians of the franchise on the same terms as it is accorded to the British settlers is definitely to deny racial equality even within that part of the Empire which is controlled by His Majesty's Government.

If as is just the interests of the African population should be the determining motive in the British Policy it seems clearly to follow that to British immigration no less than to Indian strict bounds should be set. That the Indian settler desires to exploit the native race may be admitted but the same

contention applies equally to the British, all experience notably in South Africa should have established by now that to create a dominant white population is inconsistent with normal Native development."

MANDATED TERRITORIES

The position of Indians with regard to mandated Territories is inconsistent with the position of India as a member of the League of Nations. The former German Colonies of New Guinea, W Sam and S W Africa are now administered by Australia, New Zealand and S Africa respectively under the League mandates. The League empowers the mandatory nation to administer these areas as integral portions of its territories and under its own laws. Thus, the immigration laws of these dominions are extended to the mandated territories, and Indians are barred from entering them. The position for the Indians is thus worse than what it was before the war. Naturally resentment is felt against this policy of exclusion. Political autonomy and socio-economic ideals made India acquiesce in the exclusion laws of the Dominions, but the promotion of the Native interests in the mandated territories does not appear incompatible with economic equality of all the nationals, of all the members of the League. In any case, the Mandatory power cannot be allowed to be the sole judge of how this trust of civilization is discharged. India herself should be one of the trustees. The question is not of a theoretical importance only. It has a practical significance. These tropical countries which are mandated are well suited for Indian colonization. They are, besides, sparsely populated, and hence no immigration of Indian labour need really conflict with native inhabitants. But India has protested in vain.

So far admission of Indians to other parts of the British Empire was considered. With regard to foreign countries we shall only consider here the United States. Indians began to emigrate to that country in about 1839 when some

fifteen persons migrated. By 1910, the number increased to 1872. Since then restriction measures were adopted. In 1917, an Immigration Act was passed extending prohibition to native labour of territories within a defined geographical zone which embraces the greater part of Central Asia and the whole of India, excluding China and Japan. Permission is given to students, merchants and travellers.

Now, what are the reasons of the doors being barred and bolted against Indians,—and Asiatics in general? One of the reasons put forward is the fear of the whites being swamped by the coloured. Now, our population does not mainly account for the presence of the Asiatics in other countries, not certainly of Indians in any way. They did not emigrate to settle down. Their religion forbade it. The system of indentured labour has been primarily responsible for the large numbers of Indians elsewhere. It is on account of the Westerner's feverish activity to better his own economic standard that Indians have suffered. As Mr Andrews puts it, for the last 1000 years the only migration from India of any Indians has been brought about to supply cheap labour to the British Colonies. 'The picture of hungry Indian hordes entering Africa is a pure myth.'

The other reason that is generally advanced in favour of the policy of excluding Asiatics is purely economic. It is pleaded that different communities have different standards of living, and different capacities for work. It is feared that the industrial and economic competition by the Asiatics, who are, as a rule, more hard working and require less for their living, constitute a great danger to the whites. This is the agreement advanced by Canada, U.S.A., S Africa, Australia &c. Whatever the justice of this contention as facts stand, India has silently acquiesced in it. The Imperial Conference Resolution in 1918 leaves every dominion to leave open or shut and bolt the door of her country against any immigration. And Mr Shastri could not do better than acquiescing in the White Australia Policy.

THE ORIGIN AND DEVELOPMENT OF THE BENGALI LANGUAGE *

(A REVIEW)

BR G TUCCI

of the University of Rome

This work is the result of a happy combination of proficiency in facts and of familiarity with theory and exhibits a mastery of detail controlled and ordered by the sobriety of true scholarship. In this way such an authority on Indian Vernaculars as Sir George Grierson expresses his opinion on the book of Prof S. K. Chatterji. After the judgment of such an eminent scholar one should prefer to give up any idea of writing a review of the book. In general the reviewer is not satisfied if he does not find something to criticise something about which he can make a show of his knowledge and induce in the readers the impression that he is a better authority than the writer of the book to be judged. But I do not belong to this kind of critics and therefore I am glad to begin these notes on the recent work by Prof Chatterji with the words of Sir George Grierson whose judgment I completely share.

The "Origin and Development of Bengali Language" is indeed the accomplishment of the *siddhi* of that *sadhana* of patient and uninterupted work to which the author has dedicated the best years of his life. But so far as the Bengali language is concerned, he had no *guru* before him. Except the brilliant and forerunner essays by Rahindranath Tagore, neither Indian nor European scholars had yet worked in a serious and scientific way at the solution of the complicated problems of the origin development and formation of the Bengali language. Either the traditional system of Sanskrit grammarians or some too often fanciful comparisons and theories (as those of Mr. Majumdar) had prevented to build up a real scientific idea about the evolution of Bengali. Let the way how to work was already shown in connexion with other dialects by some great linguists. The "Comparative Grammar of the Gandhari Languages" by Hoernle, the essay on the Rajasthani by the late lamented Italian scholar Tassinari, the masterly book on the Marathi language by Jules Bloch can all be considered as epoch making works. Taking his *diksha* about the method of research from these scholars from Prof. Meillet whose lectures he attended in Paris and from Sir George Grierson himself whom he met during his stay in England the author had to do everything anew in the field of Bengali.

Those who have an idea of the history of

Bengal and of Bengali literature can only too well realize how difficult this task would be. First of all the linguistic documents which can give us an idea of Bengali in the earliest stages of its evolution are very scanty or preserved in a modernized or Sanskritised form. Secondly the races that have met each other in that vast country which is now called Bengal have been so many and so various the languages which have been spoken there are so manifold and the influences which have worked on Bengali are of so many origins and kinds that no attempt to trace out the history of the language would have proved successful without a sound knowledge not only of Indo-European linguistics merely but also of the fundamental dialects and linguistic groups which have developed in or come in contact with the country and possibly may have contributed to some extent to the actual characterisation of Bengali. As the author has studied all the questions directly or indirectly connected with Bengali the title of the book does not perhaps say completely what it contains. In fact we can say that it is of a capital importance not only for those who are particularly interested in Bengali but also for the scholars who work in the difficult field of Prakrit researches. Having made for several years the Prakrit dialects (or the Middle Indo-Aryan) according to the terminology employed by the author the object of my studies I was glad to find in the book many an important question regarding the Sauraseni, the Magadhi, the Ardha-Magadhi, the Apabhraṃsa etc. thoroughly discussed with an up-to-date information. In fact in the *Introduction* which covers 235 pages as well as in the text the author has not only given a careful synthesis of the results of modern research on the various topics of Indian Vernaculars in the different periods of their evolution and in this way traced out a clear idea of the linguistic area and of the various elements which co-operated in the formation of Bengali but also very often has come into details and brought into discussion new elements and data in order to elucidate with a new light many a difficult or uncertain question. I quote for instance the interpretation that he gives (p. 245 ff.) of the Prakrit *Prakasa sutra* xi 5 (*catangasya spasthata talhoccaranah*) correcting the views expounded by Grierson and proving that in Maharshtri and in Sauraseni at least during a stage of their evolution the intervocalic palatal stops did not have a

* SUNITI KUMAR CHATTERJI—The Origin and Development of the Bengali Language. Calcutta University Press 1936. Two Volumes. Foolscap Octavo Cloth Bound. Vol I—Introduction and Phonology pp. i-xci 1-648. Vol II—Morphology Additions and Corrections and Index of Bengali Words pp. 649-1179. Price Rupees Twenty.

* For the pronunciation of ancient Bengali many an important hint can be had from a Sanskrit text transliterated into Tibetan which has been published by HACKETT. *Formulaire des écrits tibétains*.

dental affricate but rather an elided pronunciation. The examples which he quotes from the *Samrasam* of the *Mlechhatika* and to which it would be easy to add some others also are decisive. As it is known another question of capital interest is that of the division of the dialects of New Indo-Aryan. The theory of a twofold immigration in India by the Aryan invaders first postulated by Hoernle has been later on developed on a linguistic basis by Grierson who in a fundamental article published in the *Bulletin of the School of Oriental Studies* London (1920) tried to demonstrate that there are in India an *Outer* and an *Inner* group of languages the one represented by Lahndi, Sindhi, Gujarati, Marathi, Bengali, Bihari and Pahari and the other by Western Hindi. This theory of Grierson although based on very many facts cannot be considered as definitive, inasmuch as there is almost the same amount of linguistic arguments which stand against it. It is a merit of Prof. Chatterji to have collected the largest number of these arguments and to have shown that on many points at least we have to admit a similarity of Bengali with Western Hindi much more than with the western dialects. I myself had serious doubts about this classification by Grierson. All the dialects of Middle Indo-Aryan although they developed very soon some peculiar characteristics show yet a general unity which can be explained quite well by the fact that they are the common offshoots of the Vedic language. As pointed out recently also by Meillet there is no need to suppose in ancient times the existence of another dialect other than that which is represented by the Vedic.

We cannot follow here the author in the thousand pages in which with an up-to-date documentation he studies the various phonetical and morphological aspects of the Bengali language in the evolution and in their type. A book on pure linguistics in which the various laws are to be discussed on the basis of facts as they appear in words and forms cannot be summarised. Moreover this would compel us to come into minute details which do not belong to a literary journal like the present one. Anyhow I

cannot help pointing out *Appendix B* in which the author studies the Dravidian influences in Bengal. The importance of this subject can be well realized by those who know how modern research emphasises the contribution of pre-Aryan and non-Aryan peoples to Aryan civilisation and language whose presence is also sufficiently witnessed by toponymy. Many a question of great interest in the history of Indian literature is discussed in the *Introduction*. I must mention for instance the conclusions of the author about the fatherland of Vyasa who according to some Pali chronicles went to Ceylon from *Lalavatha*, his homeland. Against the opinion of many scholars who thought this *Lala* to be *Kadla* or West Bengal he is quite right in supporting the equation *Lala* = *Lada* = *Lata*. *Lata* the *La* like of Greek geographers (p. 2) on the basis of some linguistic facts which are very important in order to prove the relation between Ceylon and Gujarat (Section 8). And I think that we shall have also to accept as sure the date proposed by the author for Goralshanatha and Kanhu pada (11th century) on the basis not only of the internal evidence but also with the help of the tradition preserved in the *Jameswari* and the date contained in the colophon of a manuscript of the *Hevra* *arjanika* *Yagaratna* mala.

To sum up. We can say that the work by Prof. Chatterji is the first scientific contribution of Modern India to linguistic studies. With his book the author has shown the way how to work to his younger countrymen who are inclined to this kind of research. Linguistics cannot be based on mere *rapprochement* of sounds but it has to establish rules and laws which must be proved by the linguistic facts themselves. Fanciful hypotheses are no more allowed but only those the probability of which is the result of a thorough discussion of all the documents available.

Of course books like this cannot be an easy reading since science real science cannot be always merely amusing.

Madras November 3 1926

INTERNATIONAL INJUSTICE TO INDIAN GIRLS

By JYOTI SWARUP GUPTA

Vakil High Court Allahabad

It appears* that in his speech before the League of Nations the Maharaja of Kapurthala took credit on behalf of the Government of India for the recent increase

in the age from sixteen to eighteen years in three sections of the Indian Penal Code viz sections 366, 372 and 373 which deal with the inducing to illicit intercourse selling and buying (for prostitution or any unlawful and immoral purpose) respectively of a minor. Those of us who have followed the history of these amendments know full well how the remarks of the editor of the *Modern Review*

* Vide a note under the caption "Speech of the Maharaja of Kapurthala" published in the *Modern Review* for October 1926 at page 456 over the initials (R. C.) of the editor of the *Modern Review*.

that the Government of India put obstacles in the way of these amendments being made quite effective are fully borne out by the very unhappy attitude which the Government took from the very beginning when the question was first mooted at Paris in 1921 and all through while the amending bills were on the floor of the Indian Legislature. If the Maharajah had been a representative of the Indian Nation and not merely a nominee of the alien government which happens to rule India and had been properly briefed by a minister responsible to the Indian people and not by a bureaucratic executive councillor he would never have added insult to injury by claiming credit for something which really deserves to be condemned.

It will perhaps do our soul a little good to recapitulate the history of the amendment as told by the official reports of the Legislative Assembly debates. It would also help us to understand the attitude of the Government as also the seriousness of the injustice to our Indian sisters. It might awaken the interest, which it rightly deserves amongst our social and political thinkers and also succeed in drawing the attention of some of our new M.L.As who would doubtless introduce an amending bill to remove the gross injustice under which we are suffering and put us on a level with our sisters in all other civilised countries at least as regards the safety of their person is concerned.

The International Convention for the suppression of the traffic in women and children which had assembled in 1921 under the auspices of the League of Nations passed the following resolutions on the lines of an earlier convention which had met at Paris in 1910 to discover ways and means for the suppression of the sale of white girls in foreign countries —

"Whoever in order to gratify the passions of another person (a) procured, enticed or led away even with her consent, a woman or girl under age for immoral purposes or (ii) by fraud, or by means of violence threats abuse of authority or any other method of compulsion procured enticed or led away a woman or girl over age shall be punished notwithstanding that the various acts constituting the offence may have been committed in different countries

For the purposes of these resolutions a woman or girl over age was defined as a female over 21 years of age a female below that age being termed 'under age'

Mr Edwards a retired police officer who represented the Government of India at the

convention did not find himself in a position to accept this innocent resolution of an international body. This wise representative of a wise Government rose on his legs in that august body and pointed out that the age in the analogous section (viz s 366) of the Indian Penal Code was 16 and therefore contended that India would only subscribe to this resolution if she was allowed to maintain the age of 16 years instead of the proposed 21 years for every other constituent member of the League. He said in substance —

As matters stand now a proposal to enhance the limit from 16 to 21 years (a) would in all probability be found to be in advance on the general body of orthodox and conservative Indian opinion (b) would be in conflict with established physical facts it being well known that the climate conditions of Indians result in maturity being reached at an earlier age than in Europe and (c) might involve impolitic interference by the state with religious and social customs which are observed and followed by certain tribes castes and communities in various parts of the Indian Continent.

In all representative gatherings the representatives of different bodies would gladly make any exception in the way of a further advance or progress not reached by the other countries but they would never dilute on their weakness and would never think of making a reservation in the direction of backwardness. If they will realise that their country lags behind other countries on any point they would return to their own country with a fixed determination to make up their deficiency. But the representative from India would be nothing if he did not make a display in the International body of India's backwardness and retrogression and show Indians as a mass of orthodox and conservative people following peculiar religious and social customs from which they would not budge an inch.

Early in 1922 Sir William Vincent, the then Home Member moved a resolution in the Legislative Assembly which was ultimately carried in spite of the view of a section of the house that the age should be further raised. It authorised the Indian Government to sign the resolution of the Convention subject to the reservation that India could in its discretion substitute 16 years for 21 years. This resolution committed the Government of India to introduce legislation to give effect to the articles of the Convention. Consequently the Government introduced a bill to amend section 366 of the Indian Penal Code as it could by a slight change be made to cover the articles passed by

the Convention The old age of 16 was allowed to remain as it was and no change was made by the Government with respect to it.

The Government view all through was and it was strongly maintained that it will not be proper to raise the age from 16 that the whole penal legislation was based on that principle and for the reason much the same advanced by Mr Edwards it consistently maintained that it will not be in the interest of India that the age be raised beyond 16 on the other hand there was a considerable section of non official members which pressed that the age should be the same as adopted by the Convention or at least raised to 18 because women in this country are more helpless more uneducated and need more protection than their sisters elsewhere Whatever might be the opinion of different people about the marriageable age of their girls no religion social custom or orthodox and conservative opinion worth its name will ever warrant that a person should approach a woman of any age much less an innocent girl of the age of 16 18 or 21 with a suggestion that she should sell her body and soul and honour and everything which is at once the dignity and treasure of womanhood The Hindu and Muslim religions are very vigilant and insist on the purity and chastity of their women They will stake everything to guard this priceless treasure of their women and certainly the orthodox and conservative Indian would be the first to punish the man who dare make indecent overtures to any woman

The second argument that Indian girls attain maturity early is quite irrelevant and does not arise in the discussion of this question because the attainment of maturity (supposing that it arises much earlier in the case of Indian girls) cannot permit the commission of crime Moreover what we have to consider is not physical maturity or fitness to lead a married life but maturity of judgment discriminating powers of mind and development of character which a sound education alone can bring

At the age of 16 18 or 21 a girl's mind is certainly not mature enough to enable her to form an independent judgment especially in the critical and tempting conditions in which she may find herself when face to face with an unscrupulous person

As for the religious and social customs

mentioned in the third ground probably they exist more in the brains of Mr Edwards than in actual practice and even if they exist is it not the imperative duty of every civilized Government as the *pater patriae* to destroy their root and branch? What is to be the function of a government if it is to be a silent spectator to the commission of immoral acts and the consequent ruin of innocent souls under cover of so-called religious or social customs? It is therefore fortunate that the amendment to raise the age to 18 was carried when this change was effected with the force of Indian opinion and in spite of the persistent and consistent opposition of the Government it felt compelled to correspondingly increase the age in sections 362 and 373 But Indian public opinion both orthodox and conservative as also liberal and advanced must insist that the age should be raised to 21 and thus brought on a par with all other civilized countries There is yet another very important reason why the age should be raised to 21 The amendments relating to girls under age have been incorporated in the Indian Penal Code as sections 366A and 366B They read thus —

366A. Whoever by any means whatsoever induces any minor girl under the age of eighteen years to go from any place or to do any act with intent that such girl may be or knowing that it is likely that she will be forced or seduced to illicit intercourse with another person shall be punishable with imprisonment which may extend to ten years and shall also be liable to fine

366B. Whoever imports into British India from any country outside India any girl under the age of twenty-one years with intent that she may be or knowing it to be likely that she will be forced or seduced to illicit intercourse with another person and whoever with such intent or knowledge imports into British India from any State in India any such girl who has with like intent or knowledge been imported into India whether by himself or by another person shall be punishable with imprisonment which may extend to ten years and shall also be liable to fine.

Thus inducing a girl under 18 to go from any place in India to any other place in or outside India is a penal offence while importing any girl up to the age of 21 is punishable This difference in the age when girls are open to be induced to illicit intercourse—if I may use a very unhappy phrase—certainly degrades the Indian sisters and puts them in the wrong before the whole civilized world It means that the innocence of India might be exploited and exported with impunity between the ages of 18 and

21 while importing such girls would be a grave offence. This is an international insult and injustice to our womanhood which no civilised and responsible Government can witness complacently and what is worse be a party to it. The evil consequences of this sordid differentiation would be much more colossal than the injury and insult to our sense of self respect. The evil disposed persons who carry on this sort of nefarious trade finding that in all other civilized countries they cannot carry on their dirty business of inducing girls until they are above 21 years of age (when beyond the disadvantage of age it would be very difficult

because of the maturity of judgment to induce them to such things) will naturally turn their eyes eagerly towards and concentrate their energies in the fair and rich soil of India where they can quietly and legitimately induce innocent uneducated and simple girls without any check or hindrance from the State. Hitherto India's children were only exported for labour but now the Indian girls stand the risk of being exported for immoral purposes. Would our new legislators watch and silently see or would they immediately see to it that the age is raised to twenty one and the danger is thus forthwith removed?

THE SALZBURG FESTIVAL PLAYS

By AGNES SMEDLEY

TO see the Salzburg Festival Plays or other events of a similar nature in Germany is not merely to stand in admiration before the genius of the German people and under stand the national events by which they keep alive the memory of their great dead and deepen their racial culture but instead it is to think of what India might do were it an independent nation free to release and develop its creative energies in every direction to revive and cherish as do the Germans its great dead and to overcome the degeneracy of the present and face the possibilities of the future.

There is for instance a little north Austrian town Salzburg where a musical and dramatic event of international importance occurs annually. This may seem far removed from India but it is not, for it is a suggestion of what India might do.

Two developments of outstanding importance centre about this international event in Salzburg. The first is that since the War throughout the German lands of Austria and Germany there has been a revival of the people's theatres that in past ages were an intimate part of the life of the masses. In East Prussia in Brandenburg in the Rhein land and above all in the Alpine lands of Bavaria and north Austria this folk theatre

movement has grown with instinctive rapidity. Men and women teachers in towns or villages for example—give their spare time

Richard Strauss the noted Austrian composer conductor of the orchestra in the Vienna State Opera who came to Salzburg to direct his opera Ariadne in Naxos

to it, there are a few men and women who do nothing else and in Berlin is the central organization of folk theatres for manufacturing costumes and properties and for publishing in cheap editions the historical religious ethical fairy or other dramas in which the masses are interested. This means that the theatre—in Germany this is a combination of drama painting and music is no longer the monopoly of artists of the city who make it their life's profession: it is becoming an expression of the people as it once was in Gothic and in Baroque times from the 12th to the 17th centuries. What this theatrical development means we can but vaguely guess. To India it may mean nothing for in India the theatre is not a place where the best productions of the human mind may be seen or heard but the theatre is instead outcast, and a thing of shame. In Europe however the opposite is true. Everyone who thinks knows that the folk everywhere

Helena Thuring the actress who played the role of the Chinese princess in the old Chinese fairy tale Turandot

Alexander Moissi the eminent Russian actor in the role of Everyman in the drama Everyman

possesses dramatic genius that needs only to be awakened and used and this is one reason why creators and thinkers of Germany view with deep interest the development of the folk theatre. Not only is it a cultural advancement but it is of undoubted psychological value that in turn reacts on social and political life. We know that in the soul of every individual as of the masses both social and anti social instincts slumber and that anti social instincts denied creative outlet or application break out in open or subtle anti social actions—in cruelty, crime and even in War. The possible value of the theatre as an institution for using up and sublimating this energy cannot be underestimated: it gives the opportunity to act out every kind of emotion not in an evil, but in an artistic and creative manner. When mankind has the opportunity to live out creatively everything within it war, with its dramatic appeal and its opportunity for

lawlessness of every kind, will have no hold on the masses.

It is for this reason that every theatrical development, such as the folk theatre movement, culminating in the Salzburg Festival Plays is of such social importance. In the past Salzburg was one of the centers of the peoples' festival theatres. Their theatres were generally in the open air—in the public gardens of Salzburg or in the natural rock theatres outside the town.

The second outstanding feature of importance about Salzburg is that it was the birthplace in 1756 of one of mankind's greatest geniuses—Wolfgang Amadeus Mozart the composer whose music after nearly two centuries of changing social and political conditions, after war upon war remains as fresh as young and modern as when he wrote it. A time test which the works of few creators can endure.

During the War a number of artists conceived the idea of uniting the historic folk festivals of Salzburg with the name of Mozart and creating an annual national German festival. They were undoubtedly inspired by the very ancient peasant Passion Play (the drama of the life of Christ) of Oberammergau and by the annual festivals at Bayreuth and Munich in Germany where the operas of Wagner are produced annually before international audiences. In 1917 a number of artists founded the Salzburg Festival Plays Union in Vienna some of their most outstanding names were Hugo v. Hofmannsthal the eminent author and dramatist Max Reinhardt, Germany's most distinguished regisseur and producer and Richard Strauss one of the most noted living composers and conductor of the Vienna State Opera orchestra. As soon as the War ended the plan matured and despite political and economic defeat and collapse, the world of German and Austrian artists—musicians actors and actresses writers painters—began their work of building a cultural event of international importance. That this event has developed until today music and drama lovers travel from every country of Europe and America to witness it is an indication of the sort of thing that causes other nations to hate and fear the German people for they are a people who build and create even on ruins. Such a people are dangerous for they cannot be destroyed.

When the Salzburg Festival Plays idea at

first originated it was intended to make it a Mozart Festival where Mozart's operas serenades symphonies quartettes requiems masses and other such compositions would be given. A careful selection was to be made from among the more than six hundred compositions that had poured like a flood of gold from his pen. But the idea of the festival developed in other directions. It reached out and included the works of other great Germans, and then the works of international writers. Mozart's "Magic Flute" and Goethe's "Faust" were placed in the center

Wolfgang Amadeus Mozart (1756-1791) in whose memory the Salzburg Festival plays have been created. After a century and a half Mozart is a source of inspiration to musicians today and the Festival Plays are an indication of how the German people honour their great dead.

of the program the Spanish were represented in Calderon the French in Moliere Shakespear in "The Tempest" and "A Midsummer Night's Dream" the antique world of Greece was represented and this year two Italian dramatists one of them Carlo Gozzi whose lovely old Chinese fairy tale "Turandot" was given.

The Festival extends over the last three weeks of August of each year beginning just as the Wagner Festival in Munich comes to

an end. This year Goethe's "Faust" and Mozart's "The Magic Flute" were not given because the special Festival Play House that has been built was not complete enough to give them. The special stage that is essential for such a great production as "Faust" will not be complete for a number of months yet. Instead of these, Hofmannsthal's "Everyman" and Gozzi's "Turandot" were placed in the centre of the program.

The Salzburg Festival Plays as they have developed are not folk festivals as in the

Luis Rainer, the actor who played the role of Death in the drama, "Everyman"

past; they have instead, called into their service the greatest artists of the German and Austrian stages. Hofmannsthal and Reinhardt are the directing forces. This year the following took part in the program: the entire Vienna State Opera; the Ballet of forty classical dancers from the Vienna State Opera; the Vienna Philharmonic Society; the Rose

Quartette; the Vienna Men's Chorus; and among the distinguished individuals: Richard Strauss; Bruno Walter, Germany's foremost conductor, of international renown; Alexander Moissi, the eminent Russian actor; Max Pallenberg, the German; and a long list of German and Austrian actors and actresses, with a Hungarian name or two appearing among them.

The program was a brilliant one that drew an international audience. The audience, however, was, as perhaps most theatrical audiences are, a mixture of everything. There were Germans and Austrians who love music and who had come at a sacrifice, and who were only able to purchase standing room or the cheapest back seats. There were artists of all kind, some of them wealthy, who had come to rest and study and gather new ideas for their own work. Then there was an overwhelming majority of rich Americans, with their automobiles, servants, and elegant clothing who were determined to be "cultured or bust"; there were but few Englishmen—perhaps because, as George Bernard Shaw has recently written, England is a land that regards art as immorality, to be enjoyed if at all in shameful secret; also perhaps because the English already know everything and no other people can teach them *anything*. There were a number of interesting French people to whom art is more than political prejudice and who regard Salzburg as a very excellent artistic achievement. There were a few Italians a number of Hungarians (including the Prime Minister and his family); and Russians and Scandinavians of interest. The press called it an elegant international audience of the intellectual elite, but that statement may be seriously questioned in so far as a part of it was concerned, for many present had come to gather material for light tea-table chatter at home.

The Festival opened with a morning's concert of historical music in the Salzburg Cathedral. Apart from the great organ, there was an orchestra, a four-part chorus of a hundred voices from the Mozarteum, the Mozart Conservatorium of Music—and two very fine soloists from the Vienna State Opera, one man and one woman.

On the second day "Everyman" began. This is a very old religious drama of Gothic origin (about the 12th century, I believe), rewritten by Hofmannsthal. On rainy evenings it was given in the Festival Play House, a

very large and interesting structure, with a stage extending down to and in the midst of the audience—an arrangement so beloved of Reinhardt whose mass dramas are made to appear a part of the audience and of life, instead of just dramas on a stage. The theatre is a very long broad oblong with two balconies in the back. The old theatres of the middle ages have been copied, for there is not one gaudy or elaborate effect in the building. Plain rough beams, dyed a dark brown, form the walls and ceiling. The entrance corridors have wall paintings of folk themes done by well known artists, and inside the theatres painted banners, such as existed in the middle ages, hang here and there from the first balcony. The entire impression created is one of fundamental, natural values—a very healthy reaction against the elaborate, gilded artificial theatres of today with a box stage in front.

On pleasant evenings "Everyman" was given, not in the Festival Play House, but in the open air, as are folk festivals, in the Cathedral Square, surrounded on three sides by the walls of the old Court and the old Catholic University, and on the other by the beautiful 16th century Baroque Cathedral. The seats for the audience were of plain unpainted boards, arranged facing the Cathedral facade which furnished the background for the low stage erected before it. Beyond reared the heights of Hohensalzburg—the old castle fort on the hill where once the warrior archbishop-princes lived, ruled, with an iron hand, crushing the movement of freedom among the citizens and peasants on the one hand, and on the other, supporting the theatre, musicians, and building the historic monuments of old Baroque architecture which characterize Salzburg to this day.

"Everyman" is the story of a rich man whose life is one of luxury, selfishness, cruelty and thoughtlessness. A man who like many a man today, builds pleasure gardens for himself, his friends and women, while the masses starve. Therefore, although of Gothic origin, the play is over now. It shows man however rich and powerful, finally standing alone face to face with death, deserted of friends and relatives and beloveds, stripped of wealth, power, prestige, with nothing but his life's work as support and comfort when he passes into annihilation. The drama ends in a spectacular Catholic pageant of angels with wings and haloes and so on, and of the rich man—known as Everyman—accepting the

Christian faith and the church. Everyman tries every means of escape from death, but in the end enters the Cathedral in the back, then returns prepared to meet his fate, and calmly descends into the grave, followed by the white robed figure of the woman representing his life's work—and both followed by the dark draped form of death.

Mrs. Hedwig Bleibron, the noted actress from the Vienna State Opera, who played the role of Death in "Everyman."

The costumes of the drama, the manners, the gestures, and the dancing were careful studies taken from old Gothic woodcuts, and an attempt, not entirely successful, was made to give the entire drama a woodcut effect. A low undertone of sacred music accompanied the speaking and acting throughout. Alexander Moissi, the Russian actor, played the leading role of Everyman.

On following evenings there were repeated concerts by the Roso Quartette, a string quartette that has gained renown for its rendering of the quartette masterpieces.

of Mozart, Haydn Beethoven, Schubert and other masters

The Philharmonic Society from Vienna gave four concerts directed by Bruno Walter from Berlin and by Clemens Krans and Franz Schalk of Vienna (Clemens Krans is a young man in his early thirties who has already won for himself a place of importance in the musical world) The Vienna Mens Chorus gave a number of concerts as did individual artists of international repute

Bruno Walter the noted German conductor of international renown who came to Salzburg to conduct some of the orchestras for the Mozart operas as well as the Philharmonic Society concerts

Mozart's operas "The Abduction from the Seraglio (known better as *Il Seraglio*) and Don Juan were presented in the Salzburg Opera a number of times by the Vienna State Opera. Don Juan was especially magnificent. Richard Tauber the young Austrian tenor and Marie Nemeth the Hungarian dramatic soprano bringing the audience to of

trained opera goes to its feet with deafening applause

The Ballet of the Vienna State Opera gave six performances of the most exquisite graceful nature imaginable. The first part of their program was the story of Don Juan in rhythm with music by Gluck, the second part a lovely little drama with music by Mozart. With the exception of the Russian ballet one can seldom see any classical dancing of this sort. Two or three of the young women dancers and two of the men, were excellent.

The opera "The Bat" by Johann Strauss, was repeated a number of times with unparalleled success. This was chiefly due to the conducting of Bruno Walter who seemed to be the living embodiment of the music and who dominated and inspired not only his orchestra but all the singers. Richard Strauss' opera *Ariadne in Naxos* was also given with great success. Richard Strauss himself coming from Vienna to conduct it. Carlo Goldini's comedy, *The servant of two masters* was presented a number of times in the Festival Play house and the old Chinese tragic comedy *Turandot* was given twice a week, alternating with *Every man Turandot* was shown as a spectacular pageant. Over the play with its thread of adventure and romance hung the spirit of delicate humour. Special music a blending of old Chinese melodies with Mozartian motives had been especially composed by Bernhard Paumgarten. This music was undoubtedly the best part of the entire drama.

Of all the actors in *Turandot* Pallenberg the German actor was the best. His intimate heart to heart conversations with the audience on the virtues of the play on love adventure the princely life and similar themes made him the high light in the production.

The Salzburg Festival Plays are a very real and beautiful tribute to the memory and genius of Mozart, whose influence dominates the little town of Salzburg after the elapse of nearly two centuries. Throughout the Festival one's mind is centered upon him and his sad short life. There are the three little rooms on the top floor of an ordinary house where he was born—rooms now converted into a Mozart Museum. There is the Cathedral where he was organist, there is also the Mozarteum, the Conservatory of Music—in fact a University of Music in

whose lovely halls many of the Mozart concerts were held throughout the month. Then there is also Mozart Square with his statue in the centre and on Capuccin Hill stands the one-room hut in which he composed "The Magic Flute." His memory is as young and fresh today as is his deathless music with its sublime undertone of pain.

The Salzburg Festival Plays are an international event of importance in the musical and theatrical world. There one can hear the best music and see the greatest artists. Yet with all its virtues and its suggestion to the artists of India, it has a number of disadvantages on the whole: only people with a certain amount of money can afford to attend it; the intelligentsia in Central Europe to whom music, the drama and art, is the bread of life do not have the money to attend it; nor do the masses. Instead, rich people filled the theatres and streamed through the poor little rooms in which Mozart was born. One thought of the child Mozart who from the age of six had been made a living sacrifice before the rich and noble classes of his time—all for their idle pleasure and all for money and fame of his father. At the age of eight years he began to compose his first little compositions. Childhood was denied him that he might please others; from the age of three he knew nothing but ceaseless practice on the piano and the violin. At the age of nineteen he was a famous man; at twenty-five he had composed some of his greatest masterpieces. He was famous—and poor—for spiritual geniuses have always been exhibited before the aristocracy and the wealthy as are animals in the zoological gardens, but their genius is not considered as of much value as things to be worn and eaten. In Mozart's time as today in every land we human beings are so materialistic, so unspiritual that we value and will pay heavily for pieces of cloth and expensive food and physical comfort but things of the spirit which we cannot see and touch and taste are considered of less value. India is by no means superior to Europe in this respect—in many respects it is less spiritual. And so it was that Mozart, a genius such as mankind seldom produces, died at the early age of thirty-five, an undeveloped worn-out man so poor that he was buried in a mass grave with many unknown poor in Vienna. No one knows where his used-up body really lies but a great monument has been erected over the mass

grave where he was supposed to have been buried.

One listens to his music today—that strange music for ever young. It is difficult to live or feel the same after bearing and understanding Mozart for he was the very embodiment of music. There is something in it by which we know that Mozart had passed beyond expressing pain in tears or in speech; he expressed in music a spiritual hunger that lies at the heart of creation—man standing before eternal values of this existence and speaking in a language of which Mozart was master. It is sad that he was a joyous man and that his music laughs that it is a tumbling golden water fall of sound I also listened

The old historic town of Salzburg in north Austria. This is a town settled in pre-Christian times by the Celts. Later in the 3rd and 4th Centuries A.D. it was one of the northern outposts of Imperial Rome. It contains old catacombs of early Christians and some of the best architecture of the Baroque period—16th and 17th Centuries.

for the laughing—but instead I heard pain, whether in his last great requiem finished on his death bed, whether in his exquisite arias or whether in the seductive strains of Don Juan the conqueror of women there was a pain that tinged forever at the heart. Don Juan may have had the thousand conquests attributed to him but the Don Juan of Mozart is a man searching for something and never finding it, a man whose songs of wild defiance or of gentle caresses carry with them a longing and a pain deeper than words.

Mozart was a poor man as many men are poor today. The wealthy few from the four corners of the western world stream through the little rooms where he first drew breath—the wealthy few who always honour the poor after they are dead. Today there

money the system they support kills many in undeveloped Mozart many a genius who cannot live because a few must eat luxuriously and dress extravagantly. So it is that one cannot be deeply impressed by such people who travel first class in luxury trains of Europe and go to Salzburg to get an appetizer or a new emotional thrill from the music of a man who was so poor that he could not pay for a piece of earth six feet by three as his last resting place.

Then there was *Everyman* which apart from its historic and dramatic value one cannot but criticize. *Everyman* was a rich man who lived his wild life but embraced Christianity a few minutes before he died then the angels came and took him home. It must be said that such a philosophy is not only Christian but it is Islam also and it is Hindu. The ruling idea in that philosophy guides all religions and all nations today it is that a man may do what he will on this earth crush and destroy his fellowman reduce him to the position of a servant, a serf, or slave, ruin him rob him murder him, leave this earth a heritage of poverty and misery. But—in the end turn cowardly pious, accept some one or another faith and save his own miserable individual soul.

It is a fine soft philosophy we human

beings have manufactured for ourselves. The drama of *Everyman* is a symbol of it. Such a philosophy prevents us from wiping out the injustices and evils and poverty that harden the masses of every land.

The spectacle after the production of *Everyman* as after the operas written with the heart blood of Mozart, was but a confirmation of this philosophy—one by no means confined to the Christian world. After the elegant international audience had witnessed the soul of man facing death in stark loneliness and horror it left the theatre in highpowered automobiles and drove to expensive hotels. Poor people unable to buy even standing room, lined the streets to watch them fly past. Once inside the hotels, the dining saloons were opened to them and there their banquetts were spread as had been the banquet before *Everyman*. One of those dinners cost as much as a working man uses for a week or a month for himself and family. There was silver and crystal champagne and the most delicious of food. After the dinner the elegantly clad couples drifted into the adjoining hall room where the jazz orchestra thumped wildly and the couples swang their legs in the abandon of the Charleston. *Everyman* had been only a pleasant evening's entertainment!

INDIA AND CHINA

By DR. PROBODH CHANDRA BAGCHI M. A. D. Litt. (Paris)

THE BEGINNING OF HISTORICAL RELATION

THE history of India is inseparable from the history of the whole of Asia. From the most ancient times the migration of races or the cultural movement of one country has affected the other. India has never been an exception to it and her apparently insurmountable natural barriers have never succeeded in shutting her up from the rest of Asia. The problem of India therefore is an Asiatic one and she has got to look up to her neighbours with greater interest than ever China with her vast population of 435 millions, with the great resources at her command and with the

increasing promises she is making everyday draws our attention more than any other country.

It is not a mere accident that China is still known to the outside world by a name which India gave her for the first time (*China* skt *Cina*) and the Chinese nobility by a name derived from Sanskrit (*Mandarin-Mantra*). Though these two great countries of Asia have lost since last few hundred years all consciousness of their former relations the archives of the historian still cherish the reminiscences of a glorious past still in the solitary corners of the far eastern countries.

the monasteries zealously guard the sacred memories of India. Still the pious monks bow towards the Western land of *Tien chou* (India) the land of Sakyamuni the paradise of Fa hien and Hsuan tsang

But the science of life has come to the help of a rising national consciousness and the patient labour of scholars is being utilised to lay the foundation of international amity. It is high time for us the Indians not to remain contented with our lot but to try to understand what our forefathers achieved towards the diffusion of Indian culture abroad. That profitable study will no doubt contribute a good deal to the establishment of a better mutual understanding between ourselves and our neighbours the Chinese. We will therefore try to trace the history of this ancient cultural movement in its briefest outline.

In the middle of the 3rd century before Christ China was still divided amongst nine feudal chiefs. A Central Government, that of the Chou existed but it was more or less ephemeral. Chong siang the chief of the principality of Ts'in destroyed successively a number of other feudal states and grew up sufficiently powerful to attack and defeat the central authority. During three years of his reign he constantly fought against the princes which disputed his supreme authority. This fight was successfully continued by his son Cheng a man of uncontested genius. He pursued energetically the destruction of the feudalism and became the true founder of the Chinese empire and its national unity. He assumed the title of *Sho Houangti* the first sovereign emperor. But the work of unification and organisation which he had commenced was not completed during his life-time. It was continued by the Han dynasty which succeeded the Ts'in. They founded the Chinese nation on a definite basis by giving to the intelligentsia the *droit de cité* in the government. *Sho Houangti* demolished the feudal citadels and suppressed the nobility but the Hans founded on the devastated soil a new civilisation where the power did not belong to the noblest but to the wisest.

Of the Han dynasty the epoch of the Emperor Wu (140-80 B.C.) was the most remarkable on account of its external policy which opened up routes to the foreign countries and laid the foundation of international relation. And it was in this period that China came into touch

with India. In the year 138 B.C. in order to fortify better his position against the *Hiong nous* (the Huns) the hereditary enemies of China Han Wu ti entrusted a certain Chang Hien with a mission to search for an ally amongst the Great *Yue che* (Fa *Yue che*) people who occupied at that time the north western valley of the Oxus. Chang Hien returned to China in 126 B.C. after an absence of 12 years. Although his mission was not successful his expedition had a considerable effect in opening up to China an entire new world. The report which he submitted to Han Wu ti contained precise information about different occidental states: *Ta yuan* (Ferganah) *Agan si* (Parthia) *Ta lu* (Bactria) etc. He made another important remark while he was in the country of *Ta lu* (Bactria) he found to his great surprise the bamboos and cotton stuff of the southern provinces of China, *Yun nan* and *Sso-chuan*. He came to know from the natives of the country that there was a rich and powerful kingdom called *Shen ou* (India) and the caravans which brought the product of south China passed across that country up to Afghanistan (*Kiao fu*).

Henceforth Han Wu ti turned his attention into two directions. He wanted on one hand to take away from the *Hiong nous*, the small states which they occupied to the west of the province of *han su* and in the eastern part of Turkestan and on the other hand to open in the south the route of India. In 115 B.C. Han Wu ti succeeded in annexing the Western territories now known as *Leung cheou* *han cheou* *Su cheou* and *Touen hoang* and driving the Hans towards the north.

Henceforth embassies were frequently sent by the Chinese Court to the foreign countries. Intimate relation was established with the country of *Ta yuan* (Ferganah) which possessed the most beautiful horses. Friendly relation continued till 102 B.C. when a rupture took place and a Chinese army was sent to besiege the capital (*Oura tape*) of Ferganah which was soon reduced. The people of Ferganah submitted and promised to send tribute to the Chinese Court.

In order to command well the routes of Eastern Turkestan which had established commerce with the West, the Chinese resolved to annex the Western territory to China in the first century A.D. In 73 A.D. the general Pan chao was entrusted with this mission after 16 years of continual war he succeeded in submitting most of the

states of the Tarim region, either by diplomacy or by force. He fixed the seat of his administration at Kucha in 91 A D. Military posts were founded along the great routes and henceforth safe and regular communication with the Western countries was established.

But even before the beginning of this official communication we have historical data to prove that unofficial relation existed between India and China. We will leave aside the pious legends about the arrival of 18 Indian missionaries of Asoka to the Chinese capital in 217 B C—a legend certainly forged at a later date. We will leave aside also the much disputed question of Indian influence on the philosophy of Lao tseu the founder of Taoism.

It is at present an established fact that the name China (Cina) given to the country has been current amongst foreigners through its Indian form. The form *Sinæ* (Thinae) which Ptolemy mentions is no doubt based on the Sanskrit form *Cina* which was derived from the name of the Tsin dynasty which rose to prominence under the Honan ti. From the middle of the XVIIIth century the Father Martini proposed to derive the name of *China* from the name of the Tsin dynasty (240—207 B C). The opinion was accepted for a long time till Von Richtofen and Terrien de Lacouperie started new theories based on imperfect knowledge of Chinese philology. All these theories were at last definitely dismissed by Professor Paul Pelliot who established that the explanation of Father Martini satisfies all exigencies of philology. The report of Chang Hien proves without doubt that commercial relation was already existing between India and China in 2nd century before Christ by some land route which connected South Western China and India. So there is nothing impossible if a century earlier the name of the conquering dynasty of Tsin had penetrated the South Western provinces of China (Szechuan and Yunnan) and reached the ears of the Indians through these countries. It was certainly at this time that the name *Cina* appeared in India. During the advance of the Indo-Scythians towards Bactria in the 2nd and 1st centuries B C the Indians heard about the Chinese from the north west. Later on in the first century A D when regular commercial relation had been established between India on one side and Indo-China and Insulinia on the other Indian sailors

followed the coast line and reached Tonkin where they met the Chinese. Already used to call the Chinese *Cina* the Indian navigators continued to call them by the same name. The Chinese however had no difficulty to recognise themselves under that historical name.

The Roman orient was called *Ta Tsin* on account of the fact that men of those countries were similar to the people of Chiao. In the Chinese version of Lalitavistara prepared during the latter Han period (25—220 A D) the language of China is translated as the language of Tsin. Even in later translations of Buddhist texts China is mentioned as the land of the Tsin in the character is the same in the name of the Tsin dynasty.

It will be therefore idle to dispute all these evidences and try to take back the name *Cina* to an earlier date than the 3rd century B C. For us it is sufficient to point out that the mention of *Cina* in Indian literature already presupposes an intercourse between India and China long before the introduction of Buddhism.

Besides it has been now shown that Indian stories migrated to China at an early date—we find traces of them in the writings of some Chinese authors of the second century B C. The prince Liou ngah otherwise known as Houai nan tsen (died in 122 B C) is an well known author of the 2nd cen B C. His writing contains reminiscences of an Indian story. Houai nan tsen speaks of the great Yu who while going to the country of the naked people left his clothes before entering and put them on when coming out, thus showing that wisdom can adapt itself to circumstances. The story is the reminiscence of the *avadana* of a Budhisattva who did the same thing when he went to the country of the naked people for doing commerce. From these indications concludes Professor Chavannes it can be ascertained that long before the introduction of Buddhism in China the Indian stories must have penetrated the country and the far East. It is still to be known however if these stories really came from India or were derived from some common source.

The introduction of Buddhism in China took place before the beginning of the Christian era. There is however a class of traditions which would have us believe that the missionaries of Asoka went to China in 217 B C to preach Buddhism. They were

imprisoned at the order of the Emperor but were soon released when they produced some miracle. In the end of the second century B C (121 B C) the Chinese general Ho Kiu ping after his war with the Huns returned to the capital with a golden man. This was the tradition says an image of Buddha. There is however another set of traditions which would place the first arrival of Buddhism in the year 68 A D. When Ming ti of the Han dynasty dreamt of a golden man and came to know from his courtiers that it was Buddha. He sent two ambassadors in search of the followers of Buddha. The two ambassadors says the tradition soon returned to the capital with two Indian Monks Kasyapa Matanga and Dharmaratna, who translated the first Buddhist texts into Chinese.

None of these traditions however is trustworthy. The political condition of Central Asia in the time of Ts'in She Houan gti when the 18 missionaries are supposed to have come to the Chinese Court

do not permit us to dream of any relation of China with the west. The dream of Ming ti is also false. It was towards the close of the 1st century B C (2 B C) that the first Buddhist text was brought by a Chinese ambassador (Tsiang King) from the Indo Scythian court. Besides in the middle of the first century B C we hear of the existence of monks and laymen in the court of a prince of the imperial family ruling in the valley of Yoang tse kiang. The story of the dream of Ming ti also shows that the courtiers of Ming ti were already familiar with Buddhism. But there is no reason of disbelieving the arrival of the two monks Kasyapa Matanga and Dharmaratna as some of their translations are still preserved in the Chinese Tripitaka and bears a very ancient stamp. The first Buddhist monastery which was built for them in the capital of China (Ho-nan fu) viz Po ma se the white horse monastery played a great role for long centuries in the history of the Buddhist church in China.

THE COMPARATIVE EFFICIENCY OF INDIAN LABOUR

By RAMA NADA CHATTERJEE

It has been repeatedly said that one of the causes of India's industrial backwardness is the inefficiency of Indian labour and it is generally assumed that this inefficiency is due to racial and other irremovable causes. It is therefore necessary to inquire whether the environment and other conditions being the same with other laborers Indian labourers are really as inefficient as they are thought to be.

Such an inquiry was held a few years ago under the auspices of the Bureau of Labor Statistics United States (Government) Department of Labor by Rajani Kanta Das M Sc. Ph D former lecturer in economics New York University. The result of his inquiry is embodied in his book on "Hindustani Workers on the Pacific Coast." It is

divided into eleven chapters dealing with Immigration Geographical Distribution Occupational Classification Employment and Unionism Conditions of Work Industrial Efficiency Wages and Income Standard of Living Social Life Traits and Achievements and Principal Problems. We shall here deal briefly with the subject of the industrial efficiency of our countrymen in America and the allied topics of their morals and cleanliness as these have a bearing on their efficiency.

As in America the word Indian is used to denote the aboriginal inhabitants of that continent, Dr Das uses the word Hindustani to mean a native of India.

In America our laborers are for the most part without the advantages of home life and the influence of social opinion. Moreover most of them go there without any knowledge of the language of the country. In spite of

these disadvantages as we shall see they are generally as efficient as and sometimes more efficient than men of other races

Dr Das's book is as free from patriotic bias as is generally to be expected. He writes in the true scientific spirit scrupulously mentioning everything which goes against his countrymen. Yet the final verdict is not unfavorable to them. It is not possible in a brief article to reproduce or summarize all the evidence and conclusions contained in his work for that the book itself should be read. We will present to the reader only a few of them.

Dealing with the question of the aptitude and adaptability of Hindustani workers the author says that they become quickly familiar with the process of cultivating land with modern machinery. The work in saw mills was also a new venture to them but here also they adapted themselves very rapidly and have become expert in many of the operations in a short time.

As regards regularity of attendance, Dr Das records —

The Hindustani workers stand very high in the estimation of their employers on this score. Not only are they punctual but always steady in their attendance. Whenever they accept a job they stick to it until it is finished.

In application and endurance the Hindustanis stand very high. Employers and superintendents speak of them in these respects as either good, excellent, "steady," "reliable" or industrious. They also enjoy a high reputation for speed and dexterity.

In the different industrial activities in which most of the Hindustanis are at present engaged on the Pacific Coast they are regarded as very skilful and ingenious.

Dr Das quotes evidence to prove his conclusions.

As regards the comparative efficiency of the Indian workers on the Pacific Coast the author observes —

In the present study a special attempt was made to ascertain the efficiency of the Hindustanis as compared with that of the other nationalities. Some of the results were verified by a large number of persons of different occupations, such as employers, superintendents, foremen and workmen. With the exception of one or two unfavorable criticisms, the people generally spoke very highly of the efficiency of the Hindustanis.

The unfavorable criticisms are quoted below —

"Their industrial efficiency I have found is not to be compared with that of the Americans

writes Mr H L Miller, a former manager of the State Employment office at Chico, California.

Says Mr W F Toomey, fruit grower of Fresno, California: "Japanese and Hindus are about equal. Americans, regular ranchers, better than either Japs or Hindus. Average man from city not as good as either the Hindus or the Japanese. Mexicans and (American) Indians slower than above-mentioned and not as industrious as any of the above races."

The favorable opinions are far more numerous. We quote a few below.

Comparing them (the Hindustanis) to other nationalities as to their efficiency I can say that they are as good as or better in some cases than the Japanese workers and far above the Mexican and Chinese workers. The Chinese are a slow class of workers and the Mexicans have to be watched all the time. The statement of Mr John A. Greene, manager of the Public Employment Bureau of the State of California at Stockton, California —

I consider them very efficient. writes Mr Kett Gould of Clovis, California: "really the best workers we have among the people other than Americans."

Mr Carson C. Cook of the Rimrock Land and Navigation Company at Stockton, California, found the Hindustani farm worker as capable as the average farmer of any race.

My opinion is, remarks H B Graesser, Holtville, Cal., that the Hindu ranks well in intelligence with the American laborer and I have met a number who will rank much higher.

The author sums up thus —

In spite of the difference of opinion as to the exact degree of efficiency we might say in conclusion, that compared with other races and nationalities such as the Mexicans, Chinese, Japanese, Americans and Canadians, the efficiency of the majority of the Hindustanis is of a very high order in the different fields in which they are engaged.

As regards cleanliness, Dr Das points out that one of the essential qualities of Hindustani life is personal cleanliness, and in proof mentions the habits of daily bathing, daily cleaning the teeth, always washing the hands after returning from the toilet, always having the linens and underwear clean, etc. One of the reasons why in spite of these facts the Hindustani worker is often considered uncleanly is thus stated by the author —

It must be pointed out that the Hindustani does not dress himself with special reference to society. He may have taken his daily bath, washed his hair, brushed his teeth and donned clean underwear yet he is utterly to appreciate the idea that he must adjust his dress according to the social etiquette. His shirt though freshly washed is frequently wrinkled, his suit though clean is often unpressed, his shoes though costly are unpolished and these peculiarities make the Hindustanis look untidy.

Dr Das quotes from India's appeal to Canada the following testimony of Dr S. H. Lawson M. D. —

There is one phase of the Hindu question concerning which the majority of the public seem to hold most erroneous opinions. I refer to his personal habits regarding cleanliness, use of alcoholic liquors, etc. As ship surgeon on the C. P. R. Steamer *Monteagle* and later the *Tartar* at the time of the greatest influx of Hindus the majority of those people passed under my close observation. It was my duty to make a thorough physical examination of each immigrant at Hong Kong, and although at first I was strongly prejudiced against them I lost this prejudice after thousands of them had passed through my hands and I had compared them with the white steerage passengers I had seen on the Atlantic. I refer in particular to the Sikhs and I am not exaggerating in the least when I say that they were one hundred percent cleaner in their habits and freer from disease than the European steerage passengers I had come in contact with. The Sikhs impressed me as a clean, manly, honest race. My more recent impressions as surgeon in military camps among thousands of white men where immorality is rife has increased my respect for the Sikhs.

A special attempt was made says the author to ascertain the amount of vice

and crime among the Hindustanis on the Pacific Coast. One of the points of investigation was the prevalence of venereal diseases. The evidence quoted shows that these were not commoner among them than among other races. Dr Engel Callexico found that these diseases among them were less than among others. "From the standpoint of health and morals," observed Dr Corry, "I think they compare favorably with any other class of citizens."

The evidence quoted also shows that in criminality the record of the Hindu is not worse but rather better than that of other races in America.

The author also quotes evidence to show that in integrity and the spirit of self respect the Indian labourers in America stand high.

Dr Das's book ought to be translated into the chief Indian vernaculars—particularly Hindi.

He has rendered a national service which we hope will be duly recognised and appreciated.

OSKAR VON MILLER, GERMAN ELECTRICAL ENGINEER VISITING INDIA

PROF Benoy Kumar Sarkar, Editor Journal of the Indian National Chamber of Commerce, has received a communication from Excellency Geheimer Rurat Dr Oskar Von Miller to the effect that under the auspices of the Norddeutscher Lloyd German Shipping Company he has been visiting Singapore, Java, Bali, and the other islands of the group. Dr Von Miller is electrical engineer and founder director of the *Deutsches Museum* (German Museum of Natural Science and Technology) at Munich in Bavaria.

The object of his travels is to study the collections in the field of the natural sciences, the historical monuments, as well as the sources of water power. He is expected to

be in Calcutta by the last week of January and is likely to spend a month or so visiting Benares, Delhi, Jaipur, Bombay, Madras, and Colombo.

As some of our engineers and industrialists as well as persons interested in economic development, science, and technology may like to make the personal acquaintance of the distinguished traveler, a few items of his professional and scientific career are being enumerated below.

1881 Visits the Electro-technical Exhibition at Paris as the government commissioner of Bavaria.

1887 Organizes the International Electrical Exhibition at Munich, the first of its kind in Germany.

1882 A Private society sends him to the United States *Via* England to study the electrical works

1883 Invited by the Austrian Government to help the commission preparing the legal regulations relating to the industrial use of electricity.

1884 Leaves government service on the invitation of Emil Rathenau, the industrialist, to be associated with him in his newly founded 'German Edison Co' (which afterwards has grown into the world-famous *Allgemeine Elektrizitätsgesellschaft*, General Electric works for the manufacture of electrical machineries

Almost at the same time the *Berliner Elektrizitäts-uerlo* is established by Rathenau and Von Miller with the object of furnishing Berlin with electric light

1890 Returns to Munich and begins his independent practice

1891 Invited to Frankfurt to organize the International Electrical Exhibition. Water power is used and electricity is carried to a distance of 180 kilometres (roughly about 113 miles). He "compels the distant cascades of the Neckar," as sings a poet, 'to function on the banks of the main'. A wonder of that epoch of electrical industry and science. Germany wins world recognition as an electrical power

1891-1900 Undertakes the establishment of electrical works of all sorts for (i) Munich the *Isar Werke* to operate the industrial section of the city (ii) Hermannstadt in Roumania (utilizing the water power of the Carpathian Mountains), (iii) Merano and Bozen in Southern Tyrol Austria now in Italy, (utilizing the water power of the Etsch River) (iv) Tettnang in Wuertemberg (electrical

railway), (v) Strassburg in Alsace (now in France), (vi) Wiesbaden, (vii) Riga in Russia (now in Lettland), (viii) Ludwigshafen, and other cities of Central and Eastern Europe

1896-1903 Publication of *Die Versorgung der Staedte mit Elektrizitaet* (Supplying the Cities with Electricity), a comprehensive book in two volumes on electrical science and industry. The utilization of water power has attracted the authors' greatest attention

1902 At the 'Congress of German scientific investigators and medical men' which sits at Karlsruhe V. Miller formulates his precise plan in regard to the electrification of Germany, and specially of Bavaria (which is poor in coal)

1911 Submits to the Bavarian government the plan for the unification and centralization of all electrical public works on the right side of the Rhine

1914-21 The *Bayernwerke* project developed and work commenced. The industries and railways of the whole of Bavaria to be operated from one main centre fed by water-power

In addition to the professional engineering activities by which V. Miller has been able to contribute some of the most

Dr. Oskar von Miller
Electrical Engineer and Founder of the
Deutsches Museum

imposing industrial installations to Germany and render economic services to the German people his career is noteworthy for the establishment of the *Deutsches Museum* at Munich which is one of the most remarkable institutions of the world. The plan was broached in 1903 before the Congress of German Engineers which held its annual session that year at Munich. The co-operation of the geologist Zittel, the physicist Roentgen the engineers Siemens, Zeppelin and others was secured. The Kingdom of Bavaria as well as the German Empire came to the help

In 1906 the foundation stone was laid for the new building on the Isar Island. A part of it was ready by 1916. But the whole including the library has been formally declared open in 1924.

The psychological origins of the *Deutsches Museum* may be briefly described. In 1878 Oskar Von Miller visited the South Kensington Museum in London as a young engineer. And in 1881 as government commissioner he had the occasion to attend the International Electrical Exhibition at Paris. There he visited the *Conservatoire des Arts et Metiers*. It occurred to him that in entire Germany there was no institution corresponding to the British or the French museum of technology. The German institutions of the 80s were merely school boy collections so to say adapted to the requirements of students and professors. An elaborate Museum for the whole people was yet to be built.

There is another aspect of the question to

which V. Miller directed his attention. He noticed that the technical museums of London and Paris were great indeed in the collections. But neither in the one nor in the other was it possible to study the scientific discoveries and technical inventions in their historical development. The formative experimental stages in the growth of the great discoveries and inventions of the latter half of the nineteenth century had been neglected as much at Paris as at London.

The *Deutsches Museum* is in dimensions the greatest of the technical museums existing in the world to day. And from the standpoint of exhibiting the mutual influences of natural science and technology the Bavarian institution is perhaps unique of its kind.

Dr. Von Miller is 71 years old and is one of the most highly respected of men in Germany.

GAUHATI—THE TEMPLE TOWN OF ASSAM*

THE 41st Session of the Indian National Congress will have been held at Gauhati (Assam) under the presidency of Mr. S. Srinivasa Iyengar, ex-advocate General of Madras, before the publication of the present issue of the *Modern Review*. This is the first session of the Indian National Congress held in Assam.

Assam is fairly rich in natural resources and her natural grandeur is magnificent. With the lofty mountains standing along the north with vast plains bounded by high ranges such as Bhutan, Khasia, Jaintia, Naga and the Garo hills and with the mighty river Brahmaputra majestically flowing through her heart, Assam may stand comparison with the most beautiful country in the world. The total area of the province is 77,000 sq. miles.

Assam is sacred with a thousand memories of India's past glories, memories of culture, movement of heroic deeds and in Assam from a long time past progressive Hindu religion has been a living force. It was

in Assam that Princess Joymati practised passive resistance and cheerfully bore the tortures of death while firmly refusing to disclose the name of her beloved and brave husband who was wanted by the king.

Gauhati (Qua bathi—High land covered with areca nut trees) is situated on the left bank of the river Brahmaputra. The town is located in the district of Kamrupa. The origin of the name Kamrupa is mythologically explained as follows.

When Sati died of vexation at the discourtesy shown to her husband Siva by her father Daksha, Siva overcome by grief, wandered about the world carrying her dead body on his head. In order to put a stop to his penance, Vishnu followed him and lopped away the body piecemeal with his discus. It fell to earth in fifty-one different pieces and wherever each piece fell the ground was held to be sacred. Her organs of generation fell on Kamagraha Nilachal Hill near Gauhati and the place was thenceforth held sacred to Kamakhya. As Siva still continued to do penance the other gods became afraid that he would thereby acquire universal power and accordingly despatched Kamadev the Indian cupid to make him fall in love again and thereby break his penance. He succeeded in his mission but so enraged was Siva at the result, that he burnt him to ashes by a fiery glance from the eye in the centre of his

* Based on Gait's History of Assam, Assam District Gazetteer and Habbaras's Congress Guide.

forehead Kamdeb eventually recovered his original form and the country where this took place became known as kamrupa (Gait A History of Assam p 11)

Narak Asur, according to legends is said to have erected the temple of Kamakshya in the heroic period of the Mahabharata. He made Pragjyotishpur (Modern Gauhati) his capital and fortified it. There is still a hill in the vicinity of Gauhati which is called the hill of Narak Asur. Narak's son Bhagdatta fought for the Kauravas in the great battle of Kurukshetra. It was in this holy land of Kamrup that ancient sages like Basistha Sankaracharya Kasyapa and others found suitable places for their *Tapasya*. For many centuries the history of the district is involved in great obscurity. Some historians assert that the line of Narak was displaced by a Bodo chief who ruled at Gauhati. It appears that in the 11th century A.D. kamrupa was included in the territories of the Pala Kings who were powerful and civilised monarchs. They were lords of Pragjyotishpur (Modern Gauhati). The huge tanks in the neighbourhood of Gauhati and the bricks and mortar found in

every direction beneath the soil show that it must have been a place of great importance

Basistha Ashram Gauhati

To the south there are remains of ramparts (one made by Arjuna the Baragohain in 1667 A.D.) nearly four miles distant from the river beak and it is obvious that such an extended line of fortifications could only have been held by a large army. The contrast between the glories of old Gauhati and the dead level of mediocrity which is the distinguishing feature of the district at the present day is very marked. In the 16th century the Koch Kings came into possession of the district. The power of this dynasty however rapidly declined and in the 17th century the district was the scene of continual conflicts between the Muhammadans and the Ahoms. Within a short space of 50 years Gauhati was taken and retaken no less than 8 times by rival aspirants and these raids brought great misery and hardship upon the inhabitants. Towards the end of the 17th century Kamrupa was definitely incorporated in the kingdom of the Ahom Kings. 38 Kings of the dynasty ruled the country after which the King of Burma began to exert his influence in the administration of the country. British help was unavoidably asked for. An expedition under Col. Richardson was dispatched to drive out the Burmese from Assam. The Burmese suffered a defeat and according to the terms of the treaty of Yandabo in 1826 although the Burmese quitted the territory the destiny of the Assamese was virtually transferred to the hands of the British Indian Government. And in 1926 just a century later Assam has invited the Indian National Congress to shape and guide the future destiny of the Indians by the Indians themselves!

Palace of the Ahom King in ruins

Gauhati is a port of call for the river steamers and an excellent metalled road runs from Gauhati Ghri to Shillong the head quarters of Assam. The town is growing steadily and the population in 1872 1881 1891 1901 and 1921 was 11 492 11 695 8 283 11 661 16 000 respectively. During the Ahom rule this town became the residence of the Viceroy for Lower Assam. The Ahom Viceroy used to be the ruler of the extensive district and was in charge of the relations between Assam and Bengal. At that time Gauhati was garrisoned by some five or six hundred men.

From the European point of view the city has not been very attractive. Buchanan Hamilton in his *Memoirs of Assam* (1809) describes the city as a "very poor place".

Kamakhya Temple on the Nilachal Hill—Gauhati

The bracing climate of Shillong was perhaps more attractive to the European officials who did all they could to effect the transfer of the seat of Government from Gauhati to Shillong. The District Gazetteer states:

For many years after our (British) occupation on Gauhati remained the headquarters of the province but it enjoyed a very evil reputation for unhealthiness. Col. Hopkinson the Commissioner in 1866 brought a powerful and efficient agent against the district when advocating the transfer of his headquarters to Shillong. The European population of the place must have been very small but death was only too busy in their ranks.

Their agitation however was successful and even to this day when Assam has got

the status of a province Shillong is the capital of Assam.

In spite of the denunciation by Europeans the situation of the town is extremely picturesque. To the south Gauhati is surrounded by a semi-circle of thickly wooded hillocks while in front the mighty river Brahmaputra rolls on. In the centre of the river lies a rocky island the further bank is fringed with graceful palms and the view is again shut in by ranges of low hills. Considerable improvements in drainage and water supply have been effected and the town is now very healthy.

The most noteworthy event in the recent history of Gauhati was the great earthquake of 1897 which devastated the whole town.

Gauhati is the chief town and administrative headquarters of the district and principal centre of trade in Lower Assam. Tea is a flourishing industry in the district. There are good educational facilities in the town. The Cotton College named after Sir Henry Cotton formerly Chief Commissioner of Assam, is now affiliated to the Calcutta University up to M. A. standard. Besides there is a Law College (Earle Law College) and a large number of H. E. Schools.

Recently a museum under the appellation of *Kamrupa Anusandhan Samiti* have been established at Gauhati. It will surely bring to light all the past glories of Assam that are now consigned to oblivion.

Gauhati has aptly been called the temple town of Assam. About two miles to the west of Modern Gauhati on the summit of the Nilachal Hill lies the Kamakhya temple—a place of pilgrimage visited by the Hindus from every part of India.

Kamakhya should be visited by every lover of the picturesque. A paved causeway which tradition says was constructed by Narak Asur thousands of years ago stretches from the Trunk Road to the spur on which the temple stands. The path is steep and the rocks had been worn to a slippery smoothness by the feet of generations of pilgrims. The sides of the hill are rocky in places even precipitous but wherever they can find a foothold the giants of the forest have driven their roots into the earth and huge peepul and rubber trees cast their shadows over the path. At the other end it passes through an archway of fine masonry and

here and there the rocks along the side have been hewn into the semblance of gods. From the summit of the hill there is a magnificent view over the surrounding country. Its feet are washed by the mighty Brahmaputra whose channel at this point is shut in by rocks on either hand. To the south there are the tumbled masses of the Khasia Hills rising out of the alluvium as cliffs rise out of the sea, the flat and fertile valleys with which they are intersected forming a striking contrast to their precipitous and jungle covered sides. On the north are fields of golden rice and yellow mustard groves of palms and feathery bamboos surrounded and enclosed by rocky hills while far away in the distance are the blue range of Bhutan and the snowy peaks beyond.

Another place of pilgrimage situated in the vicinity of Gauhati is the *Umananda* island—the place which was the delight of Uma. Siva Sinha built a temple at this place in 1720 A D and dedicated it to Siva and Parvati.

Near the *Umananda* there is another small hillock called *Urbasi* and on the north bank of the river stands on a rocky promontory the temple of *Asuaklanta*. The story goes that Srikrishna halted here with Rukmini and the holes now visible in the rocks have been made by his horse's hoofs. Near about lies the temple of *Ugratara* and *Chatrakar*. The most interesting temple near Gauhati is

who is said to have spent some time in the locality *Rudreswar* is another temple near

Umananda Island Gauhati

Gauhati erected by Siva Singh in memory of his father the hero Rudra Singhe who died in 1714. At Hajo near Gauhati stands the celebrated temple containing the image of Nrisingh Avatar of Vishnu and Buddhists too consider this as a place of pilgrimage. The place is also regarded as the holy Poa Mecca of the Mubammadens.

To the north bank of the Brahmaputra just opposite to Gauhati lies the battle field of Saraighat. Here the army of Anrangzeb under the command of Raja Ram Sing had to suffer an ignominious defeat at the hands of Lachit Bar Phukan in 1668. The historical association of Saraighat is revered by every Assamese.

The Congress town is located at Pandu about four miles off modern Gauhati where the Pandavas are said to have halted for some time during their exile. The temple of Shiva, known as *Pandunath* was said to have been founded by the Pandavas.

The Congress Town itself is divided into two parts—the Congress grounds proper and the Leaders' Camp. The Leaders' Camp is built on the railway land on the Brahmaputra towards the west of the Pandu Railway Station and is about half a mile off from the Congress grounds proper.

The Congress grounds proper are at the foot of the Kamakhya hill and the Pandu Feeder Road passes through a portion of it encircling the other portion. The entire Congress Town comprises an area of about 10½ acres of land. The pavilion is located in the centre of the grounds having the delegates' camp on the north west, and the family cottages on the south west and facing the exhibition grounds. The romantic spot on the bank of the Brahmaputra where the special cottage with the presidents' camp is situated has been named Chitranjanapur. The main gate of the Congress pavilion has been named Swaraj gate. The western gate of the pavilion has been named Gandhi gate, while Ansari gate is the name given to the southern gate. * P C S

Urbasi rock in the middle of the river Brahmaputra with the signal pillar Gauhati

Natagraha (nine planets). It stands on the summit of a low hill on the east of the town and the roof of the dome has completely disappeared. Looking down from above on to the floor of this open cockpit are seen the altars of the sun moon and other seven planets. The *Vasistha Asram* lies nine miles south of Gauhati amongst the most picturesque surroundings. The temple was built in 1751 A D by Rajah

ENGLISH

SCENES FROM INDIAN LIFE By Sarda Charan Ukil R. Chatterjee 91 Upper Circular Road Calcutta Rs 2 Postage extra

This is a beautiful album of twenty-five drawings by Saradacharan Ukil finely printed on art paper. There are besides a charming drawing on the cover and a photographic portrait of the artist. There are brief descriptions of the pictures. A foreword by Dr James H Cousins enhances the value of the album. Dr Cousins says

Mr Ukil's drawings are not sketches in the rough sense. They are finished works in their own class. They throb with a common melodic fervour. Yet each gives in its own way the artist's emotional and intellectual response to the touches of the multifarious life of his country.

He concludes—

This book will bring an exquisite pleasure to every lover of art and will do much to reveal true India to India herself as well as to other peoples.

X

DEBTS AND CRIMES—By Rudyard Kipling Macmillan Dominions Edition

This new and interesting volume contains some hitherto unpublished poems nearly all being inspired by the war and a similar set of short stories—some of them of war and the post armistice period.

Of the poems one 'vineyard' beginning with the already famous lines 'At the eleventh hour he came though written with dignified restraint has certainly not been soothing to American pride. It has already evoked considerable criticism there and at least one striking parody has already been published in retort.

Mr Kipling's stories are always welcome specially as of late we have received so little from his pen. All the stories however of this series have not attained the usual high watermark of Kipling's genius. Some of them are quite ordinary and provide dull reading but there are others which sparkle with the usual brilliance of this popular author. On the gate 'The Janities'.

The bull that thought are very readable and interesting stories.

P DAS

THE UNIVERSAL RELIGION OF SRI CHAITANYA By Sri Aurobinda Nath Chatterjee B A Madras Gauranga Bhawan Punthi 24 Parganas Bengal 1926 price six annas

This little pamphlet of 32 pages consists of two essays on World Peace and on Modern Vaishnavism the Religion of Sri Chaitanya. The author is a devout follower of the Gaudiya or Bengal school of Vaishnavism and Reproposes the religion of Sri Chaitanya as the solution of the evils of the age. The discourse between Sri Chaitanya and Raja Ramananda as narrated in that great book of Bengal Vaishnavism which is indeed one of the greatest works of Indian religion and philosophy the Chaitanya Charitamrita of Krishna das Kaviraja is taken as the basis of the author's arguments and he emphasises on the idea that all other religious experiences are but stages or stepping stones to the highest form of experience which is that of ecstatic love for God as the lover of the soul the madhura rasa of the Vaishnavas. It is a slight little work and although neither inspired nor deep or erudite the author's conviction and his earnest desire to draw all to the beauty of the ideal of Sri Chaitanya have all our sympathy.

HANDBOOK TO MATHERAN By Vishnu Bhikaji Dabke Head master Municipal School Matheran 1924 pp 120 with map 6 illustrations price Re 1 8

This is a guide to the hill station of Matheran near Bombay giving detailed information in all matters connected with the place. The writer is a Resident of the town and is in love with this beautiful spot on the Ghats and what is more knows all that a resident who is acting as a guide to new comers should know about it. His book thus being written with both knowledge and sympathy is sure to be helpful to the sojourner or visitor to Matheran.

S K C

HISTORY OF INDIAN TARIFFS By V J Shah B A Ph D (Foon) Lond Publishers—Thacker & Co Bombay & London Price Rs 7 8

Bombay & London Price Rs 7 8
This book is an attempt to provide a non-partisan history of the development of tariff policy in India. At a time when inter-imperial economic and tariff problems are drawing so much of attention the work is very opportune.

The subject has been studied by periods classified according to the problems which dominated them. The first chapter deals with the native customs system especially under the Moghuls. Customs at the ports did not then exceed 5 p c ad valorem but the trade of India was obstructed by an elaborate system of inland transit duties. The second chapter deals with the period from 1630 to 1833 and describes the

British attempts at fiscal reconstruction on provincial basis. During the period from 1833 and 1875 dealt with in the third chapter, many of the most pressing reforms on lines of free trade policy had been introduced in the customs system of India. In chapter IV Dr Sinha examines thoroughly all the tendencies that led to the tariff policy in India during the first half of the 19th century and exposes how the subordination of India to British interests was always the chief characteristic of the tariff policy framed for India. In the fifth, sixth and seventh chapters which cover the period between 1875 and 1896 we notice how with the main object of encouraging the interests of British trade and industries the principles of free trade were practised with vengeance in India, irrespective of all financial and industrial needs of the country, often against the strong and continuous protests of the Govt. of India and always against a unanimous public opinion. The eighth chapter has been devoted to tariff changes between 1896 and 1922. Generally speaking the old policy of free trade was continued till 1914, except at times when strong foreign competition endangered British or Imperial interests. From 1914 the financial stress of the war caused large increases in the low pre-war tariff of India, and consequently Imperial Preference became a subject of serious discussion. The Indian movements for a protective tariff and fiscal autonomy also gradually developed after the war till the Indian Fiscal Commission recommended in 1922 protection with discrimination. The Book thus affords an excellent compendium of facts relating to the tariff history of India and dispassionately delineates the issues with a language at once forceful and convincing.

EARLY EUROPEAN BANKING IN INDIA WITH SOME REFLECTIONS ON PRESENT CONDITION. By H. Sinha, *certified Associate of the Institute of Bankers London*. Published by Macmillan and Co Ltd, St Martin's Street London 1927 Price Sh 12 6 net.

This book is a distinct contribution to the economic history of Modern India. Many of us have studied deep and well the political history of this period in the hope of mastering the details of the evolution of our serfdom, but few have really understood how important it is for the realisation of this ideal to hunt up the forgotten chapters of the history of Britain's economic conquest of India. One Plassey did not achieve this. It was slow and tedious work, but it paid the British much more than they got by painting the map of India red.

Mr Sinha has shown himself to be a hard worker. Not only that, he has proved himself to be methodical and as possessing a clear idea of what he is aiming at. Early European Banking in India—and Mr Sinha has gone systematically over the records of the Imperial Bank of India, the Bengal Government Record Office, the Imperial Record Office, the library of the Institute of Bankers London, the India Office etc. The result has been that his book contains information which no other book contains and gives us definite answers where we had to be satisfied before with only vague conjectures.

Who knew that India had a joint stock Bank more than half a century before England had any? The

General Bank of India established in 1786 was a limited liability bank with a hundred shareholders (not more than 400 quarter shareholders) of which some were privileged as original subscribers." Art. 8 of the Articles of the Bank said "The subscribers shall be liable to no risk or claim beyond the amount of their subscription."

Mr Sinha gives some good specimens of the instruments of banking of those days both European and indigenous and these form one of the most interesting features of the book. The reader is struck everywhere in the book by one outstanding aspect of early European Banking in India. It is the constant effort made by those bankers to adapt themselves to local conditions and the readiness with which they went in for even daring experiments. In the conclusion of his book Mr Sinha states a reason for the success of European Banking in India. When these Bankers came to India, the indigenous banking was in an advanced state of development and one wonders how the Europeans could establish themselves in India. Mr Sinha says "The reason is that they supplied a want and made important contributions to banking in India." He also says in tracing the history of early European banks many questions naturally arise in the mind of the economic enquirer. The first is why did not the indigenous banks adapt themselves to the new conditions? Why was it necessary to establish European banks with state aid? We have seen that the indigenous bankers were willing to accept Bengal Bank Post Bills in preference to their time honoured *hundis*. Their failure to adjust themselves to the new circumstances must therefore be ascribed not to their narrowness or conservatism but to the circumstances of the time. What were these circumstances? We are told 'during the latter half of the eighteenth century, when the East India Co. was in power without responsibility most of the foreign trade passed out of the hands of the people. The inland trade was also monopolised by the servants of the Co. for a considerable time. As a result of this indigenous bankers naturally lost their old pre-eminence.' So the main end real reason was here rather than in the excellence of European Banking.

The book is well printed and got up

ECONOMIC ANNALS OF BENGAL.—By J. C. Sinha, *Reader and Head of the Department of Economics and Politics, Dacca University*. Published by Macmillan and Co Ltd, St Martin's Street London 1927 Price Sh 12 6 net.

Prof J. C. Sinha is an economist of ability. His book on the early history of Anglo-Bengali economic relations therefore will be welcomed by every student of Indian economics. British politics was preceded by British economics in India and the economics can be related to the politics as cause and effect. Britain did not conquer India by the sword. The conquest was achieved on the other hand by economic means. For this reason the study of economic history has a special significance—a fundamental political one—for us. Prof J. C. Sinha has given us a level headed account of the rise of British economic power in Bengal. His treatment of the subject is scientific and based on facts and figures not sentiment. His conclusions differ in some cases from accepted ideas but he gives arguments everywhere

to support his own views. For example he thinks that the estimate of Digby of the drain of wealth from Bengal after Plassey to be exaggerated. Instead of it being 500/1000 million pounds Prof Sinha thinks the drain amounted to about £40 millions (then) or considering the present fall in the purchasing power of the Rupee £200 millions (now). He, nevertheless, considers this drain to have been extremely injurious to the economic life of Bengal. The increased exports from Bengal representing part of the drain, were of little good to Bengali industry on account of their oppressive and exploitative nature. Prof Sinha gives a long and detailed account of the abuses prevalent during this period.

The East India Co. and their hirelings were out to make money and some of their deeds show to what depths they descended for the sake of lucre. When they were virtual rulers of Bengal in 1770 a famine of terrible intensity broke out in that province. Selling of children eating leaves grass and even dead bodies were of common occurrence during the famine. The East India Co.'s Government practically did not move a muscle to save the people who were dying like fleas. In one case a grant of five rupees a day was made for a province containing 400,000 people.

There are many other items of information in the book which deserve reproduction but space does not permit fulfilment of our desire to do so. We congratulate Prof Sinha on the excellent quality of his treatise and hope he will write often and more.

A C

The New Spirit By Havelock Ellis Fourth Edition with a new preface, Constable and Company Ltd. 250 Pp. 6 s. net. 1926

This book was written in 1890 by Mr Havelock Ellis who was then quite young. The author now brings out the book exactly as it was written. He has his reasons for doing this. He thinks that the ideas given in the book were much in advance of the times and what was then considered to be outrageous and "ultra" will now be taken as quite sober views. The book consists of five critical essays on Diderot, Hegel, Whitman, Ibsen and Tolstoi with an introduction and a conclusion. The essays are not merely literary criticisms, the author has tried to infuse in them his own ideas about the tendencies of the age. Hence the name 'New Spirit'. The author writes in the preface "One might best indicate the nature of that spirit I thought by carefully selecting certain significant personalities and studying them in the light of one's own personal temperament." The book is a personal document put into an impersonal shape. The way in which Mr Ellis discusses about the social, moral religious and intellectual revolutions then going on through the writings of the authors selected is quite unique. He has played with a dangerous weapon and has come out successful only because he is dexterous. The book will be of real interest to students of modern literary movements.

SHAKESPEARE'S HAMLET Edited with introduction, notes and illustrations by Anuradha Jha M.A. Alahabad, The Indian Press Limited, 1926

This is a beautifully got up annotated edition

of the famous tragedy. Will be very helpful to University students.

MEMOIRS OF A REVOLUTIONARY By Upendra Nath Banerjee. Published by K. L. Chakravarty 46-1 Durga Charan Mitter St. Calcutta Pp 174 Price Re 1-8 1925

The author of this interesting book was a labelled anarchist and was tried and deported as such during the Swadeshi movement. He narrates a pathetic story of a futile endeavour in his humorous clear out style. The original memoirs were written in Bengali.

GLIMPSES OF VILLAGE LIFE IN NORTHERN INDIA By Hon'ble Thakur Jayendra Singh M.L.C. Thacker Spink & Co. Calcutta Pp 132 Price Rs 3 1926

This volume is the collection of several well-written essays on Indian village life. The author has given the pictures of familiar things and scenes in a pleasant form. The book is written from the standpoint of agriculture and will at least give some idea to the reader of what the Indian village life is like. The book is well got up but the price seems to be too high.

CHARACTER BUILDERS By Kharshedji Cawasji Desai Nasar 1925 Pp 602 Price not given

Mr Desai has really done a great service to his country by the publication of this very useful book.—The sayings of the great, the lofty ideas of master minds of ancient and modern times are highly valuable for moral and religious upliftment of the younger generation. The utility of the book has been enhanced by refining the life-sketches of the authors to their sayings. The get-up is excellent.

THE CENTURY OF LIFE By Aurobindo Ghose The Shama Publishing House Madras Pp 139 Price 1 14

The *Niti Shataka* of the famous poet Bhartrihari has been freely rendered in to English verse by Sri Ghose. The renderings were made more than 20 years ago. Every piece is like a gem clear and sparkling—the translations are really good. We give below one or two Shloka's—

(1) It is not amulets that adorn a man
Nor necklaces all crammed with moonbright pearls,
Nor baths, nor ornaments, nor arranged curls
Nor art of excellent speech that only can
Adorn him—jewels perish, garlands fade
Thus only abides and glitters undelayed

(2) Like shadows of the afternoon and moon
Friendship in good men is and in the base
All vast the lead men in its first embrace,
But lessens and wears away the others born
A dwarfish thing grows gnatlike space
Considering the bulk and matter the price of the book is high.

LITTLE Mrs. MANINGTON By Cecil Roberts, Hodder and Stoughton 7s 6d

This is an addition to the list of Holiday Fiction given in the last month's Reviews. It will provide a good four hours reading and will repay purchase.

SELECTIONS FROM DIFFERENT POETS. By *Ram Gopal*. Bangalore Press Bangalore City Price Rs 2 (paper cover)

The selection consists of some pieces of Bhartrihari Saubh Sataka rendered into English some poems of Robert Burns and several pieces from other poets. In selecting the compiler has considered only those pieces which begun or end with a moral to make the book useful to young students

S K D

BENGALI

SAN YAT SEN O BARTIMAN CHIN (SUN YAT-SEY AND MODERN CHINA). *Jyotish Kumar Gango* pad jay To be led of Messrs Chakravartty Chatterjee & Co Ltd., 15 College Square Calcutta Bengali Year 1333 pp 148 Price Re 1 das

This is a well written book on the life of the great leader of South China and his achievement as well as on the present-day situation in China and we have read it with pleasure. One of the strongest and most powerful revolutions is taking place before our eyes fraught with such momentous consequences to humanity. We of India should take some interest in the recent history and current affairs of our great neighbour as there is a great deal for us to learn from the march of events which have transformed China during the last fifteen years—transformed her not only politically but also socially and intellectually. The publication of a book like this which is nothing if not opportune shows that such an interest is not absent in our country. The writer is young student who has studied modern Chinese history and the Chinese question closely and with discrimination his source of information naturally enough being books and journals in English and he has done a real service to Bengali readers by giving them an eminently readable *resume* of the national movement in China as embodied in the life of Sun Yat sen. He is dispassionate though sympathetic and he has an eye for the essentials of the story and he has been quite successful in this his first literary venture.

A book like this will make excellent reading for grown up school boys and junior college students and advanced college students also will read it with profit. There is a brief preliminary survey of early Chinese history and culture, followed by the biography of Sun Yat sen his career his struggles and sufferings and the fight against the Manchus the founding of the republic, and then the story of internal disorders and foreign intrigue. There are chapters on Sun's personality and on the old and modern educational systems in China, on the student political movement and on the present political situation in China, including the question of the Bolshevik influences in the country.

It is a good book and only in one point, we wish the author were a little more careful and that is the transliteration of the Chinese names. The author should have read up something on the pronunciation of Chinese as written in Roman characters and guided his Bengali transcription accordingly which as they stand in his book as Bengali approximations of English mispronunciation

tions of Chinese names look very jarring and very unscientific also. To enable readers to identify the names in the English newspapers English forms of these might have been given to advantage. This however is a small matter and does not materially affect the book for which we wish a wide popularity

S K C

HINDI

VICHTI A JIVANA By *Pundit Kachharan Sarma*. Published by the Prem pustakalaya Fult bagan Agra Pp 202

The book under notice is the result of anti Mohammedan propaganda by the Arya Samajists and professes to show into the mysteries in connection with the life and doctrine of the Islamic prophet. Many original texts are freely quoted but we fear they are construed to serve the purpose of the author. We are of opinion that there is no gain in this sort of vilification. We trust learned Mohammedans should meet the arguments of the author who bases them on the very Islamic documents of old.

MANOVINANA By *Ghanhamayuli Sukul M 4* I T The Ganga Pustakalaya Office Lucknow pp 134

A popular treatise on psychology. The appendix gives English equivalents of the technical terms used in the book.

BHARATIYA ITIHAS KA BIOGOLIC ADHYAYA By *Prof. Jaychandra Vidyalankar*. Published by the Himi Bha in Lahore Pp 104

Pandit Vidyalankar has touched upon a very interesting subject. His considerations on the geographical and orographical peculiarities of India shed new light on Indian history and civilization. How the strategic points determined the military enterprises in this land is most ably dealt with.

AKRITI NIMANA By *Pandit Janardan Bhatta M 4*. Published by the Hindi Pustak Agency 126 Harrison Road Calcutta Pp 111 104 with 56 plates

This book is the Hindi translation of the English version of Louis Huxley's German work on treatment of the physiognomical defect of the human body. This most important and interesting subject is popularly treated and the plates elucidate the contents.

BHASHA BUDHAN Id ted B ayaratna Das P b-lished by U P Pathak & Sons Pura Darwaja Be are pp 111 + 17 + 11

This old work on rhetoric by Maharaja Jaswant Singh of Jodhpur who lived at time of Shah Jahan and Aurangzeb is well edited with notes and glossary by Mr. Brajraj Narayana Das the Secretary to the Nagari Pracharini Sabha of Benares. An old portrait of the Maharaja is also given.

MAHATMA MILAN By *Pundit Jagan Nath Prasad* Cl at read. Published by the Hindi Pustak Bhavan 181 Harrison Road Calcutta Pp 16

Plain social drama

BHARATIA ARTHA SASTRA, Part I By *Bhagawan das kela* The Ganga Pustakalaya Office Lucknow Pp 275 1925

A popular treatise on political economy of India. The chapter on domestic economy is specially interesting.

RAMES BA U

GUJARATI

PRAKRIT VAKARAN—By *Pandit Becharadas Jai ji Doshi* Published by the Gujarat Puratattva Mandir Ahmedabad 1925 353 Price Rs 4

Under the auspices of the Gajarati Vidyalaya the Gujarat Puratattva Mandir is doing good work in the domain of Indology and a number of useful books popularising the study of Pali and Prakrit through the Gujarati language have been brought out. The present work forms a very good grammar of Prakrit, perhaps the best of its kind in an Indian language and students of Prakrit outside Gujarat should also be able to use this book to advantage, as the Prakrit is given in Devanagari character and the Gujarati rules which are also printed in Devanagari are easy to follow at least for speakers of the Aryan languages. The author treats of the four dialects of Prakrit—Maharashtri which with him as with orthodox Jain scholars generally, is Prakrit proper and Sauraseni, Magadhi, Paisachi and Apabhramsa. He takes Hemachandra as his model. There is an introduction of some 49 pages the greater part of which is taken up in discussing the nature and name of the language of the Jaina canonical texts—the so-called *Ardhamagadhi* dialect. The author thinks that this speech is not the true *Ardhamagadhi*—it does not agree with the typical *Magadhi* speech as described by the grammarians and as found used in the earlier dramatists to except in one point—the use of *-e* for the nominative singular of *a*-nouns medieval Jaina authors called it simply *Prakrit* or sometimes *Arsha prkrit* and implied tacitly its close agreement with Prakrit proper or Maharashtri and Hemachandra did not treat this so-called *Ardhamagadhi* separately in his grammar but he included under the other Prakrits specially Maharashtri thereby also implying its being a form of the last and not a separate dialect. He quotes with approval the statement of an old writer *Kramadivara* that *Ardhamagadhi* is a mixed dialect partly Prakrit (i.e. Maharashtri) and partly *Magadhi*—a statement which is also accepted by Pandit *Vidhasekhara Sastri* whose view Mr. Doshi cites. The author is orthodox or unscientific in his outlook and his uncritical acceptance of the opinions of the Prakrit Grammarians goes hand in hand with a failure to appreciate the proper line of development of the middle or Prakrit stage of the Aryan speech as well as the question of dialectal differentiation in Prakrit. The fact that a number of different local dialects occur in the Asokan inscriptions, and that the Asokan graphic system employed a single consonant for a doubled one (e.g. writing *apa* but reading *appa* *ska* *alpa*) are not realised by him. The only valuable thing in the introduction is the quotation (with a Gujarati translation) of an interesting

passage from a M S of the Prakrit *Kuvalayamala* of *Daksinyachihna Suri* which mentions the characteristics of the peoples of different tracts of India, like *Golla* (*Ganda*) *Madhyadesa*, *Magadha* *Gurjara* *Malava* etc and gives a typical expression from their dialects.

The introduction apart the book is a valuable compilation and is fairly exhaustive for a book intended for beginners. Copious examples have been given even if they are a little uncritically disposed especially under phonology Declensional and conjugal forms have been given in full and frequently Pali forms are quoted in the foot notes to explain the Prakrit. This was a happy idea. Some attention has been paid to the formative affixes a side often neglected in Prakrit grammars. Finally a *Dhatupatha* of Prakrit roots on the authority of Hemachandra has been given the Prakrit roots *tadbhava* *desi* or *tatsama* being given as equivalents in sense of Sanskrit roots. On the whole the book will serve its purpose very well viz to act as a handbook of Prakrit grammar for students and we wish it a wide circulation.

S K C

SAKSHI MAHABHARAT By *Ratipatras Udayram Pandya B A* Printed at the Surya prakash Printing Press Ahmedabad Golden lettered Cloth Cover with Coloured Pictures Pp 344 Price Rs 4 8 (1925)

LAOCH MAHABHARAT By the same Author also printed at Ahmedabad Cloth covered Pp 158 Price Re 0-12 0 (1926)

There are two translations of this well known epic of India in Gujarati but those who did not care to go through those elaborate works were in want of a connected historical narrative shorn of the passages intended more for advice than narration, and this want has very well been supplied by Mr. Pandya, who has written out the whole story from the Sanskrit original in a simple but dignified style adapted to the incidents described. The book is appreciated uniformly by those who read it and that is no small recompense to the writer. The first book is in comparison with the second and smaller one a sort of edition *de luxe* and the publisher has done well in entrusting the abbreviation to the same writer as he being full of the subject, was the most proper person to render it into still simpler language for school children for whom it is intended. It contains many aids in the shape of explanations for students and altogether we think it is bound to prove useful to them.

JAIN GUJARAT POETS PART I By *Molant Lalchand Desai B A LL B* Vali High Court Printed at the Diamond Jubilee Printing Press Ahmedabad Cloth Cover Pp 370-651 Price R 5 0 0 (1926).

This is a treasure house of old poems written by Jain poets in Gujarati between the XIIIth and XVIIth centuries of the Vikrama Era. The collection is the result of Mr. Desai's persistence and assiduity as he has left hardly a single Jain Bhandari unexplored wherever and whenever he could help it. His opinion is that prior to the XIIIth century the literature of Gujarat was written in *Apabhramsha* (very old Gujarati) and hence

he has taken that century as the starting point for his collection. A preface of staggering volume consisting of 320 pages containing a *short* history of old Gujarati forms an important part of this book. If the author calls this a *short* history we wonder what the size of his preface would have been had it been a full one. He passes in rapid review the different stages of the development of the language from Sanskrit to Prakrit, thence to Shauraseni and Paishachi. Apabramsha old Gujarati to its present State. He asserts the principle that the prior or older forms of the language were not dying or becoming dead but that they were developing and presenting an altered exterior. The preface is replete with quotations from very old writers in support of the facts stated by the writer who is at pains to show that so far as the language or vehicle for expression was concerned there was no difference or distinction between the writings of Jain and non Jain (Brahmin) writers in those far off days just as there is none now. We congratulate Mr. Desai in his *magnum opus* and await the second part with great interest.

K M J

TELUGU

SRI VASURAYA CHATURABHANDHANM By Vaddathi Sribharaja Kavi Rajakumuri Saraswati Press 1925 Price Rs 1 8 0 Pp 304

This is a collection of the poetical writings of the author extending over nearly half a century. Though there is no single central theme running throughout the book the poems are grouped under four headings—the first part is a collection of poems on stray topics, the poems on the description of natural scenery which form the third part are really of great value. The third part consists of some brilliant translations of Sanskrit pieces. The fourth part is purely autobiographical and is written in chaste and elegant style. The poems (from page 281 to 287) are written in Sringara rasam and on every captivating and would not fail to interest the reader.

This reminds us of the Bhimani Vilasam written by Vasanatha Kavi. It need not be stated that the author has done a signal service to the cause of the Telugu language by republishing his writings in a compact form.

B RAMACHANDRA RAO

MARATHI

RAJYATILASTRA PARICHAYA OR INTRODUCTION TO THE SCIENCE OF POLITICS By Prof S D Sardekar of the Tilak Maha Vidyalaya Poona Published by himself Page, 500 Price Rs 3

Marathi literature is growing at a rapid pace but the percentage of books on serious subjects of practical importance is so small that we

welcome the appearance of this book with special pleasure. Politics in our country was at one time confined more or less only to English knowing people but that time is now long past. No man did more to familiarise the people of Maharashtra with politics in their own tongue than the late Lokmanya Tilak and as a result the circle of persons who take a keen interest in the political affairs of their own country is growing daily wider. It is therefore appropriate that the authorship of such an important and much needed Marathi book should fall on one who is a professor in the Tilak Maha Vidyalaya of Poona. The book is divided into three parts—historical descriptive and theoretical. The first part explains the necessity and origin of the institution called state and traces its evolution right up to the present stage of its development. The second part broadly reviews the existing forms of government in the different parts of the world such as England, America, France, Germany, Japan, Canada, South Africa and India while the third part gives an able exposition of the necessity of government, its present and potential sphere of operation, the defects of the present form of Government in India and the directions in which their removal could be sought. The purpose of the book is modest and that is to present to the new student a broad view of general principles of politics in the setting of its historical development. The author disclaims any attempt at originality or new discovery but in spite of this disclaimer he has certainly achieved a measure of originality if originality is not confined solely to any thing new that one may have to say. The originality of this book consists in the arrangement of the subjects treated. The method of their presentation and the manner of exposition evince a high degree of skill on the part of the author who has spared no pains to make the book as intelligible as possible. The author has constantly to refer to the older systems of Indian polity and in the evolution of British polity but all such references are marked by an effortless dispassionateness or freedom from bias either way. The book is remarkably free from the imposing but confounding use of technical words or phrases which is generally the besetting weakness of new authors and the dread of the lay or uninitiated reader—such as a student desiring to learn the elements of politics must be. The book contains quite a wealth of quotations and references which is calculated to serve the double purpose of furnishing a guide to further reading and adding the weight of authority to the conclusions reached or to the reasoning adopted in the treatment of the subjects dealt with. The book is a model of how books for beginners should be written and is such as could be recommended not only to college students but also to writers and speakers in whom a knowledge of the elements of politics is an indispensable mental equipment.

GLEANINGS

The British Strike

We give below several conflicting opinions regarding the recent British Strikes—

Mr Colvin the chief Editorial writer of the *London Morning Post* wrote

The unconditional surrender of the workers was the knowledge that the broad masses of the workers to use a Communist phrase could not much longer be prevented from returning to work and also that on all important food questions the strike had signally failed.

Now to cite the labor view as revealed by Mr Hamilton Fyfe—

Never has there been in this or any other country such a wonderful demonstration of solidarity of organized workers as shown in the general strike which has achieved its object today

The strike has very greatly strengthened the forces of labor Nobody imagined that the workers would stand together so firmly For eight days they have kept their arms folded with a quiet dignity and tranquil assurances of the justice of their cause

They Broke the strike Citizens in London Eagering for service in Essential Industries

Motor Transport was a Tremendous Factor in stopping the British Strike
How non striking Londoners went to work when buses trains and tubes were idle

Happily the general council is composed of people endowed with a full sense of their responsibilities. They were resolved not to allow the strike to last a single moment after it had fulfilled its design.

The great value of this dramatic termination from the workers' viewpoint in addition to securing a square deal for the miners is that peace has come while they were still solid. Thus is an immense advantage and all strikers will resume their jobs feeling that their self-sacrifice and splendid display of comradeship has been fully rewarded.

A distinguished English liberal editor A G Gardiner writes in a copyrighted cablegram to the New York *Herald Tribune* that honors in the first place belong to the public and he adds that no praise can be too high for the tearing of the people in circumstances of unparalleled strain and distress and incalculable menace. It was this steadiness that broke the sharp tactics and made ultimate victory assured. Also Mr Gardiner avers the Government behaved with conspicuous wisdom, was firm but unprovocative and altho a force had been mobilized for emergencies it was kept studiously in the background. We read then

For this restraint thanks are due to the moderating influence of Mr Baldwin who kept the spirit of sweet reasonableness in command and his wild men under check and control. I think history will be searched in vain for a parallel to this vast social convulsion taking place without the firing of a gun or as far as I know the loss of a

London strikers chasing a strike breaker

single life by deliberate violence directed against life.

In the spirit of this great achievement all have a share—the Government, who set the tone for the people who kept their heads and their temper, the police who were magnificent and the strikers who however misguided kept generally with amazing sobriety within the limits of the law and of decency.

I come to another cause of the failure. It was within the strike movement itself. That movement was not popular. Whatever political motives may have been in the minds of a certain section of the leaders they had no place in the minds of the mass of the men. They came out unwillingly in loyalty to their unions but generally were profoundly disturbed about the wisdom of this unprecedented attack on the public.

As the strike advanced and they saw its consequences to themselves and others not the rich only but still more the poor who were workers like themselves. This concern deepened. It was not a clean fight against some monster of capitalism after all.

It was a fight against all sorts of helpless people they had been unanimous against.

They saw businesses which gave them good wages and against which they had no grievance being paralyzed and destroyed by themselves for a cause which was remote and which they only half understood. These things ate at the heart of the movement and doomed it the moment the knock-out blow had failed.

Two other factors must be mentioned in

An Amateur Engineer
Captain Moor the first locomotive volunteer who
drove a train from Ilkerton to London during
the strike.

"Business as usual" during the strike.
The bicycle as well as the motor was busy as a bee.
The Bank of England shows in the background.

the solution of the strike according to Mr Gardiner who points them out as follows:

Motor transport played a tremendous part in the result. I doubt whether any one's position could have survived such a shock in the days before gasoline had made every man an engine-driver and every road a railway. And the influence of wireless has been immense. It has kept the whole nation in touch with events and has been an astonishing medium for organizing opinion and directing public activity into the most effective channels.

What after? The danger is that the reaction will be extreme and that violence will answer violence. Some measures to make the recurrence of such an outrage on the community impossible are necessary.

An Amazing Piece of Copper

Largest copper crystal weighing twelve pounds. It has revealed strange properties.

The illustration is of the largest single copper crystal in the world. From an ordinary piece of copper it was reduced to its present form by terrific heat, which rearranged the chaotic atoms in orderly form. The experiment was one of several made in the laboratories of the General Electric Company to discover the latent properties of single-crystal metals.

In its new form the copper was found to conduct electricity thirteen per cent. more efficiently than before. Also, it bends easily but only once bending scatters the atoms again.

Out of the Shadows of Centuries

Supreme Tuscan volcanic energy is occasionally turned in the direction of esthetics. On May 20 he unveiled the great pulpit of Giovanni Pisano in the Cathedral of Pisa and brought to light again a supreme work of art that has lain dismembered and practically forgotten for centuries. He is said to have gasped with admiration when the pulpit was unveiled. This work says a correspondent of *The London Times* "might well claim that it had been more consistently unloved than any other great monument in existence and this is strange because its parent and neighbor the smaller pulpit made by Nicola Pisano in 1269 for the adjoining Baptistery has received a continuous tribute of admiration in spite of successive modifications of the laws of taste. Father and son now stand in rivalry in their respective works: the one in the Duomo, the other in the Baptistery. And a new joy is added to the traveller who visits Pisa. The story of the long obscurity of this work and its recent recovery is given by *The Times*."

For some 500 years the pulpit as Giovanni made and left it, had no existence even in the minds of men until about the middle of last century. Professor Fontana, after a careful study of the scattered fragments constructed a small wooden model of the whole which is still to be seen in the civic museum of Pisa. His work came at an inopportune moment: the union of Italy had degraded Pisa, once the capital of an invincible Republic from being the second city of Tuscany to one of seventy or more provincial capitals each with similar claims and interests of its own. A disastrous flood leading to the construction of the present spacious Lungarni absorbed the revenues of the city for a generation to come but it is pleasant to record that certain English artists seeing and appreciating Fontana's work took casts of the principal fragments which were shown at the Paris Exhibition of 1867 and are now to be found at South Kensington.

Finally after the late war the reconstruction of the pulpit was definitely taken in hand under the direction of Prof. Felco Bacci then Superintendent of Fine Arts at Pisa, which he has since left to fill the corresponding office at Siena. A full-sized model was constructed and placed successively in various parts of the Cathedral until a suitable position was found. A long spell of controversy followed owing to the meagerness of the descriptions handed down from the period before the fire of 1399. This fire which melted the leaden roof of the Cathedral furnished an opportunity for a rearrangement of its interior and the pulpit, which

had escaped unharmed was removed piecemeal. Its panels stuck up on the walls as casual decorations its corbels planed into rectilinear shape to support the steps leading to the meagre little box that replaced it still resting on its two lion borne columns and the rest carried out as lumber, scattered, sold, destroyed. In the long controversy it was maintained by some that the pulpit had been supported by nine columns and that the Caryatid figures traditionally associated with it must therefore have come from another monument presumably the tomb of Henry VII. But Professor Bacci has triumphantly proved his conclusions and the unity of the whole as reconstructed under his guidance is self evident.

Pulpit in Pisa Cathedral
The reconstructed work of Giovanni Pisano that has long been dismembered

The panels in the wall of the landing depict scenes in the life of Christ and the central column seen in the picture breaks into three life-sized figures of Faith, Hope and Charity and behind the heads of the virtues the column rises to end in an elaborate capital of foliage. In the expense of much learning enterprise and patience the great work of reconstruction is at last complete.

The description of the pulpit takes the point of view of a visitor standing with his back to the northern wall of the church.

The nearest columns to his left and right (beyond the plain pillars which support the open landing) consist of figures of Christ on the one side and a female variously interpreted as the earth, Pisa and the Church on the other. The figure of Christ slightly below life size is supported upon a block flanked by the figures of the

The Adoration of the Magi

Is the subject of the intricate sculpture in the central panel of the pulpit wall. This view shows one of the highly ornate pillars

four Evangelists. On the right hand of each Evangelist is his symbol: beneath St. Matthew's angel crouches the Ojerio at whose order the pulpit was built; his face raised in supplication to the Saint. On the other side, beneath the eagle Giovanni himself kneels to receive the blessing of St. John. Christ has His right hand raised in blessing; in His left is a scroll inscribed *Veritas de terra orta est et iustitia de celo prosperit*. On either side of His head is a cherub with outstretched wings. These cherubs have been lost and are now replaced in plaster. The corresponding figure on the right is that of a crowned woman formerly interpreted as Pisa (and as such copied by Francavilla in his

statue of Ferdinand I de Medici by the Royal Place) at either breast she suckles a man child (the citizen and the countryman) and there are seven knots in the cord of her girdle representing her dominion over the Seven Islands (Alternatively the woman is the Church, her bales and Old and New Testaments, the knots in her girdle the seven virtues.) Behind her head are a pair of eagles (these also replaced in plaster), and beneath her feet are the four cardinal virtues: Prudence, Temperance, Strength and Justice, the front and back of the pedestal being screened by eagles.

The column to the right of this is composed of the nude figure of Hercules on an ornate pedestal. This figure is traditionally a relic of antiquity, said to have been taken from the house of Hannibal at Carthage, but an examination of it shows unmistakable traces of Giovanni's handiwork, notably the sharply pointed knees and the treatment of the hair and beard. It is in striking contrast to Nicolas' youthful and almost flamboyant Hercules in the Baptistry: a wizened, mournful figure, it symbolizes the failure of pagan strength when in conflict with the Christian strength represented by the corresponding figure of St. Michael.

The third and sixth columns of broccatello and porphyry rest upon crouching lions (the one feature common to all these pulpits) each of which holds the body of a horse in his paws. The fourth and fifth columns are plain. The seventh corresponding to the Hercules bears a winged Michael armed and cloaked, a drawn sword in his hand—a slapely and triumphant figure. This again is in marked contrast to Nicolas' Michael in the Baptistry, who wears deacon's vestments and sits with a look in his left hand on the cover of which is carved the crucified Christ between two soldiers with sponge and spear, but the figure corresponds exactly to the winged and armed Michael in the panel immediately above of the Judgment of the Blessed. Above the capital of each of the columns stands a shield, the triangular corbel on either side of her being filled with the leaning figure of a scroll-bearing prophet. Above these again are the nine panels which with the figures that separate them are about one meter in height.

DIVINITY

By E F SPEIGHT

Thou art sent unto this earth
To be a god in human guise
To call new beauty into birth
By the deep wonder in thine eyes

There is none above thee none
Save thou shroud thyself in shame

For some evil thou hast done
To the glory of thy name

Thou art God and thou art man
None can set thy selves apart
Ever since the world began
Heaven hath gathered round thy heart

LETTERS FROM THE EDITOR

IV

AFTER staying at Paris for a few days, I left for London by a morning train, which was rather crowded. My seat had been reserved before. So there was no difficulty about sitting accommodation. In my compartment there were an American gentleman, his wife and their two little sons. That they were Americans I learnt after the train had started. The gentleman himself began the conversation, asking me whether I was a Hindu. On my answering in the affirmative, he asked what Mahatma Gandhi was now doing and many other questions about him. I have noticed in my travels that no Englishman ever spoke to me first without introduction. One American, two American ladies, an Australian, a Japanese, (mistaking me for the poet Tagore), a German lady (mistaking me for Tagore), a Frenchman, a Chinese, a French colonial man etc., first started the conversation with me. By pointing out this difference I do not mean to suggest that Englishmen are not polite and sociable. About that I shall write later on.

I forgot to mention in the proper place that when at Paris I was waiting at the hotel to which I was first taken, I found an old Australian gentleman also waiting there. He asked me to sit in a chair near him and told me that he also was a stranger there like me. I learnt from him that he was an Australian minister of religion going to America after the death of his wife, he became the minister of a church there, and now he was going to England to meet his children, who were all grown up and settled in that country. He spoke to me about the message of Tagore, and said that the Hindus were concerned more with the deeper things of life, whereas the people of the West were more concerned with what might be of some practical advantage. He agreed with me in thinking that the gulf between East and West was not unbridgable, and that the difference between orientals and occidentals was not basic, in fundamentals. They agreed.

Alighting from the train at Calais, we

hurried to the ferry steamer in which we were to cross the English channel. Both before and afterwards in my travels I found how convenient it was to have even the porters literate. They tell you their numbers, and by that you can easily find out your baggage in the customs office as well as in ferry steamers and railway compartments. You give them the slips showing the number of your seat or your sleeping berth, and they take you there and place your baggage there.

I had been told before that though I had no sea sickness even on the Indian Ocean I should most probably have some trouble when crossing the English channel. That was likely enough, for were not the *English* people, though few in number in India more terrible than the *Indian* people in India who were much more numerous? So it would not be surprising if the *English Channel* were more troublesome than the *Indian Ocean*. But in reality I found crossing the channel a rather tame affair. That was also the case when I returned from England to France. On both occasions, I found some ladies affected. Perhaps there was nothing the matter with them, but their imagination was more active than their sense of the actual.

After I had been about an hour on the steamer, I could see indistinctly the chalk cliffs of Dover. They became more and more distinct as we approached the shore. At length we landed. As usual we had to pass through the customs office.

The railway journey from Dover to London took us across a small part of England and gave me my first idea of what the country was like. The Bengali poet D. L. Roy has said, 'বিলত দেশে তা মাতর', "Bilat desh ta matir", that is to say, the British soil, like the soil of other countries, is earthy. What he meant to convey thereby is obvious. Englishmen are prosperous and powerful, and are intellectually advanced. They are prosperous, not because the soil of England is composed of gold and other precious metals which can be had for the digging but for other reasons. They are

powerful and intellectually advanced not because of the chemical composition of the soil being appreciably or entirely different from that of the rest of the world, but for other reasons. The lesson which the poet wished to impress upon the minds of his countrymen is that they also can be prosperous, powerful and intellectually advanced if they will only try and take the proper steps there being nothing in the soil of their country which can present any insurmountable difficulty.

While crossing portions of Italy, Switzerland and France I had seen green grass growing on the soil, the trees having green leaves and bearing flowers of many colours and the rivers and lakes full of water like the water in our rivers and lakes—there were no golden grass or golden leaves or flowers or molten gold or silver for water. When I tasted the water I found it was like our water, not elixir vitae. The chemical composition of the different kinds of European food was the same as that of the same kinds of food in India. Wonderful to relate in England also I found corroborations of these impressions. Yet, alas! Europeans and Englishmen are Europeans and Englishmen and we are we! But to resume my story.

The first thing that struck me in my journey from Dover to London was the undulating character of the land. This feature also struck me when afterwards I went from London to Cambridge to Oxford and to Great Missenden (a village in Buckinghamshire where at the time of my visit Sir J. C. Bose was residing). This undulating character of the soil added to the beauty of the natural scenery. The fact that England is a great manufacturing country leads many Indians to expect to see land lying uncultivated or otherwise neglected there. But I found the fact to be quite different. There are of course extensive commons in England. There are also parks and gardens. But I did not find any considerable area entirely neglected. The land was either cultivated or utilised in some other way as I had previously found to be the case in France. The few thatched houses I saw (perhaps they belonged to farms) reminded me of similar houses in Bengal and gave me some pleasure.

It was nearly evening when I reached Victoria Station and got down from the train there. As I was told the customs inspection would take some time I drove to the place where I was to stay. A young

friend of mine who had been kind to me during the voyage and the transcontinental journey from Venice to Paris, kindly undertook to bring my baggage from the customs office after inspection. He took my keys from me. I am afraid he had a little trouble, not because there were any dutiable articles in my luggage but because of the too inquisitive dutifulness of the customs officials in my case.

Rice and vegetable curry of a palatable sort I had on board the steamer *Pilsna* on several days but my first dal (a kind of soup of split pulse) and bhat (rice) since leaving India I had the very first evening in London in the Y. M. C. A. hostel in Gower Street, formerly situated at the Shakespeare Hut. The founders and managers of this institution are to be praised for providing Indian food for so many Indian students and other Indians who choose to take their meals there, as many Indians, at least for some time after their arrival in London do not relish European dishes cooked in the European way. Of course European dishes are also supplied to those who want them including beef, bacon etc. cooked in European style. As a vegetarian I appreciated the restaurant of the institution very much. I was glad to find, as I had expected that no wines, spirits or liquors are served there. But at the risk of being considered puritanic I must say that I noticed with pain the very large percentage of smokers among the Indian students. As far as I remember even those Bengali students who are smokers did not smoke in my presence. But other Indian students who were smokers had the courage of their convictions. Perhaps it was because they did not know that I was a fellow countryman of theirs. Or it may be they had outgrown the Indian (or Hindu?) contention that young men should not smoke in the presence of their elders. I do not blame them. For I know there are British professors in British universities who almost insist on their students smoking in their presence when they themselves smoke. They consider smoking perfectly harmless physically, morally and intellectually. I think otherwise and prefer the Indian etiquette. Here I may mention incidentally that wherever I travelled in Europe in railway trains I found compartments separately provided for smokers. This arrangement should be introduced in India.

In London I had good rice dal, vegetable curry, etc. at an Indian restaurant also kept by an Indian who calls himself Virooswamy.

He supplies meat dishes also. His restaurant is largely patronised by Anglo-Indians (old style) and other Britishers. One Mr Rajani Kanta Majumdar of Chittagong owns three hotels in London, and I heard from an acquaintance of his at Genoa that he had recently purchased a fourth one in the same city. He does not make a speciality of supplying Indian dishes. I was told in London that there was a restaurant there named 'Abdulla Restaurant', but we could not find it out. Probably it does not exist any longer. I am told it was kept by a non-Muhammadan, the name Abdulla being given to attract meat-eating customers. I believe a few well-managed Indian restaurants would pay in London.

The A. M. C. A. hostel in Gower Street and the one at 21 Cromwell Road, managed by the education department, are the two places in London where Indian students largely congregate. The company of fellow countrymen in a foreign country is undoubtedly a great comfort. The means of recreation and culture provided by these hostels are also much to be commended. But in so far as Indian student centres indirectly though not intentionally, serve to keep our students from seeking the company of and mixing with British students of good character and other desirable non-Indians, they present a problem whose existence the authorities of both the centres do not ignore. They have been trying in their own way to solve it. I know there is much undesirable company in England. It is better for our youth not to have such company. But I am not sure that these hostels succeed in keeping their boarders and other students away from such company. I was in fact told that some of them frequent dancing saloons of a questionable character, but I can not vouch for the truth of this allegation.

I must also mention here that one Indian student—I will not mention either his name or that of his native town in Upper India—asked me questions on political and communal topics in an inquisitorial way which I did not like. He in fact cross-examined me like a witness in the witness box, leading me to imagine that he might have another occupation in addition to that of a student.

In India I had heard much about the gloominess of London its fog etc. But luckily for me during the ten days that I was there I had fine weather: it rained or rather drizzled only on the last day of my

stay there. I have therefore, been able to carry away a good impression of London. This favourable impression is also due to the fact that I had no time to visit the congested districts and slums. What I saw I shall incidentally indicate in my next letter.

I have some observations to make on European or Occidental dress both male and female which may be made as well in this letter as in any future one. I have passed through parts of Italy, Switzerland, France, England, Germany, Czechoslovakia and Austria, and I have seen in Europe men and women who are natives of Russia, Holland, Norway and America. I have found all the men dressed practically alike and the women also dressed practically alike. This sameness, monotony or uniformity cannot be appreciated from the artistic point of view. The artist would perhaps desire more variety.

But this uniformity has its value. In India by merely looking at the dress of large masses of men and women, one can tell to what part of the country they belong. This difference in dress produces a feeling of not being quite alien or related in any way, at least it stands in the way of the growth of complete solidarity of feeling. In the West nations sometimes fight against nation, no doubt, but so far as non-occidentals are concerned, they feel that they are one, and the non-occidentals no different from them. The growth of this feeling is helped by the uniformity of costume. Dress is one cause of Western solidarity in relation to the rest of the world.

Western male dress is not artistic, nor is it as simple as it may be without sacrificing decency in the least. It does not, however, stand in the way of activity in the way that the dress of the well-dressed Bengali gentleman for instance, though more graceful and artistic does.

If the modern dress of the Western man is unartistic, the modern dress of the Western woman is in the vast majority of cases positively ugly. I beg pardon for this uncharitable remark. But I make it because I have respect for Western women for many reasons and wish that they were more decently and beautifully dressed. In some cases fashion seemed to have gone to such extremes that the Pope felt obliged to ban some kinds of women's costumes among Roman Catholics. I do not in the least mean to suggest that

because Western women dress in the way they do they are mostly immodest. My opinion is quite the opposite. I am not a thought reader but it was obvious to me that in the West women generally can not be accused of immodesty as even young waitresses and chamber maids in the hotels and restaurants and other young women of the same rank in society appeared to me from their faces and demeanour to be generally innocent and pure. No the reason why almost all women in the West follow the prevailing fashion in dress is because of the rule of use and wont and the tyranny of fashion. I have heard many men and women in the West declare the Indian sari very beautiful much more graceful than any garment worn by Western women. But though in India some European women may occasionally wear the sari not one of them will dare appear in public in a sari in their own country. That is one of the reasons why it may be said with truth that though politically Europeans are free in some social matters they are in greater bondage than orientals.

The modern dress of European women has been defended on grounds of utility. It has been said that it conduces to greater bodily activity and freer movement. But, I hope it will be conceded that in the West as in the East, men are not less active and useful and not less free in their movements than the women they are in fact more so than the women. Now if Western men can be so active and free in their movements in spite of their bodies being completely covered from neck to foot, it is not clear why Western women should require to keep parts of their bodies bare or half bare and should require also to suggest nudity by using skin coloured or flesh coloured stockings in order that they may be active useful and free in their movements.

Bobbed or shingled hair is another thing which I did not like. I admit some women look graceful in such hair or rather in spite of it. But for the most part, bobbed hair gives them a mannish appearance. To my oriental eyes hair kept long appears more beautiful and womanly. That may be due to my conservatism. It may be urged that bobbed hair has one advantage over long hair—it dries more quickly after wetting than long hair and is therefore healthier. There is something in this. But as speaking generally Indian women who bathe daily wear their hair

long and Western women who do not bathe so frequently have bobbed hair this argument may be pushed too far. Women in Germany do not bathe less frequently than women in France for example. But proportionally in Germany more women wear their hair long than in France. It should also be said that bobbed hair requires less time to clean and dress than long hair. But Western women spend so much time over their toilet that a few minutes more or less do not much matter.

While on this topic I may present the reader with the following item of news which I cut out from the continental edition of the *Daily Mail* of September 6 1926 when I was in Geneva—

BOBBED HAIR TRAGEDY

FATHER'S SUICIDE WHEN GIRLS CUT TRESSES

Charles Serlaodde (30) living at 100 Avenue du President Wilson Saint Denis, near Paris was recently told by his daughters that they intended to cut their hair short.

He threatened to kill himself if they carried out their intention and yesterday on learning that they had cut their hair he shot himself through the heart with a revolver. He had been an invalid for some years.

In Europe and perhaps in America too, women have taken to opening men. That is perhaps a reason why so large a proportion of Western women smoke. It does not certainly promote their health. Neither does it add to their charms. In a Geneva hotel in the dining saloon I often saw a young woman who looked more like a professional (male) cricketer or an athlete than a member of the fair sex. Her hair was not bobbed like that of women but cropped close to the skin on the back of the head like that of men. Her looks and the expression of her eyes were hard and masculine. I found a young woman of the same masculine sort in the French steamer *Ama one* in which I came back to India, with only this difference that the expression of her face and eyes was mild. In a Geneva restaurant I saw a girl whom I at first mistook for a boy because only her face and head from the neck and throat upwards were visible to me. And the way she held her cigarette between her teeth while she was washing her hands was quite funnyly boylike.

That women should be very healthy and physically strong is much to be desired. But it should be always remembered that a woman who is a counterfeit man is neither man nor woman just as a man who is a counterfeit woman is neither woman nor man.

COMMENTS AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact clearly erroneous views misrepresentations, etc. in the original contributions and editorials published in this Review or in other papers criticising it. As various opinions may reasonably be held on the same subject this section is not meant for the airing of such differences of opinion. As owing to the kindness of our numerous contributors we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor *The Modern Review*]

Mr Sleem an Indian

Three correspondents have pointed out that I was wrong in speaking of Mr Sleem as an Englishman in the November number p. 480. He is in fact an Indian (Punjabi) Mussalman barrister at law and a distinguished tennis player. I make this correction with pleasure and withdraw the remark I was led to make because of my mistake. I had not had the pleasure of Mr Sleem's acquaintance at Geneva and never met him there. The spelling of his name misled me as it is usually spelt Selim or Salim. I remember how Mr Srudd Hossain editor of the *New Orient* of America strongly criticised in that review the European practice of spelling the Riff leaders' name Abd el Krim instead of Abdnl Karim. I did not then know that an Indian gentleman spells his name in a similar way. I do not, of course question any body's right to spell his own name in the way he likes—I am only explaining how my mistake arose.

R C

Date of the Death of DEVA RAYA II

In the December number of the *Modern Review* Mr Sri banta Sastry says that the death of Deva Rava II occurred on Tuesday the 10th of May 1446 and not on Tuesday, the 24th of May as was pointed out by Dr Kiel Horn. If May 10th was a Tuesday then 24th May also should be a Tuesday and not Wednesday. If the latter it ought to be the 20th Solar Vaisakh month began at 17 hours 43

minutes on Monday and so the first date was a Tuesday when Snklasaptami ended at 14 hours 50 minutes and star Pushya lasted till 50 minutes after sunrise and Aslesha was the reigning star on that day. No doubt Krishna chaturdasi ended at about 99 hours on the 20th and Kritika was the reigning star of the day which ended at about 14 hours. On Tuesday the 24th Krishna trayodasi lasted till 22 hours 20 minutes. Valakasha paksha atare in the Epigraph does not allow us to hold it as Snkla paksha or Bright half. It has to be pointed that the Epigraph as printed is not intelligible as it is not written with the usual symbols. Mr Sastry might have given the necessary reference for tracing out the original easily.

Generally it is the custom to note the Nakshatra in the Epigraphs of the later kings. Here the Nakshatra could not easily be found. As the year of the death of the king has been located it would be easy to fix the date also correctly if we had the Nakshatra and tithi though the week day is in correct. From the Epigraph noted in the Review I read as follows—

*Kṛṣṇachaturdasi kṛṣṇachaturdasi kṛṣṇachaturdasi
Mahatmaya varaka yuktā valaksha pakshatara
Pratipadā; Devala pralayamapakshanta samo
chaturdasi dīna katham pitṛupā dharmyagatit*

It is better that Mr. Sri banta Sastry looks over the date again on the light of the above suggestion.

SOMA SUNDARA DESIKAN

A LETTER OF LEO TOLSTOY

By ROMAIN ROLLAND

I wrote to Tolstoy for the first time about the Pentecost (May) of 1887. At that time I have been founding my creed ("Credo Quia Verum") on the direct sensation of the Divine Existence. I feel therefore I exist. And I could not understand the proscription of Art by the author of *What to Do*.

I do not find anything but a few fragments of my original letter.

I would not have dared to write to you if I

had not to express to you my passionate admiration. It seems that I know you too well through your works to address to you a few compliments which would appear almost impertinent on the part of a boy like me. I am tormented by the idea of Death which I find haunting almost every page of your novels and above all in your *Franklin*. I am convinced that ordinary life is not the real life. The reality of Life is in the renunciation of the egoistic conception of the living creatures and in their closer union with

the Supreme Life—the Universal being—we should try immediately to get fused into that Life. That is your thought I believe. My thoughts also follow the same line. I understand that to realise that renunciation of selfish personality, we must avoid all barren sentimentality and work for the benefit of all. In you say sir that benefit to others, practical charity, and bodily work alone can tear ourselves away from the fanciful consciousness of our limited ego, can give us the *ataraxia* or quietude of thought, the peaceful sleep of the heart, the only blessing. It is this oblivion of ones self sir that I am seeking that I desire with all my heart and I believe that I shall attain it. But why do you insist that it can come only through manual labour? I ask you this question which engages my heart most strongly. Why do you condemn Art? Would you not use it rather as the most perfect instrument for the realisation of renunciation? I read your new work *What to do*. The problem of Art is assigned there in quite the last place. You say that you condemn Art without giving all the reasons for your proscription. Excuse me if I cannot wait any longer and permit me to ask you your reasons. I believe to have understood that you condemn Art because you detect there in the selfish desire of subtle enjoyments which make our selfishness more coarse by the hyper excitability of our senses. I know that alas for the most of the so-called artists Art is nothing but an aristocratic sensuality.

But is not Art something else something more? Another thing which means *everything* to a small number of artists? To them it is only Art which means the oblivion of the selfish individuality the absorption into the Divine Unity the creative Ecstasy. In that state what can Death do to us? Death is dead. Sovereign Art has killed Death.

Am I wrong? Do tell me Sir if I am mistaken. I am in love with Art because it shatters my miserable Ego and unifies me with the Eternal Life. Do you not believe that Art has a great role to play above all amongst old races of men who are dying through the excesses of their civilisation?

Please reply to me Sir! Tell me in all sincerity if labour without thought which you extol would really satisfy you. Would you never feel the regrets due to the sacrifice of Thought and to the disowning of Art and moreover if it is possible to reject Thought and Art by the simple fact of our wishing like that?

I am in need of advice. I find near about me not a single guide or moral preceptor. In France in Europe I find only indifferent or sceptical people or the dilettantes.

Romain Rolland.]

[Reply of Leo Tolstoy]

4 October 1887

To Monsieur Romain Rolland

Dear Brother!

I received your first letter. It touched me deeply in my heart. I read it with tears in my eyes. I had the intention of replying to it but I could not make time and over

and above the difficulty that I feel in writing in French. I must write lengthily in reply to your questions which are largely based on a misunderstanding.

The questions raised by you are: Why does manual labour impose itself on us as one of the essential conditions of our true happiness? Must we voluntarily cut ourselves away from all intellectual activities of science and art which seem to be incompatible with manual labour?

To these questions I have replied so far as I could in the book entitled *What to do*, which I hear has been translated into French. I have never presented manual labour as a principle but only as the application of the most simple and natural moral law which is the very first to appear before all sincere people.

Manual labour in our depraved society—the society of the so-called civilised people—imposes itself on us uniquely by reason of the fact that the principal defect of that Society was and is down to this day that we have freed ourselves from manual labour and are profiting by the labour of the poorer classes, they are ignorant unfortunate veritable slaves like the slaves of the old world and we do nothing for them in comparison with what they do for us.

The very first proof of the sincerity of the people of this society professing the principles of Christianity, philosophical or humanitarian is to try to come as much as possible out of this contradiction.

To succeed in this we have the simplest and the readiest method of manual labour which starts with the act of taking care of oneself. I would never believe in the sincerity of Christian convictions, philosophical or humanitarian of a person who allows his own chamber pot to be cleaned by a servant.

The shortest and simplest moral formula is to take the service of others as little as possible and to serve others as much as possible to demand the best and to give the utmost possible in our relations with others.

This formula which gives a rational meaning to our existence and the happiness which results from the same removes all the difficulties at one stroke no less the difficulty appearing before you that relating to the role of intellectual activity—to Science and Art.

Following the above principle, admit that I am never satisfied and happy until I have the firm conviction that while acting,

RADHA IN EXPECTATION OF SRIKRISHNA

By Courtesy of the Artist Sreemati Sukumari Devi Santiniketan

I am making myself useful to others. The contentment of those for whom I act, is an extra, a surplus of happiness on which I do not count and which cannot influence the choice of my actions. My firm conviction that what I do is neither useless nor evil but is something for the good of others is therefore the principal condition of my happiness.

And it is this, which urges involuntarily a sincere and ethical man to prefer manual work to scientific and artistic works. The book that I write needs the work of the printers, the symphony that I compose needs the work of musicians, the experiments that I make need the work of those who manufacture the instruments of laboratories, the picture that I paint needs the work of those who make the colours and canvases. All these works may be useful to men, but may also be completely useless and even injurious as it often happens in many cases. Thus while I work at things whose utility is highly debatable and to produce which I must moreover make others work, I have before and around me, endless things to do of which one and all, are undoubtedly useful to others, and to produce which I need not make a single person work: a burden to carry for one who is fatigued a field to cultivate for a peasant proprietor who is ill, a wound to dress—millions of things like these which surround us, which requires nobody's help, which produce immediate contentment in those for whose welfare you have performed the act: planting a tree, tending a calf, cleaving a well and such works are, beyond doubt, useful to others and which cannot but be preferred by a sincere man to doubtful occupations which in our world, are preached as the highest and the noblest vocation of man.

The vocation of a prophet is high and noble. But we know what sort of people are the priests who believe themselves to be prophets only because it is to their advantage and that they have the chance of passing for prophets.

A prophet is not the person who receives the education of a prophet but who has the intimate conviction that he is a prophet, that he must be so and that he cannot but be so. This conviction is rare and cannot be realised except by the sacrifices which one makes for his vocation.

It is the same for true science as well as for real art. Lull with all his risks and

perils, left his profession as a cook and took to violin; by the sacrifice that he made he justified his title to the musical vocation. But our ordinary student of a conservatoire, one whose sole duty is to study the things that are taught, is not in the state of giving proof of his vocational zeal, he simply profits by the position which seems to him nice and advantageous.

Manual work is a duty as well as a blessing for all, the intellectual activity is something exceptional which becomes a duty and a blessing only to those persons who have that vocation. That vocation cannot be tested and known except by sacrifice which the scholar and the artist make of their repose and their prosperity in order to pursue their vocation. A person, who continues to fulfil his duty of sustaining life by the works of his hands and yet devotes the hours of his repose and of sleep to thinking and creating in the sphere of intellect, has given proof of his vocation. But one who frees himself from the moral obligations of each individual and under the pretext of his taste for science and art, takes to a life of a parasite, would produce nothing but false science and false art.

True science and true art are the products of sacrifice and not of certain material advantages.

But what happens then to science and art? How many times have I listened to this question made by people who have neither any pre-occupation for nor any clear idea whatever of science and art? One would be inclined to believe that those people have nothing so near to their heart as the well-being of humanity which, according to their belief could not have evolved except by the development of those things which they call Science and Art.

But how is it, that we find people so stupid as to contest the utility of science and art, as well as people still more comic who believe it to be their duty to defend them? There are manual labourers, agricultural labourers. No one bothers about contesting their utility and never would a labourer take it into his head to prove the utility of his work. He simply produces; his production is necessary and is good for others. We profit by it and never doubt its utility, still less, attempt to prove the same.

The workers in the realm of art and science also are in the same condition. But how is it that we see people straining all

their powers to prove the utility of Science and Art?

The reason is that real labourers in the field of science and of art do not arrogate to themselves any special rights, they give the products of their work which are useful and they do not feel the need for any special right and to prove their rights. But the great majority of those who call themselves scholars and artists, know quite well, that what they produce are not worth the things they consume in society, and probably because of that, they take so much pains, like the priests of all ages, to prove that their activity is indispensable for the well-being of Humanity.

Real science and real art always existed and will exist always like the other modes of human activity and it is impossible and useless either to prove or to disprove them.

That science and art play a false role in our society is the result of the fact that the so-called civilised people headed by the scholars and artists form a caste of their own, privileged like the priests. This caste has all the defects of other castes lowering and degrading the very principles under which they organise themselves. Thus we get in the place of true religion a false one in the place of true science a false one, and the same thing we find in Art. It has the fault of weighing heavily on the masses and even more, of depriving them of that very thing which one pretends to propagate among them. This consoling contradiction between the principles professed and their practice is the greatest weakness of the case.

Excepting those who maintain the inept principle of science for science's and art for art's sake the champions of civilisation are obliged to affirm that science and art are great assets for Humanity. In what sense are they assets? What are the signs by which we can distinguish the good from the evil? These are questions which the champions of science and art do not care to reply to. They even pretend to say that the definition of the good and the beautiful is impossible to make, generally speaking they cannot be defined.

But those who speak like that do not speak the truth. In all ages Humanity has done nothing in course of its progress but to define what is Beauty and what is Goodness. But that definition does not suit the champions of culture, for it unmasks the futility, if not the injuriousness of opposing

to Goodness and Beauty, what they call their Science and Art. The Good and the Beautiful have been defined through centuries. The Brahman and the Buddhist sages, the Chinese, the Hebrew and the Egyptian sages, the Greek Stoics and the Christian Bible all have defined them in the most precise way.

All that tend to unify mankind belong to the Good and the Beautiful. All that tend to disunite are Evil and Ugly.

The whole mankind knows this formula. It is inscribed in our heart.

That which unites people is good and beautiful for Humanity. Well, if the champions of Science and of Art have the good of humanity as their object, they should not ignore it, and if they do not ignore it they should cultivate only those arts and sciences which lead to the fulfilment of that object. Then there should not be the judicial science, the military science, the science of political economy and of finance, which have no other object but to secure the prosperity of certain nations at the expense of others. If human welfare had been the ultimate criterion of science and of art, then never would those positive sciences which are completely futile from the point of view of human welfare, have acquired the importance that they have now, so, the products of our arts, which are good more or less to provide excitement to the old rakes, or relaxation to the comfortable idlers, would never have gained so much popularity.

Human wisdom does not consist solely of the mere knowledge of things. For the things that one may know are infinite and to know the largest amount of things is not wisdom. It consists in knowing the hierarchy of things which it is good to know and in learning to arrange one's knowings according to their importance.

Now of all the sciences which man can and should know, the principal is the science of living in such a way as to do the least harm and the utmost good, and of all the arts that of knowing to avoid evil and to produce good even in the smallest of our efforts. But we find that amongst all the arts and the sciences which pretend to serve Humanity, this very first in science and in art according to importance, not only do not exist but are excluded from the lists.

What we call science and art in our society, is nothing but a stupendous humbug, a huge superstition into which we fall

ordinarily as soon as we get out of the old superstition of the church. To see clearly the route which we should follow we must begin at the very beginning removing the eye-preserver which is comfortable no doubt but which obstructs the vision. The temptation is great. We live either by labour or by some intellectual application we raise ourselves gradually in the social scale and we find ourselves amongst the privileged the priests of civilisation the *cultured* as the Germans say. And to doubt the principles which had given us that position of advantage requires, as it does in case of a Brahmin or a Catholic priest much sincerity and great love of truth and goodness. But for a serious man like you Mon Rolland who questions Life, there is no other choice. In order to see clearly we must free our mind from the superstitions in which we are steeped however profitable they might be. That is the condition *sine qua non*. It is useless to discuss with a man who holds blindly to a fixed creed even on a single question.

If the field of reasoning is not completely free. There may be fine discussions fine argumentations and yet we may not move toward Truth even one step. The fixed point would arrest all the reasonings and falsify them. There are creeds of religion and creeds of our civilisation both are quite analogous. A Catholic would say I may reason but not beyond that what my scripture and our tradition teach me they contain the whole and immutable Truth. A devotee of Civilisation would say 'My reasoning stops before the data of civilisation Science and Art. Our Science is the totality of true human knowledge. If science does not possess as yet the whole verity she will do it in future. Our art with its classical traditions is the only true art. The Catholics say Outside man there exists only one thing complete in itself as the Germans say it is the *Church*. The man of the world says Outside man the only thing that exists is *Civilisation*.

It is easy for us to see the faults of reasoning in religious superstitions, because we do not any longer share them. But a believing monk or even a Catholic is fully convinced that there can be only one religion or truth professed by him. And it even seems to him that the verity of his religion proves itself by reasoning. It is the same case with us believers in *Civilisation*. We are fully convinced that there exists only one true civilisation—our own.

And it is almost impossible to see the illogicality of all our reasonings which do nothing but to prove that of all the ages and of all the peoples there is only our age and a few millions of creatures inhabiting the peninsula which is called Europe that finds itself in possession of the only true civilisation composed of true sciences and real arts.

For knowing the truth of life which is so simple it is not absolutely necessary to have something positive a profound knowledge a philosophy—it is necessary only to have the negative virtue of *not having Superstition*. One must place oneself in the state of a child or of Descartes saying I know nothing I believe nothing and I do not wish anything but the knowledge of the truth of life which I am compelled to live.

And the reply given is complete for centuries and it is simple and clear.

My personal interest prompts that I must have all wealth and good fortune for my own self. The reason speaks that all creatures all beings desire the same thing. So all the souls that are like me in search of their individual happiness would crush me that is clear. I cannot possess singly the happiness that I desire. But the searching after happiness is Life. Not to be able to possess happiness not even to attempt for it is not to live.

The reasoning says that in the order of the world where all creatures desire only their own good myself a being desiring the same thing cannot have it, therefore I cannot live. But in spite of this clear argumentation we continue to live and to seek for happiness. We say I would never have good fortune and be happy except in the case in which all other beings would love me more than they love themselves. That is something impossible. But in spite of that we all live together and all our activity, our searching of fortune of glory of power are nothing but attempts to make ourselves loved by others more than they love themselves. Fortune glory power give me but the appearances of that state of things and we are almost happy and we almost forget for the moment that they are but appearances and not the reality. All beings love themselves more than they do love us and happiness is impossible. There are people—and their number increases from day to day—who cannot solve this difficulty and burn their head while saying that life is nothing but a mockery.

And yet, the solution of the problem is

more than simple and offers itself spontaneously to us I can never be happy except under a condition of the world wherein all beings would love the others more than they love themselves. If this thing is realised then the entire universe would be happy.

I am a human being and Reason gives me the law of happiness for all beings I must then follow the law of my reason—that I love others more than I love my own self.

Let but man follow this line of reasoning and Life would appear before him in quite a different aspect as it had never done before. The creatures destroy one another no doubt but they also love one another and practice mutual aid. Life is not sustained by destruction but by the Reciprocity of love amongst living beings and this is translated within my heart into Love. So far as I could survey the march of the world I see that the progress of Humanity is due to this principle of Reciprocity. Our History is nothing but the progressive clearing up of the conception and application of this unique principle of the *Solidarity of all beings*. This reasoning is corroborated by the experience of History as well as by personal realisation. But beyond reasoning

man finds the most convincing proof of the truth of that reasoning in his intimate feelings of the heart. The greatest happiness that man knows the largest freedom the utmost joy is in Abnegation and in Love. Renson discovers for man the only way to happiness and the feelings also push him to that conclusion.

If the ideas that I strive to communicate to you appear not so clear please do not judge them too severely. I hope that you will read them someday in a way more clear and definite. I only wished to give you an idea of my way of seeing things.

Leo Tolstoy

[Translated by Kalidas Nag from the original French]

A B I had the rare privilege of passing over this noble ether of the Russian base the very first day that I saw Mon Romieu Rolland in Paris. He has cherished this epistle as one of the most precious things in his life and he made touching references to this Great Soul straining every nerve to make his idea of Love clear to this unknown French youth who grew up to repay this debt by consecrating a profound and artistic study to Leo Tolstoy. I shall publish Mon Rolland's note on this letter in a subsequent issue of this Review.

INDIAN PERIODICALS

The Duty of the Indian Youth

T. L. Vaswami writes in *The Scholar*

The future is with the Nation's youth. Many young men and women are dreaming to-day the Dream of Freedom. But they are not yet organised into a Great body. Youth movements have in other countries done great things. Much has been done by Young Italy. Ireland owes much to young men. There is a Youth Movement in Germany. It has two wings. The one is the Workers' Youth representing young people of the Industrial Class. The second consists of young men and women drawn not from the workshop but from the Universities and High Schools. The Workers' Youth believe in social reform and international peace. The young people of the Universities and High Schools believe in return to nature.

An Order of Young India is needed to check the process of disintegration in our life. Cohesive forces have weakened those of disintegration are spreading. India is not acting as one will. And until she develops a will to act as a national personality she may not hope to achieve anything.

India is not acting as one will mainly because she is not thinking as one mind. Unity—not the fleeting, unity of feeling but a truly fruitful unity—must grow out of knowledge. Indians—Hindus, Muslims, Parsis, Christians, Jains—must know India her glories, her culture, her ideals. There can be no true unity which is not a unity with our ancestors, our race-consciousness through the centuries. All attempts at unity which ignore or trample upon our race-memory and the ancient Ideals of the India that was truly great, are I humbly submit foredoomed to failure.

Therefore I plead for a new renaissance of Indian Culture. Not many are aware of how much students in China are doing for national movement in their country. The most popular cry writes an English critic "among the students of China is China for the Chinese." The youth of China are aflame with passionate patriotism and are demanding that China shall no longer be a pawn in the game of the nations. And this patriotism of the students in China is deepened by a new knowledge of the ancient history and ancient ideas. The same English critic observes—

"These young students are learning more of their own history of their ancient and wonderful civilisation. They know that China had a highly developed and civilised life when Europe and America were peopled with painted savages. This knowledge of their ancient greatness is increasing their national pride and deepening their conviction that China has also a great future to look forward to."

In India so many even of the educated know so little of the geniuses and ideals of India. Much of the current education is I am afraid, educated ignorance. I have heard not a few of the Indian graduates argue that India never showed any political genius. India at best, says our young educated graduate, produced religion and religion he observes with a benignant smile, is superstition. Yet if he will but care to study the ancient history of India, he will know that far back in the dawn of history in the far-off Vedic age, India had developed a theory of constitutional monarchy and a democratic constitution. The Vedic King was not a despot, nor a benevolent autocrat; he was elected, he had a Council guided by the wisdom of the Rishis and the State was practically shaped by Samitis or Popular Assemblies. In post Vedic times we read of the establishment of *ganas* or republics in India.

The more we know India the more may we understand her genius and the value of her great ideals for the modern age.

Fruit Growing for India

Looking at the largest industries in India one fairly gasps to see how primitively things are carried on here. This backwardness is mainly due to lack of education and cheap capital. The following account of the Fruit Growing industry which appeared in the *Indian Scientific Agriculturist* tells the same tale.

Fruit culture in India in spite of the fact that it has been carried on for centuries is still primitive and largely empirical. Western countries like Great Britain and the United States of America have demonstrated to the world the possibilities of the Fruit Industry. The reason for the backwardness of India is not far to seek. The scientific development which has influenced the progress of horticulture in other countries has had but little effect on India. The Indian fruit grower is still carrying on in his avocation as his forefathers did. His ignorance of the scientific methods of horticulture, coupled with his aversion to embrace new methods is a serious impediment in the way of progress. He largely plants seedlings instead of budded or grafted plants as he does not know how to propagate them. The Art of budding and grafting he has never cared to learn and those who know it try to make too much out of it. He plants his trees too closely together where they struggle for light, irrigates his orchard too wastefully and gives but little cultivation. Hence the orchards become infested with weeds, insects and fungoid pests. He does not know how to combat

these diseases and ascribes his misfortune to his fate. Practically he gives no pruning, does not thin his fruit, the result is that sometimes the trees bear abundant crops and at others none at all. His methods of picking, grading and packing are crude and marketing still more so resulting in great waste. As regards preservation of fruit he has hardly heard of it. The net result of all this is that fruit industry is undeveloped and domestic supply entirely inadequate to meet the requirements of the people which have been met by large imports from abroad.

In the year 1922-23 the imports amounted to Rs. 18,357,208 whereas the exports to Rs. 632,260 only. These figures speak for themselves and show more convincingly than words what a vast field there is for the fruit industry in India not only to supply the home markets but also to produce a surplus for export.

Will the unemployed youths with university training pay some attention to this field? It has money in it as well as the pleasure of achievement.

The Arya Samaj in Bengal

Kali Nath Rai writes in the *Vedic Magazine* on the causes which have kept the Arya Samaj out of success in Bengal. He says:

The Arya Samaj has not made much of a headway in Bengal for much the same reason for which the Brahmo Samaj had its birth in Bengal. Bengal is a firm believer in evolution, and she does not believe in Back to the Vedas; perhaps back to anything. Bengal is essentially rationalistic and does not believe in the infallibility of any book or any human being that has ever walked the earth. To her the reason of the individual is the ultimate authority in all matters. She is also very largely cosmopolitan and believes far more in proving the affinity of her own faith to other faiths than in proving that it alone is right. Lastly, in spite of her intellectualism she has a partiality for the emotional side of religion, a side in which she finds the Arya Samaj deficient according to her ideas. Nothing so absurd is meant as that this generalisation is true in the same sense or to the same extent of all her people. But no acute observer can deny that it sums up the prevailing spiritual tendencies of her educated youth and the educated youth in every province and every country are fairly representative of the people as a whole. No one who knows the Arya Samaj, its strength as well as its weakness will need to be told that it cannot possibly appeal as a religion to a people with these prevailing tendencies.

The Bns Menace

Calcutta is faced by a new danger in the shape of reckless Bns driver whose pranks on the road have made walking or driving

along Calcutta Streets extremely risky Major G G Walsh writing in the *Indian and Eastern Motors* on this says

To anyone who uses his eyes the present situation must be a matter for grave concern. Certainly as far as Calcutta is concerned motor omnibuses are an innovation but that cannot be held as an excuse for not taking the matter in hand and preventing drivers from running riot. The situation must be faced squarely and lessons learnt by other towns must be applied to Calcutta. London in which motor vehicles of all sorts have been plying for many years past can surely by now be taken as a model on which to base a code of laws applicable to Calcutta.

Prevention is better than cure and A stitch in time saves nine are proverbs which have been dinned into our ears from time immemorial. Yet in the present all the axioms on which we are supposed to have based our code of living are forgotten. We must bear in mind that motor omnibuses have come to stay and the more their utility is appreciated the more will they spread. Unless urgent steps are taken to control the comparative few which are now plying for hire it will be a problem exceedingly difficult of solution when the numbers are augmented.

At almost any hour of the day on those thoroughfares along which plying for hire is permitted motor omnibuses will be seen cheek by jowl with every other form of vehicle, but the drivers of them appear to be oblivious to their existence. At least, that is the impression which is left to the mind of the onlooker who is generally credited with seeing most of the game. With little or no warning they will stop at any point at which a passenger may wish to descend nearly always in the middle of the road and very often in the act of overtaking another bus or car. It is a veritable nightmare to anyone who has used the London General Omnibus Company's services to see the total disregard by the Calcutta bus driver of all laws written and unwritten.

These remarks are more directly aimed at the drivers of individually owned buses and not at the drivers of the two larger Transport companies although they too have a very great deal to learn. There are four glaring faults which should receive the attention of the powers that be. They are —

- (1) Stopping in the middle of the road to discharge or load passengers
- (2) Racing resulting in double banking
- (3) Overtaking on a corner
- (4) Dirty interiors

Surely legislation can deal with these faults. More serious problems have been solved in India but there seems to be an air of apathy where buses are concerned.

Mr F W Pethick Lawrence the Labour M P

The following account of the life and career of Mr Pethick Lawrence M P who is now on a visit to India is compiled from a longer account in the *Hindustan Review*

Frederic William Pethick Lawrence who with

his wife is now on a visit to India is best known for his vigorous advocacy of Woman Suffrage and for active association with Labour and internationalism.

Born in December 1871 he went to Eton in 1885 and in January 1891 became Captain of the Oppidans. From there he went to Trinity College, Cambridge and became Fourth Wrangler in 1894. He also obtained a first class in Natural Science in 1895 and was awarded the second Smith's Prize for Mathematics in 1896 and the Adam Smith prize for an essay on Local Variations in Wages in 1897. In the same year he was elected a Fellow of Trinity College, Cambridge. He was also President of the Cambridge Union Debating Society in 1896 and played billiards for the University in the match against Oxford.

After leaving Cambridge Mr Pethick Lawrence made a tour of the world. He visited India twenty-seven years ago and proceeded to Ceylon, Australia, New Zealand, China, Japan and the United States.

Having been called to the Bar in 1899 he sometimes sat as Poor Man's Lawyer to give legal advice to all who applied for it.

In 1900 he was appointed as Dunkin Professor at Manchester College, Oxford and lectured there during the year on social questions.

Meanwhile he had been elected as the Unionist candidate for North Lambeth but after a full study of the South African problem and a visit to that country he found himself in opposition to the views of the Unionist Party and retired from the candidature. He became associated with Miss Emily Hobhouse in exposing the scandals of the concentration camps for women and children in South Africa and served as Honorary Secretary of the South African Women's and Children's Distress Fund.

In 1901 Mr Pethick Lawrence obtained a controlling interest in the London Evening Paper the *Echo* and a little later became the editor himself. When the new Labour Party was formed he threw in his lot with it and gave to it the support of the *Echo* alone among London daily journals. When the paper was wound up in 1905 he paid the creditors himself and gave to the staff out of his own pocket two or three months salary in view of the abrupt termination of their agreements.

From 1903 to 1907 he was the editor of *The Labour Record and Review*. At the 1906 election he had one or two offers of safe Liberal seats but refused to consider them on the ground of his adherence to the Labour Party. About this time he became a member of the I L P.

Meanwhile, in 1901 he had married Emmeline Pethick, the president of the Esperance Working Girls Club which is well known for its production of the Old English songs and Morris Dances.

When the new movement among women found an express on in 1906 Mr and Mrs Pethick Lawrence identified themselves with the militant party. Among many activities in connection with the W S F G M Pethick Lawrence organised the monster Demonstration in Hyde Park in 1908 and founded and edited the paper *Votes for Women*. He also wrote the book *Women's Fight for the Vote*. In 1910 he was prosecuted for conspiracy in connection with one of the militant demonstrations. The jury returned a verdict of Guilty adding a rider referring to the purity of motive of the defendant. He was sentenced to nine months imprisonment and ordered to pay the cost

of the prosecution. He was transferred to the first division in prison after an international petition. He adopted the hunger in sympathy with other surface prisoners who were not given first division treatment. He was forcibly fed for six days and released. On his continued refusal to pay the Government cost of the prosecution his house was sold up and he was made bankrupt, his bankruptcy being antequently annulled. Mr. Lethick Lawrence disagreed with the subsequent change of policy of the W. S. P. U. to more violent methods and together with his wife severed his connection with Mrs. Pankhurst continuing to edit the paper "Votes for Women and to take part in the Women Suffrage Movement until the outbreak of the great war.

Since then Mr. Pethick-Lawrence has devoted himself to the Labour Movement and to international questions.

In 1918 he wrote a book advising a levy on Capital as a means of getting rid of the war debt. His policy was subsequently adopted by the Labour Party at the general election and is on their programme to-day.

Mr. Pethick-Lawrence has written books on "Local Variation in Wages," "Women's Fight for the Vote," "A Levy on Capital," "Why Prices Rise and Fall," "Unemployment," "The National Debt," and many pamphlets on social, economic, international and women's questions. He is well known as a lecturer of the Independent Labour Party and other bodies all over the country. He is the member of the Royal Statistical Society and of the Royal Aero Club and 1917 Club. He has made a special study of the currency question and was the principle opponent of the time and method of reintroduction of gold standard in England. In 1924 during his stay in India he makes a study of the main facts of the currency proceedings.

Mr. Lethick-Lawrence is a keen lawn tennis player and billiards player and has won many prizes in lawn tennis tournaments.

Mr. Pethick-Lawrence has many friends in India both among his own countrymen and among Indians.

Asura Expansion in India

Dr. A. Banerjee Shastri M. A., Ph.D. (Oxon.) concludes his brilliant paper on the above in the current number of the *Journal of Bihar and Orissa Research Society*. As against the puerile attempt of the purists to prove Indian Civilisation wholly Aryan Dr. Shastri affirms

The Asuras were the elders of the Suras. They were the masters of the sea. The ocean had yielded them her riches and made them masters of the three worlds i.e. universal sovereigns. The Nagas were the standard bearers of Asura supremacy in India. Then came the Aryans posterior in time. Begun the Arya (Deva)-Asura war. Imperial power was the stake. It lasted for 32,000 years. The earth was converted to an ocean of blood. The ocean got prosperity of the Asuras was systematically forced. Its chief guardian the Asura Naga began to vomit poison and slowed

his prowess that fairly threatened to submerge the Aryans. But in the long run the Aryans succeeded. "From across the sea had come the victorious Asura. After defeat they retraced the steps and plunged into the sea of salt waters. Those that remained entered the bowels of the earth and disappeared as a separate entity, being completely assimilated in the now firmly established Arya Asura-Dasa body politic of India. But the Asura strain never died and led them on to fresh pastures and new life in India to the south and across the eastern seas beyond as champions of the neo-Aryan Indian outlook now become theirs as well.

The non-Aryan colour of the Vedic Kings and Rsis is due to many of those kings and seers having been originally Asuras. After the Arya Asura amalgamation the neo-Aryan pantheon contained many non-Aryan entities and affinities. The success of the process can be judged by Agastya Vasishta Vasumatra, etc. being regarded as descended from the same father viz. Mitra Varuna priest of the same king Budas. Even the different gods Varuna of the Asuras Indra of the Trisu Bharata Aryas become each others gods and then one god. The same synthesis has in medieval days succeeded in turning acetician deities into all India avatars—incarnation. (i) This unification of India was achieved, not in the North West and the Punjab but in the Mid Himalayan Madhyadesa. The neo-Aryan was born after the old Arya Asura conflict was over. Naturally Kurukshetra brooms and has ever remained the *Dharmaksetra* of this neo-Aryanism. The Epics and the Puranas glorify this reconstructed and re-read Arya outlook of the Panuravas Atishakas and Maradhas. The Mahabharata Anuramanika and the Churning of the Ocean usher in this synthetic Aryanism and the new India as historical and accomplished facts. Any discussion about the intrusive or extrusive character of Aryan culture in Mesopotamia must start with an adequate appreciation of the contribution made to it by the sea born and sea bred Asura, who reached India and the Indus mouth from beyond the sea (the Arab Sea) and whose footfalls once resounded on the banks of many a river in the Indus valley and the Gangetic plains and some of whom retreated from whence they had come across the sea of salt water. The rest carried their common heritage of an Arya-Asura mission to the Deccan to Ceylon and across the Pacific.

Indian Architecture

The same Journal contains a posthumous paper of Mr. Monmohan Gangooly author of "Orissa and Her Remains" in course of which the architect archaeologist makes certain important suggestions which may appear quite heretical but which the author maintains on a thorough analysis of the motifs of architecture and principles of construction in India and Europe. He says

The development of temple architecture is a matter of speculation and diverse theories are advanced to trace the origin and growth of temple

construction. It is not the purpose of this paper to enter into the constructional details of temples. I shall only content myself with stating how it came into existence. We find references of temples in the Mahabharata Puranas, and also in Kautilya who gives the exact position of temples in a fortified city. Now considering that in the age in which Kautilya flourished Buddhist architecture had not attained much importance as evident from an absence of remains, and as the Buddhist empire supplanted the Brahminical one or in other words as the latter grew out of the former it is expected that there must have been some type extant before Kautilya, from which the temple could have evolved. It is for us to determine what this could possibly be. We find at Bharhut representations of chambers or halls divided by pillars into nave and aisles similar to the basilicas. These representations are found here, not as indication of the first beginning of this type of buildings, but in an advanced stage of evolution and convention. I should also request you to bear in mind that even at this time basilicas with semi-vaulted aisles were unknown in any other part of the civilised world. This structural type with the *pristina* in the centre and two side-aisles roofed by semi-vaults was older than its counterpart found in Europe. The earliest building in Europe bearing some resemblance to it is the Pantheon in Rome erected in the second century A.D. under the orders of the Emperor Hadrian. If a section be drawn through the two semi-circular recesses or exedrae or even the rectangular ones of the Pantheons it cannot but strike a casual observer that the two types are cousins, Germans and who can say that India did not furnish the architectural ideal at least a portion thereof for the erection of the noblest of the Roman monuments of art.

History of the Daily Mail

Mr Imtiaz Mohamad Khan M.A. (London) writes on the above in the *Indian Review*. We quote from his article below. Says Mr Mohamad:

None can imagine that a dark and dingy by-lane of Fleet Street contains the World's quickest Printing Press which produces the most widely read and circulated newspaper of the world. Even when you are standing almost at the door of the building you don't feel that just under your feet a Machine is producing a twelve page newspaper at the rate of 1500 copies per minute.

To-day the DAILY MAIL is decidedly the world's most popular daily journal and beats every European or American rival.

Now who was the man who started this Wonder of Modern Journalism? In the history of the Press the name of Alfred Harmsworth, better known as Lord Northcliffe will always stand conspicuously. He was the man who almost doubled the importance of the press and made it a power in the country. It was he who by lowering the cost of production made the newspaper study almost the habit of his countrymen. He began life as a news boy and started his first paper *Answers* in 1888 with his brother Cecil. In 1894 he purchased the *Evening News* and by

his superior organisation made it a paying concern. But it was in 1896 that he started the famous *DAILY MAIL*. Northcliffe's shrewd study of an average reader's taste was the chief factor in making it popular so soon after its birth. The other factor in its success was its low price—you could buy a ten or twelve page paper neatly printed at the ridiculous price of half a penny only. Though the price is doubled now yet as compared with the *Times* or other famous dailies it is still the cheapest thing of its kind on the market.

Like all other London presses the *DAILY MAIL* Press too is situated in the City Quarters bounded on one side by the Thames embankments and on the other by the famous Fleet Street. When you enter the lane in the evening say at ten o'clock when London is either asleep or revelling in Theatres or dance-halls, the first thing you meet is a number of cheap restaurants which specially cater for the night workers of the Press. As you move further you come across motor vans being loaded with mail bags and ready to start for the Railway Stations from where the newspaper specials start before or after midnight. The copy which comes out of the printing machine at half past ten at night in London is delivered at your door in Inverness (extreme north of Scotland) at six o'clock in the morning.

On the upper floors of the building are the Editorial Offices and compositors' rooms where 47 composing and casting machines are constantly at work. The staff consists of 1200 hands and their wages range from two to forty pounds per week.

The length of the machine which prints, folds, wraps and stamps at the same time is about fifteen yards and there are about twenty such machines constantly working. The paper is composed and is ready for printing at about ten in the evening. But before the hour of eleven strikes the *DAILY MAIL* is ready for distribution among its subscribers. The country edition is despatched from London before midnight while the London Edition is ready for market at three o'clock in the morning.

In every twenty-four hours four or five editions come out for distribution in London and then there are two continental editions, one in Paris and the other in Munich (Germany). But the most novel edition is the one issued on big Atlantic liners sailing between England and the United States.

Its net daily sale in the British Isles excluding London is about three quarters of a million while its circulation in London and abroad is about a million and a quarter the total sale thus amounting to about two million copies.

Like all other newspapers the *DAILY MAIL* too depends to a great extent on its income from advertisements. If you want the full front page to advertise your wares you have to pay about £1700 for a single insertion and even then you have to wait for some time before you can reserve it. Their daily income from advertisements is about seven thousand pounds.

Pressing Problems

Sister Subbalakshmi Ammal, B.A., says in *Stri Dharma*

Physical development, sex hygiene, avoidance of early marriage and the need for training in

mothercraft are pressing problems for consideration, and I hope we shall learn much about these in the course of our work here to-day I would like to say a word specially about early marriage which is the greatest hindrance to the educational and therefore cultural advancement of our Hindn race. At an age when young boys and girls should be going to school and allow both their minds and bodies to be growing at an age when they should not be hampered with cares and worries which spoil their health mental as well as physical at an age when their minds should be young pure, unsullied by worldly desires the poor young boys and girls are married forced to enter the mysteries of married life and made to face all the problems troubles worries and cares of a family. Imagine a young girl of 13 being a mother with a young baby kept awake at nights to look after the child and in many homes doing all the domestic work as well. How can we expect such a girl to live a long and healthy life and how can we expect a child born to another child of 13 to grow up into a healthy boy or girl? Again imagine a boy of 15 years being a father chained down to a family unable to rude either his mother or his young delicate wife, having at the same time, to study all his school lessons and satisfy his teachers. By the time he completes his course and is in a position to earn his living he has a big family depending on him.

The Late Swami Vedananda

The *Vedanta Kesari* says

It is with deep sorrow that we record the passing away of Swami Vedananda, the head of the Ramakrishna Mission Sevashram at Brundaban. For about a year past, he had several attacks of diphtheria fever and pneumonia. An attack of diphtheria, however was the immediate cause of his passing away. The Swami was an ardent patriot who joined the Ramakrishna Order about fifteen years ago and was the brother of Sri Sarat Chandra Chatterjee, the famous Bengali novelist. May his soul rest in peace.

The Begm of Bhopal's Advice to Moslems

In the Course of her Convocation Address at Aligarh the Begm of Bhopal gave some valuable advice to the Moslem students which we reproduce from the *Feudatory of Zeindar India* below

Addressing the Moslem students in particular Her Highness asked them to remember that they were the sons of Islam which had brought them message of peace for the world. Islam taught them toleration for non Muslims with everybody in God's vast world. Her Highness went on to say "You are living in a country inhabited by different creeds. Your objects and outlook in life

is the same as theirs. The progress of your country or its decline in the concern of you all. You are a subject people and you have duties to perform by the Government under which you are living in peace. You have therefore to live in unity and with tolerance with all of them and show them the respect that Quran has enjoined upon you. You must sail clear of the dangerous rocks of communal prejudice and not allow your self to be contaminated by that poisonous atmosphere. Your education demands and your religion orders that you must live in peace and amity and carry aloft the standard of a united nation in your country. It should be your never ceasing effort to bring about harmony and concord where friction and disruption exists.

Cultural Unity of Asia

Dr Kaldas Nag Hony Secretary Greater India Society writes in the *Forward Congress* and Winter Number

Thanks to the text books and the programme of studies inspired by our English school masters we in India have managed to forget that as Indians we are inevitably Asiatic. But Asia is generally depicted in such lurid colours by her foreign exploiters that many of us still consider the Asiatic context of our national history as a "Geographical Fatality" and try to outgrow as quickly as possible the "Oriental mentality".

Yet to do the barest justice to Asia, we have got to admit that she is the stage on which some of the momentous dramas of human progress have been represented. Leaving aside the tableaux vivantes of the dawn of civilisation in course of the collaboration of the Aegio-Egyptian and the Chaldeo-Assyrian peoples in remote antiquity the emergence of great personalities with their prophetic messages in the historic period redounds no doubt to the credit of Asia. Zoroaster the first reformer of Iran Mahavir the champion of Ahimsa against the barbarous human instinct of cruelty Buddha, the high priest of mutual universal fellowship Lao-tze the protagonist of spiritual non interference and Confucius the promulgator of ethical perfection—are pioneers in the history of human progress. Culture of Asia was the by product of their spiritual missions. Age after age, the declaration of a new faith has led to the development of new civilisations literature and philosophy ritual and art institutions and inventions have followed in the wake of each spiritual awakening.

PAN ASIATIC HUMANISM

Iran India and China were the three big radiating centres of spiritual and cultural internationalism. Yet by a curious irony of our academic destiny we are not only ignorant of this grand triangular evolution but are almost totally indifferent to the necessity of any positive knowledge of Pan Asiatic Humanism. No doubt we know something of India but our study of India is as yet provincial and not continental. France and Germany are nearer to our students than Iran and China, our next door neighbours and spiritual collaborators. Our students know more of Alexander and Napoleon than of Zoroaster or Confucius,

Let there be a questionnaire-test amongst the under-graduates of our colleges and my contention would be proved. No wonder then that our students our young men the best recruits to our public life and activities lack that indispensable background of the culture and the spirit of the East without which most of our experiment and reconstructions would inevitably be the mere imitation or mimicry of occidental life and history. East and West should and must collaborate but East must do so as East and West as West. Then only the collaboration would be honourable and creative. Otherwise there would be fruitless parody of Oriental spirituality on the one hand or a tragic caricature of Occidental culture on the other.

Judged from this point of view our school and college syllabuses of studies stand self-condemned. The very element of Asiatic history and culture are not known to our students. No wonder then that they never bother their head about the vicissitudes of this vast continent. How can there be love or sympathy without knowledge?

MORE KNOWLEDGE OF ASIA

It is high time that we should organise to provide for this knowledge of Asia both inside and outside the academic circles. If the hard and fast regulations do not permit a sudden change in the courses of studies let there be intensive discussions conferences as well as popular public lectures with pictures and lantern slides with a view to bring home to our people the intimate relations that exist between the different peoples of the Orient. Even if our students are not spared the pains of cramming the delectable details of the career of Catherine de Medici or of the constitutional reforms of Cleisthenes let them occasionally at least study in pictures the magnificent results of the Sino-Indian or Indo-Japanese collaboration.

The monumental remains of the Chinese Buddhist temple-city of Longmen the exquisite Japanese wood carvings and temples of Nara and the frescoes of Horiuchi the Mahabharata reliefs on the Indo-Chinese temple of Angkor Wat, the Ramayana scenes sculptured on the Javanese temples of Prambanan and Panataran the Central Asian frescoes discovered in Turfan and Tuen Houang the latest Buddhist remains in Khotan Bamiyan Afghanistan and Persia—all these things should be shown discussed and made familiar to all those who aspire to have some culture. This great chapter of give-and-take in Asiatic history should be made living. Then only we shall realise how much India has received and how largely she has given through selfless service and deathless creation. But let this study be in a spirit of humility and devotion to truth. If India had once through her loving participation in the life of humanity built her spiritual domain in the East so as to earn the title of the Light of Asia that rare privilege is only a matter of forgotten history to-day. What are the short comings of our life or the defects of our national character that led to the present retrogression isolation and stagnation? Let these problems be studied with scientific detachment of spirit. Let all that we know of our great achievements in the past make us more ready to admit our present limitations, let it open our heart to the immortal lessons of the Angels of Peace and Fellowship and let our hands be ready and fit again for the

alleviation of human sufferings and for the uplifting of mankind. India became Greater India through self-effacing service for humanity. May our Asia the Mother of all the great religions of man rise above her present degradation and once again pronounce full-hearted benedictions for the whole world.

Indian Traditions or Indians

Nothing is so shameful, so flagrantly against the laws of spiritual economy as the case of the members of an ancient and living cultural group attempting to throw off their own traditions cultural, moral and spiritual habits and making vain efforts to tread exotic paths of thinking feeling and willing. Yet there are millions in India who do so with the greatest pride. The following sensible words of the *National Christian Council Review* regarding the relation that Indian Christians should have with Indian tradition and culture may help foreign minded Indians to regain their sanity.

How can we distinguish the main current of the river of God from its tributary streams? Christian theology has long maintained that the head waters of religious truth are in India but can that be maintained in the face of the acknowledgment of India's subtlety and courage in the endeavour after the ultimate secret of the universe? Even Christians are found to maintain that since Christ is the fulfilment of India's long quest, the Old Testament of her people is to be sought in the Upanishads or in the utterances of the *bhakti* saints. Why feed the young Indian Christian on the husks of Hebrew history when he can glean rather after the *rishis* and the *sadhus* of his own ancient land?

Islamic Hopes of Painting Europe Green

The *Islamic World* quotes the following from the *Daily Express*:

In his statement of the other day that Most English people have abandoned Christianity but have not yet adopted any other form of religion, Prebendary Mackay said no more than the exact truth. We are no longer a Christian people in any real sense of the word and it is useless pretending that we are. It is questionable whether we are still even a religious people. It is true that we occupy ourselves a great deal with religious and semi-religious problems and discussions but that is a different thing from being religious. We study comparative religion we have an intellectual curiosity about the superstitions and modes of belief of other races and times we dabble in spiritualism and theosophy we take an academic interest in mysticism and religious psychology generally we are interested in Church history and in the results of the Higher Criticism—but we are not religious. Not one in a hundred of those who take interest in these things is primarily concerned to lead a

religious life himself. And of the few who are how many are specifically Christian in conduct outlook or belief? Christianity as a guide to the conduct of life or as a scheme of dogmatic belief means, I am afraid, little to most of us to-day the spirit of the age is definitely anti-Christian.

Then says the Moslem journal—

At last our friends have come out into the open! It is admitted that in England Christianity is dead, and that whilst there is a tendency to look around and dabble in religious problems the fact remains that England is without a religion to-day. Too long has this Church held away too long has it misled enquirers, and retribution has overtaken it in full measure. People have been led to think of Christianity as religion and all other Creeds as Paganism, hence when people forsake religion they really mean Christianity. Here my brethren is the opportunity! Islam must be introduced forcefully and widely in the West we must bestir ourselves and not be content to have one or two missions here, but we must organise and have a teacher of Islam in all the great cities of the West. We must have a full supply of literature for distribution and we must have a good headquarters so that everyone who wishes can apply for Islamic instruction.

But the people of Europe are developing a great craving for speculative philosophy and spiritualism on the one hand and for cold scientific reasoning on the other. For this reason would it not be rather difficult for Islamic missionaries to win over the Europeans? We are not in a position to pass any judgment on Islam as a religion but we can very well say that Islamic missionaries will have to make improvements on their intellectual equipment before they can expect to preach successfully to Europeans.

Hindu Moslem Affairs

The Anagarika N. Dharmapala writes in the *Maha Bodhi*

In the tenth decade of the eighteenth century hooligans, brigands, pirates, adventurers, filibusters, immoral scoundrels of different European countries armed with nothing else except desultory weapons and poisons left their shores and came to Asia and destroyed weaker races and subdued them and pillaged the countries. Politically free races were made to go under the yoke of slavery. The political crimes committed by European adventurers have had no parallel in the history of the world except during the period of Moslem vandalism. Barbarous hordes from Arabia fresh from the conquests inaugurated by the successors of Mohammad lust for more land and fresh pastures with the sword and Koran in their hands devastated the countries lying between Persia and India. The Aryan civilization that

stood for two thousand years had met with a barbarous foe who recognized neither art literature nor aesthetic beauty. Destruction was their slogan. Entering India they destroyed the vestiges of Buddhism and converted people by force into Islam. Centres of learning became centres of frugandage. India lost the noble religion of the Buddha and the lay Buddhists were converted by force to the million into the Semitic religion of Arabia. India then had not one Moslem but to-day there are 70 millions. The Hindus and Moslems are killing each other and the British with their impartiality fire on both parties and kill them. When the Moslems killed in number exceed that of the Hindus the latter shower praise on the British and vice versa.

There were living on the banks of the Ganges two others and one day they went fishing one going by the bank side the other on the deeper side and both succeeded in catching a big fish and they had it dragged on to the bank. Now how are they to have it equally divided, because the one had caught the fish by the head and other by the tail. They began to quarrel and a fox who had been watching the two others came rather close to them and was gazing at the horizon and the others seeing the fox said there is a fox let us go to him and he will judge our case and divide the fish impartially. They approached the fox and requested to come and help them. With nonchalant indifference the fox said that he had just left the bench of the court of the King of Benares and came here to get a little fresh air and he had no time to attend to other matters. However at their request the fox approached the place and inquired of the two how they had caught the fish and the one said Lord I got hold of the tail end and you he asked of the other and he said at the head. The fox cut off the tail end and gave it to one saying that is your portion and he bit off the head and gave it to the other and the middle portion the fox took as his share for having decided the case. The fox marched off dragging the best portion of the fish. This story is from the Jataka. The illustration is to be found in the Barhut railing in the Calcutta Museum.

Effect of the War on Art

Bhavachitra Lekhana Siromani N. Vyasa Ram contributes a beautifully comprehensive article on the Growth of Art in Europe to the *Quarterly Journal of the Mythic Society*. Regarding the effect of the war on art he says

Whatever troubles otherwise the world might have experienced due to the Great War art received a mighty impetus such as was never known before except once as a result of the French Revolution. It was officially recognised that picture making was not a mere idle pastime but an activity which had its own function and purpose of usefulness to humanity. More than ever they saw how art could be turned to great advantage if the people chose. The idea art for art's sake and art was recognized as an element of education and social progress because nothing else in the

world could impress an idea so vividly and lasting ly on the human memory. Various war artists were officially employed and ever since then more and more encouragement is being given to the growth of art in England. The fact that in London alone there are over thirty schools of art is enough for us to imagine the extent to which art is appreciated and recognised as a necessary element of education in England. As a result of the War English art became more settled and came back to a modified realism though it is idle yet to speculate over the various phases of modern European art.

The Work of Educated Men in Villages

Mr W Samiah (Retd Tasildar) writes in *Rural India*

During the last fifty years or so there has been a steady migration into towns and cities of the intelligent and wealthy classes among the rural populations. They came out of their villages to receive English education in Schools and Colleges and thereafter secured occupations in Government service, learned professions and commercial lines and eventually settled themselves in towns on their pensions or accumulated savings or both. When opportunities came to satisfy their further ambition they stepped into further appointments in estates, mutts, temples or private firms and then spent all their life time for their own personal ends. They forgot altogether the welfare of the village which gave them birth. Scarcely do they pay a visit to it except perhaps to collect their dues from their recalcitrant tenants or to see a dying relation who with a strong aversion to town life refuses to leave the village. Accustomed as they are to the luxuries and easy going town life, they feel the incompatibility of leading a village-life at the far end of their earthly existence. But it is this class of people that owes a heavy debt of gratitude to the villages. They owed their education and prosperity to the taxes wrung from the rural population and the best way of discharging that debt is for them to go back to their home of parentage and utilise their knowledge and past experience for the benefit of the village. Retired men if they only care to spend the evening of their life in their own village, will find enough to occupy them in wholesome endeavours for the uplift of the rural populations. Let them make a beginning and they will naturally prefer a retired and peaceful life in their own village and feel contented and happy in doing some useful work in that humble sphere and the little work which they may be able to do would be of immense advantage to the villages. Fortunate indeed is the village which can claim as its own retired men with knowledge and experience. For instance retired judicial officers may very well spare their villages from costly litigation in law courts by settling local disputes by arbitration and giving homely advice on the spot. Retired revenue officials may educate the village folk and give the lead in all revenue matters. Those with medical experience may open dispensaries and look after village sanitation and health and an Ex Engineer may help in making dams and estimates for constructing roads and digging wells, building houses, laying out streets and

drainage, channels and repairing irrigation works. Similarly educationists will have ample scope for doing educational work and forest officials may encourage planting operations. Retired lawyers if indeed there are any are expected to be the natural leaders of the village and take part in training the villagers in civics and citizenship and thus enable the people's voice to be heard in the councils of the empire. In these and other ways retired men may find useful occupations in their own villages. The village communities have also a right to demand the services of such men not as a favour done but as service due to them. Their services are now badly wanted in villages. Village panchayats, Panchayat Courts, Irrigation Panchayats, Union Boards, Co-operative Societies and Banks which are increasing in rural areas are now in the hands of inefficient men with little experience of administration and accounts and it is no wonder that many of these institutions are not working as they ought to. In these circumstances the re-advent of the lost intelligence to villages would be a very great boon indeed.

The writer is quite right in what he says

Marriage among Jains

The following appears in the *Jama Gazette*

The consequences of the lack of free matrimonial intercourse among Jains are ruinous in several ways. Thousands of young men cannot find brides within their respective sub-sects and are forced to pass their lives as bachelors. Some of the sub-sects are composed of extremely insignificant numbers. There is a difficult position. The rigid conditions which prevail so far preclude the marriage of their youth among other sects. Since the girls must in no case remain unmarried, they are often forced, like so many dumb driven cattle, into altogether undesirable marriages. While the girls are thus dedicated to lives of heart rending misery and speedy widowhood, boys of brimming vitality and strength are deprived of the joys of conjugal life. The latter are no better than the dead so far as the propagation of the race is concerned. The call of youth is irresistible. There is no wonder that some of them contract objectionable marriages or fall into dissolute ways and thereby fall into the clutches of the petty tyrants of local *Paradaries* to get excommunicated. In this manner the vicious circle goes merrily round and round unabated. The advance of poor parents plays a considerable part at times in the marriage of young girls to men of advanced age. Lured by monetary and other material advantages, girls are bundled into matrimony without the slightest compunction by those who profess the creed of Ahimsa. Comparative poverty is men who are out to find mates. The evil is thus complicated and accentuated. Inter-marriage would certainly open out a wide field of natural selection and help to rejuvenate the entire communal life. As matters stand, we are torn

into small artificial groups by means of a tedious convention which cannot stand the test of reason for a minute. The perennial economic loss which our society is incurring by our prejudice against healthy breeding is leading us on the road to sure extinction.

It is an admitted fact that our numbers are fast diminishing. We quite realize that the lives of thousands of our young men are running to waste and that many many thousands of

girls are being driven to lead unhappy barren lives. Class fertility is at a very low ebb among Jains. It is impossible to produce children unless the people unite in wedlock and unless couples are physically well matched. How long are we to continue to be harried by out worn social theories which are sucking up all our vitality and daily leaving us the worse off in the battle of life?

FOREIGN PERIODICALS

Mussolini's New Powers

The *Literary Digest* gives the following

"If one is going to be a dictator then one should be a dictator" is evidently the Mussolini principle, remarks the *Buffalo Courier and Express* commenting on the new powers assumed by the Italian dictator after the latest attempt on his life. There never has been anything like the multiplication of manifold governmental powers to the hands of one man outside of Asia, says the *Philadelphia Record* noting Mussolini's assumption of the Ministry of the Interior with direct control of the police force which gives him six Cabinet portfolios besides the Premiership, the chieftaincy of the Fascist movement, and the direct command of the Fascist militia.

The new and drastic laws were adopted very shortly after the end of the fourth year of the Fascist regime. This year was marked by a notable tightening of control as a correspondent of the *New York Herald Tribune* recalls including the outlawry of strikes, the banning of secret societies, the further limitation of the freedom of the press, laws making the Premier responsible to the King alone, another making remarks derogatory to the Premier punishable, the fining and disfranchisement of any Italian at home or abroad speaking disrespectfully of Fascism and the replacing of local elective officials by government appointees. This period as a *Chicago Tribune* writer puts it might be called Fascism's period of direct action, the events of the last few weeks have ushered in the "period of intransigence." The new laws are the direct result of acts of violence culminating in a boy's attempt to kill Mussolini on October 31. The youth was promptly lynched, and in an ensuing reign of terror a hundred persons were killed, a thousand injured, and hundreds of homes destroyed. On November 4 Mussolini promised his followers, "To-morrow we will have the acts you have been awaiting." So on the 5th, the Fascist Cabinet approved a list of new measures for the suppression of dissent. In the meantime an international incident had arisen. There had been grumbling in Italy over anti Fascist plotting on French soil and anti French demonstrations in Italy. On November 4 Colonel R. Crotti Garibaldi was arrested in France

after being accused of being an *agent provocateur* in the hire of the Italian secret service. On the 9th the Italian Minister in Paris conveyed his Government's official regret to foreign Minister Brand. On the same day the Chamber of Deputies passed by practically unanimous votes most of the laws asked by the Mussolini Cabinet. These included the revival of the death penalty for plotting against the life of the Premier or members of the royal family, and also

1 Punishment by prison sentences for those who enroll in any anti Fascist organization

2 Abolishment of all passports permitting Italians to leave the country and heavy penalties for evasion

3 Revocation of the licenses of hostile news papers.

4 Dissolution of all organizations suspected of holding views at variance with the Government.

5 Police dead lines for persons suspected of anti Fascism

6 Representatives of the Army, Navy, Aeronautical Corps and Militia to form special courts for judging offenders under the new regulation

At the same time the Chamber of Deputies expelled its remaining opposition members. On the 15th it was announced that 190,000 Fascist militiamen were to be armed with rifles. Twelve newspapers were actually suspended in accordance with these decrees but what seems to our editors to be the last straw was the decree of the Fascist Government forbidding Italian parents to give their children names which would seem to be subversive to the existing system.

So to-day says the *New York Evening Post* Italy is practically under martial law. Many of our papers wonder how long such a rule can endure, and consider the policy of repression a confession of weakness. To the editor of *The Nation* "the interesting thing is not what Mussolini may achieve in the six months or six years that may yet be his, but what is the price for this horrible strangling of liberty, this destruction of every vestige of democratic government."

And yet the ruthless suppression of plotters seems to some of our editors to be at least partially justified. "Some bloodletting may be necessary to protect Mussolini's life and his hold on power," which he probably regrets as much as any one.

hnt, declares the St. Paul *Pioneer Press* it is nothing to the streams of blood that would be un-
losed in Italy if he should fall to-day by the
hand of an assassin

Free Trade for Europe ?

Europe to day is cut up into numerous economic fragments by tariff barriers although her economic life is one. Much of Europe's present misery is due to the false protectionism which is slowly undermining the health and vigour of European industries by narrowing down their relations with one another to the barest minimum. The *Literary Digest* tells us of a new movement against this dangerous protectionism of Europe. We are told

The walls of Jericho fell before the blowing of the trumpets but recalling this in connection with the manifesto issued by more than 200 persons representing some sixteen countries pleading for the removal of restrictions on European trade certain English authorities assure us that they are not simple enough to suppose that the tariff walls of Europe will fall down at the blast of the trumpet even when blown by such competent instrumentalists as the 200 distinguished signatories of the document. According to the *London Economist* the present plea, although it indicates a wide-spread recognition of the folly of Europe's trade practices cannot be expected to do more than change the trend of international trade policies. Nevertheless it is said to be more than a small mercy that the beginnings of a change are appearing. The next step we are told by this weekly is the international Economic Conference which is expected to meet at Geneva next year and is by the issue of this manifesto and all that it means invested with a far greater importance than it might otherwise have possessed. We read further of the manifesto that

It is bound to exercise considerable influence on the Governments of Europe because of the very great weight and authority of the men who have put their signatures to it. But it will assuredly rank as one of the great economic documents of history chiefly because there has never been any declaration of economic policy—outside the decisions of official conferences—which has had so powerful an international backing.

The document is signed by over 200 persons representing some sixteen countries. In the first place there are the heads of a dozen Central Banks, including those of Great Britain, Germany and Italy, the chief central States of Europe, with the notable omission of Spain and certain countries of Central Europe. These signatures are of special importance for the heads of Central Banks, though not usually government officials are nevertheless in charge of institutions the primary purpose of which is not to make profits for their bank, but in the public interest to look after the monetary basis on which the economic life of each country depends. Being free from direct political influences and unattached to the interests of

particular groups or industries the Central Banks are in a peculiarly favorable position for judging what is needed for the public well being. Moreover in present circumstances these banks which are entrusted with the difficult problem of securing monetary stability, have good reason to know how much they are hampered in carrying out their primary function by the existence of trade barriers. The signatories include a very strong representation of other banks and other financial houses in every country.

England 'Done For'

The same journal also gives the following

Sir Thomas Beecham one of England's leading imprecators conductors, and composers thinks that the musical future of England is so black that the only thing left for musicians to do is to get out. Accordingly Sir Thomas departs for the United States to take up his permanent residence there. At least, so report current cable dispatches from London, with the result that both England and America are stirred to editorial demonstrations of interest. Since Sir Thomas is said to be headed for Philadelphia as his first stopping place particular importance may attach to a welooming editorial from the *Philadelphia Public Ledger*. The *Ledger* briefly calling attention to be the fact that Sir Thomas's fortune proceeds from that most famous remedy Beecham's Pills notes that, since Beecham is now seeking refreshment in America, doubtless the medication on which the paternal affluence was founded is in this instance unavailing. The editor compares Sir Thomas to the Gloomy Dean of Westminster Cathedral, who spends much of his time prophesying woe for England. It seems that Sir Thomas's gloomy remark on the British situation, music and otherwise runs in part.

England is finished, not only musically but every other way. The only thing for anybody to do is to give up and go to America. I am going as a guest and will conduct the Philadelphia Orchestra. After a few months experience as a guest I will stay permanently and I advise as many English musicians as possible to leave this country and go to America.

"Why one of my American friends spends as much money on one orchestra in California as the English spend on music in all England including the English Government's subsidy to broadcasting."

The broadcasting of opera especially arouses Sir Thomas's ire it appears his cabled protest running

"It sounds like most horrible chattering gibbering, chortling shrieking devils and goblins and they call it Beethoven or Wagner. The sound has as much in relation to their music as the singing of Galla Curci to a roaring bull. It's insanity."

Future of British Politics

The *New Republic* says

The recent municipal elections in Great Britain showed remarkable gains for labor especially in the northern cities. Labour won one hundred

and sixty-one seats and lost twenty-one while Conservatives won only fifteen and lost seven-ty-eight. The Liberals did even more badly losing fifty three and gaining only eight. Thus labor made a net gain of one hundred and forty while the Conservatives and Liberals made net losses of sixty three and forty five respectively. Several reasons are given for this upset. The Labor party has now lost from its ranks many of the extremists who by their presence had alienated persons of moderate views. The Liberals are split asunder by the personal quarrel between Lloyd George and Lord Oxford and Asquith. There is widespread and well justified dissatisfaction with the Conservative government over its handling of the coal strike. The result of all these factors combined is to put the Labor party in a position of suddenly and greatly enhanced political strength.

This does not mean however that the political skies are clearing. On the contrary they seem more stormy than ever. The Communists who have been frozen out of the Labor party are aggressive and well organized. The present situation with the coal strike virtually broken the trade union treasures exhausted the leaders quarrelling among themselves and the Conservative government showing an increasing tendency to use Fascist methods presents just the soil in which Communism best grows. At present we have the Conservatives on the right, Labor on the left and the Liberals in the middle. It is not at all improbable that in the future we may see Conservatives on the right, Communists on the left and a Liberal Labor alliance in the middle. The right wing of the Liberals would go over to the Conservatives, the left wing of Labor would go over to the Communists where for the most part it is already, the left wing of the Liberals would move a little further still to the left to combine with the right wing of Labor.

While such a regrouping would mean greater reality in politics it is impossible to look forward to it without serious misgivings. The Communists are not interested in parliamentary government, they are interested in class war as a precursor to and accompaniment of revolution. For some time to come British industrial life is likely to continue greatly depressed for reasons some of which at least are international in character. It needs an increased degree of socialization but the dose the Communists would apply would probably be fatal. To vary the figure the British ship must pass through stormy waters and it will be a serious misfortune if a large part of the crew stands by with folded arms, or seeks covertly to cut the haywards.

Life Insurance in Japan

The Japan Magazine tells us

At present life insurance companies numbered 41 and marine fire and other accident insurance companies 51. Before the insurance business was so strongly established as at present it had strong competition from foreign insurance offices doing business in Japan. These offices, numbered 60 or 70 in 1900 when the Imperial ordinance was

issued controlling foreign insurance offices in Japan. They were obliged by the law to deposit an amount of money with the Government. This forced nearly half of them to give up business in Japan. At present there are only 4 life insurance offices and 32 fire insurance offices operated by foreigners.

We see that foreign companies do not thrive well in Japan. Is this due to the Japanese being more efficient than the foreigners in business or to the fact that the foreigners have no political hold on Japan? The extraordinary dearth of foreign companies in life work (only 4) shows that the Japanese people believe in insuring with national companies and do as they believe.

Woman Explorers

We learn from the *Woman Citizen* that

A new feminine organization, founded on daring and scholarship has just announced itself—the Society of Woman Geographers which is to give comradeship and stimulation to the woman explorer and her ally in science. There are so far thirty nine members, an unbelievably fascinating list of hunters and writers whose names mean dangers conquered and hidden facts unearthed. Harriet Chalmers Adams, authority on Latin America, Spain and her colonies and on early American peoples is president. Marguerite Harrison co-author of *Grass*, interpreter of the East, serves as treasurer and Blair Niles who studies the peoples of Venezuela, Ecuador, India, Java, the Andes and the Himalayas as secretary. One of the charter members Mrs. Ernest Thompson Seton has just returned from a South American trip with the Field Museum expedition—the first white woman to penetrate the wilderness of Paraguay. For widely traveled women who eschew jungles and microscopes there is to be an associate membership.

The Most Romantic Regiment in the World

Hugh Vincent contributes a highly interesting account of the French Foreign Legion to *Chamber's Journal*. We give quotation from it below.

In a world where the love of adventure is rapidly giving way to the exigencies of life, there still remains that famous band of adventurers, the French Foreign Legion.

The Foreign Legion was founded in the year 1831 under the name of the African Auxiliaries. A Belgian who styled himself Baron de Boecard collected round him some four thousand soldiers of fortune and set sail for Africa after swearing allegiance to France.

They were so poor and ragged that the Arabs called them the Bedouins from France. They gave such a good account of themselves however

that a royal edict dated 10th March 1831 sanctioned their incorporation in a Foreign Legion under the title of *La Legion Etrangere* on the pattern of the *Legion d'Hohenlohe* which fought at the time of the Restoration. They remained as a separate entity until 1864, when a decree was passed bringing them into the armies of the French Empire.

Recruits are given the choice of joining the 1st Regiment stationed at Sidi bel Abbes or the 2nd regiment located at Saida. The former is easily first favourite with the young soldiers, for Sidi bel Abbes is a gay place with cafes and dance halls and wine too is cheap in Algeria. After a day or two at Oran they are sent forward to the regiment of their selection.

Sidi bel Abbes is distant about fifty five miles from Oran. Here are the great barracks of the 1st Regiment covering more than two acres of ground. The city of the Legion has a population of thirty thousand. It is 1500 feet above sea-level and is embowered in gardens trees and vineyards. Its fertile fields in a wide valley are watered by the river of the Mekarra.

On their arrival at the barracks the recruits are greeted with shouts of derision from the old Legionnaires. Here come *Les Bleus* they call out, and pass scathing remarks on the newcomers' personal appearance. All this is simply meant as chaff and banter and must be accepted as such. The blues are then shown to their quarters. In the morning they are awakened by the cry of *Au Jus au Jus* (to the juice) and in old soldier gongs the rounds of the beds with a big jug containing black coffee—about half a pint is apportioned to each man. Five minutes later reveille is sounded. Then ensues a rush to the ground floor where the washing arrangements are. Fall in for parade sounds fifteen minutes after reveille.

The most trying part of the life at the beginning is learning how to march for marching is a religion in the Legion. The recruit starts by covering short distances carrying only his arms. Gradually this is increased until he is able to carry at least seventy pounds weight on his back and cover twenty five to thirty miles day by day without interruption at a pace of five kilometres an hour under a broiling African sun. This is the time when a man regrets the day he set foot in the Legion. The greatest crime a Legionnaire can commit is to fail in any of these soul-destroying marches.

Iron discipline is enforced and the punishment meted out for some offences is unbelievably severe. For an infraction of discipline the mildest form is *corree* which is the French equivalent for 'fatigue duty' in the British army. The next in order is room arrest, which means confinement to barracks. Then there is *Salle de Police*. Offenders undergoing it have to sleep in their clothes on a plank bed in the guardroom.

Ordinary arrest is decreed by every Legionnaire. Those undergoing one form of it are kept in confinement all the time except when they are brought out to do six hours punishment drill duty. This consists of going round the prison yard at the dottle with a bag containing thirty pounds of sand strapped to the shoulders. The prisoner has to halt for a minute or two and go down on one knee every time he goes round. It

is not a pretty sight to watch the agony of men undergoing this awful ordeal. I have seen the strongest collapse under it.

The Legion types are as interesting as they are varied. Some are not easily forgotten.

There was the Emperor's so called because he wore a frock coat of immaculate cut and a glossy topper when he joined up. But his great asset was the monocle he affected. The coat and hat he obstinately refused to part with until he reached bel Abbes.

Spelman was another old character. He could imitate the note of almost any bird with absolute fidelity. In appearance he was not unlike a bird. He had the longest neck of any one I ever met, with an enormous hook nose.

The Marquis de B—was a Legionnaire of the second class. He was something of a mystery to everyone. Why he elected to join as a humble ranker no one ever found out, for it was common knowledge that he had served with distinction in a famous French artillery regiment and had held the rank of major. He refused all offers of promotion during his term of service with the Legion.

Legionnaire X was the son of a well known French admiral. He was a devil may-care sort of fellow with a genius for getting into trouble. He possessed a beautiful tenor voice and when he could be induced to sing—which was not often—the canteen room couldn't hold all the Legionnaires who came to listen. The boy (he was christened the Babe) looked not more than sixteen although he claimed to be eighteen. He was from Alsace, and had big round blue eyes and the wondering expression of a child. When upset by any of the old hands he would burst into tears.

His great pal and staunch friend was a most romantic character who earned for himself the sobriquet of *Great heart*. He too was a mystery man who would have made the fortune of any novelist. Tall and handsome he was the modern d'Artagnan. No one knew what his nationality was and he never invited questions on the subject. His English was perfect, and he spoke four other languages with equal facility. He was the champion of the weak and fought their battles as if they were his own. No raw recruit appealed to him in vain for protection from a bully. He was loved by the weak and feared and respected by the strong. When the Babe was down with fever he obtained permission to nurse him. Night and day he sat by the boy's bedside until he was out of danger. When the lad went on the march again before he had quite regained his strength faltered, and looked like giving up it was *Great heart* who shouldered his pack and rifle in addition to his own burden. This was against all the disciplinary rules of the Legion but the grim sergeant only looked the other way and smiled. *Great heart* was killed in action in Morocco after winning the *medaille militaire* and being recommended for the *Legion d'Honneur*. He died as he lived a very gallant gentleman.

Alma, Inkerman, Sebastopol—in desert warfare against the savage tribes—Mexico, Madagascar, Iodo-China and the Great War—the Legion has always shown those qualities of

reckless bravery and heroic endurance for which it is famous

The most valued possession of the Legion in the Hall of Honour is the artificial hand of Major d'Anjou who was in command of a detachment of sixty five men at the battle of the Camerone. This little band was opposed by three thousand Mexican irregulars. Five times were they called upon to surrender but they flung back their defiance at the enemy. Finally, when only five remained and these five all desperately wounded and without water for twenty four hours they agreed to a truce if allowed to keep their arms. The Mexican general granted their request, but so great was his surprise on seeing that the garrison consisted of five men only one of whom could stand that he exclaimed "We have not been fighting men, but devils."

Discovery of Hinen Tsang's Memorials

J Takakusu writes in the *Young East*

Particulars concerning the memorials presented to the Throne by Hinen Tsang, the great Chinese traveller to India during the Tang Dynasty are fairly well known. In fact the Life of Hinen Tsang contains twenty-one and a volume in possession of the Chion in Temple in Kyoto sixteen of them. Besides these it has not been exactly known how many more were written by the great traveller. As it is a discovery of great interest has recently been made in Japan. To be particular manuscript copies of forty two memorials written by him have been discovered among old documents in the possession of Mr Sakutaro Kozumi, a well known political leader. These include ten papers which were hitherto entirely unknown. It is almost certain that forty two represents the total number of the memorials written by Hinen Tsang. Inasmuch as it was entirely due to the protection given him by the Emperor Koso of the Tang Dynasty that he could undertake his memorable journey to India the newly discovered documents are of great value to a better knowledge of his life and career.

As has just been said of the forty two memorials discovered ten are those hitherto unknown none of them being found either in the Life of Hinen Tsang or in the volume kept in the Chion in above referred to. These are the undermentioned—

1 A poem composed by the Emperor Koso when he was still Crown Prince on the occasion of a visit he paid to Hinen Tsang at the Tsuen ssu Temple.

2 A memorial presented to the Emperor by Hinen Tsang when translations of the sutras were completed and submitted to his perusal.

3 A memorial asking the Emperor for procuring a set of the Sanskrit Triptaka from the province of Khotan as it came under the rule of China.

4 A memorial written on the occasion of the presentation by the Emperor Koso to Hinen Tsang of hand writings by a celebrated calligrapher.

5 A memorial thanking the Emperor for having enabled Hinen Tsang to procure a complete set of the Triptaka existent in China at that time.

6 A memorial thanking the Emperor for his offer to compose an inscription for a monument in the Ta Tsuen ssu Temple as well as for the assistance given by the Premier in obedience to Imperial command in the translation work.

7 A memorial asking permission for Shango and some other pupils who for some reason or other had returned to secular life but desired to enter priesthood again.

8 A memorial repeating a petition for permission to enter the mountain for rest and recuperation and to relax the translation work for some time which petition was formerly denied.

9 A memorial thanking the Emperor for the favour of granting the above-mentioned petition.

10 A memorial asking the Emperor to write a preface to the translation of Maha prajna Paramita Sutra.

What Shanghai means to China and the World

The Chinese upheaval has brought Shanghai to the limelight. Let us see what the *China Journal of Science and Art* says about this great port.

* To those who have not lived in China, all names and towns seem practically the same. Peking, Shanghai and Canton are, of course known to be important places with large populations but, since all Chinese cities are thought to have large populations no particular significance attaches to these places on that account. Peking as the capital is admitted to be of some consequence and Shanghai is associated with trade and shipping but few realize that the latter place is one of the most important commercial centres in the world. Less than eighty years ago it was of no more consequence than a hundred other towns in China. Now it compares in size, trade and shipping with ports such as Hamburg, Rotterdam and Antwerp and exceeds many well known places such as Marseilles and Singapore. The reason is not far to seek. Situated near the mouth of the Yangtze which is navigable by a steam craft for some 1200 miles it concentrates the imports and exports of an area of well over 500,000 square miles with a population of nearly ten per cent. that of the whole world. The buying and producing power of these people per head is small but in the aggregate is very large. In 1925 the gross trade of Shanghai passed through the Maritime Customs was nearly 1,200,000,000 Haikuan Taels (about £200,000,000 or nearly 1,000,000,000 U.S. Dollars). Of this over one third was foreign import, nearly one-third import from other places in China and the remainder local products. Twenty five years earlier in 1900 the gross trade was only 250,000,000 Haikuan Taels, and twenty five years before that in 1875 it was only a little over 100,000,000 Haikuan Taels. The shipping has grown similarly from 3,000,000 net tons entered and cleared in 1875 to 30,000,000 in 1925. These ships come from all over the world.

A similar prodigious growth is apparent in the physical development of the town. Whereas in 1843 there was a Chinese city of third class with

unimportant suburbs there is now to the north of the Chinese city (which has also developed but not in the same ratio) a foreign style metropolis covering some 12 square miles with some 200 miles of made roads and buildings mostly of foreign style of a value of perhaps £50 000 000. The river frontage actually developed for shipping and industrial purposes amount to some 10 miles and the largest ships plying on the Pacific (20 000 or more tons gross and 30 ft. draft) can be up in the town. Several hundred modern factories (principally Chinese and Japanese owned) constructed in recent years have made the place an important industrial centre. The principal power station has a capacity of 120 000 kilowatts or say 150 000 horsepower the energy being derived from coal most of which originates in China.

This development has been the result of the growth of foreign trade bold enterprise good municipal government and the regulation of the river since 1900 by the Whangpoo Conservancy Board without which large ships could not have reached the city.

From scientific and artistic standpoints Shanghai is of similar consequence, though as yet development along these lines has not kept pace with commercial and industrial development. However there can be no question of the city's importance in the growth of both science and art in China. There are many art-craft industries that are rapidly growing in importance. Its engineering industry is large and there are many important educational institutions. It is the principal point for the export of Chinese art objects and antiques and while it cannot compare with Peking for artistic motives there is a strong nucleus of people whose occupations or hobbies contribute to the production or distribution of beautiful things.

The future is obscure from some points of view but there can be no doubt that Shanghai will continue to grow and will maintain its place as the leading city on the Asiatic continent for many years to come.

Indo-Japanese Rivalry in Cotton

The following quotation from the *Living Age* should be of interest to Indian Cotton Millowners.

Although Japan raises no cotton and India does she can manufacture cheaper than her competitor and is driving the products of the Hindu and the Persi mill owners of Bombay not only from the Persian Gulf market, but also from India itself. While her labour costs are lower her spinners receiving only about thirtyseven cents for an eleven hour day other elements also account for this. Her mills are better organized, equipped, and managed. A German correspondent writing in *Leutsche Zeitung* makes this comparison of the industrial efficiency of the two countries. I have visited cotton mills in Bombay and I have just seen a number of those in Osaka. The mills in Japan are much cleaner and more sanitary than the squalid filthy with betel nut spit where the Hindus work. Every large Japanese factory has

a restaurant where the employees can get three good meals for four or five cents each. Many factories have their own up-to-date hospitals. The dormitories of the unmarried employees, and the little cottages of the married help are quite up to the average accommodations in that country. Intercourse between managers and workers is courteous. No Japanese would stand for a moment the rough treatment which is customary in India. On the other hand Japanese wages are from a quarter to a third lower and their working day is from one to two hours longer than in India. On the whole I should prefer to work in a Japanese factory rather than in an Indian factory and I should far prefer this to working in a Chinese factory. Japan's six million spindles can compete at an advantage with the seven million spindles of India, not only because wages are lower and the working day is longer in Japan but because India's mill managers are unreliable, her cotton brokers are often dishonest, and her selling houses charge very high commissions. Osaka, in a word is a more efficient industrial city than Bombay.

Austria's Greatest Poet

In the same journal we find a short sketch of Austria's Greatest Poet. We reproduce a part of it below.

His name is Rainer Maria Rilke he lives in Paris and he writes in French.

Herr, or rather Monsieur Rilke was born in 1875, in Prague. Slavic blood flows in his veins, which probably accounts for the ease with which he learns foreign languages. In 1900 he went to Moscow discovered Dostoevski one of whose novels he translated into German and visited Tolstoi. When he arrived at Yasnaya Polyana, the author of *War and Peace* plucked out of his front door something that he did not want any lunch but preferred to walk in the forest. He turned to Rilke's astonished party and asked: Which do you choose—to go with me into the woods and the fields or to eat here like a bunch of imbeciles with plates and tumblers? For once Rilke disdained the interior life.

Rilke learned English simply in order to be able to read Browning in the original. It took him only a few months and when his purpose was accomplished he abandoned his study of that tongue whose genius seemed to me so foreign that, once my curiosity was satisfied I had forgotten it again completely within six months and to-day I do not understand a single word. French he found far more sympathetic to his taste, and German he liked less and less.

The poet's best friend in France is Paul Valéry, of whom he tells this amusing story. Valéry had come to pay a visit and the waggish *chef de gare* seeing the initials P. V. on his luggage, pretended to send them by *petite vitesse*. When the joke was discovered a hearty laugh was enjoyed by all.

American Exploitation of Europe

Lending money has been for a long time one of the most potent weapons of Imperialism. Create economic interests then protect them by force—such has been the procedure of economic exploitation by the "powers" in modern times. It will appear from the extract given below from the *Literary Digest* that Europe is at present fearing what might eventually develop into American Imperialism in that continent. We are told,

The fear that America will completely dominate Europe through its power of wealth is said to be rife in various European countries but especially in France, which is resolved to resist such an eventuality. This explains the formidable opposition raised against the ratification of the debt settlement, we are told and in the *London New Statesman* Mr. Sisley Huddleston a distinguished observer of French affairs, relates that an influential American, who has always advocated the cancellation of Europe's debts by America, showed him carefully worked-out figures to prove that if Europe really endeavoured to pay its immense debt to America, it could do so only by further huge borrowings from the same source on definite pledges, and that in the course of fifty or sixty years America by this process would have bought up almost the whole of Europe. Of such an eventuality we then read—

It sounds absurd, and indeed as a practical proposition is absurd. But theoretically the possibility exists. Since it is by a transference neither of gold nor of goods that Europe can pay it is not difficult to demonstrate on paper that in one way or another there may be effected a change of control and of possession of property inside Europe. This is however reckoning without circumstances which one can dimly envisage and which one believes to be ineluctable.

Take the case of Germany. I have already noted the facts and will only recall briefly that according to Arnold Reebber, German steel manufacturer, finding themselves short of working capital after the period of inflation had ceased and stabilization of the mark had been accomplished were obliged to turn to American banks backed by American steel interests and obtained loans on condition of American participation. The allegation is that the ultimate object is to secure a predominant holding. Now the German heavy industries, through the Hugenberg organization control the majority of German newspapers and various patriotic associations and parties. This is only one example that might be given of American penetration into German affairs. In a quarter of an hour a loan of thirty million dollars was subscribed in New York for Germany and if a statement which has received publicity in France is to be accepted the rhythm of American investments in Germany is such that were it to remain unaltered Germany's national riches would in a few years pass into American hands. An estimate which I can not verify puts American interests in Germany already at 30 per cent. of the total.

Will Syria become Italian

The *New Republic* informs us

Is France planning to turn over the Syrian mandate to Italy? Persistent rumors have come from the European capitals in the past week that this is so. The *quid pro quo* has even been named. France is to be supported in her North African policy which means that Italy will cast no covetous eyes on Tunisia and will not encourage Spanish ambitions in Tangier. These rumors as to Syria have been denied but there is nothing inherently improbable about them. The French are heartily sick of their disastrous venture. They cannot afford the expense of the war which they brought about through the insane folly and cruelty of their administrators under the mandate. The whole enterprise has thus far been a liability not an asset and there is reason to suppose that this condition will continue even after Syria has been pacified. Mussolini on the other hand would find several advantages in taking over the mandate assuming of course that he could get the assent of the League of Nations. He could make terms with the Druze without losing face, as the French feel they would do. He could present to the Italian people the new colonies he has been grandly offering them without knowing how to make good on his promise. He would find himself one step nearer to being overlord of the Mediterranean which is his ambition. If the new venture brought about a war with Turkey as is more than possible—well a war now and then is an excellent thing for a dictator. It keeps the population from dwelling too much upon troubles at home.

An Entente of Steel Magnets

The same journal also informs us

After years of intermittent negotiations the steel makers of Germany, France, Belgium, Luxembourg and the Saar Valley have reached an international agreement which has been hailed in the American and European press as the reunion of the coke of the Ruhr with the iron ore of Lorraine and the greatest steel trust the world has ever seen. According to the news despatches which contain few details the essential features of the convention signed on September 30 are as follows:

Beginning October 1 1926 and for a period of five years, the five groups of steel makers named above have agreed to limit their aggregate annual output to 27,578,000 tons with a possible decrease to 30,000,000 tons and a possible increase to 26,000,000 tons. The production quotas have been fixed according to the following percentages: Germany 43.18, France 31.19, Belgium 11.60, Luxembourg 8.93, Saar Valley 5.77. Each group is to deposit one dollar in a common fund for every ton of steel produced within its allotted quota. For each ton produced in excess of the quota a penalty of four dollars is to be paid while a refund of two dollars will be made for every ton which any given group fails to produce of its allotted percentage of the minimum of 26,000,000 tons annually. A collateral agreement between France and Germany provides for the exchange of Ruhr coke for Lorraine iron ore.

Apparently no definite agreement has been reached or even attempted for either the allocation of export markets or the fixing of prices. While only the four countries named and the Saar are

participants in the convention, the way has been left open for the adherence of Great Britain and for the smaller steel producing countries in central Europe.

NOTES

Swami Shraddhananda's Martyrdom

The murder of Swami Shraddhananda, while lying in sick-bed at Delhi, by a Mussalman, named Abdur Rashid, has naturally roused great indignation among Hindus, and many Mussalman leaders have also unreservedly condemned the deed.

At the time of his death, the Swami was 71 years of age. He had recently had an attack of broncho-pneumonia and was slowly recovering from it. The murderer got access to him on the pretext of discussing some problems of Islam with him and shot him dead with a revolver, firing five times in quick succession. Swami-ji's death was almost instantaneous. The murder of an old man, lying in sick bed, in this treacherous manner, is a most cowardly and shameful deed.

The miscreant Abdur Rashid is said to have declared that he alone was responsible for the act, and that he expected to go to heaven for having killed an unbeliever. Heaven must be a very undesirable place to live in if its portals are thrown open to treacherous and cowardly assassins. As for responsibility for the deed, it is to be hoped for the reputation of even the most criminal, turbulent and fanatical sections of Muhammadans that none of them were privy to it. That the Muhammadan community in general is not responsible for it, goes without saying. As regards the murderer, we fervently hope that he will repent, that his heart will change, and that he will obtain God's mercy and forgiveness. And may his deed also serve to remind us that few of us are free from communal hatred, which we must get rid of, and that therefore his shame is our shame, too. Electricity is discharged from a point in a mass of matter, but that does not mean that only the point was surcharged. No, the whole mass was surcharged. Similarly, though the assassin may be one, it was not his hatred alone that prompted his action but

the hatred of masses of men professing different creeds.

Though we hope no other Mussalman than the murderer was connected with the foul deed, many leading Mussalmans who could be named cannot be absolved from indirect but none the less real responsibility for the murder, because of the "militant" speeches delivered by them and the dire consequences foretold by them if the shuddhi and sangathan movements were not discontinued by the Hindus. We regret to have to write these words, for the outstanding figure in these movements was Swami Shraddhananda. We have always been opposed to mutual communal recriminations. We earnestly deprecate them at this juncture, too, and in future. We are second to none in our desire for real and whole-hearted friendship between all classes and creeds. But such friendship cannot be secured by a "hush hush" policy or by make-believe. Neither can it, of course, be promoted by needlessly offensive remarks. It must be understood and accepted unreservedly by the followers of all creeds, that so long as the practice of conversion continues, the right to convert in an open and legitimate manner must belong perfectly equally to men of every religious persuasion. Personally we do not attach any importance to outward conversion and the profession by an individual of any particular faith. It is a man's inner life and outward conduct that really matter. But, as we have said before, so long as there is conversion, men of every religious persuasion must be allowed to convert. As regards the shuddhi and sangathan movements, we have never been opposed to them, though we have criticised the name shuddhi, because we do not believe that a non-Hindu or a Hindu of the so-called untouchable castes is necessarily *ashuddha* or impure.

Swami Shraddhananda led a dedicated life. Giving up his lucrative practice as a lawyer in

the full maturity of his powers he devoted the best portion of his life to the foundation building up and carrying on of the Gurukul Vidyalaya for educating Hindu boys and young men according to the ancient ideals and methods of India and imparting to them both the ancient learning of the land as well as modern scientific and other knowledge. Some years ago he made over the charge of

this institution to able hands, and devoted himself entirely to public activities of a different kind. He was a sincere nationalist, and desired to have the friendship of Mussalmans and other non-Hindus without sacrificing the self-respect and social and religious rights and principles of his own community. Latterly he had incurred the odium of the Moslem community on account of his fearless advocacy of shuddhi. But there was a time when even Mussalmans respected and trusted him so much that he was asked and allowed to deliver a discourse from the pulpit of the far-famed Juma Masjid at Delhi. He continued to the last to be loved and trusted by individual Mussalmans and to reciprocate their feelings as is evidenced among other things by his being treated by Dr. Ansari during his last illness. He was a perfectly fearless man. The incident of his squaring his broad chest to be shot at by soldiers in the employ of Government in the streets of Delhi will be readily recalled.

His conduct was always in accord with his convictions and principles. He was not a believer in the modern system of caste and accordingly he married his two sons and his only daughter outside his caste. He led a life

of strict purity and self-control and was a man of mild disposition and affable manners. We had the honour of meeting and speaking to him only once. It was in the Arya Samaj Maudir in Cornwallis Street, Calcutta.

The void created by his death in the ranks of the public workers of India cannot so far as we can see be filled up immediately or in the near future. But if God will a

Swami Shuddhananda

greater worker than he may arise to carry on his work. That does not mean that the shuddhi and sangathan movements will suffer any setback. Thousands will step forward to do the work that was nearest his heart and undergo similar martyrdom if need be. Such workers, it is to be hoped, will bear in mind

that the Swami wanted not only to reclaim those Mussalmans and Christians who or whose ancestors were at one time Hindus but also to remove the stigma of untouch

Swami Sraddhananda

ability from millions of our fellow creatures who though Hindus are treated as if they are neither Hindus nor even human beings. He earnestly desired to imbue them with self respect and to improve their condition.

Swami Shradhananda's life has its lessons for those also who do not believe in or are even opposed to the Gurukul system of education and the shuddhi and sangathan movements. To the people of India and to humanity at large he leaves the legacy of a pure life spent in the selfless, sincere and fearless pursuit of noble aims and high ideals. May we all be able to make this heritage our own each in his own way.

The Congress Presidential Address

The presidential address delivered by Mr. S. N. Srinivasa Iyengar at the forty first Indian

National Congress held at Gauhati was not as brief as Mahatma Gandhi's presidential address or as that of Mrs. Sarojini Naidu. But neither was it as long as that of Maulana Mohamed Ali and some other presidential addresses. Its length was not likely to tire the patience of his audience. It deserves to be treated with respect as embodying the opinions of a man who has made sacrifice, and devoted his powers to the cause of India's political freedom.

There is little emotional appeal in the speech. The appeal almost throughout the discourse being to the intellect there was no room for an oratorical delivery. But that is not necessarily a demerit of a presidential address. Merely oratorical flights may produce greater momentary effects but do not leave any lasting impression behind. The best addresses are no doubt those which vitalize the patriotism of a people which

S. N. Srinivasa Iyengar
General Secretary Reception Committee I. N. Congress

have an ennobling chastening purifying rousing and strengthening effect owing to their emotional appeal and which at the same time convince and satisfy the intellect. But

all subjects do not lend themselves to oratorical treatment of this kind. And these which merely convince and satisfy our reason are by no means to be undervalued. For this reason we think Mr Iyengar's speech will rank high among Congress presidential addresses though it may not be considered one of the very best. It is succinct, free from verbiage and well and ably argued.

Some omissions arrest the attention of the readers of his printed address. He does not pay the customary tribute of respect to the memory of the political leaders who died during the year. He says nothing regarding mass civil disobedience. And it must be considered a merit of his speech that he does not criticise or denounce any rival political party.

He begins by pointing out that the foremost of our duties for the coming year is to mobilise all our forces on the issue of the National Demand which was formulated in February 1934 in the Legislative Assembly by Pandit Motilal Nebru on behalf of the Nationalist Party consisting of the Swarajists and the Independents.

It asked the Government to take steps to have the Government of India Act revised with a view to establish full responsible government in India and for that purpose to summon at an early date a representative Round Table Conference to recommend the scheme of a constitution for India with due regard to the protection of the rights and interests of important minorities and to place the scheme for approval before a newly elected Indian Legislature after dissolving the Central Legislature and finally submit the same to the British Parliament to be embodied in a statute. That resolution was passed by a majority of 6 to 48 against the Government.

Instead of meeting the National Demand and in order to sidetrack the principal issue the Government appointed the Reforms Inquiry Committee in pursuance of a tinkering policy to investigate the feasibility and

desirability of securing remedies for the difficulties and defects connected with the working of the Government of India Act but consistently with the policy structure and purpose of the Act. The Majority Report of the Committee admitted that Dyarchy was clearly a complex confused system having no logical basis rooted in compromise and defensible only as a transitional expedient.

S. Srinivasa Iyengar
President All India National Congress

but curiously enough expressed the following opinion:

While the period during which the present constitution has been in force has been too short to enable a well founded opinion as to its success to be formed the evidence before us is far from convincing that it has failed.

The Minority Report on the other hand

concludes that the present system has failed and is incapable of yielding better results in future. The Government of India however tried to induce the Assembly to accept the recommendations contained in the Majority Report. This led to the reiteration of the National Demand in the Assembly in an amplified form in September 1925. In February 1924 the resolution embodying

S. Tarunram Phookan
Chairman Reception Committee I N Congress

the National Demand was carried by 71 votes against 48. In September 1926 it was carried by a majority of 72 to 45 by the Independents and Swarajists acting together on both occasions. But on neither occasion did the Government pay the least attention to it.

Mr. Iyengar then refers to the walk out in March 1926 on the Government refusing to accede to the demand in accordance with the Congress mandate.

The leader of the Party in the Assembly said on that occasion: 'We hope and trust that the nation will give a suitable reply to the truculent rejection of our demands and send us again in larger numbers with a stronger mandate and God willing with the sanction for fulfilling its aspirations and enforcing its commands.'

Mr. Iyengar thinks that

The results of the campaign thus opened and of the general elections that followed and are just now over have justified the policy of the Swarajya Party in the Assembly and the Provincial Legislative Councils and have abundantly proved the wisdom of the great experiment inaugurated by the Congress at its Cawnpore Session.

Along with many others we are unable to support this view though we admit that the Swarajists have been more successful on the whole than seemed probable to us in July last when we left India for Europe.

We are asked to work Dyarchy

From the Secretary of State downwards British bureaucrats have said in every variety of accent and phrase that we should lay aside for the time being our demand for Swaraj and should soberly and wholeheartedly work the present constitution. Mr. Iyengar has no difficulty in showing that the new constitution has been worked by various groups of moderate or progressive politicians soberly and wholeheartedly for six years. And Minister after Minister has borne witness against it. Mr. Iyengar is therefore right in concluding

What the Government therefore requires really of us is that the Congress should give up its demand for Swaraj and merge itself in the bureaucracy.

That cannot and ought not to be done.

The speaker next proves conclusively that Dyarchy is not workable, workable that is to say in such a manner as to lead to the establishment of fully responsible Government.

Dyarchy not the only Defect of Reform Act

Particularly valuable and cogent are those paragraphs in Mr. Iyengar's address in which he shows that the removal of dyarchy alone

will not end our troubles and lead to the establishment of Swaraj

For we must remember that in respect of transferred subjects there is no responsible government and the mere transfer of reserved subjects to additional Ministers on the same statutory conditions as at present govern transferred subjects will not improve matters. At the outset each Legislative Council has a solid block of nominated and official members to support the views or policy of the bureaucracy on questions relating to transferred subjects though a majority of elected members may decide otherwise. Thanks to the nominated members and to the number of special constituencies, supple, reactionary or obscurantist, the composition of a Legislative Council is such that the Ministers have to depend upon the support of the Governor and his Executive Council. Nor is it very difficult for a Governor to form against a majority group of elected members a Ministry with the aid of a minority group of elected members and of his own nominated and protected block. This has been done again and again in every province. Secondly under existing conditions the power of appointing Ministers exercised by a Governor is not a mere technical mode of naming the established leaders of the majority in the Council but is a substantial power of patronage by which a nobody or anybody can be made a benami leader to carry out the Governor's policy. Thirdly we all know that a Legislative Council has no control over the items of expenditure known as non votables under each transferred head including the salaries and allowances and all other payments of officials belonging to superior services in that department. Fourthly the Ministers have little or no control over the members of the Civil or other public services serving in departments dealing with transferred subjects and the Governor has and exercises the power of making all appointments to posts in the transferred departments. The statutory independence of the Indian Civil Service is the most outstanding feature of the Reform Act. All the parliamentary apparatus of a responsible government will prove to be a costly and pompous futility unless the completest control over the Indian Civil and other services is unreservedly secured to Ministers fully responsible to a wholly elected legislature. Fifthly the Governor is empowered to over ride the Ministers' decisions on questions relating to a transferred subject and direct him to act otherwise. Sixthly the Governor has an emergency power—the emergency to be determined by himself—to authorise expenditure notwithstanding a veto of the Legislative Council in respect of transferred subjects. Seventhly the Governor has power to stop legislation in respect of transferred subjects notwithstanding the opinion of the Legislative Council. Eighthly he can return a Bill relating to a transferred subject to the Council for reconsideration with his recommendation which are in effect obligatory. Ninthly when a Governor cannot through his Ministry manage a Council to his satisfaction he can himself administer the transferred subjects as happened in the Central Provinces. Tenthly a Minister can hold office during the Governor's pleasure which does not mean the formal express on of the Council's pleasure but his own independent pleasure against the opinion of the

Council as was vividly demonstrated by Lord Lytton in Bengal. Eleventhly the Governor is entitled to disallow any motion for the adjournment of the business of the Council to discuss a definite matter of urgent public importance even when it relates to a transferred subject. Lastly the allocation of the revenues for the administration of transferred subjects depends primarily on the will of the reserved half and of the Governor and not on the decision of the Legislative Council.

Central Government not at all Responsible

Mr Iyengar points out in detail that the Central Government is not at all responsible to the Indian Legislature which has no power of the purse. He shows as follows that the Reform Act has in one respect made the Governor General a greater despot than he was before.

In addition to the power to make temporary ordinances the Governor General is given what he had not before the Reform Act the autocratic power of certifying any bill and signing it as a permanent law on his sole and absolute authority notwithstanding the refusal of the Legislature.

The Congress President has made it abundantly clear that

The centre of gravity both in the central government and in the provinces alike is transferred and is reserved departments when analysed closely is both in fact and in constitutional theory in the Executive Government in other words in the bureaucracy. It would therefore be a tragedy if we still sought to discover in all this statutory hypocrisy the germs of self government.

Status of India and of the Dominions

It requires to be pointed out repeatedly as Mr Iyengar has done that

While India is being denied Swaraj the Inter Imperial Relations Committee of the Empire Prime Ministers has restated the position of the Dominions as autonomous communities within the British Empire equal in status and in no way subordinate one to another in any aspect of their domestic or external affairs though united by common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations. That Committee adds and rightly that every Dominion now and always must remain the sole judge of the nature and extent of its co-operation. India is of course excluded from this privileged communion. She is not to be a free country equal in status to the Dominions but is to bear the galling burden of an Empire and the nature and extent of her co-operation are to be determined for her by others.

ns more than the bureaucracy Labour legislation in India whether it concerns registration or trade unions or other matters is by no means satisfactory Labour is not represented by its own men in the existing legislative bodies as the present electorates are too unmanageable and expensive And nomination is a wholly inadmissible method of securing representation either of labour or of the depressed classes or of any class of the population The Congress must therefore increasingly promote the welfare of labour and the Congress party in each legislature should represent its interests and pay special attention to its requirements

Regarding unemployment he asks among other things

Will the present Government for instance establish the great industry of shipbuilding on a large scale or start a line of state-owned steamship that will earn freight for India and give employment as Indian Railways do to tens of thousands of Indians? Assuredly not

A very pertinent question

Government's Currency Policy

The President observes on this topic

A little reflection will make us agree that the lower price of imports is no compensation especially when we remember that expenditure on imported goods by the vast bulk of the consumers is but a small percentage of their total expenditure The loss inflicted upon India is very substantial whether we have regard to the drop of 12½ per cent in the real value of agricultural produce or of exports or have regard to the competition between products of Indian and foreign industries or to consequential increase in agricultural indebtedness In our fear lest our own capitalists use us let us not allow ourselves to be exploited by foreign capitalists in the interests of England and to the general detriment of India.

Indian States

Mr Iyengar thinks that the Indian States should be included in our scheme of Swaraj

I share to the full the sympathy of all those who think that Indian States are a kind of very imperfect Swaraj They remind us of the high estate from which we have fallen and our national instinct sound in the main prompts us to preserve these relics of an ancient dignity But the reconciliation between sentiment and the imperious necessity for Swaraj is by no means difficult The rulers of Indian States ought in their own interests and in the interests of their subjects to content themselves with the position of hereditary governors or administrators of their territories under a system of representative institutions and responsible government.

The people of each State should have such representation in the Assembly as may be necessary to safeguard their interests till each Indian State attains a system of responsible government.

Greater India

The President has not forgotten our sisters and brethren across the seas Of all that he says and says well on this topic we will quote one observation

The term "cooly" connotes the dignity of labour and the Indian cooly settler lowly as he is is far superior in status to the original convict settler in Australia

He is in favour of the opening of a foreign department of the Congress to look after the interests of overseas Indians

Further a small committee should be appointed to go to the principal foreign countries where Indians whether traders students labourers or others reside so as to get into direct personal touch with them

Asiatic Federation

That Mr Iyengar mentions only "the possibilities of a cultural and business union with all Asiatic countries, but does not at present think of any political federation shows his level-headedness When India becomes fully self-ruling both as regards internal and external affairs it would be exactly true to say as Mr Iyengar says now,

The time has perhaps come for us seriously to think of a federation of the Asiatic peoples for their common welfare So long as our neighbours were ruled by irresponsible autocrats such an idea was clearly out of the question Now that Angora Persia China and Siberia are governed by democracies a federation of Asiatic democracies will make for peace prosperity and freedom of Asia and therefore comes within the range of practical politics

Communalism and Nationalism

We hope the Congress President's reading of the situation was correct when he said,

The forces of nationalism are steadily and visibly triumphing over the forces of communalism

That communalism is a negation of nationalism and is an obstacle to Swaraj is being rapidly and very generally realised

Communalism has been rampant from the first among Mussalmans Hindu communalism is an effect of it So if Mr Iyengar's observations quoted above are to be considered correct, it must be shown that Mussalmans are giving up communalism and swelling the ranks of nationalists We do not think it can be shown We shall be sincerely glad and thankful if any one will bring forward proofs to convince us that we are mistaken It would be good if all communalists realised that

Communalism is not so much a positive idea of benefiting one's own community as a destructive desire to obtain advantages at the expense of the other communities

Politics and Religion

We have no hesitation to endorse the following observations of Mr Iyengar —

The intrusion into politics of religion and very often of dogmatic religion, must be resisted as a primitive or mediaeval idea born of theocracies and disastrous alike to religion and to politics. Hinduism and Islam will gain immeasurably in strength and purity if they are not mixed up with secular politics. I do not speak of morality or of that spiritual quality which is common to all great religions for thereby politics and organizations are cleansed and made sweet and wholesome. In the evolution of States theocracies have not survived as they were responsible for fanaticism, persecution and internal strife, and neglected the material welfare of the people and the proper arts of government.

Fanatics among Hindus and Mussalmans may not like the following statement of an historical fact, which is nevertheless true —

No proselytizing can equal the hearty crusading fervour of early and mediaeval times and the two great religions of India have in spite of innumerable conversions and re-conversions adjusted and consoled themselves and have acquired an adamantine stability

Appeal for Unity

One of the reasons why this REVIEW has been from its very first issue a non-party organ is the belief formulated by Mr Iyengar in his own way in the following words

There can be only two parties in India, the party of the Government and its adherents that obstruct Swaraj and the party that fights visibly and unceasingly for Swaraj. An army has several arms, but it would be a singular army indeed if its cavalry fought its infantry and its artillery opened fire on both. The duties of all groups or parties in the country and in the Congress is vigorously to co-operate with one another in their fight for Swaraj just as the arms of a sensible army will do in a real war.

We are therefore able unreservedly to support his appeal for unity — only we would have this unity not for one brief year but that freedom has been actually won as we do not believe in fixing a date for the attainment of Swaraj.

Rabindranath's Popularity in Germany

When we were in Vienna we received

the following cutting from an Anglo Indian newspaper —

Cologne Sept 26

Five thousand people to-day paid from half a crown to ten shillings each to hear Rabindranath Tagore lecture on the philosophy of India.

The lecture which was delivered in English was translated into German.

In the evening the poet gave excerpts from his poems in Bengali which proved to be very popular — *Reuter*

On this item of news *The Statesman's* comment was quite characteristic. It wrote in its issue of the 28th September

Although it has awoken an uneasy consciousness of inferiority in the British mind the sincerity of German admiration for Shakespeare has never been doubted and many of the best disquisitions on the immortal plays have come from Teutonic pens. Nevertheless and after making due allowance for the speaker's compelling personality it is a little difficult to believe that a Cologne audience listened to Rabindranath Tagore's Bengali poems with any real enthusiasm. Only after complete familiarity with the language has been obtained can foreign poetry be appreciated and when the audience is divided from the poet by every difference of upbringing and environment, the sympathy indispensable to understanding is impossible. Without cynicism then we may conclude that it was Rabindranath himself rather than his poems that proved to be very popular with his German hearers. Even the educated Indo-Briton cannot do the same justice to the *Gitanjali* as the Bengali.

We were not among Tagore's Cologne audience but we were in the midst of two of his German audiences — one at Dresden and the other at Prague. In both places we found that the recitation of some of his poems was received with perhaps greater enthusiasm than his lectures. At both Dresden and Prague a fair proportion of the audience understood English and could follow what he said in English. At Dresden as in the other towns of Germany visited by the poet, Professor Trautmann of Berlin University a Panjabi Hindu translated Tagore's lectures into German. The professor has a powerful voice and an easy command over the German language. So his translations greatly helped those of the audience who did not understand English. At Prague no one translated the poet's lectures into German or Czech. Nevertheless, as many among the audience knew English they understood and appreciated his lectures.

As for the poems which he read in English or in Bengali we found that they were appreciated very much. Both at Dresden and Prague when he had finished

We have to repeat that, in the case of India co operation means subservience and subordination

The speaker was therefore perfectly justified in saying

The time has I think come when we must make it clear to others and to ourselves that if England wants India to remain within the British Empire it can be only on the terms just stated and that otherwise none can or should set any limits to her freedom

If we confine ourselves to the abolition of Dyarchy are we certain that the residuary powers of the Governor will be surrendered? What again is the use of responsible Provincial Government without a responsible Central Government? The comedy will be enacted differently but its spirit and purpose will be there if the Central Government is not a fully responsible government. Supposing again both the Central and the Provincial Governments are made responsible governments and we are still not to touch the Civil Service the position will be no better. The Indian agents of the foreign bureaucracy will be more numerous and there will be more competition for Minister ships but the masters will be the same. We cannot therefore compromise on the question of appointment and control of the services or provide for them a dual control. Any scheme of self government will be nothing but an empty form if the control over the army and navy and the control over the political relations with Indian States as distinguished from foreign relations with other countries are not given to our Swaraj Government. Any such reservation will deprive the Indian Swaraj Government of financial administrative and political control over the Indian people including Indian finances. Otherwise self governing India will be managed by an army under foreign control and the Indian States will be perpetual thorns in its side if nothing worse

Army and Navy

Mr Iyengar has shown that for real Swaraj we must have control over our army and navy and is rightly confident that a self governing India would be able both to pay for an adequate army and navy as well as to man and control them. We should not therefore admit our imaginary incapacity to administer the army and the navy

The Council Programme

The president then chalks out the following council programme and explains and defends each item in detail —

The general policy of Congressmen in the Assembly and the various councils should be one of resistance to every activity governmental or other that may impede the nation's progress

towards Swaraj and in particular Congressmen in the legislatures should —

(a) refuse to accept offices in the gift of the Government until in the opinion of the Congress a satisfactory response is made by the Government to the national demand

(b) refuse supplies and throw out budgets (unless otherwise directed by the All India Working Committee) until such response is made by the Government

(c) throw out all proposals for legislative enactments by which the bureaucracy proposes to consolidate its powers

(d) move resolutions and introduce and support measures and bills which are necessary for the healthy growth of national life and the advancement of the economic, agricultural industrial and commercial interests of the country

(e) take steps to improve the condition of agricultural tenants by introducing and supporting measures to secure fixity of tenure and other advantages with due regard to the rights of the Zamindars and

(f) generally protect the rights of labour agricultural and industrial and adjust the relations between landlords and tenants capitalists and workmen

But supposing the Swaraj party is able consistently and fully to carry out this programme which we doubt when we bear in mind its past record we do not see how such a programme would lead to Swaraj. Swaraj will certainly come in future. What has to be explained is how it would be the logical outcome of any council programme. Mr Iyengar has not attempted any such explanation

Nor has he explained even in the briefest way possible why accepting the office of president of a council is not acceptance of office. He is right in observing

By accepting office the Congress is bound to become an unconscious ally of the bureaucracy. And if the most advanced party in the country takes office where will be the determined and disciplined opposition in each council to fight against Dyarchy or for Swaraj? Neither the Ministers nor their party can openly speak and vote against the administration of reserved subjects

But is not a council president an ally of the bureaucracy? Does he not soberly and whole heartedly work the present constitution to which Mr Iyengar objects? Can the council president openly speak and vote against the administration of reserved subjects or any other subjects?

Self reliance

We agree with Mr Iyengar that from the point of view of the ideal

The remedying of grievances must be upon the basis of self reliance and resistance and not on the basis of co-operation with the Government. The people must be taught to assert their rights and to develop their powers of self reliance and resistance.

But, as he does not mention the sanction and does not seem to remember how the boycott of British Indian law courts and the substitution of national law courts in their place (which was part of the Non co operation programme) actually worked we cannot consider the following as a practical man's suggestion.

The Congress members of all the legislatures should meet as a separate national legislature and frame model laws for adoption by the people.

Village Sabhas

As an ideal again we have no quarrel with the following suggestion.

We must establish village sabhas that shall under Congress mandate, administer village affairs and be the units of a permanent Swaraj. The great practical difficulties that are in the way must not depress us but should only serve as a powerful stimulus to exertion.

But where is the sanction? And where there are village unions will not the village sabhas come into conflict with the village unions? The capture of local bodies is a more feasible plan and as village unions are such local bodies why not capture them too instead of creating independent village sabhas? Of course voluntary associations of village people for educational or other particular purposes should and do exist and they work well too in some places. But they have no power to make rules for all the inhabitants of a village or levy rates on all which a village sabha must do.

Constructive Programme

Mr Iyengar then expatiates upon the constructive programme. He thinks the restoration of the spinning wheel to its ancient primacy has made the boycott of foreign cloth real to an appreciable extent. We should have been glad if that were a fact. But the speaker himself states that "during 1925-26 khadi production was 19 lakhs and this year it is expected that there will be an increase of 25 percent. Suppose it becomes 24 lakhs. Taking the value of imported foreign cloth to be

60 crores does the production of 24 lakhs worth khaddar represent any appreciable boycott of foreign cloth? 24 lakhs is only $\frac{2}{5}$ percent of 60 crores.

The Boycott of foreign Cloth

If we want to boycott foreign cloth and we think we ought to we should emulate the Chinese example and learn Chinese methods. *The Guardian* of Calcutta states in its issue of the 10th December that the boycott of British goods in Southern China has resulted in still further losses to shipping companies. We in India have little conception of the effects on the British colony of Hongkong of the Chinese boycott. It has been more effective than we think. It has in fact been so effective that Lord Inchcape felt compelled to find out who was responsible for the anti British feeling in China and he has laid upon the missionaries as the only party to blame. *The Guardian* by the way effectually disposes of his accusation.

Untouchability

The section devoted to untouchability in Mr Iyengar's address is valuable from many points of view. He is right in observing that

The final solution of the question depends in great part upon the improvement of the economic conditions of the vast bulk of the untouchables.

Neither foreign nor domestic critics are however right when they assert that untouchability is a formidable obstacle to Swaraj or that its removal will automatically bring about Swaraj. We cannot wait for Swaraj till it is removed any more than we can wait till caste is abolished. There is the capital instance of the United States of America achieving freedom long before the abolition of a very real and wide-spread slavery. But we must all agree that we must make an end of untouchability apart from any question of Swaraj and whether we ever win Swaraj or not.

Labour and Unemployment

As regards the question of Labour the President says in part

The organization of labour has been included by the Congress at Cawnpore in its constructive programme. We must give it a front place in our work for the coming year. The welfare of labour its housing its provident funds and industrial insurance and all the other things required for improvement in the treatment and conditions of labour are of great national importance. They constitute a reserved subject though they concern

reading the poems according to the programme, the cheering went on and he repeatedly felt obliged to read out other poems. At Dresden, his English poems were recited beforehand in their German translation by Professor Tara Chand Roy. This helped those among the audience who did not know English to appreciate them. Some at least of the English poems which he read out at Prague to German or Czech hearers were also given in German or Czech translations—we cannot say whether all were so translated.

But neither at Dresden nor at Prague were all the Bengali poems which the poet read out translated into any European language. Still they all roused immense enthusiasm. Poems can be appreciated both for their sense and feeling and their music. It is well known that the poet has a musical voice and is an excellent reader. Besides, he is a perfect master of the histrionic art, and some of his poems lend themselves easily to be read in the way that an actor would render them on the stage if they formed part of the play. Moreover, even the sense and feeling of some poems can be partly expressed by appropriate gestures and delivery. These considerations may convince those who are not determined to remain unconvinced that some Bengali poems, when properly read or recited, may be appreciated even by those who do not know Bengali. Perhaps the average German and the average Czech has a more sensitive and trained ear for music in general and the music of Bengali poems in particular than the average Indo Briton as represented by the editor of *The Statesman*. And it is possible even for unmusical people sometimes to appreciate good music—a fact to which we may be allowed to bear personal testimony. At Prague we went to see a Czech school for orphans and boys and girls without some limb or other. The children sang some Czech songs. We enjoyed them though we do not know Czech and are not qualified to appreciate Western music.

Indo Britons, formerly styled Anglo-Indians, may not be able to appreciate the English *Gitanjali* but in Great Britain there are numerous unhyphenated true Britons who fully understand and appreciate it.

Congress Session at Ganhati

Ganhati is a comparatively small town

in Assam, the easternmost province of India. It was very plucky on its part, therefore, to invite the Indian National Congress to hold a session there. Mr Tarun Ram Phookan, Chairman of the Reception Committee, Mr Nabin Chandra Bardalai, General Secretary to the Reception Committee and other earnest workers are entitled to great credit for their enthusiasm and earnest labours.

The attendance at the Gauhati session of the Congress has been put down by the *Amrita Bazar Patrika* and *Foricard* at over ten thousand. *The Bengalee* and *The Statesman* on the other hand, state that the number of persons attending was five thousand or thereabouts. Even if we take the lower figure to be correct, the attendance does not indicate any want of enthusiasm on the part of politically minded Indians. That so many as two thousand delegates attended the Congress session in a far-off town like Gauhati, and that in such a small town fifteen hundred persons could be enlisted as members of the Reception Committee, are facts of which nobody need be ashamed.

Mr. Phookan's Address

The address of welcome delivered by Mr Tarun Ram Phookan is conceived in a manly and optimistic vein. He briefly narrated the ancient history of Assam, dwelling specially on its heroic episodes, and referring to the cultural renaissance in that province, said:—

However poor our condition under the British Raj may be to-day, we are inheritors of a very ancient Hindu culture and I am proud to say that if there is any place where catholic and progressive Hindu Religion is a living force, that place is Assam.

He also pointed out that spinning and weaving (both cotton and silk) are still practised in Assam in the homes of the people to a considerable extent.

Lord Birkenhead, with some politicians of lower rank, has uttered the threat repeatedly that unless India "co-operates" and works the constitution given to her, she cannot have any further reforms. Mr Phookan's commentary on the above is as follows:—

'Good' bad or indifferent you must work the present constitution dictates the Noble Lord 'or you will be given no further reforms.' This to my mind means that India's power of resistance must be crushed she must be humiliated. Let Ganhati Congress let the representatives of the people of India answer the challenge of the Noble Lord fairly

and squarely but I personally believe that the Councils should either be mediated in a manner suitable for the attainment of Swaraj or should be ended completely. Let Gauhati Congress decide whether India should get back to her old mentality of begging for favours on beaded knees with folded hands or that she should stand on her own rights and make a demand for her birthright. Let Gauhati Congress decide whether India should be humiliated into co-operation in the hope of getting some favours or that she should stoutly refuse co-operation till her legitimate rights are conceded to her.

That Non co-operation has not brought Swaraj as early as was expected has not dispirited Mr Phookan. He is not at all down hearted. Says he —

I personally possess a great deal of robust optimism and I have a firm faith and a clear vision that the freedom of India will come sooner than many people expect—it only we work honestly earnestly and unitedly. Let not our success be judged by the measure of our achievements. Non violent Non co-operation had worked wonders within the very short time it was practised. It has animated Indian life with a sense of manhood. It has infused that love for freedom for the motherland which cannot be killed even by the most inhumane methods of the Bureaucracy. It has taught us that the weakest nation has a right to rebel against the most powerful nation that tries to impose by strength of arms its will against the wish of the people.

Mr Phookan need not have adopted the apologetic tone that he did in seeking to justify the invitation of the Congress to Gauhati when he said —

Our right to invite you to such a distant and a poor country is based upon our modest achievement during the Non-co-operation Movement on the terrible sufferings undergone at that time by the people of Assam at the most cruel hands of the Bureaucracy and above all in our sincere willingness to follow your lead through the Congress and do our honest best in the fight for Swaraj.

Earlier in his speech also he referred to the sufferings of the public spirited workers of Assam in the following words —

The severest indictment that the Government of Assam stand charged with is the wilful slow poisoning of the people of Assam by carrying on their immoral traffic in opium. And what is more, when a number of selfless workers raised their voice of protest by preaching temperance during Non-co-operation they were mercilessly flung into prison.

The sufferings of our Assamese brethren have not been in vain. These have not only made them strong but their labours have greatly reduced the consumption of opium in the province.

Mr Damle's Speech

We are indebted to Rao Bahadur K G Damle CIE, Chairman of the Reception Committee of the Akola Session of the National Liberal Federation of India for an advance copy of his speech. A considerable portion of his address is devoted to the narration of the recent political history of India and of the Congress movement.

The following words of his ought to make for unity —

It is undeniable that all the political workers in India, whether they are inside the Congress or outside and whether they belong to one group or another are animated by the same motive to do devoted service to their motherland and are fired with the same righteous and noble sentiment of patriotic love for India. They have honestly been seeking out the surest way to carry forward the political status of India to the highest altitude attainable as early as possible. They are agreed also as to the practical limitations within which their activities have to be carried on. In this state of things every right minded patriot has to place the true interests of his country above considerations of self or party. In his heart of hearts every sensible Indian cherishes and must cherish an ardent wish for the rapid advance of his country to the destined goal of responsible self government or Swaraj. For an early realisation of this object is required the consolidation of our forces and united action is the right direction.

But the sentence which follows is not likely to result in united action —

I shall however content myself with asserting my honest conviction that the activities of the Swarajists and non co operators in the country are proving a serious handicap to the smooth and orderly progress of the country along the right path.

To communalists he addresses words of sober wisdom when he says —

Religious orthodoxy was more rampant in days of old than it is now. It is now common knowledge how Turkey has emerged from the War. The Angora Republic has shaken off the hold of old religious notions, ideals and prejudices. With the Turks religion does not stand above politics. Its claims on its followers have been subordinated to those of the State. In India however the same old action survives in full force. A major part of a Mahomedan's every day life is engaged like that of the non Mahomedan population in attending to non religious matters of purely worldly importance and in their associations with their fellow men of other faiths the occasions are rare when their religious preachings affect their everyday acts and their relations with other communities. The history of all civilized countries Turkey included, teaches us that in proportion as the peoples' interests advance in matters political social and international the primitive rigidity of religious precepts and injunctions requires to be relaxed and religious orthodoxy to be shaken off so as to permit social and

political growth to keep pace with advancing and changing times and circumstances. In India both the Mahomedans and the Hindus possess a large community of interest. Neither of them can afford to impede and risk the steady advancement of their political growth and social unity. Both must advance side by side with equal pace and in equal measure if the entire body politic of India is to present a healthy and all-sided advancement. The religion of neither community should demand a surrender of these non religious interests. Religion teaches us our duty to God and our devotion to Him can be expressed as fervently in a temple as in a mosque. The conventional outward symbols and formalities clothed with sentiments of religious sanctity have hardly any permanent and real value in estimating the depth of heart and the steadiness of mind dedicated by a religious devotee to the service and realization of the Divine Power. The religious truths so far as they are divine claims common allegiance and homage from humanity as a whole. That being so the apparent points of antagonism discernable in what may be strictly deemed to be mere outward conventional appendages should not be regarded as of great significance and value. They may be made adjustable to varying needs and circumstances. Such adjustment does not affect the high divine truths

—

Calcutta University Election of Fellows

Four Fellows are going to be elected this year by the registered graduates of the Calcutta University. It has thousands of graduates but the registered graduates number only a few hundreds. This is due to the rules relating to the registration of graduates and the unnecessarily high fee which has to be paid every year for keeping one's name on the register. The rules should be amended and the fee made almost nominal.

As the present number of registered graduates is small canvassing is quite easy and various kinds of pressure are brought to bear on them. They ought therefore to be all the more careful in giving their votes. The Calcutta University is not a political institution and its Senate is not a political body. Only those persons ought to be elected to it who are cultured and have taken an active interest in the spread and improvement of education who have shown that they are actively interested in the improvement and reform of the university and who are jealous of its good name. It is almost as ridiculous to send a man to the Senate merely for his political opinions as to select an engineer or a physician merely for the sake of the political party to which he belongs.

—

European Politics and Indian Publicists

For about half a century some Indian publicists or others have generally sided with some political party in Great Britain and expected that it would help them in promoting the cause of self rule and freedom in India. But India has been always treated by all British political parties as outside party politics. It has been everybody's that is to say nobody's business to promote the cause of Indian freedom. Some Indian politicians nevertheless think that when Labour again comes to power in Great Britain India will have Home Rule. Let us wait and see.

Whatever the result may be we do not deny that there is some connection between British politics and Indian politics. But with European continental politics we have no such connection. We are interested in continental politics only in a general way. But our interest is none the less keen and real for that reason. We rejoice and are encouraged in our fight for freedom when we find the cause of popular freedom triumphant in any country. On the other hand whenever and wherever tyranny is rampant and freedom of expression of opinion and liberty of association are suppressed we cannot but feel pain and sympathy with the sufferers. The disadvantage we suffer from is that, owing to distance and to our sources of information being practically almost wholly British we do not generally get unbiased information. Perhaps Italy Hungary Bulgaria Roumania all groan under the same kind of cruel oppression and tyranny and suppression of liberty but British news vendors and publicists may not be equally interested in denouncing evil doers in all lands. So far as we are concerned as in India so in European and American politics, we do not adopt a partisan attitude. But we are afraid we cannot guarantee the same non party attitude on the part of all our political contributors.

A Science Congress in Japan

The Third Pan Pacific Science Congress was held in Tokyo from October 30 to November 11. The inaugural meeting was attended by about 3000 persons and was highly successful. This large attendance at a science Congress shows the great intellectual progress which the people of Japan have

made The Congress was attended by delegates from China the U S A Canada Hawaii, Australia France the Philippines etc., and there were also English Dutch and Japanese delegates Papers on various scientific subjects were read at the many divisional and sectional meetings

The closing ceremony of the Congress has held in the form of a general meeting It decided to hold the Fourth Pan Pacific Science Congress in Java It also resolved to perpetuate the Congress The resolutions proposed by the divisional meetings and passed at the above general meeting are as below —

- 1 Co-operative study of volcanology and local seismology
- 2 Geodetic study by submarine boats
- 3 Creation of the "Pacific Geological Review"
- 4 Selection of a Preparatory Committee for the Fourth Pan-Pacific Science Congress
- 5 Making of weather charts
- 6 Use of radio for the unity of time of meteorology
- 7 Unity of wave-lengths of radio
- 8 Unity of methods of study of mineral resources in the Pacific region and its organs
- 9 Topographic study of the bed of the Pacific
- 10 Study of the shape of the globe and more particularly of the shape of the Southern Hemisphere with Australia in the centre
- 11 Preservation of natural monuments in the Pacific region
- 12 Memorial to the Chilean Government regarding the preservation of animals and plants of Juan Fernandez Island
- 13 Study of corals of the Pacific and the Indian Ocean
- 14 Biological study of the Pacific
- 15 Protection of crops more particularly plant quarantine in the countries of the Pacific
- 16 Cultivation of dechivites and the ruse

Indian Medicines in Ancient Japan

At Nara the oldest Imperial Residence of Japan known all over the world by its giant statue of Buddha, the Daibutsu cast out of gold bronze there stands also an old Imperial treasure house "Shoso In" which was built almost at the same time as the Daibutsu was cast, i.e., about 743 A.D. This treasure-house serves for the storage of various precious objects which were in the possession of Emperor Shomu Tenno and which were dedicated after his death to the Daibutsu by the Empress dowager Komyo-Kogo. Among these valuable offerings says *The Young Jast* we find also vegetable animal and mineral medicines partly home products of Japan but mostly from Arabia

Persia, India and chiefly from China. The various medicaments are in all of 60 kinds packed in 21 lacquered boxes. They are dedicated to Vairochana synonymous with the Great Buddha. In the list given in the *Young Jast* it is easy to recognise a few Indian medicines. For instance musk *mupali* (*piper longum*) *amalak* *amra* or mango *laritaki* or myroblan *slarkara* or *sngar* etc.

The Late Principal B V Gupta

As I left Calcutta in the last week of July 1926 and was absent from India for four

Principal B. P. N. Vihari Gupta

months I did not hear of the death of Principal Bipin Vihari Gupta till recently and could not pay my tribute of respect to his memory at the proper time. I was a very unworthy pupil of his in mathematics at the Presidency College in the third and fourth year classes. He was then assistant professor of mathematics. I dreaded mathematics but for some reasons which I need not mention I took up mathematics as one of my subjects for the B.A. examination. As I was not a good student of mathematics fear made me absent

myself frequently from Professor Gupta's class. Nevertheless the good professor knew that I was a pupil of his but a truant. I distinctly remember now that on one occasion he told me with a smile "চাট্জো, তোমাকে যে দেখতেই পাওয়া যায় না" 'Chatterjee I wonder why one cannot catch sight of you' That was the only rebuke—a very mild one he administered to his unworthy pupil. But though I did not regularly attend Prof Gupta's class, I could understand that he was a mathematical genius and a very able teacher. My fellow students and myself could not but contrast his ability as a teacher with the comparatively inferior ability of a British graduate, a high Cambridge wrangler, who had then recently come out from England as our professor of mathematics whereas Bipin Babu was only an assistant professor. Inspite, however, of this marked difference in ability the British graduate retired from Government service as Director of Public Instruction Bengal and Bipin Babu drew a salary of only Rs 600 a month at the time of his retirement—about a fifth of what the educational director did.

Professor Gupta was a man of a cheerful temper and had bright genial eyes.

I am indebted to my esteemed friend Professor Jogesh Chandra Ray for a copy of a biographical sketch of Principal Gupta which has appeared in the *Ravenshaw College Magazine*. Professor G. C. Ganguli tells us there that Bipin Vihari Gupta was born in October 1855 in Hulsahar. His academic career was brilliant, he having stood first in all University examinations except the F. A., in which he stood second. Sir Alfred Croft, a former Director of Public Instruction, Bengal, wrote of Professor Gupta when the Provincial Educational Service was organised in 1896: 'He is a distinguished Mathematician, being the only graduate who obtained a first class in the M. A. in that subject from 1874 to 1880'.

Mr Ganguli writes

{It seldom falls to the lot of an educational officer to command respect from all as Bipin Babu did. He was almost an idol at Calcutta both as a University Student and as a Professor of Mathematics. Successive Directors of Public Instruction and Principals of Presidency College, had nothing but the highest praise for him and his work. When he was Principal of the Ravenshaw College, remarks on his work was admiring both from the scholastic and administrative points of view and he has left his mark on that College, not only

in having raised it educationally, but also as having worked and enlarged the Hostel system there most successfully.' It may be stated without exaggeration, remarks another, that a complete revolution was effected in every department of the College and the School attached to it by Mr Gupta. Principal Maitra, a just and severe critic, in his evidence before the Royal Commission spoke highly of the work done by Principal Gupta as head of our College.

He was not only a born Mathematician but was well read in many subjects. Dickens was his favourite author. I was struck with the wonderful quickness of his understanding. With his strong commonsense he could at once dive deep into a matter however complicated and took little time to solve any problem however intricate. From his intelligent discussion of matters medical, legal and engineering I often thought that he might have excelled equally as a doctor or a lawyer or an engineer.

He was a keen sportsman himself and much in advance of his time he greatly encouraged sports among the students. His elder son Bhupi unfortunately cut off in the prime of life was one of the founders of the Orissa Athletic Association and his younger son Omri won several prizes for sports year after year. Before partially losing his eyesight Bipin Babu was a dead shot. His was the Greek ideal of *mens sana in corpore sano* and a sound mind in a sound body. He was of robust health and had to take leave only for a little over 3 months during his 34 years' service. He was very fond of gardening which was his main occupation in his retirement. He knew some thing of everything and everything of something.

He was a remarkable figure in every society in which he moved. He was absolutely free from *hauteur* and was not only accessible to all but felt for all. When there was a devastating flood in Kendrapara in 1907 his heart bled and, without waiting for anybody he issued an appeal for the distressed people and the appeal was liberally responded to.

For months Bipin Babu had to work hard in this connection but it was to him a call of duty, a self imposed task a labour of love.

Those who had the privilege of being his personal friends valued him as an agreeable companion and a faithful friend.

When before the last summer vacation I saw Principal Gupta unable to move without others' help I thought of the time when in his youth, incredible as it might appear he having missed a train at Natore ran with it and caught it at last at the next Station.

The students it may be safely asserted, found a father in him. On hearing that a 3rd year meritorious student was unable to pay his College fees he approached a gentleman who advanced without a word his two years College fees and the student could prosecute his studies, obtain his degree and follow a useful and honourable career. As he had himself to struggle hard against poverty in early life he could readily sympathise with poor students and in their behalf he carried on correspondence with the D. P. I. and in consequence half a dozen free-studentships were granted to each Government College but the initiative had been taken by the principal of Ravenshaw College, which was then not a very important College.

Child Marriages and Indian States

As part of the celebration of the birth day of the Maharani of Bharatpur the Maharaja of that State has given his consent to a measure entitled the Bharatpur Social Reform Act, which is to come into force in that State from January 1 1927. This is quite a fitting way to commemorate the birth day of a woman as it is calculated to remove some causes of the miseries of her sisters of high and low degree and relieve their sufferings.

The Act enables widows to contract a second valid marriage and enables their children to inherit their property. To avoid controversy or dispute as regards marriage or remarriage of widows they shall be registered in the courts of tehsildars or in temples or mosques recognised by the State on payment of a fee of Re 1. Another clause relating to child marriages makes them invalid before a court of law if contracted between parties who have not attained the age of 14 in the case of females and 16 in the case of males. All persons knowingly abetting a marriage or remarriage contrary to the Act would be liable to imprisonment for any term not exceeding two years or a fine not exceeding Rs. 3000 or both.

The Maharaja Gaekwad of Baroda passed a law years ago to prevent infant and child marriages. But as for some reason or other the object desired has not been gained he is thinking of taking steps to make the law more effective. It is to be hoped he will succeed in his efforts.

If in British India the age of consent even in marital relations is raised sufficiently high that may indirectly prevent the marriage of female children in many cases. We say this, because our Government is not likely to pass any law meant directly to prevent child marriages.

Sir Sivaswamy Iyer's Address

Not having received any advance copy of the presidential address of Sir Sivaswamy Iyer at the ninth annual meeting of the National Liberal Federation held at Akola we have been able to read only extracts from it in a newspaper. It appears to have been conceived in a different vein from that of Sir Moropant a Joshi at the Calcutta session of the Federation last year. Sir Moropant did not strongly criticise any rival party. Sir Sivaswamy has strongly criticised the Swaraj party. Says he sarcastically —

We wonder whether the country has since March 8 1916 been secretly or openly prepared for mass civil disobedience and whether it is any

more fit to resort to this weapon than it was when the Congress committee submitted its report.

Knowing as the Swarajists must do that the country is not prepared to follow them in the stout of civil disobedience their talk of sanctions is meaningless and can only be sheer bluff.

It cannot be denied that there is a great deal of truth in what Sir Sivaswamy says in the following passage about the Congress creed —

The creed of the Congress party has undergone many changes. They have climbed down from their heights of non-co-operative aloofness to participation in the work of the Councils. They have climbed down from a policy of uniform continuous and consistent obstruction to a policy of supporting some at least of the measures for the benefit of the people. It is not however likely that the Swarajist party as a whole will abandon their infructuous policy and return from the barren wilderness to the paths of commonsense and wisdom.

He then passes on to put the Responsive vists on the back.

With the robust good sense and grip of actualities which is characteristic of the Maharashtra community they have led a revolt against the fatuous policy of the Swarajist party and succeeded in forming the party of Responsive co-operation. We welcome the formation of this party which has practically adopted our creed though it has not joined us and seems to light shy of the name Liberal. The formation of the Responsive Co-operation party is really a triumph of the principles for which the Liberal party has all along stood.

He laments the disfavour into which the Liberals have fallen and explains it thus.

It is an irony of fate that while the principles for which the Liberal party has stood have been slowly gaining recognition the party itself should have fallen into disfavour with the people.

But the explanation is not far to seek. In the first place the policy of moderation does not appeal to the popular mind in the same way as a policy of extremism. A member of the Moderate or Liberal party who is prepared to look at the different sides of a question and make allowances for them all can never indulge in the same sweeping statements and denunciations as a member of a party which refuses to look at the other side of the question or face realities and is prepared to recommend short-cuts, however dangerous to the end in view. The Liberal party cannot possibly make spacious promises of a millennium to be attained in months or weeks and can neither attribute all the evils under which the country is suffering to the foreign domination nor refuse to recognize the benefits that the country has derived from the British connexion.

There is another reason. The Liberals as a party have not given up their faith in British justice and generosity and their habit of appealing to these qualities though in divinely eminent Liberals like Mr. Srinivasa Sastri have more than once said very caustic

things about this same sense of justice of the British people. We do not know whether Sir Ali Imam is a Liberal. He was, however, a trusted member of the Government of India. Recently he is reported to have warned a Patna audience and of course the larger audience of his countrymen all over India, "against putting any great store by the pronouncements of British statesmen, the only moral they ought to learn from repeated betrayals being that they should set their house in order." But Sir Sivaswamy Iyer continues to set great store by the utterances of British statesmen and appeals to their generosity also, as the following paragraphs from his address will show.

So far as we can judge from the utterances of British statesmen the main point upon which they desire to be satisfied is our willingness to co-operate with the Government in working the reforms introduced in 1921.

Signs are not wanting of a disposition on the part of British statesmen to advance the appointment of the Commission. One can see a marked change in their utterances and a tone of greater willingness to appoint the Commission earlier.

Let us allay the apprehensions of Britain that the grant of responsible government may be accompanied by a desire on our part to injure British interests or sever the British connection. I would say to the Government that trust begets trust and that the longer the delay in making the further advance the greater will be the feeling of distrust on the part of Indians in their professions of sympathy and goodwill. Let them take their courage into their hands and deal with us generously and they will find a grateful response from politicians of all shades and a closer and a more spontaneous linking of the ties that bind the two countries.

The patience and faith of the Liberal party appear to exceed the patience and faith of Job, and if our Earthly Providence in the shape of the British statesmen were as just and merciful as Divine Providence we could have predicted without waiting for the final issue that the Liberal party's great virtues would be surely rewarded by the grant of some adequate boons. But as the greatest admirers and even the flatterers of British men in power have never attributed divine perfection to them we can only wait and see what the reward is going to be.

As regards appointing the Commission earlier than 1929, there may be other reasons for taking such a step than generosity to India. By 1929 Labour may again come into power. So the Conservative Ministry now in power may like to choose the personnel and settle the terms of reference to the Commission instead of leaving these

things to be done by a Labour Cabinet. The present Cabinet may be anxious, as "Indo Britons" like Mr. Langford James are, for the appointment of the Commission now, before Indian politicians have had further opportunities of co-operating with the Government and proving their capacity.

In conclusion, referring to future Liberal policy, Sir Sivaswamy Iyer declared that it would be their duty to co-operate with any and every party in all questions on which they could see eye to eye.

Our Pictorial Supplements

We issue with this number the reproduction in colours of two water colour paintings.

The portrait of Panini, the great ancient Sanskrit grammarian, is of course imaginary. It is that of a great critical scholar.

The other picture is that of Radha, the beloved of Sri Krishna waiting for the coming of her lover. The mood of expectancy is well depicted in her face.

Small-pox Epidemic in Durban

Mr C. F. Andrews writes to us from Durban in a letter dated Nov. 20, 1926 —

"The small pox epidemic here has brought out the worst side of things. And we have had to face a cruel attack on the ground of being insanitary when we have been driven into it by the pressure of the European."

Mr Andrews has enclosed a cutting from the *Natal Mercury* containing a very strong statement made by Mrs. Knight, one of the most trusted members of the Durban Town Council. Her statement is an amazing revelation. Summarising it, the *Natal Mercury* writes —

Strong evidence of the indifference and neglect of the Durban Town Council in relation to the housing of Asiatics even of its own Indian employees was given by Councillor Mrs. E. L. Knight in the course of an interview which she accorded a representative of the *Mercury*.

She states that notwithstanding innumerable reports by the Sub-Committee on Indian Wages and Conditions and by the Borough Health and Sanitary Officials for years practically nothing has been done to remedy the scandalous housing conditions of Asiatics which exist in the Borough and which again have been brought prominently to the fore since the outbreak of small pox.

Some Councillors," she declares, "have felt and said that the more wretchedly the Indians are housed and paid the more likely will they be willing to be repatriated and return to India."

The Crown Prince of Sweden As An Archaeologist

The Young Fast of Tokyo reports —

If H. Crown Prince Gustaf Adolf of Sweden recently visiting Japan in company with his consort, Princess Louise, is a noted archaeologist, its chief object in visiting the country was to widen his scientific knowledge by carrying out archaeological researches. Accompanied by a few noted Japanese archaeologists, the Prince went on September 13 to some shell mounds in Chiba Prefecture about twenty miles from Tokyo and unearthed a stone axe believed to have been used 3000 years ago, articles made of horn more than 20 kinds of shells and an earthen jar in nearly perfect condition. His Highness was exceedingly delighted with his successful excavation and said that he hoped to present them to the museum at Stockholm.

The Prince is an archaeologist of distinction. He has previously conducted excavations in Greece and is the patron of the well known group of scientists who are exploring the neolithic and the Bronze Age sites of China and Manchuria. Some of these explorations have led to the discovery of painted pottery of a surprisingly advanced technique. "The manner of its manufacture, its general appearance and the recurrence on it of certain kinds of decorative design" writes R. L. Hobson in *Discovery* "all recalled the pottery found of neolithic and early Bronze Age sites in Eastern Europe and Western Asia, viz at Tripolye in South-Western Russia, at Anau in North Eastern Persia at Susa, Nur, and as far east as Baluchistan. Interesting speculations were at once suggested one of which is "Was there a common origin for the neolithic inhabitants of both extremities of the Asiatic continent? The writer in *Discovery* thinks that one result of the archaeological explorations in China Manchuria and the borders of Tibet may probably be the proof of a common origin in Central Asia for both the Eastern and Western groups of Asiatic peoples.

Crown Prince Gustaf Adolf came to India from China after inspecting the work of the Swedish archaeologists there. He is also interested in Chinese sculpture.

In Calcutta, the very day he reached the city, he visited the archaeological section of the Indian Museum. He also visited the archaeological and the picture gallery of the Museum on the two following days accompanied by the Crown Princess and their party in other places in India also the prince and princess have shown active interest in Indian art and archaeology.

It would be a blessing if the princes of Indian royal families took as much intelligent and active interest in archaeology as this Swedish prince does. Many an Indian State would, if explored reward the archaeologist with funds and discoveries of great value to the historian.

—

"Communalism is Excelsis"

This is the caption of an editorial note in *The Guardian*, "A Christian Weekly Journal of Public Affairs," published by the Rev. Principal P. G. Bridge. In it has been criticised the speech delivered as president of the European Association by the barrister Mr. Langford James at the annual dinner given by the Association to His Excellency the Viceroy in Calcutta. Though the editor of the *Guardian* realised that it would be wrong to judge a community for utterances after a sumptuous dinner, yet he has criticised the speech because it "bore every mark of careful preparation. We now proceed to quote substantial portions of the note.

Mr. Langford James informed his guests at the very outset that the only object of the European Association was to protect the rights and interests of the European community in India. It is not unfair to conclude that any further responsibility towards the people of the country to ensure their better government, health and education or any of those benefits which the millions thought without a stake in the country have a right to expect from a civilised government was supererogatory on the part of the European community. With this introduction the speaker plunged immediately into the defence of two Europeans who during the year had been charged with causing the death of two humble coolies.

The editor then gives details of the cases. In the one the assault was punished with a fine of Rs 200.

Against this decision the Government of Assam strictly within its rights appealed to the High Court and a fresh trial was ordered. The man was again convicted of the same offence. In the second case another European was charged with causing the death of a mill hand but after a prolonged and careful enquiry was discharged. Against this decision also the Bengal Government made an unsuccessful appeal. Mr. Langford James asserted that Government were vindictive in their determination to have these men punished for the alleged crimes. If Mr. Langford James felt so strongly against the judicial system which permits appeals to the higher courts for enhancement of sentence, he as a lawyer ought not to have remained silent all these years. We realise that grave injustice may be done by a procedure which is, by the way unknown to English law. On the other

hand in a country like India Government must protect the citizen against grievous miscarriage of justice. It was not however the legal procedure against which Mr James' complaint lay but against its application to a European accused.

Mr Langford James then paid a tribute to what he was pleased to term British qualities."

He added that Englishmen had a right to be in India on moral and on equally strong grounds for he added the British people have very largely made India. The speaker must surely lack a sense of humour when he made this and the further statement that the stock in trade brought to India by their forefathers was stamina honesty and initiative. We could probably accept the first and last qualities mentioned by him, though it would appear that initiative is a lost characteristic of the present generation. But where was Mr Langford James taught Anglo Indian history? for surely honesty was a rare quality among the early bag men of the East India Company!

Mr James then turned his attention to the Indianisation of the Army.

He asserted that he had been considerably disturbed by statements made from several quarters "that any system of what I will call infiltration of Indian officers into British messes is likely to have disastrous repercussions at Home. I have been told that parents are loath to allow their son to join the Indian Army under such a system." Whether this is true or not, we have no means of discovering. The English people have strange prejudices but behind this crude if not vulgar assertion was a sequence of thought which ranged in its scope from the dinner table on the one hand and Bolshevik Russia on the other. With an inflamed mind Mr Langford James peered into the future. Here was the Indian Army a perfected machine of war recruited from the peasantry of India and incidentally paid for by them, officered almost exclusively by members of the old English governing classes paid for also and doubly paid for by the aforesaid peasantry. In the year of Grace 1926 a young man, an Indian and therefore not of the same caste as the officers themselves obtains as an act of justice his Commission from the King. There is panic. An out-caste has appeared and social boycott is put into operation. Aged fathers in their dotage testily assert that India is going to the dogs, that the efficiency of the military system will be impaired and the Moscow Bolshevik with his Red Army is already entering the Khyber Pass. This was the vision that Mr Langford James conjured up.

We need not make more extracts. Britishers have repeated *ad nauseam* that they hold India in trust for its people. Mr Langford James is a typical trustee, determined to remain in absolute possession of the trust property till the day of doom.

Equal Rights for Indians under
the Portuguese Government

When the Indian Delegation to South

Africa reached Lorenzo Marques, which is in Portuguese territory, the local Indians sent to the Deputation a telegram of welcome assuring the Deputation that Indians under the auspices of the Portuguese Republic were enjoying all equal rights without disability of nationality, caste, creed or colour, and expressing a desire that the same equality of rights should be attained by their brethren residing in the British Empire.

Will the Britishers and the Boers be too proud to learn from the Portuguese?

Complete Indian Provincial Autonomy Favorable to British Imperialism

One of the proposals for the consolidation of the Christian Power in India, after the suppression of the Indian Mutiny, was what was euphemistically called "provincial autonomy" but which was really the policy of "Divide and rule." Before the Parliamentary Committee on the Colonization and Settlement of the Britishers in India, Major G. Wingate, who appeared as a witness on 13th July 1898, on being asked,

"Will you speak of the dangers that arise from a central government, and you say that it leads to a community of aims and feelings that might be dangerous?"—yes, I think that if there be any one subject in which the whole population of India would be interested that is more likely to be dangerous to the foreign authority than if a question were simply agitated in one division of the empire. If a question were agitated throughout the length and breadth of the empire it would surely be much more dangerous to foreign authority than a question which interested one Presidency only.

"Will Mr Danby Seymour

Is what you mean this that all the people of India might be excited about the same thing, at the same time?"—Yes.

He gave expression to the feeling which was uppermost in the minds of the Britishers at that time, not to do anything which might "amalgamate" the different creeds and castes of India. So everything was being done to prevent the growing up of a community of feelings and interests throughout India, which would make the peoples of India politically a nation. Of course, they have been a nation in a different way since antiquity.

Indian High Officials and Equality in
the British Empire

One Anglo-Indian (old style) signing himself as "Sagittarius" wrote in the *Crisis*

and Military Gazette of Lahore on September 5 1906 —

"I take no alarmist view but regard the whole subject calmly and rationally. Not only myself but many others must surely see daily the increasing impertinence disrespect officiousness and disloyalty of the subject race. I wish to lay special emphasis on the words *subject race* for the native of India, be his position and salary what it may should and must understand that British blood has conquered India and rules it and respect and deference must be shown to it at all times and in all places.

Mr William Archer who has quoted the above passage in his book entitled *India and the Future* gives one or two more extracts from the same paper.

"Let the Babus clearly understand that we have admitted them into the administration as our servants not as our partners. A partnership between Europeans and natives there must inevitably be, but it must be with the ruling classes not with the servile classes.

Again

Already discerning people in England must be beginning to see that even half a dozen princely counsellors of the intellectual type of the Maharaja of Bikanir would be worth a whole parliament of babbling B. A.'s.

The author rightly says —

"The senseless swa-gger of such utterances is directly due to the idea that we have some sort of Providential mandate to rule India for ever."

The extracts given by Mr William Archer in his book clearly show what meaning British imperialists attach to the word "Co operation." It is subservience and subordination on the part of Indians. Respon-sivists should take note of the fact.

It is also clear that the ruling classes have been singled out for special praise and patronage because they are more subservient than the agitating Babus and B. A.'s. The prominent mention of the Maharaja of Bikanir makes one wonder what he has done to deserve this pillorying. High Indian officials in the employ of the British Government must be very careful lest they be similarly pilloried. Many of them we know are able men. But for preferment, currying favor with the British Government and even with Britishers of lower rank than themselves as necessary.

—

Anthropological Expeditions in India

As announced in the Press two anthropological expeditions from Europe are visiting India during this winter. The first is a

German expedition under Dr Egon von Felesbedt of the University of Freiburg. Dr Ecclesbedt is a pupil of the late Prof. Von Luschan of Berlin and is a young man who has published two excellent monographs entitled *Razenelemente der Sikh* in the *Zeitschrift für Ethnologie* and *Comparative Anthropometry of the Panjabis* in *Man* in India being based on the measurements taken by him on the Panjabi soldiers captured by Germany during the War. The expedition under his charge is coming to India to study the primitive tribes in the Malabar coast and the Himalayan regions.

The second expedition is being undertaken by the Zurich University under Prof. Hans Wehrli and Dr Martin Hurliman. The University of Zurich is one of the foremost centres of Physical Anthropology in Europe built mainly by the efforts of the late Dr Rudolf Martin the brothers Sarasin and Dr Schluginhaufen. The object of the present expedition under Prof. Hans Wehrli is to collect ethnological data from important strategic points in India.

We have been informed that the Government of India are providing all facilities to these expeditions even going to the extent of granting free railway passes and there can not be any doubt that steps thus taken are in the right direction. It is the duty of all enlightened Governments to do their utmost to help all scientific investigators sent by foreign countries. While therefore we approve of the eagerness of the Indian Government to help these expeditions we must condemn its apathy in its own domains. Since the preliminary work of Risley (due mainly to the initiative of the late Lord Curzon) practically nothing has been done by the Government of India to promote anthropological studies in India particularly by Indian anthropologists and the Natural History Museum and other scientific bodies in India do not possess any Anthropological Department in unenviable contrast to such institutions in Europe and America.

The Universities of India also sadly lag behind the Western Universities in the matter. They appear to be keen to duplicate and reduplicate subjects almost reaching the saturation point but there is a definite lack of policy to orient their teachings to the needs and interests of India. With a diversity of cultures and antagonistic races no country in the world is better suited to anthropological studies and nowhere else are the

results of scientific dispassionate enquiries more important for the growth of a common but really harmonious body politic than India. We recommend in this connection the excellent scheme for collegiate studies prepared by Prof Benoy Kumar Sarkar where he makes anthropology a subject of compulsory study for all college students and draw the attention of the Government and the Universities to this matter

Mahamahopadhyaya Pandit Haraprasad Sastri and Dr Suniti Kumar Chatterjee's Book on the Bengali Language

Pandit Haraprasad Sastri is a sort of Columbus in the region of Bengali language and literature. His discovery of the *Charyya* literature has pushed back the chronology of Bengali literary history by centuries. His benedictions upon the works of Dr Suniti Kumar Chatterjee on the Bengali language pronounced in connection with a touching function at the residence of Sastri has a symbolical importance—the retiring *śaśant* embracing the rising scholar. Sastri made a feeling reference to his interview with Bankim Ch Chatterjee who listened to *Valmiki Jaya* (বাল্মীকি জয়) a whole morning through and and honoured the young author Haraprasad with a fatherly embrace. Dr Chatterjee acknowledged his gratitude in moving terms and the whole party was treated to a sumptuous feast. Principal Aditya Mookerjee, S. Hirendra Nath Dutta, Pandit Basanta Banjan Ray and others were present.

Dr Chatterjee's book has been receiving warm appreciation from the scholars of Europe and India. Elsewhere in this issue will be found a review of his book by Professor Dr Giuseppe Tucci who has made a special study of Bengali during his stay in Santiniketan.

A Talented Indian Sculptor

The Indian school of painting is an established fact of modern Indian history but to hear about the progress of modern Indian sculpture would mean a few contractions of the facial muscles in ironical wonder which may not be unworthy of a statuesque delineation. Yet it is a fact that for several years Indian devotees of the Form goddess have been working silently and steadily to rediscover the form cult so wonderfully

presented in the deathless creations of ancient Indian sculpture. On the Bombay side several sculptors have done good work the late Mr Faundra Bose had shown great promise and now we find S. Deviprasad Rai Chowdhury the talented painter of the Bengal School coming out with a series of remarkable studies in sculpture. We find here that latent hunger for plastic form which seemed to break through the vigorous sweep of his brush strokes. Let us hope that his fingers and chisel would be equally eloquent and audacious. The Wrestler group is as faithful in its observation of Indian athletic life as it is suggestive of the smouldering fury

Umprasad Roychowdhury the Artist's Father

that would soon break out into a thunderous charge. The left figure in its self confident scientific pose in its meditative restraint, is a veritable incarnation of strength in repose. This was exhibited last year and has since been acquired by Hamilton and Co of Calcutta. There is also a series of portraits. Those of Principal Percy Brown and of Chanchal Banerjee (a brother artist of the Bengal School) deserve mention. If in the study of Chanchal we find the characteristic inflection of a Rodin stoop,

Mr W I Kerr

yet the artist has given a sufficient jerk of his Indian soul to produce finally the psychic portrait of an artist's soul. This is not the happy and comfortable looking caricaturist as Chanchal is known in life but his penetrating gaze into Reality surprised into plastic fixation. The figure of Mr Keir consulting architect to the Government, shows the artist to be fully equipped in the technique of modern portrait sculpture and it has fetched the gold medal and the first prize of the Government Art School Exhibition this year.

But the thing which shows the artist at his best which raises him above the mastery of grammar and technique is the portrait study of his own father. Here we find observation transformed by devotion and remarkable strength tempered by rare sympathy. If our artists can produce such

Chanchal Kuntar Bannerjee

work then we may safely prophesy that modern Indian sculpture has a future. The floating forms, the fleeting gestures that can hardly be captured by the restricted sweep of the mythological and mystical

The Wrestlers

brush of modern Bengali painters may be immortalised if earnest *rupa dalshas* like Mr Deviprosad devote their life to combine the study of real life with that of the archetypes of sculptural form that India had evolved through centuries. The land that had given to the encyclopaedia of form the Buddha and the Nataraja has a future in sculptural art and let us hope that many would follow the example of Mr Roy Chowdhury in order to bring about a renaissance of Indian sculpture.

K N

A Visit to Sarat Ch Chatterjee

Sarat Chandra Chatterjee the famous Bengali novelist, has built a beautiful garden house for himself at Deulti a village on the Ganges which is 3½ miles by railway from Calcutta. The house stands on a site sloping gently into the Ganges which sweeps past this place in a mighty curve. From the beautiful rose garden attached to the house one can see in the distance on the opposite bank

of the river the dim outlines of the district of Midnapore Nature is vivid and powerful at this place which S_j Sarat Chandra Chatterjee has chosen as a refuge from the tremendous trifles of City life Deult is in the heart of deltaic Bengal The soil here is rich and with a little human aid is adaptable to every kind of production from ordinary paddy to *Marechal* Neil roses The gifted Bengali litterateur has chosen his nest with an instinct for suitability and setting which is

rare and is only found in men whose senses are extraordinarily keen and responsive Deult possesses scenic qualities which are unique It is a vantage point whence one can get a glimpse of the eternal through the far stretched blue of the sky and the gorgeous expanse of the Ganges It also provides delicacies in the subdued flushes and fine tints in the evening sky and in the subtle play of colour light and shade on the heart of the river between the setting sun and the slim country boats which silently glide on to somewhere Sarat Chandra Chatterjee a realist but a worshipper of the Beautiful finds this place just suited to his nature which loves the touch of what is and is beautiful and cares little for the speculative wanderings of the so called "creative" artists

We started from Calcutta one Saturday morning for Deult to pay a visit to S_j Chatterjee The Bengal Nagpur Railway provides a faster mode of travel than the bullock carts with which our ancestors had to be satisfied in pre-British Bengal For this we are indebted to the great island race of exploiters and administrators and to the B N Ry Co It took us some what less than three hours to cover the 32 miles which lay between Calcutta and Deult and we alighted at the latter Station only to learn that we had a four mile march before us to reach our destination

A local gentleman kindly guided us all the way to S_j Chatterjee's house across fields painted azure by the countless peahens and along high earthen embankments built to keep the floods out of the peasants' hearths and homes

S_j Chatterjee was having a game of chess with some village friends when we arrived He received us on a verandah where he usually reclines on an armchair and has his fill of the sky the river and fresh air We

Sarat Chandra Chatterjee

found he had aged considerably since we last saw him and on referring to this change we were told that his brother Swami Vedananda of the Ramkrishna Mission had only recently died of some undiagnosed disease He died in S_j Chatterjee's arms suffocated tortured and within a few hours Nothing could be done. The pain of seeing his brother

die while he was absolutely powerless to do anything was so great, said Sj Chatterjee, that he could never dream that such pain was possible. At an advanced age his sorrow had come to him as a revelation of the intensity of human suffering.

We could say nothing. We silently listened to him as he recounted to us in a soft undertone how good and full of the spirit of adventure and restlessness his brother was, and how devoted to the cause he served.

After a little silence, he began to talk on the sorrows of India and of Beogal in particular. He was vehement when he began to describe the injustices, untruths and cowardice that we usually wink at and leave alone. This policy of ethical *laissez faire* was killing our nation inch by inch. Unless we learned to be true to our convictions and had backbone enough to avoid compromise with evil, there was no hope for us. He could have some faith in the youth of the race but where boys of eighteen had wives and children could there be any place for youth? Our race lost its youth before it had a good grasp of it, and here was our greatest tragedy. Sj Chatterjee also condemned strongly the present prevalence of dilettantism in every field of life. People wanted to be writers without learning grammar and thought they were 'artists' before they knew the meaning of drawing. Discipline and *Sadhana* alone could make a nation great, be it in art, literature, music, politics or industry. He said, he had no university education but he had made efforts all his life to read and learn and valued knowledge above everything else. We asked Sj Chatterjee, if he did not consider that we were having a bit too much of 'self expression' nowadays especially from those who had little to express. He smiled and said nothing. After a

little while he said that in his opinion the greatness of Art is in restraint not in roaring riot. It was nearly dark when we left Deulhi. Sj Sarat Ch Chatterjee impressed us as a man of singularly rational outlook of life. He has the gift of looking at things in their proper perspective and of correct evaluation of blessings and evils. A C

Death of the Emperor of Japan

The untimely death of His Imperial Majesty the Emperor Yoshihito of Japan has cast a gloom over that land of smiles and cheery optimism. The Emperor was loved by the Japanese as their own father and his sudden death has put the whole Japanese nation in deepest mourning. We offer our sincerest condolences to our gallant neighbours. The late Emperor was the 122nd emperor of Japan. He was born on August 31st, 1879 and was the 3rd son of the late Emperor Mutsuhito. He was highly educated and was well trained in the military and naval sciences. A C

Tolstoy on Manual Labour

The letter of Leo Tolstoy to Mon Romain Rolland published elsewhere shows how deep his insight was into the fundamentals of human happiness. His formulation of the principles of conduct which would ensure universal *Kalyana* clearly points out his profound sympathy with Indian ethical ideals and this naturally creates a hunger in us to learn more of his views on the common problems of humanity.

Rotaphel Verlag of Munich have published a small volume entitled 'Tolstoy and the Orient' (in German) which gives us the Great Russian sage's correspondence with various Asiatic friends and admirers of all sects and religions. Readers of the Modern Review will be glad to learn that we are arranging to give them English renderings of selected extracts from this book. A C

THE ABORIGINAL TRIBES OF INDIA

By A V THAKKAR

ACCORDING to the Census returns of 1921, our aboriginal tribes number about 16 millions in India forming one in twenty of the population. They are most numerous in Assam the Central Provinces Bihar and Orissa Central India and Burma. The following figures show the strength of some of the major aboriginal tribes in India.

Gond (C P B & O C I U P)	29 07 597
Hyderabad and Assam)	
Santal (Bihar and Orissa Madras and C I)	22 63 987
Bhui (Bombay C I Baroda and Rajputana)	17 95 868
Kurumban (Coorg Madras Hyderabad and Mysore)	8 55 779
Oron (B & O Bengal Assam and C P)	7 65 630
Banjara (Bombay C P Punjab Hyderabad and Mysore)	6 51 977
Kandh (B & O and Madras)	6 16 8 4
Munda (B & O Bengal and Assam)	5 93 839
Savara (B & O Madras and C I)	4 5 868
Ho (B & O)	4 40 174
Naga (Assam)	2 20 619
Kachari (Assam)	2 0 266

Almost all these tribes live in the solitude of forests and jungle-clad hills—small pools of humanity without any living connection with the main currents of Indian life and culture. Truants to civilization their life is an unending series of terrors terror of man animal and unknown powers. In the words of Sir Herbert Risley they "worship and seek by all means to influence and conciliate the shifting and shadowy company of unknown powers or influences making for evil rather than for good which reside in the primeval forest, in the crumbling hills in the rushing river in the spreading tree which gives its spring to the tiger its venom to the snake which generates jungle fever and walks abroad in the terrible guise of cholera small pox or murrain.

There is nothing so grinding and corrosive as fear and fear forms the stuff of life and beliefs of these tribes. Fear has degraded many of them to the deepest depths of misery and abasement. Unacquainted with the more civilized methods of agriculture and industries and ignorant of the ways of trade and commerce their life is hard pressed by poverty and the scourge of starvation often drives them to occasional acts of violence and crime and to be classed by law as a criminal tribe. The fierce struggle for economic advantages has continually driven these tribes to places where food is more and more difficult to gather or grow. Forest laws in many cases operate harshly on them by limiting the area of cultivation in order to preserve the forests and by prohibiting the free use of forest produce beyond a very limited extent. Technical and slight infringements of forest laws are sometimes met with punishments severe beyond all proportions. Not infrequently the poor aborigines bind themselves for small cash to work as field labourers to well to do cultivators or money lenders. The Kamia system passing under different names in the different provinces in India and which amounts to serfdom in practice counts among its victims a very large proportion of aborigines. The writer recalls listening to Gond *Kanias* in a village in the interior of the Central Provinces. One of them related how he had bound himself to serve as a labourer to a money lender until he paid back Rs. 30 in cash and 6 mannds of paddy which he had received from him. He said that he had served for eleven long years yet emancipation was not in sight for he could never get together enough cash to pay back his creditor to his satisfaction.

The people of the plains miss no opportunity of exploiting the labour or the produce of the labour of the aboriginal tribes. Simple as they are they always lose in dealing with the cunning money lenders, liquor vendors and traders from the plains. Their labour is heavily underpaid, they are cheated out of their land, extortionate interest is charged from them and liquor completes their ruin. The aboriginal tribes have no reason to be thankful for the contact of the civilized people with them for the civilization which the money lenders, the traders and the liquor vendors carry with them is a thing to be avoided. So far the results of the contact have been generally very unhappy for the aborigines.

From this tale of exploitation by some of the advanced communities in India one turns with gratitude and admiration to the work of the Christian Missionaries. The supreme purpose of the missionary activities among the aborigines is no doubt, to Christianize them—a purpose which the missionaries themselves never conceal. As an American missionary once put it to the writer it is their One Job above all other. But one would far rather welcome the evangelization of all the aborigines than a continuance of their present degraded condition. It is easy enough for non-Christian critics to feel panicky over the mass conversion of whole tribes of aborigines, like the Jhais and Lushus of Assam to Christianity. It is a far more difficult thing to make the communities to which such critics belong do even a small fraction of what the Christian missionaries are doing. It is one thing to contemplate the glories of Hinduism or Islam, it is quite another to go out into the dense forests and isolated hills and live among the aborigines to help them to a better life. It is an undisputed fact that Christian aborigines are better off than their fellow tribesmen in many respects, particularly in education. Communal jealousy apart, the complaint that one bears against convert aborigines is that they cut themselves adrift from their people and by servile aping of the Europeans make themselves particularly disagreeable to their own community. The complaint is largely true and I respectfully invite the attention of the missionaries to this unsavoury aspect of conversion to Christianity. It is not pleasant to contemplate that the life of the aborigines should be made the bunting ground for competing evangelists belonging to different

religious sects. How one wishes that it were possible that the missionaries belonging to different sects had sought to serve for the sake of service, impelled by all that is best in their own faiths without being impatient to swell the number of converts and improve their dogmas and doctrines on masses of people. As things are the Christian missionaries have evangelized and served a section of the aborigines. Other faiths in India have not yet attempted to do either in a serious or organized manner or on a large scale.

In the provincial legislative councils the interests of the aborigines have received very little attention. Two seats are allotted in the B & O Legislative Council to the representatives of the aborigines to be filled by nomination. Although the 'depressed classes' and backward tracts are represented in some of the provincial legislatures, the B & O legislature alone out of eight provincial and one central legislature provides for the representation of the aborigines. In this connection it is important to remember the proportion of the aborigines per 1000 of the population which is as follows according to the Census of 1921—

Assam—248 C P & Berar—204 B & O—62 Bombay—8 Madras—32

It is impossible to think of the introduction of any practicable system of election for the representation of the interests of the aborigines. On the other hand considering the large number of these primitive people whose poverty is only surpassed by their ignorance it is necessary that their interests should be by some method or other represented in the provincial and central legislatures. It will add to the representative character of the legislatures and give publicity to the needs and grievances of the aborigines which is not given them at present. It is a regrettable fact that very few of the members of the provincial and central Legislative Councils take any interest in the welfare of the aborigines. Earl Winterburn recently announced in the House of Commons that the seats for the representation of Labour and the Depressed Classes would be increased in the Provincial Legislatures after the General Election. As already pointed out, the numerical strength and the peculiar position of the aborigines demand that their claims to better representation in at least all provincial legislatures should no longer be ignored.

Apart from the Missionaries, social

workers and legislators the aboriginal tribes of India should be of special interest to all students of anthropology and sociology. Here are strange social institutions in a nebulous state slowly hardening and taking shape dim glimmerings of a faith in future life and fantastic cosmologies crude rituals to propitiate evil influences a life surrounded by ignorance and chased by terrors known and unknown.

Yet they are our brethren children of the soil in a very intimate sense defeated in the fierce race of modern civilization and hard hit by the strenuous conditions of civilized life. They deserve our help and sympathy to enable them to adapt themselves to the changed and ever changing conditions

all around. An All India Association consisting of all who are interested in them and their welfare can alone adequately meet the need by focussing the attention of thoughtful people on the life and needs of the sixteen millions of aborigines of India and interlinking the various tribes among themselves and with the rest of the people of India.

However populous a country may be the life of sixteen millions of its inhabitants can never be an object of contempt or neglect without prejudicially affecting the interests of the rest. A progressive integration of the various peoples within the Indian boundaries is the only true and solid foundation of the future Indian democracy.

BUDDHIST REMAINS IN AFGHANISTAN

BY RAJIT PANDIT DARRISTEPATIL

In the eastern portion of the Iranian Plateau the centre of the ancient world at the junction of the cross roads of Central Asia joining India and China is the country now called Afghanistan. Through the mountains and valleys of Afghanistan came to the plains of India from time immemorial warriors merchants and pilgrims. No other country has been a conduit pipe for the passage of such differing peoples nor has any other country been subjugated by such a diversity of masters. Assyrians Medes Persians Greeks Scythians Parthians Kushans Huns Turks Arabs and Mongols invaded Afghanistan and established their own power therein realising the strategic importance of the formidable barrier of the Hindu Kush between India and Central Asia. They in turn founded powerful cities and having realised to a greater or less extent their dreams of conquest in India, disappeared from history being pushed by fresh invaders.

Few Indians realise that the political and religious history of Afghanistan is a part of the early history of their own country. Through Afghanistan Asoka sent religious missions to the Hellenistic monarchies of Syria Egypt Cyrene Macedonia and Epirus

The missionary organisation thus embraced three continents Asia Africa and Europe. In the succeeding centuries the heathen raged so furiously that history stopped for awhile till according to Buddhist legend

Tope Bimaran—Jelalabad

the Kushan Emperor Kanishka was miraculously converted to the Path of Righteousness. White Asoka spread Buddhism among the Greeks and the Western peoples the empire of Kanishka influenced China and the Far East. A son of the Emperor of China was

miraculously cured of his blindness in Gandhara while listening to a Buddhist preacher. Through Afghanistan Indian religion sculpture painting and music spread from Central Asia to Japan. The Indian Caucasus or Hindu Kush was the Northern frontier of India.³ In former times Khurasan Persia, Irak Mosul the country upto the frontier of Syria was Buddhist. The eminent Chinese Buddhist pilgrim Fahien (399-413 A.C.) who visited India passed through Afghanistan which he calls North India.

The country of Wu-lan commences North India. The Language of Mid India is used by all Mid India's but they call the Middle country. The dress of the people their food and drink are also the same as in the middle country. The religion of Buddha is very flourishing.

About this time the famous Indian missionary Kumara Jiva (385-417 A.C.) went to China to labour for many years to translate Buddhist books into Chinese.⁶ The Indian Scholar Paramartha arrived in China 546 A.C. with a collection of Buddhist manuscripts and died there in 569 A.C. The patriarch of Indian Buddhism Bodhi

dharma migrated in 526 A.C. to China which became thereafter the seat of his patriarchate.⁶ Chinese pilgrims continued to trek to the Holy land for pilgrimage and

Stupa of Convent in the amphitheatre of
Seh Topan
Buddhist kahul

collection of Buddhist Sacred Books. Song Yun Envoy of the Chinese emperor visited Eastern Afghanistan Gandhara and Udyana. Buddhism flourished in this garden land of the Kabul river country nor were literature poetry and the arts of peace neglected. No less than sixty Buddhist pilgrims from China visited India in the latter part of the VII century.⁸ the most distinguished amongst them being the intrepid Scholar Saint Huen Tsiang. He visited Afghanistan with which country he begins his description of India. Travelling east from the Hindu Kush Huen Tsiang describes the Buddhist cities of Kapisa (north of Kabul) Langhan Nagarhara Hidda and Peslawar. In the Candhara country he observes the growing power of Hinduism. He writes

The Capital of the country is Polisha pu lo (Purushapura the modern Peshawar) the climate is warm and moist and in general without ice or snow. The disposition of the people is mild and soft they love literature most of them belong to heretical schools a few believe in the true law. From old time till now this border land of India has produced many authors of Shastras e.g. Narayan Deva Aswara Bodhisatva Vasubandha Bodhisatva Dharmaratna Manorhita Parsva the noble and so on. There are about 1000 Sangharamas which are deserted and in ruins. They are filled with wild shrubs and solitary to the last degree. The stupas are mostly decayed. The heretical temples to the number of about 100 are occupied pellmell by heretics.⁹

Early in the VIII century the Arabs penetrated into Afghanistan and the roads

Hidda
Statues of Cell No III

over the Hindu Kush were blocked by the conquests of the Arab General Kofaiba in Central Asia. The intimate cultural and spiritual union between China and India was threatened and the Emperor of China invoked the aid of the Kshatriya kings of Kapisa and Kashmir to whom he sent letters patent conferring the title of King to face the common danger.¹⁰ An influx of Hindu learning took place at Baghdad under Harun (866-805)

Buddha—Stupa of Cell No I

A C) The ministerial family of Barmak came from Balh where an ancestor of theirs had been an official in the Buddhist Temple Naubehar that is Nava Vihara the new temple.¹ The last Kshatriya King of Kabul the descendant of Kanishka of the Turki Shahiya dynasty ruled till the capture of that city in 870 A C (A II 95C) by the Arab general Yakub i lais.¹² The Samanides whose princely house held almost the entire east of the Khalifate during 892-991 A C came into direct relations with Hindu Pandits in Kabul and Eastern Afghanistan and their Minister Alubani imported Indian culture into the Islamic world. Alaptagin a Turki slave of the Samanides, set up as independent ruler of Ghazna and his successor Subuktagin Mahmud's father paved the way for war for the lasting establishment of Islam in Afghanistan and India. The hardy mountaineers of Afghanistan partly Buddhist mainly Hindu fought for centuries with their reputed valour. Ja'pal was obliged to cede the frontier fort of Lamghan about 70 miles from Kabul to Subuktagin in 990 A C (A II 384). Under the Ghaznavite Conqueror Mahmud Afghanistan was finally converted to Islam with the exception of the mountain

nous part known as Kafiristan which still continues mainly non Mussalman.

Islam in Afghanistan as in Kashmir was a superstructure on the existing Buddhist and Hindu construction. The miracles of the older faiths continued they were ascribed to Muslim spiritual power the hair of the Prophet's beard replaced the hair of Buddha and the miracles of the Stupas were reproduced in the mysterious movements of the tombs (Turbat) of the minor prophets of Islam.

Sculpture and painting found no serious consideration in Islamic countries where owing to it is said to the doctrines of the Prophet art was mainly confined to carpets, tapestry, inlaid work and calligraphy. Times have changed. Painting is no longer in disrepute. Turkish students are busy moulding the clay in the ateliers of sculptors in Rome and Paris. The modern Republic of Turkey held in the autumn of 1924 the first Art Exhibition at Angora of the work of young Turkish artists trained in France chief among whom is Ali Sami Beg who in 1318 was appointed Director of the Ewraf Museum. There is now at Kabul a museum of which the Director is a cultured Afghan gentleman.

Cliffs of Bamyan with Statue of Buddha
53 metres high

In 1900 M. Alfred Foucher, Professor at the Sorbonne University, the well known author of *Greco-Buddhist art of Gandhara*, entered Afghanistan from Persia via Herat and was welcomed by His Majesty the Amir as the first Frenchman officially sent by the Government of the French Republic. M. Foucher succeeded in inducing the Afghan government to sign a convention whereby France obtained for a period of thirty years the

privilege of carrying out archaeological research in Afghanistan

The prospecting work done by the able band of French archaeologists has already proved to be of great interest. While the missions of Pelliot, Klementz, Aurel Stein, Grunwedel and Von Le Coq who succeeded one another since 1897, discovered for us the civilization and art of Central Asia and the researches of the Indian Archaeological Survey and of M. Foucher made us acquainted with the Greco-Buddhist art of the Indian section of Gandhara. Afghanistan remained from the archaeological point of view a terra incognita. What little we knew we owed to ancient historians and above all to the accounts of Chinese pilgrims who traversed Afghanistan between the V and VII century after Christ. In recent times as a result of Anglo-Afghan wars, Homburger and Simpson discovered a number of Buddhist stupas in the valley of Kabul but they were ignorant for the most part of the neighbouring convents and sanctuaries. Very little was known of the monuments of Ghazni or Ghazoo, the capital

army to the fort of Agra. No archaeologist had visited Balkh, the ancient Bactres,

Fragments from the Convent of Tappa Kalan

"mother of cities" a hundred times destroyed and rebuilt, residence of the legendary kings of Persia the birth place, it is said of Holy Zarathushtra and later the capital of the Greco-Bactrian Empire.

The learned French Archaeologists visited these interesting sites for the first time in 1923 made important discoveries and brought with them interesting documents and art treasures which are now housed in the Musée Guimet at Paris. Through the courtesy of M. Hackin the learned conservator of the Musée Guimet who has travelled widely in Afghanistan where he followed the route of the Chinese Scholar Saint Hsien Tsiang, I was permitted to study the results of French archaeological research at the Musée Guimet. M. Hackin also kindly gave me photographs of the excavations, a few of which are here reproduced.

The results of French Archaeological Research in Afghanistan may be divided into three groups —

(1) The first group comprises the cities of Jelalabad, Hidda and Buddhist Kabul—

Minar Chakri Pillar of Wheel' Kabul

of Mahmud the Conqueror, except the gates of his tomb brought by a British Indian

all three in the valley of the Kabul River and of which the art is purely Gandharian

(2) The second group concerns the sanctuaries of Bamyan and the neighbouring valleys. The art one finds here is still Greco-Buddhist but already more akin to that of Central Asia than to the Gandharian

(3) The third group constitutes the monuments of the Mussalman epoch Ghazni and the citadels of Shahr-i Zohak and of Shahr-i Chohghola

We are here concerned only with the first two groups

No monument anterior to the epoch of Buddhism has up to the present time been discovered in Afghanistan. The valley of Kabul and the North West Frontier of the Punjab were the home of art half Greek half Indian. According to Professor Foucher there was a double and inverse expansion of Hellenism towards the orient following the political conquests of Alexander and of Buddhism towards the occident by the religious missions of Asoka. The Greco-Buddhist art of the first century before Christ expanded in the following two or three centuries and later fell into decadence and disappeared in the VI century. While however it perished in its country of origin its influence modified by local conditions continued to be felt in India till the arrival of the Mussalmans and is felt to this day in Ceylon Indo-China China Japan and Tibet¹²

The towns and celebrated sanctuaries of Buddhist Afghanistan are today in ruins. Begram near Charikar is Kapisa the summer residence of the Emperor Kanishka, the most zealous propagandist of Buddhism. Jelalabad is the holy Nagarahara the site of the miracle of the Buddha Dipankara one of the most celebrated in Buddhism and a favourite theme of Greco-Buddhist sculpture. Hidda is the Hilo of Huen Tsang a place of famous Buddhist pilgrimage owing to its precious relics of Buddha

Bamyan in the heart of the snowy mountains is the sacred city of hundred convents and 12000 grottoes and the famous colossal statues of Buddha. The French archaeologists in discovering in Afghanistan the vestiges of a brilliant civilization of a bygone age are carrying forward the work of British archaeology round the city of Peshawar. Ancient Gandhara lay on either side of the modern Indo-Afghan frontier. It is not surprising that at Jelalabad Hidda and Kabul the same art, plan of building and process

of construction of stupas should be found as at Taxila, Takht-i-Bahi, Shahr-i-Behlol and Shahbaz Garhi with slight variations imposed by the nature of materials and climate. The decoration of monuments stupas convents and sanctuaries is almost identical. On the other hand some of the statues discovered recently by the French at Hidda in the course of a rapid excavation have from the artistic point of view nothing to equal them up to now in the Indian section of Gandhara

Khaesta Tope Jelalabad

One of these statues is of Buddha on the march. When brought out into open air it began to perish and fell into dust a short time after its discovery. A photograph is the only souvenir of it. The sculpture was admirable. The drapery has the thickness and at the same time the lightness of Greek drapery of the best epoch. The nervous feet are of a beauty of design and perfect on of execution with which Greco-Buddhist work too often heavily executed had not accustomed us.

The Sanskrit name Nagarahara occurs on a ruined mound of Ghosrawa in Behar¹³. It was the ancient capital of the Jelalabad district and is mentioned by Ptolemy. The site of ancient Nagarahara first determined

by Simpson is now confirmed by French archaeologists. Nagarahara was visited by the eminent pilgrims Fa hien, Song Yun and Hsuen Tsiang. The latter writes:

The country of Nagarahara (Na kie-lo-ho) is about 600 li from east to west and 250 to 360 li from north to south. It is surrounded on four sides by overhanging precipices and natural barriers. The capital is 20 li or so (four miles) in circuit. It has no chief ruler—the commandant and his subordinates come from Kapisa. The country is rich in cereals and produces a great quantity of flowers and fruits. The climate is moist and warm. Their manners are simple and honest, their disposition ardent and courageous. They think lightly of wealth and love learning. They cultivate the religion of Buddha and few believe in other doctrines.

Statue of Buddha 35 Metres High at Bamian

Hsuen Tsiang gives a detailed account of various stupas of Nagarahara, one of which he says was built by Asoka. It was "two hundred feet or so in height. He also relates the story of a dragon who dwelt in a cavern near Nagarahara. This cavern is referred to by both Fa hien and Song Yun. The dragon on seeing Tathagata was converted and vowed to defend the true law. He requested Tathagata to occupy his cavern ever

more. Hsuen Tsiang thus describes the Cavern of the Shadow:

To the south west of this Sangharama a deep torrent rushes from a high point of the hill and scatters its waters in leaping cascades. The mountain sides are like walls on the eastern side of one is a great cavern deep and profound the abode of the Naga Gopala. The entrance leading to it is narrow, the cavern is dark, the precipitous rock causes the water to find its way in various rivulets into this cavern. In old days there was a shadow of Buddha to be seen here bright as the true form with all its characteristic marks. In later days men have not seen it so much. What does appear is only a feeble likeness. But whoever prays with fervent faith he is mysteriously endowed and he sees it clearly before him though not for long."

The little town of Jelalabad is to the east of the sacred Buddhist city of Nagarahara. The ruins of the ancient city are now visible wherever the cultivator allows the soil to lie fallow. But to the east on the neighbouring hills and flanks of Sirah koh the black mountain are still extant the stupas and the convents which rendered the name of Nagarahara celebrated in the Buddhist world. Even on the plains below some stupas exist which have not yet been completely destroyed by cultivation or assimilated by the villages. The French archaeologists were unable to identify in the debris the stupa built by Emperor Asoka. It was unfortunately also difficult to identify the famous cavern where one saw appear and disappear the shadow of Buddha.

The Khaesta Tope which in Pushtoo means the magnificent tope is the best preserved stupa of Jelalabad. It is situated on a side of the Black Mountain and dominates the entire valley which opens out at the confluence of the Kabul River and the Surkh Rud thus overlooking the site of Nagarahara, the modern Jelalabad and even the valley of Hidda which meets the valley of Jelalabad a few miles to the east.

M. Andre Godard, specially designated by the French Government as Architect to the Archaeological delegation in Afghanistan, has admirably described this fine stupa. In his opinion this splendid monument was constructed with such great skill that it would have continued to resist the ravages of time but for the meddling of Honigsberger and Masson. The former made an opening on its northern side and demolished the four angles of its base and the latter made an opening in the east and knocked off the summit.

M. Godard writes

The Kbaesta Tope is situated on a vast terrace whence a broad flight of steps gives access to the circular ambulatory. The lower portion of the cylindrical shape on a level with the ambulatory was decorated by bas reliefs and statues of Buddha, in standing or sitting position supported on the moulding below between the pilasters of the base a series of umbrellas supported by a metallic mat surmounted the dome of the monument. The whole was covered with stucco punted and in part gilt.

Convent of Tappa Kalan

The decorative effect of the Kbaesta Tope consists in its beautiful situation and the happy proportions of its various parts. What survives today intact, is merely its general shape—a part of its magnificent base and of its central belt of arches. But we can imagine what it was like in ancient times and at the same time imagine fifty others similarly marvellously situated and richly decorated. Being brilliantly illuminated at nightfall they would be silhouetted against the hills which surrounded the holy city and its sanctuaries.

The monument was perhaps not intrinsically artistic nor was its architecture entirely faultless but the Buddhist stupas were not intended to make an appeal by the refinement of their art. What was intended was rather to strike the imagination of the faithful by their number, the choice of their location, their imposing massiveness by the sculpture colour and gilt with which they were decorated and by the chants, lights and incessant movements of pilgrim processions of which they became the occasion.

Hidda was visited by Fabien. Describing the Vihara of the skull bone of Buddha, Fabien adds, though the heaven should quake and the earth open this place would remain unmoved. Hiuen Tsiang writes

To the south east of the city (Nagarahara) 30 li

or so is the town of Hidda (Hidda) it is about 4 or 5 li in circuit it is high in situation and strong by natural declivities. It has flowers and woods and lakes whose waters are bright as a mirror. The people of the city are simple honest and upright.

He describes the various stupas containing different relics of Buddha which worked miracles. He adds

The king of Kapi has commanded five pure conduct men (Brahmanas) to offer continually scents and flowers to these objects. These pure persons observing the crowds who came to worship incessantly wishing to devote themselves to quiet meditation have established a scale of fixed charges with a view to secure order by means of that wealth which is so much esteemed by men. Their plan in brief is this. All who wish to see the skull bone of Tathagata have to pay one gold piece those who wish to take an impression pay five pieces. The other objects in their several order have a fixed price and yet though the charges are heavy the worshippers are numerous.

Hidda is now nothing more than a miserable little village. Like its neighbour Nagarahara it was one of the most celebrated places of pilgrimage of the Buddhist world where according to Fabien who visited it the baton tooth and skull bone of the Buddha were exposed to the veneration of the faithful on a golden throne. The convents and sanctuaries are today reduced to heaps of debris of sand and pebbles. The stupas deprived of the stucco with which they were covered

Hidda
Base of a Stupa

are shapeless excrescences on the plains. The grottoes which served as habitations for the pilgrims are so damaged or smoked that one discerns with great difficulty a few traces of frescoes and painting. In the immense desert plain of modern Hidda it is difficult to imagine the lakes and the gardens of which

Hsien Tsiang speaks. But the recent discovery by the French of the foundations of the ancient monasteries and the vestiges of barrages and quays in the vast beds of waterless streams confirms the faithful account of the Chinese pilgrim.

The site of Hidda has proved extraordinarily rich for the French archaeologists. An ancient convent which had evidently developed into a rich sanctuary has been discovered. It is situated almost in the centre of the ancient town on the Tappakalan, the great hill. The result of the excavation is described as follows:

Burman
Coossal Statue of Buddha 53 metres high

"Among its numerous cells only about forty have been cleared. Each of these cells sheltered a small stupa richly decorated with plaques and bas-reliefs. Within the walls, in the recesses of the gates and along the length of the courtyard were found a very large number of the statues of Buddha of all sizes and epochs, the smaller ones placed in front of the larger. The courtyard containing the great central stupa is itself literally covered with little stupas. This sanctuary both by the quality and the number of statues and votive monuments is a veritable museum of Greco-Buddhist art. Nothing or almost

nothing of what we had found now exists. The inhabitants of Hidda, fanatical Mussalmans as they are, view with a malicious eye this search for the idols of a detested religion. Despite our explanations, our professions of faith, our visit to a holy man of the country, the menaces of government and the friendly protestations of the village Malik, our excavations were destroyed by blows of the pickaxe after the midday prayer on the Friday following the end of our labour. Our poor statues offered but little resistance. They collapsed in a heap of dust. We could hardly collect the next day a few heads! Nevertheless the result sought for had been obtained. We learnt that Hidda was one of the most interesting artistic centres of Gandhara. There is no doubt whatever that the labour of a careful excavation would be rewarded with magnificent results."

In the days of Hsien Tsiang Buddhism appears to have been on the decline and in Gandhara Brahmanism was apparently beginning to strangle it much as modern Hinduism is absorbing the Buddhism of Nepal. The capital of the Gandhara country was Purushapura (Polushapulo), the modern Peshawar, which together with Nagarahara and Hidda formed part of the Kingdom of Kapisa. Kapisa was an ancient city known to the Greeks and is mentioned by Ptolemy and Pliny. Panini calls it Kapisi. The Kingdom of Kapisa is described in great details by Hsien Tsiang.

The King is a Kshatriya by caste. He cherishes his people with affection and reverences much the three precious objects of worship. Every year he makes a silver figure of Buddha eighteen feet high and at the same time he convokes an assembly called the Moksha Mahaparinishad when he gives alms to the poor and wretched and relieves the bereaved.

Brahmanism however seems to have flourished side by side with Buddhism from Kapisa to Purushapura (Peshawar). Regarding Kapisa Hsien Tsiang writes:

There are about 100 convents in this country and some six thousand priests. They mostly study the rules of the great vehicle. The stupas and Sangharamas are of an imposing height and are built on high level spots from which they may be seen on every side shining in their grandeur (purity). There are some ten temples of the Devas and thousand or so of heretics; there are naked ascetics and others who cover themselves with ashes, and some who make chaplets of bones which they wear as crowns on their heads."

Thus Digambara Jainas, Pashupatas and Kapaladharins flourished in the north of Kabul. Hsien Tsiang does not name the capital city but he places it 600 li to the west of Lanpo (Lamghan) which again is 100 li to the north west of Nakie-lo-ho (Nagarahara). The French archaeologists locate the capital city Kapisa about 10

kilometres south of Charikar and about 60 kilometres north of modern Kabul. The distinguished Chinese envoy Wang Hsien Tse sent by the Emperor of China in 637 A.C. to offer robes at the Buddhist holy places entered India by way of Nepal and after visiting Vaisali, Bodhi Gaya and other sacred places returned to China through Kapisa by the Hindu Kush and Pamir route. Between 661-663 A.C. Kapisa appears to have become a province of the Empire of China.²²

Ptolemy mentions the ancient city of Kabul. On the modern road from Jelalabad about 12 miles from Kabul is a line of high mountains. Here are three vast amphitheatres: the Soh Topan, Kamari and Sheraki. Buddhist Kabul lay within these three amphitheatres. Nothing remains today of Buddhist Kabul except the deserted site with the ruins of a number of stupas and convents as at Nagarahara and Hidda. The sanctuaries and convents now discovered although interesting from an architectural point of view do not reveal any trace of decoration. Nevertheless Kabul was a holy city in Buddhist Afghanistan. It maintained about 80 convents. There exists even now outside the ancient city on a neighbouring hill a gigantic pillar which has resisted to our own days the destructive efforts alike of vandalism and earthquakes. It indicated in ancient times to the inhabitants the route of Nagarahara and India. This splendid pillar known today as Minar Chakri or "Pillar of the Wheel" is constructed like the stupas in India—of identical material and technique. Its curious capital is now incomplete at the top but it no doubt was surmounted by the Buddhist symbol the Wheel of the Law from which it derives its name.

We now come to the second group. Hsien Tsang who visited Bamyan, situated in the midst of the snowy mountains says that

"It leans on a steep hill bordering on a valley 6 or 7 li in length. These people are remarkable among all their neighbours for a love of religion from the highest form of worship in the three jewels (Buddha, Dharma, Sangha) down to the worship of the hundred spirits there is not the least absence of earnestness and the utmost devotion of heart. There are 10 convents and about 1000 priests. They belong to the first Vehicle and the School of the Lokottaravadias."²³

The rock hewn colossal figures of Buddha in Bamyan are described in the 24 Annals of Atsari and the Farhug-i-Jahangiri. Hsien Tsang writes:²⁵

To the north east of the Royal city there is a mountain on the declivity of which is placed a stone figure of Buddha erect in height 140 or 150 feet. Its golden lines sparkle on every side and its precious ornaments dazzle the eyes by their brightness.

To the east of this spot there is a convent, which was built by a former king of the country. To the east of the convent there is a standing figure of Sakya Buddha made of metallic stone in height 100 feet. It has been cast in different parts and joined together and thus placed in a completed form as it stands.

To the east of the city 12 or 13 li there is a convent, in which there is a figure of Buddha lying in a sleeping position as when he attained Nirvana.

Bamyan
Paintings decorating the niche of Seated Buddha

These colossal statues attracted the attention of British officers during the campaigns in Afghanistan. General Hume writing in 1839 says

On the opposite side of the valley from the great standing image about a mile to the west a stony gully leads into the hills. A short way up this there is a nearly insulated rock on the little summit of which there is in relief a recumbent figure bearing a rude resemblance to a huge lizard.

The people call it Azdaha or dragon slain by a Moslem saint.

The first Buddhist convent at Bamian was perhaps founded by the Emperor Kanishka. At this period Balkh was the Emporium of international trade and the centre of the three principal commercial arteries of Asia on the west towards the Roman Empire on the North east towards China on the South east towards India. The site of the religious convents at Bamian was thus admirably chosen. The rich caravans and merchants journeying towards passes of the Hindukush on the Grand Trunk road from Bactria to India could not fail to stop at Bamian. In time the list of pious donors swelled and generations of artists laboured to add to the number and splendour of the sanctuaries of Bamian. The French archaeologists have established that from Taxila to Kabul there prevailed the same school of Buddhist art. They hold

Stupa in Buddhist Kabul

believed that the Buddha 30 metres high was made of bronze. This statue was perhaps the first to be made. The body is too stout and short. The legs are attached to the body like props. The head is of monstrous size. The proportions of Buddha of 53 metres are much more happy. The body reposes harmoniously on the legs in a perpendicular line according to the style of Greek and Roman statues which served as models.

Madame Godard who accompanied her husband in his journeys in that difficult country has copied from the niches above the heads of the Buddhas some of the better preserved paintings. Her sketches and paintings are placed in the Afghanistan section of the Musée Guimet at Paris. We owe to this accomplished lady a debt of gratitude for her unique service to Indian art. The paintings in the niches the major portion of which has unfortunately been destroyed are the only ones now in existence between Ajanta in India and Central Asia. They are judging from the copies in Paris very interesting from the point of view of design, colouring and possible origin. They do not represent one school of art. They appear to be the work of several artists of different nations during the long centuries when Buddhism was the chosen religion of Afghanistan. Each artist lay or ecclesiastical passing through Bamian where all civilizations then met, left a sample of his own skill and thus different schools of painting were more or less represented from the II century to the beginning of the VIII century after Christ up to the invasion of the Mussalmans.

Madame Godard says —

The paintings which decorate the niche of the Buddha 30 metres high contain portraits of divinites and of the donors in Sassanian costumes. But of Sassanian art we at present know so little. The paintings of the niche of the Buddha 53 metres high are of superior art. They take us back to India by the warmth of their colour and the elegance of their design. They represent Yakshas, Genii of the air accompanied by their wives carrying offerings in flight towards the image of Buddha. A personage represented at the summit of a niche of one of the seated Buddhas irresistibly makes us think of a Byzantine Christ. Another representation is that of a Chinese while a group of which a few traces remain in a grotto of the valley of Kakrak near Bamian is without doubt the work of an artist from Central Asia.

The first convents and sanctuaries at Bamian appear to have been constructed in the open air but the monks were soon compelled to seek sheltered habitations. The cliffs were hewn and cut into innumerable convents and stairs made to connect them. There were however some convents which

were self contained Each one of these independent convents had a special stairway leading up to a gate which gave access to a large vestibule overlooking the Bamiyan valley The vestibule was connected with a sanctuary and a large hall probably used as the council chamber by the monks There were passages which led to cells and store rooms for the use of the monks Interesting plans of a few out of the thousands of grottoes which riddled the hills of Bamiyan are now exhibited in Paris

According to M Godard —

The most ancient grottoes are to be found near the Buddha of 30 metres at the level of the soil The architecture is very rudimentary and there is no decoration The later grottoes become more perfect and ornate with first paintings and then sculpture stage by stage round the Buddha of 30 metres then than round the seated Buddhas and lastly round the Buddha of 53 metres It is here no doubt that the gigantic labour carried on for several centuries without cessation is at last terminated In the beginning of the VIII century Arab hordes penetrated into Afghanistan The Buddhist monks were massacred bounded out or converted and their convents abandoned and destroyed

The Buddhist town was supplanted by the Muslim city Shahr-i Gholghola City of Sob situated on the other side of the Bamiyan Valley almost facing the cliffs of the colossal Buddhas This city and the citadel of Shahr-i Zohak were destroyed in the XIII century by the Mongols under Genghis the Scourge of Islam

In the Lunfai country forty miles north east of Ieshawar is Shabbazgarhi on the site of an ancient Buddhist city called by the Chinese pilgrims Po-lu-sha The famous toleration Edict of the Emperor Asoka is inscribed on a rock near Shabbazgarhi in the Kharosthi script (Aramaic) The same Edict (No XII) in Brahmi character was first discovered at Girnar in Kathiawad and was translated by the veteran French savant M Senart who holds the place of honour among orientahsts This Edict is as follows —

king Piyadasi loved by the Devas honours all sects ascetics and householders he honours them by gifts and various modes of reverence But the king loved by the Devas attaches less importance to these gifts and honours than to the desire to see the growth of moral virtues which constitutes the essential part The growth of the essential foundation of all sects it is true implies diverse ways but for all there is one common way which is restraint in speech that is to say

one should not exalt one's sect by disparaging the sects of others that one should not disparage for trivial reasons that on the contrary one should on all occasions render to other sects the honour which is due to them In thus acting one works for the progress of one's own sect while doing at the same time service to the sects of others He who exalts his own sect does so no doubt from attachment to his sect with the intention of glorifying it but in so doing he on the contrary inflicts severe injuries on his own sect That is why concord alone is good in the sense that all persons should listen and love to listen to one another's creeds This in effect is the desire of the king loved by the Devas that all sects should be instructed and that they should profess their true doctrines

All persons whatever their faith should be informed that the king loved by the Devas attaches less importance to gifts and external reverence than to the desire to see the growth of the essential doctrines and respect of all sects To obtain this result are employed the Censors of the Law of Piety the Censors of the women the Inspectors and other corps of officials And the fruit of it is the growth of one's own sect and the glorification of the Religion

INDIAN LIFE IN FIJI

By NISHI BHUSHAN MITTAR,

Educational and Social Worker

THE Fiji Islands are situated between Australia and South America—the shortest distance from the Australian shores to Fiji is about 1450 miles. The Fiji Group contains two large islands viz Viti Levu and Vanua Levu which are the most important ones and also a few other smaller Islands. Viti Levu which is more important than Vanua Levu is 87 miles long by 54 broad containing 4 112 sq miles of surface. Suva a sea port is the capital of the Fiji Group. Fiji is a hilly country with plenty of flat land for cultivation purposes. Vanua Levu the second in size and importance lies north east of Viti Levu the shortest distance from Viti Levu is 39 miles by sea. The length of Vanua Levu is 114 miles and the breadth is 20 miles, comprising 2 128 sq miles. The natives of Fiji are known as Fijians or Kavities who are known to belong to the African Negro race.

Although there is no direct proof as to the origin of the Fijian race but according to Fijian tradition, it is evident that they came by sea and landed in the islands a long time ago. No historical records of the Fijians are available prior to the arrival of the Europeans. The only clue that can be found as to the origin of this race, is gathered from their national songs which show that they had sailed from a distant country in the Far West under the guidance of two chiefs named Latunasombasomba and Ndengei. After travelling through the sea for a long time by canoes, they were at last driven to the Fiji shores by a big hurricane. Since then they began to thrive in these islands. They were savage and cannibals prior to the advent of the Europeans. Abel Tasman a famous Dutch sailor, discovered the islands in the year 1643. The next European visitor was Captain Cook, who passed the islands in the year 1769 and touched at Vatoa. In 1789 Captain Bligh passed Gasawa group and in 1792, he again visited the islands. Captain Wilson narrowly escaped from being wrecked off Tavenu coast in the year 1797.

There was no settled government in Fiji before the arrival of the Europeans. Each clan had its own chief to whom it paid homage. These chiefs were at constant war with one another. In the year 1750, there rose two more powerful states than the rest, viz Verata and Rewa and each of them tried in vain for a long time to reign supreme over the other when a third state Mban made its appearance. Later on, Mban became the most powerful state in Viti Levu. The last King of this state was Thakomban. A few Europeans had already settled in the islands and in the year 1835 the Missionaries of the Wesleyan Methodist Church began to preach Christianity amongst the Fijians. A certain Missionary Mr Baker was baked and eaten up by the Fijians while working for his Mission. King Thakomban was opposed to Christianity for a long time but afterwards in the year 1854 he embraced Christianity and to day the whole Fijian race is Christian.

However, it is not intended to go into all these details of the Fijian race. Details are given just to show how the administration of this country came into the hands of the British and how Indians were introduced to these Islands. After embracing Christianity King Thakomban found that his influence was gradually declining—war broke out with Rewa who was joined by all the beathens of the South East of Viti Levu, and during the many battles that followed Thakomban's power was shaken, when unfortunately the house of the American Consul was burnt and pillaged. Thereupon the Government of the United States sent a bill to Thakomban for \$ 30 000 (£6 250) for damages. He could not pay this money. So when he was anticipating war with the United States Mafu the Tongan chief (Tonga is an Island in the Pacific) landed at Rakiraki, with the intention of attacking him by marching overland to Mban. To escape these dangers from both hands he offered to cede the Islands to the British. So the then British Consul Mr Pritchard prevented any war for the time being. In 1860 England sent Colonel Smythe to the Islands to explore

He made an unfavourable report the next year. So the British Government refused Thakomban's offer. So at last he made an offer to the United States in utter despair but no definite reply was forthcoming on account of that country's being engaged in civil war at the time. Meanwhile the European population increased in the islands most of them being engaged in cotton plantation. These European planters did all they could to prevent war in the interest of their own industry. But things went to worse for Thakomban—his debts increased to £ 85,000 and there was so much disorder everywhere that in 1873 he made a fresh offer to Great Britain for cession of the Group. But this time the Colonies urged on Great Britain the annexation of the Fiji Islands to the Empire. In 1874 Sir Hercules Robinson the Governor of New South Wales was sent to Fiji to settle terms with Thakomban. On October 10 1874 Thakomban and several other influential chiefs signed the deed of cession and the administration of the Fiji Group passed into the hands of the British and Fiji became a British Crown Colony. After the annexation the British Government found that the labour question was the most important and difficult one for the opening up of the country. The Native Fijian would not suit the purpose as he only works when he pleases. So it was found necessary to import labour from elsewhere. The first experiment in this direction was made from the Solomon Islands, but shortly afterwards, the Government of that country stopped further importation as it wanted to keep its own labourers. All schemes for the importation of foreign labour failed until it was arranged with the Government of India to supply a sufficient number of labourers from India annually and thus the abominable indenture system came into existence.

The horrors of the indenture system—oppression of the Indians—the Cooly Laws—system—the demoralisation etc. are only too well known for repetition. When the author went to Fiji in the year 1914 in the post of Supreme Court Interpreter he found the greatest of all constructive needs was the need of education amongst the Indians and felt strongly in his heart that only true education could give them relief in their sufferings. But the greatest drawback was want of proper leaders to guide them. As a Government servant he could not do much to help them. But however in 1914 Messrs C F

Andrews and the late W W Pearson went to Fiji to inquire into the condition of the Indians under the Indenture System. It is well known with what indomitable courage sacrifice and heroic labour these two great souls and true friends of India and of the poor at last succeeded to have the abominable indenture system abolished. To day it is a thing of the past and our gratitude is due to these two heroes.

Messrs Andrews and Pearson left the Island the indenture system was abolished but no call of educational work came to the writer during the three subsequent years. During the time he had the satisfaction of being able to have a bad humiliating railway law repealed—which he had to do at the risk of losing his Government post, which however did not occur. The law was that none but Europeans should be eligible to travel in the first class and that Indians, Fijians and all other races must travel in the second class (there being only two classes). This was the author's first important work in Fiji while in the Government service. Since then up to the present day everybody has been allowed to travel in the first class compartments irrespective of colour or race.

In the year 1914 Mr Andrews paid a second visit to Fiji. This time he went to open schools for the education of the Indian children. The longing for call came now and the writer had to sacrifice his Government post with its prospects and pension etc. to keep his promise to Mr Andrews to take up educational work as his life work. Two schools were started and the author took charge of one of them as Head master and continued until three years later when he was compelled to resign for want of funds. During this time he started the "Indian Association of Fiji and the Indian Labour Federation of Fiji. These organisations were the first of their kind and the author was the President founder of both the organisations. He got Government recognition for both of them and applied to the New Zealand Labour Federation for affiliation with their organisation to which they gladly consented.

The Indian Association and the Fiji Indian Labour Federation did splendid work to better the conditions of the Indians there. The author received substantial help in his work for the Indian Association from many quarters—and he wishes to mention some of them with gratitude. Indian Overseas

Association England Labour Federation New Zealand Womens Association and Womens Service Guild Australia the Imperial Indian Citizenship Association Bombay and many others

From what has been known of Fiji and the condition of the Indians prevailing there up to the present time one will at once ask the question whether Fiji will remain the home of the emigrated Indians and will form in the future a part of Greater India or it will be wiped clean of the Indians at some future date. If it is the latter there is an end of the question—the Indians there can safely be left to themselves to take care of their own affairs until that time arrives. But if the former then there is some food for serious thought. From the author's own experience he feels at heart that Fiji will never wipe out the Indians and therefore will remain the home of the emigrated Indians and will form in the future a part of Greater India. He therefore wishes to discuss the problem of Fiji as briefly as possible. The problems of Fiji are—

(i) It has an Indian population of about 60,000 mostly indentured Indian immigrants and their children. Considering its climatic and other conditions it makes a splendid home for the Indians.

(ii) It has a Government which is merely an instrument in the hands of the mighty capitalistic monarch—the C S R Co—for all practical purposes.

(iii) The native Fijian, being the owners of almost all agricultural lands, the Government cannot provide land to the Indians. Lease of land is granted by them to the Indians on payment of heavy bribes—the Government cannot control the situation. Owing to the difficulty in procuring suitable land for agricultural purposes the Indians are compelled to swallow the C S R Co's bait by accepting land from them at the cost of their freedom. The agreement that is usually made between the C S R Co and the Indian tenant is nothing but a little improved form of the contract that existed in the indentured days. By this contract the Indian tenant binds himself to work for the Company whenever he is asked to do so. Since the abolition of the indenture system the C S R Co has gradually pursued this course to meet its labour demand and this practice alone has helped it to preserve its existence. On the other hand the Indians that accept land from the Company on such

terms cannot thrive well but always remain poor depending on the C S R Co's employment. This offer of land to the Indians is so nicely and cleverly done in its outward appearance that it dazzled even our friend Mr MacMillan who was sent to Fiji about two years ago by the Y M C A of New Zealand to work amongst the Indians there for their upliftment. He was so much touched with the assumed magnanimity of the C S R Co on account of this offer that he spoke and gave publication to his appreciation of the offer in laudatory terms and also advised the Indians to help in removing the bar to fresh emigration. This is an instance to show how cleverly the C S R Co does its business.

(iv) Want of educational facilities—The Government has provided only one Government School for the Indians which was only about eight years ago and it grants aid to a few private schools. There are Christian Mission Schools where Indian scholars are admitted but the educational system there as well as in the Government School is so defective that a drastic change is vitally necessary. The need for more extended facilities is so great that one is inclined to call it the greatest need of all. The education that is given to day to the Fiji born Indian children is fundamentally wrong. The evil effect of such education is quite apparent in the present day Fiji born youths who are considered even by their parents as worthless for any useful purposes. These youths are quite unfit and unable to help their parents in their agricultural business and at the same time no kind of office work is available to them. The present day educational system makes them such creatures that they cannot earn their own livelihood and do not come of any use to anybody. The Board of Education of the Fiji Government has quite overlooked the fact that the Indian population of Fiji is entirely an agricultural community. So it committed the greatest blunder in thinking that the curriculum for the European Schools was quite suitable for the Indian Schools as well. It was owing to the controversy regarding this question between the Minister of Education and the author while acting as Headmaster of Andrews School Nadi that he refrained from accepting any grant from the Government for over twelve months when the same was offered to him at £50 per annum. At last when at the end of that period he was

allowed to have his own curriculum he accepted it. Of course, this was only a temporary measure and it lasted as long as he was in the school. It is very strange indeed that although the Minister of Education admitted that the author was right in his views in respect of this question and said that the old curriculum was drawn up at a time when there was no question of Indian education in the Colony and that he would see that a suitable curriculum was prepared for the Indian Schools as soon as opportunity would present itself, still nothing has been done yet—though a long period of eight or nine years has elapsed since then. It is in matters like this that a little effort can achieve substantial and invaluable results. It could have been possible to make such effort if the Indians were represented in the Legislative Council or in the Board of Education or if there were sufficient educated Indian leaders amongst the community who could bring pressure on the Board or the Government. But unfortunately they do not exist. It is, therefore, strongly recommended that the prevailing system of Indian education should be drastically changed and in its place a suitable curriculum should be prepared providing necessary technical courses in view of the fact that the Indians of Fiji are entirely agriculturists.

(V) Want of Medical Aid—There is great need for medical aid for the Indians in Fiji. This has been so truly described in Messrs Andrews and Pearson's joint report that it is not necessary to describe it here. Of course things have much improved since then. The writer would like to point out in this connection how the Australian Women's Associations helped the Indian cause in Fiji. A letter received by the author from Mrs Bennet, Honorary Secretary to The Committee of Enquiry into the Social and Moral Conditions of Indian Women in Fiji, which is composed of about 50 combined Australian Women's Societies is given below—

2 Strims Flats Clomorne Road
Clomorne Sydney N S W 4 5 21

DEAR MR. MITTNER

Miss Priest gave me your address quite some time ago and asked me to write to you as a fellow Theosophist but I never got the time somehow as I wanted always to write at length and my social work keeps me busy. Miss Priest and Miss Dixon will have told you that I am Hon Sec to The Committee of Enquiry into the Social and Moral Conditions of Indian Women in Fiji which is composed of about 50 combined Australian Women's Societies. We sent Miss Garham to Fiji

to enquire into conditions following on Mr Andrews report of same and upon her return asked the Fijian Government for certain reforms one of which was the appointment of a woman (Medical) at the Government Hospitals to attend principally to Indian women and have been successful in getting Dr Mildred Staley appointed to Leva Hospital. I am writing now to ask if you will give me your individual ideas and opinion of the situation in Fiji re the strike and conditions generally. You may speak absolutely freely to me as a Theosophist. I shall not use your information in any way officially or quote you but allow wisdom to guide me just how to help better conditions.

I have recently seen some Fijian papers with accounts of the strike and see that a commission has been appointed which includes Mr Pillay. I like Theo D Riaz better. In one paper he sounds fair and a humanitarian do you know him? He lives at Tawaran and sounds as if he should be on that commission.

If you have a chance of meeting Dr Staley do take it as she is in full sympathy with the Indians and is a keen educationalist. She was about 7 years in Lahore at Lady Aitcheson Hospital (R. M. D.) 9 years at the Women's Hospital, Delhi some years in Malay in fact, has devoted her life to the work of alleviation and education among the Indians except what time she was doing war work in France Salonica Syria and Palestine. She is not a Theosophist but an understanding humanitarian. I think you may be able to help her as she will not understand conditions just at first—she is staying at a Hotel and I hear is going to urge for dispensaries to be built in the towns as the Indians will not go to the hospital. Of course Dr Staley is a Government Servant and will not be able to speak very freely but I think it will not be difficult for her to cope with conditions.

I shall be so glad to hear from you
With all good wishes
Yours Fraternally
(Mrs) L. F. BENVETT

But unfortunately the Fiji Government dispensed with Dr Staley's services a couple of years after her appointment.

(VI) Franchise—The Indians do not enjoy franchise right either Legislative or Municipal though they pay rates. There has been talk of extending to them franchise right and to give them three elected members in the Legislative Council but still it is all in the air.

(VII) Poll Tax—The abominable Poll Tax Ordinance has been passed against the united protests of the whole Indian community and also against protests from many European quarters. By this Act every male person in the family, ranging from 16 to 50 years of age has to pay one pound sterling per annum. The rigours of this Poll Tax have been most acutely felt by the Indian community.

(VIII) Moral Degradation—The moral degradation amongst the Indians has been

most pathetic Much has been said and recorded in the report of Messrs Andrewa and Pearson about the demoralization of the Indians in Fiji. It is of utmost importance to take immediate steps to raise their moral standard.

(IX) Want of Leaders—The need for proper leaders is very great. The Indian community having been deceived many times by self interested leaders in the past, it has become difficult now for earnest and sincere workers to get their confidence. The people are very often misguided by selfish persons who assume leadership for the time being to meet their selfish ends. This makes things worse.

(X) Absence of Unity—Unity is lacking amongst the Indians in Fiji. Every self-styled leader carries his own men with him and is constantly at war with other similar leaders and their men. It is very difficult to get things done by united action.

There are other problems, but they are of less importance. Amongst those that have been mentioned already, the author would lay special stress on education and moral upliftment. These two are the crying need of the moment and on them depend the salvation of sixty thousand Indians. It is of utmost importance that public bodies or some philanthropic society should give the lead in this direction in order to produce the desired result. The Y M C A of New Zealand has recently sent their Secretary Mr MacMillan to work amongst the Indians in Fiji. When the author first met him, just after his arrival in the island he was quite satisfied when he discussed his plan of work with the author but later, on the eve of his departure from Fiji he was surprised to see the change in his angle of vision which no doubt was caused by the magic influence of the C S R Co. To the author it was a great pity to find him thus changed.

Then there is the question of raising the moral standard of the Indian people, much of it will be accomplished with the introduction of the true spirit of education. But propaganda work in this direction will immensely improve the conditions. From the author's experience he feels that nothing else will produce a better result than placing a living moral ideal in the every day life of the reformers themselves, in the midst of the Indian community of Fiji. On other problems, the author does not wish to suggest anything here. The Indians of Fiji

are powerless to solve these two difficult problems by themselves, therefore, they look to India for help in this direction. But unfortunately India has not yet extended her helping hand to them. During the author's eleven years' stay and propaganda work in Fiji he has so often cried for help for his unfortunate countrymen there—but he has invariably found that all his cries and appeals have proved to be cries in the wilderness.

Our public leaders were always so deeply absorbed in their struggle for Swaraj that they had no time to listen to the sufferings of thousands and thousands of our poor, helpless countrymen abroad. They have always given us to understand that the Indians abroad must undergo patiently all their sufferings until Swaraj is won at home—it does not matter if that comes to happen after a century or more. But alas! these leaders could not be convinced that if they had given only five minutes time from every hour of their Swaraj work towards the service of the Indians abroad, at least half of their miseries would have been ended by this time. The Right Hon'ble Mr Sastri, our distinguished leader, visited Fiji at a time when the Government of that country was seriously thinking of introducing the notorious Poll Tax Bill in the Legislative Council. He made eloquent speeches on equal status for the Indians. The European population listened to his speeches with interest, admired his oratorical powers, but laughed in their sleeves for his advocacy of equal status for those whom they knew to be helots in that country. The Indians of Fiji also felt that it was like striving to arrange a princely mansion for a starving beggar in the street. Mr Sastri's visit was at the time when the Indian labourers' wages were reduced from 2s 6d to 1s 6d per diem and shortly after he left the shores of Fiji the Government passed the Poll-Tax Ordinance. The author does not mean to say that Mr Sastri's visit did no good—it might have done some good in other directions but it did no good at all to redress the grievances of thousands of our poor countrymen abroad. The author would be misunderstood if he were thought to be criticising his distinguished leader's memorable tour—He simply mentions this in stance to show the mentality and lack of understanding of the true problems of Indians abroad on the part of our leaders. He can confidently say that with the trouble that

Mr Sastry took and the money that was spent on his famous tour he could have done immense good to our long forgotten countrymen abroad if he had cared to do so by directing his activities in the right direction. Messrs. Andrews and Pearson's joint report on F. I. was published in 1915 in which the horrors of the Indenture system and of the treatment meted out to the Indians there were vividly described. But it is only too well known that none else but that noble-souled man—Mr C. F. Andrews who had nobly begun that philanthropic work and later a few other followers of his have been patiently continuing that work—already achieving considerable results. Although the civilized world was shocked at the horrors of the Indenture system that was described in that memorable report, it failed to wake sufficiently our public leaders from their slumber and indifference in respect of the sufferings of our unhappy countrymen

abroad. Later on every appeal from them for help was answered with you must fight your own battles single-handed until Swaraj is won at home. This has been the unfortunate position. Could our national leaders and philanthropic bodies afford to help them to rise from the depths of their miseries and deplorable condition? They will do well if they do the cost of it is not too great considering the fact that on it depends largely the welfare and the salvation of thousands and thousands of our forgotten and suffering countrymen abroad and at some future date India will look with pride to these far off Colonies where a sturdy brave and intelligent community of the Indian race will live with contentment and peace and will proudly proclaim mother India's glory to the other nations of the world. Let us all strive with our organised efforts to make this dream a reality. May God help us.

* Read before the Greater India Society.

THE MONETARY STANDARD AND THE BATTLE OF THE RATES

By PROF. J. C. DAS GUPTA, M. A.

THE question of a sound monetary standard has been one of the vexed problems of Indian Economics no less than five expert commissions have been appointed in little more than 30 years to examine and report on the Indian Currency and Exchange System and yet even to-day it can hardly be said that we have reached our goal.

The reason for this strange phenomenon is not far to seek. If India were isolated from the rest of the world she might adopt any currency system she chose and take no thought of the monetary systems of other countries but in point of fact she has extensive trade relations with gold standard countries and has further to remit millions of pounds annually on account of what are known as Home Charges. It is, therefore, of fundamental importance to India's economic welfare that her currency system should be brought into line with that of the great trading countries of the world. And this is

why Indian opinion has been unanimous in its demand for a gold standard. A solution so simple as this has unfortunately never recommended itself to the currency authorities of the country.

Centuries of monetary experience show that a steady bimetallic ratio is incapable of achievement, but this has been the line of experiments in the Indian Currency System. A glance at the history of the evolution of the currency system of India will make it abundantly clear that a lack of appreciation of the fundamental difficulties of maintaining a stable ratio of exchange between countries with entirely dissimilar monetary systems lies at the root of most of India's currency ills. Bimetallism was the first system that came in for trial. It failed to work satisfactorily because of the relative depreciation of gold in terms of silver. Attempts were next made to raise the value of gold by suspending its coinage in India. These ex-

periments also met with no better success and the Court of Directors decided to place India on a monometallic silver standard. The thorny problem of Indian exchanges continued however to be as complex as ever for in addition to the ordinary causes of exchange fluctuations there were changes in the relative values of gold and silver to be taken into account. The problem assumed such a serious turn about the seventies of the last century on account of a long continued Indian decline in the gold value of silver that the Government were compelled to ask for foreign aid to help them to settle the silver question. It was only after the failure of the international conferences that the Herschell Commission was appointed to make recommendations whereby Indian exchanges might be stabilised. Convinced of the evils of the silver standard this Commission recommended the closing of the mints to the coinage of silver and the establishment of a gold standard in India. The rise and fall of the rupee exchange continued even after the closing of the mints and it became necessary to re-examine the situation and to devise ways of establishing the gold standard more firmly. The Fowler Committee was therefore appointed in 1898 to examine the whole question. This Committee submitted a report pronouncedly in favour of the establishment of a gold standard in India. They recommended that the Indian mints should be thrown open to the coinage of gold and that the British sovereign should be adopted as the standard coin for India. The rupee was in other words to be reduced to the position of a token coin related to the sovereign at the rate of 15 to 1. Progress to the standard thus chalked out became impossible partly because of the British Treasury opposition to the Indian Mint project but mainly because of the numerous restrictions placed on Indian imports of gold and the Indian Currency System developed along lines which were never contemplated by the Committees of 1893 and 1898. Under the new system, evolved by executive action silver continued to form as before the medium of exchange and its value remained liable to violent oscillations in terms of commodities of internal importance though its value for foreign trade purposes was artificially established by the Government by means of reserves of gold and silver. Based on a number of administrative practices which might be

suspended at pleasure the system hardly deserved the dignified name of Gold Exchange Standard conferred on it by its sponsors. The various defects of this currency system its liability to manipulation by the Government, its want of elasticity its tendency to inflate the price level its complexity and its dependence on a steady price of silver are now too well known to need repetition. It will be sufficient to say that the Chamberlain Commission who went into ecstasies over the suitability of the Gold Exchange Standard to countries like those of India were constrained to recognise some of the defects of the system e.g. sale of council bills at unduly low rates. The Basington Smith Committee though precluded by the terms of their reference from considering alternative standards of currency condemned artificial movements of exchange which this system involved and the Royal Commission after devoting full five pages to an exposition of the numerous evils of the system have proposed to place India on a new standard.

To come now to the Gold Bullion standard which the Royal Commission have recommended for India. It is a new idea in currency evolution. The War the Commission observe in their report has taught Europe to do without gold coins and modern nations have begun to understand today that a gold standard is not so much dependent on an internal circulation of gold coins as on the possession of strong and adequate reserves of gold. In consonance with this idea the commission lay down that gold coins in circulation are not essential to the establishment of a gold standard in India that the internal medium of circulation should consist, as at present of the rupee and the rupee note and that the currency authority of the country should build up a strong gold reserve to secure the unconditional convertibility of all forms of internal currency into gold. Thus it is that though gold is neither to be minted nor to be used as currency the commission hold that no favourable opportunity of fortifying the gold holding in the reserve should be allowed to escape.

The gold exchange standard was at its best one calculated to maintain the parity of the external value of the rupee little or no attention was bestowed on stabilising the value of the rupee for purposes of internal trade. The rupee was for internal purposes an inconvertible note printed on silver. Under

the new system which the commission propose, this duality in the character of the rupee is done away with, the rupee will be convertible into gold not only for external purposes but also for internal purposes. The imposition, for this purpose, of a statutory obligation on the currency authority to buy and sell gold at rates determined with reference to a fixed gold parity of the rupee is perhaps the most fundamental of all the changes which the commission have proposed. Other changes of a far-reaching character have indeed been proposed, but they are without exception such as to render the assumption of the new responsibility a practical proposition.

In the first place, to overcome the threat to the currency system inherent in the possibility of a rise in the price of silver the commission recommend that the paper currency should cease to be convertible by law into silver coin, and that the

'Currency authority should be free to determine the form of legal tender money to be supplied though all reasonable demands of the public for metallic currency should in practice be met' (para 69 73)

Secondly, they lay down that

'The coinage of silver rupees should be stopped for a long time to come, until the amount of silver rupees in circulation is reduced to the amount required for small change and thirdly, they propose that the currency authority should reintroduce one-rupee notes, which should be unlimited legal tender, but which should not be convertible by law into silver rupees'

With these changes, the way will be clear, as the commission point out, for the much-needed unification of the Paper Currency and the Gold Standard Reserves. The functions of these two reserves have never been clearly demarcated. Nor has any attempt ever been made to establish a definite relation between the total volume of internal currency and the amount of the reserves. There is, in consequence, a great lack of elasticity in the Indian system of note-issue. The Commissioners therefore propose that the two reserves should be united and that the proportions and composition of the combined reserve should be fixed by statute. Finally, attention must be drawn to the fact that the commissioners have with great ability visualised the need for the establishment of a Central Bank in India to co-ordinate her currency and credit operations. The obligation on the Central Bank to maintain the value of the internal currency makes it necessary, as the Report

indicates, 'that the Central Bank should also be entrusted with the remittance operations of the Government.'

No useful purpose will be served by denying that the Gold Bullion Standard thus outlined is a decided improvement on the apology for a standard that India had up to 1917. An adoption of the system will place India on an automatic currency system free from the manipulations of the Government, it would enable her to acquire gold freely to serve as the basis of her monetary system, and finally, it holds out the hope, dim though it may be, that India may one day by means of her Central Bank even obtain a hand in the co-ordination of world financial policy.

So far then all is well. Let us turn next to 'practical politics,' and see whether the proposed Gold Bullion Standard offers any certain prospect of guiding our monetary course in future.

It may be true, as has been suggested, that a real gold standard with a gold currency is unattainable for the present, and that a sudden dethronement of the rupee, apart from being a menace to the monetary reconstruction of Europe, may not be desirable even from the standpoint of India's own interests, but it is difficult to understand why the adoption of the proposed standard needs to be postponed for another five years. For five long years the Indian Currency authority may, according to the Time Table in the Report, continue to sell either gold or gold exchange in return for internal currency, and there can be little doubt that full advantage will be taken of the option thus left to sell not gold but gold exchange. The past currency history of the country inclines people in India to think that non-interference with the free inflow of gold into India a condition of cardinal importance for the establishment of the proposed standard may not be fulfilled. It is important to remember further, as Sir Purshottamdas Thakurdas hints, that with exchange fixed at the comparative high level of 1s 6d one or two lean years in the course of the coming five might so deplete the gold resources of the Government as to make the appointment of a fresh commission desirable. All the valuable recommendations of the Royal Commission may thus come to naught.

An excessive degree of attention seems to have been bestowed upon the need for the 'monetary reconstruction of Europe.' One

is naturally inclined to ask has Europe any legitimate claims on India's magnanimity? Did European countries consider for a moment the adverse effect on India of demonetisation of silver by them? Everyone knows that India was left to shift for herself as best as she could. And are European countries now so weak as to be unable to look to their own currency interests if they are adversely affected? Have they arrived at any agreement for a fair and equitable distribution of the world's gold supplies? Sir Parshotamdas Thakurdas's remarks on this subject are singularly apposite. He observes—

If at any stage an international agreement should be framed for the economical distribution of the world's gold supplies India would be prepared to exercise self-denial in her gold requirements in proportion to that of other countries whose currency reserves were parallel to those of our own.

He adds that

The co-operation of these other countries either with each other or with India is however neither assured nor within sight each pursuing its own individualistic policy.

It will be clear from what has been said that an amount of self sacrifice in the matter of gold absorption is being demanded of India which no other country in the world is doing.

It must be observed in the next place, that it is extremely doubtful if we can force India's pace in the domain of her currency system. The Gold Bullion Standard implying as it does a lavish use of paper currency is likely to create grave suspicions in the minds of the public. If civilised countries with experience of gold coins in circulation and with confidence in the stability of their currency systems have not yet been so far able to get rid of their attachment for gold as to adopt the ideal standard namely paper backed by gold it is idle to expect that India with a population of whom 93% are illiterate and with banking still in its infancy, would be suddenly so far revolutionised as to be ready for this step without passing through the intermediate stage of gold coins in circulation.

It is difficult further to hold with the Commission the view that while the Gold Exchange Standard was unintelligible this new standard will be simple and attractive to the people and that it will give the people confidence in the stability of their currency. The Gold Bullion Standard is a gold standard so concealed and carefully circumscribed that the change under the new

system in the character of the rupee will be little, if at all understood by the mass of the people. To understand this one has only to remember that it is a system which makes the convertibility of the rupee depend on the demand for gold bars of the weight of 400 ounces.

Whatever the value of the recommendations of the Report, it cannot be too strongly emphasised that success depends on the adoption of the Report as a whole. Piecemeal action upon isolated recommendations has rendered many a valuable currency commission report infructuous in India. It remains to be seen how far a different procedure is adopted in the present case, but it may be observed that the recent attempt to single out one solitary recommendation for legislative recognition is not one calculated to raise high hopes in the country.

To turn now to the important question of the probable reactions of the proposed 1s 6d rate on India's best interests. The central fact of cardinal importance with regard to this problem is the finding out of the point where prices and wages are in adjustment. The search for this point is bound to be largely illusory in a country like India where sufficient statistical material for such a study is not available. The proof of adjustment based on index numbers, speaking of which the Finance Member said in his evidence that he was not sure what value was to be attached to them can hardly be regarded as conclusive. The Indian Chambers of Commerce are of opinion that prices and wages are still adjusted in a preponderant degree to the 1s 4d rate. If this assumption is correct, all the disadvantages enumerated by Mr Birla must be held to be substantially true. The adoption of the 1s 6d rate will in other words, involve concealed increase of taxation, unnecessary and unwarranted increase in the remuneration of highly paid Government officials, the payment of a bounty to the foreign manufacturer, the infliction of a heavy burden on the agriculturist due to heavier incidence of land revenue and enhancement of the load at least of his long-term debts and a serious set back to the cause of the much needed development of Indian industries. If on the other hand, prices and wages are adjusted as the protagonists of the sixteen pence rupee allege to 1s 6d rate the evil effects of any attempt to alter the ratio must be as Sir Basil

Blackett points out, an era of fluctuating exchanges increased taxation higher prices rising railway rates continuance of the system of provincial contributions and an undesirable and artificial reduction in the wages of labour. The lack of clear and definite proofs of adjustment makes it impossible to arrive at any definite estimate of the losses or gains involved.

We cannot however afford to lose sight of certain fundamental principles which are apt to be forgotten in the heat of the controversy. The first of these is that the 1s 6d rate has now been in existence for about two years and it cannot in any circumstance be now urged that there has been no adjustment of prices and wages to this rate. The second is that there is danger at present of the phrase "12½%" etc passing into a catchword. Adjustment is continuous and neither the gains of the importer nor the losses of the exporter can for long be as high as 12½%. Thirdly it has to be observed that agricultural prices are undoubtedly even today much higher than what they used to be in pre-war days and the existing rate of exchange cannot be regarded as having inflicted intolerable burdens on the agricultural community. Fourthly it deserves to be made clear that rising prices are a doubtful boon to the bulk of the agriculturists in India. India is primarily a land of small agriculturists millions of them serve as day labourers to eke out their means of livelihood they do not have any surpluses to sell and are none the better for a rise in prices. Indeed it has often been held that the middleman and the foreign exporter are the only two classes who derive considerable advantage from a rise in prices. The large class of people who make their living by serving as field labourers, farm servants and growers of commercial crops lose heavily when prices rise. Fifthly it must be noted that while no rate can be of permanent advantage or disadvantage to India

the process of adjustment however rapid must be very painful for the Indian industries, for it is a widely admitted fact that wages in India do not fall with a fall in prices. Low priced imports may in the period of transition seriously damage Indian industries. The effect on cotton manufactures one of India's greatest industries may in particular be serious.

The main lesson that emerges from a study of the history of Indian currency and exchange is that the fixing of the rate of exchange at a particular point is not of overwhelming importance for India. Ours is a country whose internal trade is many times greater in value than her external trade. Stability of internal prices is therefore more important for us than stability in exchange. A moderate degree of fluctuation in rates of exchange is beneficial to India in so far as it mitigates the range of variations in internal prices. Too much should not therefore be made of India's need of stability in exchange. When other countries are trying to bring back their exchanges to the pre-war ratio there should have been no undue hurry on the part of the Government of this country to stabilise her currency by artificial methods at a point higher than the pre-war level.

To bring our survey to a close now. To me it appears that attainment of a real gold standard in the domain of economics must be as slow as the other namely progress to Self Government in the sphere of politics. We need not however be unduly pessimistic there is a silver lining behind the darkest cloud. European countries are slowly waking up to the potentialities of a regenerated India—they are realising that a prosperous India will offer for them one of the best markets, and the day may not be distant when they will themselves agitate for an assimilation of the Indian Currency System to that of theirs.

MYSTERY

God shaped a flower through
centuries of pain
And ages of long labour—

And broke it goldly through
the earth for man
His very ancient neighbour

Through centuries of pain He
made a flower

With so much wonder in it
But with it he gave man
the mournful power
Of murdering that flower
within a minute

HARINDRA CHATTOPADHYAYA

is naturally inclined to ask has Europe any legitimate claims on India's magnanimity? Did European countries consider for a moment the adverse effect on India of demonetisation of silver by them? Everyone knows that India was left to shift for herself as best as she could. And are European countries now so weak as to be unable to look to their own currency interests if they are adversely affected? Have they arrived at any agreement for a fair and equitable distribution of the world's gold supplies? Sir Purshotamdas Thakurdass's remarks on this subject are singularly apposite. He observes —

If at any stage an international agreement should be framed for the economical distribution of the world's gold supplies India would be prepared to exercise self-denial in her gold requirements in proportion to that of other countries whose currency reserves were parallel to those of our own.

He adds that

The co-operation of these other countries either with each other or with India is however neither assured nor within sight each pursuing its own individualistic policy.

It will be clear from what has been said that an amount of self-sacrifice in the matter of gold absorption is being demanded of India which no other country in the world is doing.

It is difficult further to hold with the Commission the view that while the Gold Exchange Standard was unintelligible this new standard will be simple and attractive to the people and that it will give the people confidence in the stability of their currency. The Gold Bullion Standard is a gold standard so concealed and carefully circumscribed that the change under the new

system in the character of the rupee will be little if at all understood by the mass of the people. To understand this one has only to remember that it is a system which makes the convertibility of the rupee depend on the demand for gold bars of the weight of 400 ounces.

Whatever the value of the recommendations of the Report, it cannot be too strongly emphasised that success depends on the adoption of the Report as a whole. Piecemeal action upon isolated recommendations has rendered many a valuable currency commission report infructuous in India. It remains to be seen how far a different procedure is adopted in the present case but it may be observed that the recent attempt to single out one solitary recommendation for legislative recognition is not one calculated to raise high hopes in the country.

To turn now to the important question of the probable reactions of the proposed 1s 6d rate on India's best interests. The central fact of cardinal importance with regard to this problem is the finding out of the point where prices and wages are in adjustment. The search for this point is bound to be largely illusory in a country like India where sufficient statistical material for such a study is not available. The proof of adjustment based on index numbers, speaking of which the Finance Member said in his evidence that he was not sure what value was to be attached to them can hardly be regarded as conclusive. The Indian Chambers of Commerce are of opinion that prices and wages are still adjusted in a preponderant degree to the 1s 4d rate. If this assumption is correct, all the disadvantages enumerated by Mr. Birla must be held to be substantially true. The adoption of the 1s 6d rate will in other words, involve concealed increase of taxation unnecessary and unwarranted increase in the remuneration of highly paid Government officials; the payment of a bounty to the foreign manufacturer the infliction of a heavy burden on the agriculturist due to heavier incidence of land revenue and enhancement of the load at least of his long term debts and a serious setback to the cause of the much needed development of Indian industries. If on the other hand prices and wages are adjusted as the protagonists of the sixteen pence rupee allege to 1s 6d rate the evil effects of any attempt to alter the ratio must be as Sir Basil

Blackett points out, an era of fluctuating exchanges increased taxation higher prices, rising railway rates, continuance of the system of provincial contributions and an undesirable and artificial reduction in the wages of labour. The lack of clear and definite proofs of adjustment makes it impossible to arrive at any definite estimate of the losses or gains involved.

We cannot however afford to lose sight of certain fundamental principles which are apt to be forgotten in the heat of the controversy. The first of these is that the 1s 6d rate has now been in existence for about two years and it cannot in any circumstance be now urged that there has been no adjustment of prices and wages to this rate. The second is that there is danger at present of the phrase "12½%", etc., passing into a "catchword." Adjustment is continuous and neither the gains of the importer nor the losses of the exporter can for long be as high as 12½%. Thirdly, it has to be observed that agricultural prices are undoubtedly even to day much higher than what they used to be in pre-war days and the existing rate of exchange cannot be regarded as having inflicted intolerable burdens on the agricultural community. Fourthly it deserves to be made clear that rising prices are a doubtful boon to the bulk of the agriculturists in India. India is primarily a land of small agriculturists, millions of them serve as day labourers to eke out their means of livelihood they do not have any surpluses to sell and are none the better for a rise in prices. Indeed, it has often been held that the middleman and the foreign exporter are the only two classes who derive considerable advantage from a rise in prices. The large class of people who make their living by serving as field labourers, farm servants and growers of commercial crops lose heavily when prices rise. Fifthly it must be noted that while no rate can be of permanent advantage or disadvantage to India

the process of adjustment, however rapid must be very painful for the Indian industries; for it is a widely admitted fact that wages in India do not fall with a fall in prices. Low priced imports may, in the period of transition seriously damage Indian industries. The effect on cotton manufactures one of India's greatest industries may in particular be serious.

The main lesson that emerges from a study of the history of Indian currency and exchange is that the fixing of the rate of exchange at a particular point is not of overwhelming importance for India. Ours is a country whose internal trade is many times greater in value than her external trade. Stability of internal prices is, therefore more important for us than stability in exchange. A moderate degree of fluctuation in rates of exchange is beneficial to India in so far as it mitigates the range of variations in internal prices. Too much should not therefore be made of India's need of stability in exchange. When other countries are trying to bring back their exchanges to the pre-war ratio there should have been no undue hurry on the part of the Government of this country to stabilise her currency by artificial methods at a point higher than the pre-war level.

To bring our survey to a close now. To me it appears that attainment of a real gold standard in the domain of economics must be as slow as the other namely, progress to Self-Government in the sphere of politics. We need not however be unduly pessimistic there is a silver lining behind the darkest cloud. European countries are slowly waking up to the potentialities of a regenerated India—they are realising that a prosperous India will offer for them one of the best markets and the day may not be distant when they will themselves agitate for an assimilation of the Indian Currency System to that of theirs.

MYSTERY

God shaped a flower through
centuries of plan
And ages of long labour—
And broke it goldily through
the earth for man
His very ancient neighbour

Through centuries of pain He
made a flower
With so much wonder in it,
But with it he gave man
the mournful power
Of murdering that flower
within a minute

HARINDRA CHATTOPADHYAYA

EARLY RECOLLECTIONS

By NAGENDRAMATH GUPTA

I

THE GROWTH OF MEMORY

It is impossible to fix definitely the age from which memory has a continuous and connected growth. It must necessarily differ among individuals just as the faculty of memory varies greatly in keenness between individuals. I have seen a child of a little over three years of age talking quite coherently and reminiscently of incidents that he had noticed six months or even a year ago. That boy may or may not turn out to be a prodigy. Probably the average age to which the memory can turn back is five years and beyond that is the blur of early infancy. It has also occurred to me that the average child has a keen sense of the ludicrous and the earliest recollection sometimes is of ludicrous incidents.

THE MEMORY OF DREAMS

Dreams however vivid, are usually forgotten but it is a curious fact that some dreams are always remembered. I remember three dreams that I had the first at the age of six the second at the age of eight and the third at the age of thirteen. Every detail of these three dreams is as fresh as an occurrence of yesterday. I state the bare fact but I cannot suggest any explanation of this freak of memory.

DINABANDHU MITRA

My father Mathuramath Gupta was a member of the Bengal Provincial Judicial Service and as such was transferred from one district to another periodically. The greater portion of his service was spent in Behar. Between 1842 and 1874 we were living at Arrah. Dinabandhu Mitra the well known Bengali dramatist who was a Superintendent of Post Offices came to Arrah on a tour of inspection. He called on my father one morning and was invited to dinner the same evening. Dinabandhu Mitra was a slender alert looking man wearing a long kurta and trousers and a gold braided cap

set jauntily at an angle on the head. The dinner was in English style and though we children were not admitted either into the drawing or the dining room we kept hanging round peeping in occasionally when we could do so undetected. Much of the conversation which was practically monopolised by Dinabandhu Mitra was over our heads, but the distinguished writer kept the other guests in roars of laughter by his sallies of wit and his mimicry of Oriya speech.

SWAMI DAYANANDA SARASWATI

It was also at Arrah that I saw Swami Dayananda Saraswati the renowned Sanscrit scholar and reformer and founder of the Arya Samaj. He was staying at the garden house of the Maharaja of Dumraon. I knew very little about the Swami but prompted by boyish curiosity went one afternoon accompanied by a peon to the Dumraon garden house. Swami Dayananda was standing in the verandah. He was wearing only a loin cloth and had just finished his daily exercise. Two Indian clubs which he had evidently been using stood in a corner. The Swami did not then speak Hindi fluently—formerly he spoke only Sanscrit—but he put some questions to the peon asked me one or two and patted me on the head. He was a stout well built man of medium height with a big head and a round face shaved clean. There was a lecture by the Swami the same evening in the hall in our school. As the hall was quite full a number of little boys including myself waited outside watching the people coming in. Presently Swami Dayananda came in wearing white clothes and a white turban and escorted by a number of people. We looked at the crowd a little while longer and then quietly went home. Later on in life I have seen the splendid work done by Swami Dayananda Saraswati in the Punjab. In Bengal the Brahmo Samaj movement arrested the wholesale conversion of Bengalis to Christianity at a time when orthodox Hinduism was losing its hold on young Bengalis educated in

schools and colleges conducted by Christian missionaries. Similarly in the Punjab Swami Dayananda Saraswati founded the Arya Samaj at a critical time when educated Punjabis were embracing the Christian faith in constantly increasing numbers. I shall have a great deal more to say on this subject in another place.

TALES OF THE MUTINY

The house in which we lived at Arrah originally belonged to Bahu Kumar Singh, the well known leader of the Indian Mutiny in Behar. He was a big zemindar of Jagadipur in the Arrah district and was an old man over seventy years of age when the Mutiny broke out. Behar was so far away from the real storm centre of the mutiny that there was no likelihood of Bahu Kumar Singh joining it if he had not been embittered by a personal grievance against the Bengal Government. It was in a fit of exasperation that he cast his lot with the mutineers and raised the standard of revolt at Arrah. Bahu Kumar Singh was heavily indebted and applied to the Government for a loan to pay off his debts. The Government could have easily accommodated him and realised the amount with interest from the large revenue of the landed property of Bahu Kumar Singh. The Collector of Shahabad, the district of which Arrah is the headquarters, recommended the loan but the Board of Revenue refused to help Bahu Kumar Singh who was then approached by an emissary of the rebels and was easily won over by them. So astonishing were the energy and vigour displayed by this aged Rajput in spite of his weight of years that Lord Canning declared that it was lucky for the Government that Kumar Singh was not younger by thirty or forty years when he joined the Mutiny. When we were at Arrah barely fourteen years had passed after the Mutiny and the memory of those stormy days was fresh. I was quite familiar with the quaint Bhojpuri dialect spoken in the districts of Shahabad, Saran and Gorakhpur, and I was never tired of listening to the stirring tales of the Mutiny from the servants and the hazar people. The two-storeyed house in which a few Europeans had defended themselves with the devoted help of a handful of Sikhs was just across the road behind our house. We were shown the ditch in which the mutineers lay in ambush for the relieving detachment of

troops from Dinapur under Captain Dunbar and slaughtered the troops almost to the last man. One of our servants, who was a lad of about twenty when the Mutiny broke out at Arrah, was actually caught in mistake for a mutineer and was about to be hung on the nearest tree when there was a sudden alarm of an attack by the mutineers and in the confusion the lad escaped. Snatches of songs heard in the days of the Mutiny were still sung. There was one inspired by intense local patriotism beginning *Jagat mein Jagadishpur Sahar mein Sasseram re* (there is no place in the world like Jagadishpur and no town like Sasseram). The *mahalla* in which Kumar Singh's house was situated was called Bahubazar after him, and there was a song about the street fighting in front of the house *ham na janhon Bahubazaria legon ki phansam re* (I shall not go to Bahubazar because the swords there are as thick as the clouds). Most enthusiastic were the stories about Amar Singh, a young brother of Bahu Kumar Singh. The people of Arrah spoke of Amar Singh as another Bayard of chivalry *sans peur et sans reproche*. He was in the habit of neglecting his position and family and wandering about in the company of Sadhus. But the Mutiny made him a hero and his dash and elan in every fight were recounted with epic fervour. According to every account that I heard Amar Singh performed prodigies of valour, and escaped to Nepal when the Mutiny was over. The exploits of Amar Singh so impressed my youthful imagination that several years later I wrote a story in Bengali of the Mutiny bearing his name. This book was translated in Hindi at Patna.

SYED AMIR ALI.

A few months before we left Arrah Syed Amir Ali who had just been called to the Bar came to Arrah in connection with some property belonging to his deceased brother, who was a Deputy Magistrate. Mr Amir Ali was a frequent visitor at our house and often came in to dinner. I became his favourite and he told us many stories about the English and French people. I remember in particular how horrified I was when Mr Amir Ali told me that the French ate cutlets made from the legs of frogs and deemed them a great delicacy. He spoke mostly in English but when we could not follow him he would explain in Hindustani.

He usually wore a Turkish fez at that time Mr Amir Ali afterwards became a Judge of the Calcutta High Court and is at present a member of the Judicial Committee of the Privy Council I saw him once more at Karachi where he came to conduct an important case I saw him in court and intended to call on him afterwards But when I heard him addressing the Judge in halting language with a queer enunciation, waiting a minute or half a minute after every sentence or part of a sentence as if he expected the Judge to take down every word that he spoke, I was altogether disenchanted and did not go to see him.

SYED WAHIDUDDIN

In 1874 my father was transferred to Bhagalpur and was relieved at Arrah by Syed Wahiduddin, who was my father's senior by several years and was nearing the end of his service Syed Wahiduddin was over fifty years of age at this time short with large bright eyes, and brisk and alert in manner He did not know English and wrote his judgments in Hindostani But he was an able officer and had a high reputation for probity and integrity of character My father was a fine Urdu and Persian scholar and had many Mussalman friends Syed Wahiduddin being one of the most intimate among them After his retirement Syed Wahiduddin spent a great deal of his time at Patna his native village being a few miles away Towards the latter end of his service my father was stationed at Patna where he settled after retirement Syed Wahiduddin who lived to a great age often came in a *palkee* to see my father. His son Nawab Imdad Imam who was for some time Chairman of the Patna Municipality used I believe to call my father 'uncle' Syed Wahiduddin's grandsons, Sir Ali Imam and Hassan Imam, are well aware of the cordial relations between their grandfather and my father No one then dreamed of communalism and Hindus and Mahomedans everywhere were on the friendliest terms

THE SPIRIT OF ADVENTURE

At Bhagalpur there are two old caves close to the southern bank of the Ganges at some distance to the east of the town One of these is shallow but the other is rather deep and at the time we were at Bhagalpur, was difficult of exploration People generally

contented themselves with a peep at the mouth of the cave Some said it was excavated by some hermits, others thought it was the secret lair of robbers Aoyhow I was filled with the spirit of adventure, and secretly prevailed upon some of my class fellows at school to join me in exploring the cave The expedition was kept a close secret I carried a fully loaded six chambered Colt's revolver belonging to my father, some candles and a box of matches On arrival at the entrance to the cave the courage of some of my companions began to ooze out, but they were shamed by the rest There was a sheer drop of a few feet at the mouth of the cave We jumped lightly in and discovered that the cave ramified in three directions While we were lighting the candles one of the boys, who was bigger and older than myself, nearly fainted and had to be helped out of the cave We then proceeded with our investigations The looigest way was towards the north and at the end we found the marks of claws on the damp wall and a heap of bones on the ground Perhaps the scratches had been made by the claws of a jackal or wolf but we proudly faoiced it must have been nothing less than a tiger When the Ganges was in flood wild boar and even tigers were known to swim across the river, and a large leopard and a boar were actually killed in the town while we were at Bhagalpur We returned home in high feather but the only recognition that we got for our notable daring do, which could not be kept secret was a severe reprimand for our foolhardiness

THE HUMBLING OF A CAPTAIN

One evening my father was out driving in a Victoria phaeton and I was in the carriage with him The road was barely wide enough for two carriages to pass with some care As we were passing through the town we saw a trap resembling a tonga coming towards us driven by a European at a furious pace We had a quiet old mare and the coachman drew to the left as far as he safely could, but the European, ignoring the rule of the road, came thundering on occupying the middle of the road and pulled up just in time to avert a serious collision His horse reared up and came down upon its haunches, while our groom quieted the frightened mare with some difficulty We got down from the carriage and

so did the European. My father was naturally very angry, and striding up to the European said, "I shall prosecute you for rash driving if you are not more careful." Now, my father was a man with a magnificent physique, tall, with a great breadth of shoulders, and possessed of immense muscular strength, while the European was a slight, undersized man. The latter flushed, grew red in the face, looked at my father's athletic figure, and then drove away without a word. It was afterwards ascertained that the European was Captain Douglas, attached to a regiment stationed at Champanagar, some miles to the west of Bhagalpur.

BHODEVA CHANDRA MUKERJI

Bhudevra Chandra Mukerji was Inspector of Schools, Behar Circle, at this time and he called on my father while he was at Bhagalpur. A fairly tall man, erect, with hair and mustache perfectly white, Bhudevra Chandra Mukerji struck even my immature intelligence as a man different from and superior to the people I was accustomed to see. He was distinctly intellectual looking but there was also an atmosphere of purity and cleanliness of mind about him. He had a grave and thoughtful look, well becoming the writer of *Parasarik Prastandha*, one of the most thoughtful books in Bengal. When he came out of the room where he was sitting he called me, put me a few questions in a gentle voice, and then put his hand on my head and blessed me.

RAMTANU LAHIRI

It was at Bhagalpur that I first saw Ramtanu Lahiri. He had then retired from his appointment as a Head Master on a small pension. He was at that time a little over sixty years of age, still fairly active though already venerable-looking. His eldest son Navakumar, a brilliant medical student, was attacked by pulmonary tuberculosis while preparing for his final examination and he came to Bhagalpur for a change. His father and the other members of the family followed soon after. They had taken a house on the bank of the Ganges very near our house, and were soon on very friendly terms with our family. Sarat Kumar, Ramtanu Babu's second son, who afterwards became a well known and leading publisher and bookseller in Calcutta, was of my age and we became

great chums. Ramtanu Babu's second daughter, Indumati, had received an excellent education, and was now in constant attendance on her ailing brother. The eldest daughter, Lilavati, was a young widow and had a little son. Ramtanu Babu's wife was a lady of the old school, gentle and sweet-tempered. There were two other boys, younger than Sarat. Ramtanu Babu was treated with marked respect by my father, who sometimes took him out for a drive. We youngsters were always anxious to serve Ramtanu Babu, but the only service that he ever required of us was to bring his tea, which he sipped slowly with a pleasure that it was a delight to watch. When he travelled several bottles of tea had to be carried for him, and when there was no hot tea to be had he drank cold tea with equal relish. His face beamed with benevolence and I have never seen a more winning and seraphic smile than that of Ramtanu Babu. Not only was he incapable of using a harsh word, but he never spoke ill of any man. He had many sorrows and bore them with calm resignation and with unflinching faith in a merciful and beneficent Providence. One most probably to nursing her brother, Navakumar, Indumati contracted galloping consumption and died in the course of a few months. Navakumar died shortly afterwards. The youngest son also died but Ramtanu Babu never broke down and his faith never wavered for a moment. In 1878 when Keshub Chander Sen's eldest daughter was married to the Maharaja of Kuch Behar I was in Calcutta and I went to pay my respects almost every day to Ramtanu Babu, who treated me like a son. He did not approve of the Kuch Behar marriage but no word of bitterness ever escaped his lips. He once said that he could not trust himself to go and see Keshub, whose charm of manner and persuasiveness of reasoning were irresistible, and Ramtanu Babu did not wish to discuss the marriage with him. Pandit Iswara Chandra Vidyasagara was a particular friend of Ramtanu Babu. At Bhagalpur Ramtanu Babu used to let me read letters received from Pandit Iswara Chandra. They were not ordinary letters and were full of a deep earnestness. Sometimes Pandit Iswara Chandra Vidyasagara quoted some famous English writer in support of his views, and I noted that his English handwriting was excellent. Another friend with whom Ramtanu Babu sometimes stayed in Calcutta was Kali Charan Ghose, a very

able Deputy Collector who was appointed special Collector for acquiring house property in connection with the construction of Harrison Road in Calcutta. Ramtannu Babu often spoke of Ram Gopal Ghose, whom he considered the greatest orator of Bengal. Choosing his words carefully he would say in English in his slow, deliberate way, 'Ram Gopal Ghose thundered as it were.' After I had left Calcutta in 1884 I did not see Ramtannu Babu for about two years but I saw him again in 1886 and also later. He had grown somewhat infirm and stooped a little, but age had not dimmed his intellect and memory, and the wonderful beauty and sweetness of his nature had mellowed with the years. Sarat had greatly prospered in business. He built a fairly large house on Harrison Road where Ramtannu Babu passed his remaining days surrounded with every comfort and cheered by the loving service of his surviving children and the reverence and solicitude of all who had the privilege of knowing him.

A GERMAN BEGGAR

The only German beggar I ever saw was at Bhagalpur. He was a blind man, old but quite hale with the typical German blond hair turning gray. I cannot remember how he happened to have found his way to Bhagalpur, but evidently he was being helped by charitable people as he did not seem to be in distress. He was very gentle, and kept repeating from time to time 'Gott is gut, Gott is gut!'

BUILDING A MAUSOLEUM

At some distance from the town of Bhagalpur, on the southern side of the railway line, there was a large tank with high banks and surrounded by trees. It is a very peaceful and sylvan spot. A Mahomedan gentleman who had recently retired from the service of Government was building a small mausoleum at the north western corner of the tank for himself. He was a devout and pious Mussalman and I used to watch him supervising the building of the tomb. I was greatly impressed and used to think that people usually build houses to live in, but here was a man who was placidly anticipating his own death and was building a place where he was to be laid at rest after death. And his resting place was well chosen, for all the surroundings were suggestive of the peace that comes after death.

SOME NOTABILITIES

The leading lawyers at Bhagalpur were Bengalis and some of them had large incomes. Foremost among them was Surya Narain Singh Atal Chandra Mullick, the father of Dr Sarat Kumar Mullick and Sir Basanta Kumar Mullick, had the next largest practice. Shiva Chandra Banerji, who was afterwards made a Raja was a rising young lawyer, while Sasbi Bhushan Mukerji, brother in law of W C Bonnerjee, was Government Pleader. The most successful Behari pleader was Babu Tarun Prasad Tej Narain Singh was the son of a wealthy banker. He was a public-spirited young man, and founded a College which is named after him.

A THEISTIC INTERPRETATION OF THE SANKHYA PHILOSOPHY

By PROF ABHOY KUMAR MAZUMDER M.A.

INTERNAL EVIDENCES

DOES the Sankhya System admit the existence of God? This is the most important question which we have to determine here, seeing that there is a wide-spread impression that the Sankhya teaches *allium*, that it does not, not only offer any positive proof of but positively denies,

the existence of God. This impression is directly based upon some aphorisms which appear on superficial view to positively declare the non-existence of God, and this impression becomes confirmed when it is found that no attempt has been made in the whole System to explain and prove any of its themes by reference to the Godhead. But such an impression seems to me

to be entirely false and based upon the mis-interpretation of those aphorisms and on a right interpretation the System appears to be as *theistic* as the Vedānta.

The non-theistic character of the Sankhya is made to rest on two series of aphorisms—the first series consisting of the aphs 92-99 in chap I of the Sankhya Pravachana Sūtram and the second series aphs 2-12 in chap V *Ibid*. We propose to examine these aphorisms one by one in order to see whether they or at least some of them support the impression that the Sankhya denies existence to God or whether they confirm the opposite view.

A. (1) "On account of the non proof of Isvara or Lord or more fully (it is no fault in the definition of perception that it does not extend to the perception of Isvara) because Isvara is not a subject of proof. This is perhaps the most important of all the aphorisms in which much stress has been laid by the upholders of the theory that the Sankhya teaches the non existence of Isvara or God or that at least there is no proof of the existence of Isvara or God. For instance Bijnana Bhikshu interprets it in this way. On account of the absence of proof in regard to Isvara it is no fault, the last four words following from the 90th aphorism (as the complement of the present one). And he adds. This negation of Isvara is as has been already established only in accordance with the bold assertion made by certain partisans in order to shut up the mouth of the opponents. For if it were not so the aphorism would have been worded thus on account of the non existence (and not, on account of the non existence of proof of Isvara, as we have it). Anuruddha Bhatta gives a similar interpretation. He holds. If there were evidence or proof to establish (the existence of) Isvara then this consideration of the perception of Him would properly arise. But no such proof exists. Both of these commentators therefore, maintain that there is no proof of this existence of Isvara though they do not deny positively His existence. So that according to them though the aphorism do not positively affirm *atheism* it, at least, affirms *agnosticism*. But it is curious that they do not expressly say what sort of proof of the existence of God the aphorism denies. The Sankhya admits three kinds of proof of which *Testimony* or *Authoritative Statement* (Aptavachanam) is one and it asserts that what ever cannot be proved by perception and inference may be proved by Testimony. (Vide Sankhya Karika, ver 6). It is well known that the testimony of the Śruti proves the existence of Isvara. So that when the Sankhya says that there is no proof of his existence it must mean some other proof. What is, then, that proof? If we carefully examine the context of the aphorism we find that it has been introduced only to show that by *sense-perception* (prataksheva) God's existence cannot be proved. Bijnana Bhikshu himself says that this aphorism is introduced as a reply to the contention. But, still (an opponent may say) the definition does not extend to the perception of Isvara by Yogins devotees etc. because being eternal, the perception of Him is not produced through contact. From this it is evident that non proof in general but proof by *sense-perception* only is denied of the existence of God. And it is undoubtedly true that Isvara or God who is

eternal and infinite, cannot be perceived by the organs of senses. Thus the *true* interpretation of the aphorism is there being no proof by sense-perception of the existence of Isvara. Although Bijnana Bhikshu has tried to obviate the inconsequence of his erroneous interpretation by adding that the aphorism affirms not the *non existence* of God but the *non existence* of the proof of the existence of God these two interpretations come practically to the same thing or at best as I have said lead to *agnosticism* though not to positive *atheism*.

That Bijnana Bhikshu's interpretation is mistaken may be shown more clearly if we compare it with two other aphorisms viz (a) the pur-
positive creativeness of Prakriti is through proximity to Isvara as is the case of a loadstone and (b) (actual) creativeness is of the Antahkarana because it is lighted up by Isvara, as is the case with the iron. In both of these aphorisms we meet with the word *tat*, what does it really mean? Both Anuruddha and Bijnana maintain that it refers to *purusa* or the finite soul. But if we examine it more closely we find that it really refers to Isvara not to the *purusa* at all. The aphorist first speaks of Isvara in aphorism 93 and all the subsequent aphorisms seem to have evident bearing on the same theme having regard to the fact that in no one of them he speaks of *purusa* i.e. the finite self. So that if we read each of them with the rest it evidently follows that the word *tat* in aphs 96 and 99 like the word *tat* occurring in aph 93, must indicate Isvara occurring in aph 92. Moreover this interpretation is confirmed when compared with the interpretation of the Sankhya Philosophy as given in the Sanjparva of the Mahabharata in connexion with the conversation between Vasūtha and Janaka and between Yajñavalkya and Janaka.

(2) As we do not know any other *Purusa* by sense-perception except the released and the confined the existence of Isvara who is above sense-perception is not proven. Bijnana has explained it differently. He maintains that as Isvara can be neither released from afflictions nor bound by them *nor anything of a different character* there is no proof of His existence. Anuruddha also offers a similar explanation. But what do they mean by the expression *Isvara cannot be anything of a different character*? Is He not eternally free and therefore something of a different character? The real meaning is that there is something of a different character which can be known by sense-perception because every *perceptible purusa* is either released or confined. Hence what the aphorism really means to prove is that the existence of Isvara cannot be proved by sense-perception. And this explanation only is consistent with that given to the preceding aphorism. This aphorism therefore confirms our previous conclusion.

(3) As every perceptible embodied *purusa* is either released or confined Isvara is above the proof of sense-perception. This aphorism evidently bears the same meaning as the preceding one. According to Bijnana the word *asatkāratvam* occurring in this aphorism means *akhamatvam* i.e. incapacity to effect anything. But it is difficult to understand how this meaning arises. It should mean *avaddhatvam* i.e. absence of proof and this meaning only is consistent with that of the preceding aphorism.

age) By the term 'sambandha' all the three commentators namely Aniruddha Mahadeva and Bijnana, understand vyapti i.e. pervasion which means *universal connexion or going together* of two things and is the essential condition of an inference. Aniruddha comments thus: Since the pervasion or the universal going together (of two things) must be based upon previous perception in the absence thereof how can there be the apprehension of such universal relation? Nor can there be the apprehension of such universal relation in the case of one which is wholly unconnected or above all relation. Mahadeva annotates thus: On account of the absence of vyapti i.e. pervasion (there is no inference also of Isvara). Bijnana explains thus: *Sambandha-vyapti* pervasion or universal connexion *abhava* = absence. Thus in the Syllogism—

1. Whatever is an effect, has Isvara as its cause

2. Consciousness and the rest are effects (which are pervaded by a cause)

3. Therefore they must have Isvara as their cause. There can be no such inference in respect of Isvara since there is no observed pervasion or universal connexion between Him and any effect (such as Consciousness etc. for instance). Such is the meaning.

Thus the gist of all the above commentaries is that there being no pervasion or universal connexion between Isvara and any of the effects in the world, that can be proved by sense perception which ultimately supplies all the premises of an inference no inference can be drawn in respect of Him inasmuch as one thing can be inferred from another only when they are universally and inseparably connected with each other but if no such connexion can be proved to exist, no inference can be drawn from one about the other. The case is exactly the same with Isvara and any of the effects such as Consciousness etc. found in the world for He is *asanga* or unattached or unconnected with anything of the world. Admitting that Isvara has no attachment with the world (but really as we shall prove He has at least an *indirect* connexion with it) what we can at most prove is the non existence of His *causality* not of Himself. The gist of the inference clearly and unquestionably shows that the *causality* of Isvara can not be proved from the premises supplied by sense-perception which is according to the *Sankhya* the ultimate source of all premises from which an inference can be drawn. But it does not and cannot purport to indicate anything concerning the existence of Isvara, for the simple reason that the disproof of His causality does not imply in any way the disproof of His existence. He may not be a *cause* but that does not necessarily imply that He does not exist also. He may exist, though He may not be a cause, that is He may exist in another form for instance as an indifferent spectator. If we deny or disprove that A is the cause of B we do not of course deny or disprove the existence of A unless A causality and existence are identical which certainly is not true. Therefore the interpretation of this aphorism offered by the above commentators as purporting to disprove the existence of Isvara is not only erroneous but perverted. The aphorism is emphatic on this point in the next aphorism which is—

10. "The Sruti also speaks of the world as the

product of *Pradhana* or *Prakriti*." All the commentators interpret this aphorism in their own peculiar ways. Aniruddha comments thus:

"There is the Sruti: From *Pradhana* or *Prakriti* is the world produced. Therefore the proofs demonstrative of the *existence* of Isvara are apparent and not real." It is very difficult to see how the inference of the *non existence* of Isvara follows from the fact of the world's being the product of *Prakriti*. The fact that the real cause of the world is *Prakriti* only proves if it proves anything that its real cause is not Isvara but it does by no means, prove that Isvara is *non-existent* nor does it indicate or suggest any such conclusion. Whence does then Aniruddha draw such an absurd and preposterous inference? He has certainly misunderstood the essential gist of the argument as a whole. It is certainly strange Bijnana interprets in this way. In respect of the web of creation there exists *Sruti* or Vedic declaration of its being the product of *Prakriti* but not of its having an intelligent being as its cause for example. One unborn (*Prakriti*) having the colour of red, white and black the progenitor of manifold progeny like unto herself. Here he plainly tells us that *Sruti* denies only the causality of Isvara, and not His existence. And this is confirmed by his quoting another text from *Sruti* to wit, Isvara is the witness intelligent alone, and devoid of the *gunas* which implies that Isvara exists and possesses those attributes only and not any such attribute as that of causality, as some say. He makes another curious admission namely: This denial of Isvara is a mere *prajñā vada* or bold assertion made with the object of evoking disputation in respect of the condition of being Isvara and also with the object of demonstrating that there can be Release even without the knowledge of Isvara. This admission evidently shows that according to him the aphorism does not really mean to deny the existence of Isvara but yet seems to deny it from some ulterior motives as stated above. This is no doubt, a very cautious and ugly way of avoiding some inconsequences which will follow from such denial because it is palpably inconsistent with the numerous declarations to the contrary of the *Sruti*. So that it is impossible to deny the existence of Isvara, inasmuch as it is proved by the third kind of proof to wit, the Testimony which is *admittedly* the Testimony of the *Sruti*. We are therefore bound to reject the interpretations as offered by Aniruddha and Bijnana.

GENERAL CONCLUSION

From this somewhat long discussion we are now in a position to gather the results we have arrived at. It is now evident that the main object of the discussions as set forth in both series of aphorisms is by no means to disprove the existence of Isvara, not even that there is no proof of the existence of Him. The object of the discussions as set forth in the first series aims at simply showing that sense-perception is not competent to reveal the existence of Isvara, that we cannot know Him by means of the organs of senses and there are 8th which as we have conclusively shown positively assert the existence of Isvara. Whereas the object of the discussions set forth in the second

ism. Here no query arises with regard to creation because that will make it quite unconnected with the preceding one, and will raise a new problem all on a sudden. Aniruddha also says that this aphorism explains the very same position as the preceding one.

(4) 'The sacred texts which speak of Isvara, are) either glorification of the free Self, or homages paid to the perfect Ones, (Bhavana), or glorifications either of the free-like Self, or of one made perfect by yoga.' This aphorism is introduced as a reply to such queries as these. In numerous texts in the Sruti the Smriti and the Puranas there are stories to the effect that the devotees and yogins saw Isvara, uttered words in His praise and adored Him and also of the worship of Brahma, Visnu, Maheshvara and all the incarnations regarded as Isvara if He is really unperceptible, how were these possible? The reply does not mean to say that there is no Isvara but simply that Isvara' there means the liberated souls or the souls made perfect by yoga, because they, having attained exaltation and perfectness, may be regarded as Isvara. There are, the aphorism clearly implies that those facts do not stand in the way of the theory that the existence of Isvara cannot be proved by sense perception. But it should be very carefully remembered here that this aphorism does not deny the truth of those texts of the Sruti, etc. where the real Isvara is mentioned.

(5) The purposive creativeness of Prakriti is due to her proximity to Isvara, as is the case of a gem or loadstone." This aphorism is an answer to the question How is Isvara imperceptible, if He is always present in Prakriti and guides her in her evolution? And it means to say that as a piece of iron acquires the power of attracting another iron by virtue of its proximity to a loadstone which itself remains inactive, so Prakriti acquires the power of evolution by virtue of her proximity to Isvara who Himself remains inactive. Here we should carefully remember the real meaning of the word 'tat' I need not repeat what I have said before in this connexion (See above (1)).

(6) 'In the case of all particular effects the creativeness is of the Jivas.' This aphorism clears up the meaning of 'he preceding one it means to say that the jivas i.e. the finite purusas are the direct creators of all particular effects, Isvara having nothing to do with them at least, directly. But it may be objected that if that is so, why has Sruti made such false declaration that Isvara has voluntarily created the world. The answer is given below.

(7) Those teachings of the Vedas were meant for those who were perfect and of exceptional intellectual power and who were therefore perfectly competent to understand their true meaning, and those teachings conveyed to them exactly what they meant."

Now, another objection may be raised. If Isvara be entirely unqualified and above all attachment to Prakriti, how can Prakriti acquire the power of creation by coming into contact with Him? The answer is given below.

(8) (Actual) creativeness is of the Antah-karana, because it is lighted up by Isvara, as is the case with iron." Or, more fully, as iron acquires the power of heating and burning when

things by virtue of its proximity to fire, so Antah-karana acquires the power of creation by virtue of its proximity to Isvara. Here too, the real meaning of the word 'tat' should be carefully ascertained. Aniruddha and Bijnana both understand by it, purusa or the finite soul. But it appears, after careful examination, to mean Isvara. The reasons are these: the argument begins with the aphorism 92 which denies the proof of the existence of Isvara by sense-perception, and all the succeeding aphorisms are introduced to confirm this conclusion by the refutation of all possible objections. Therefore the whole argument, of which all the aphorisms hitherto considered are mere parts, is directly concerned with Isvara, not at all with the finite purusa; that is to say, Isvara not the finite purusa, is the direct and main subject of the whole argument. Of course, in aph. 97 it speaks of Jivas, but of that incidentally only. So that it is more reasonable to understand by 'tat' Isvara not the finite purusa, inasmuch as only that will keep the continuity of the whole argument.

B. Let us now come to the consideration of the second series. Of these aphorisms at least two to wit, the 16th, and the 17th, are usually quoted as though they deny the existence of Isvara or God. We should, therefore, examine them carefully. Bijnana Bhikshu supposes that these aphorisms are meant to refute the contention of the opponents that there are other proofs of the existence of Isvara. Aniruddha Bhatta remarks: "The non-existence of Isvara has been established before. The author now states the argument." Vedantini Mahadeva makes a similar supposition. But it is very difficult to see how such a supposition arises at all. The closer examination of the aphorisms conclusively shows that they are meant for quite different things. In this instance the whole argument is intended to establish not that Isvara does not exist, but that He does not exist as the designer, creator and governor of the world at least directly, as some people say; and begins with the aphorism.

(9) 'Not because (the cause is) directed by Isvara (that there is) the resulting of fruits, (but) because the production thereof (takes place) by means of karma'. Bijnana comments: "When the cause is superintended by Isvara, there is the resulting of the transformation in the shape of the fruit of action, this is not proper because of the possibility of the resulting of fruits by means alone of the necessary Karma. Such is the meaning." Aniruddha maintains: "Were Isvara an independent creator, He could create without (the aid of) Karma, (but that is not so). If you say that He creates, having Karma as an auxiliary then let Karma itself be (the cause), what need of Isvara? Nor can an auxiliary obstruct the power of the principal agent, since, in that case, there would be a contradiction of its independence. Moreover, activity is seen to proceed from egoistic and altruistic motives. Neither can any egoistic motive belong to Isvara. And were His motives altruistic, then, He being compassionate, there would be no justification for a creation which is full of pain. Nor is there any activity which is purely altruistic, because such activity proceeds from a desire for selfish gain even by means of doing good to others, etc. Therefore, let Karma alone be the cause of the world."

series, is of a quite different nature. It aims at simply showing that the *direct cause* of the world is really Prakriti and not Isvara who is only *indirectly* associated with her and that as even the Sruti says that the *direct cause* of the world is Prakriti there is neither scriptural nor any other authoritative evidence to prove that Isvara is the *direct cause* of the world. Of course Isvara may be called the *indirect cause* for Prakriti has acquired the power of causality by virtue of her proximity to Him but in Himself Isvara is beyond all attachment and eternally free. This is in fact all that the Sankhya has to teach in those aphorisms. It is therefore not strange and inexplicable that such able commentators as Aniruddha, Mahadeva and Bhojan have been so misled as to extract from them a theory which is not only astounding but also absolutely inconsistent with the teachings of the Sankhya Philosophy as expounded by other and far more authentic treatises, and what is more even with Bhojan's own assertion that the Lord in the person of Kapila, taught by the Siva-Sastra, Lessons on Discrimination between the Self and the Not Self consisting of six books and arguments, not conflict with the Veda. (Preface to the Commentary by Bhojan Bhikshu on the

Sankhya Philosophy) Again "Now in order to teach a complete system of valid arguments for the purpose of Manana, intellect on that is assimilation, differentiation and elaboration in thought of the truth thus heard, I learnt from the Veda, there appeared on earth Narayana, in the person of Kapila, as the author of the Sankhya System of Thought, for the purpose of annihilation of the infinite sufferings of all jivas or embodied selves I bow down to Him. (Vide the Preface) Many other similar texts may be quoted from the preface, but they are sufficient for our present purpose. We should notice two things in the above quotations. First, if the Lord in the person of Kapila, taught the Sankhya Philosophy how could He teach a doctrine palpably inconsistent with the Veda which undoubtedly declares the existence of Isvara in numerous texts? It should be remembered also that in the Tatva-Samasa Panchadikha Sutra and Sankhya Karika, there is absolutely nothing which purports to say that Isvara does not exist or there is no evidence of His existence and moreover we shall presently see that there are *positive* evidences of the existence of Isvara not only in them but also in the Sankhya-Pravachana-Sutra itself.

THE DISABILITIES OF INDIANS ABROAD

By R. DAYAL, ICS

Communicated by the President of the Indian Unity League Cambridge

TO understand the problem of the social and political equality of the Indians in other parts of the British Empire it is essential to know the distribution of the Indians in the respective parts for their disabilities increase with the increase in the number of Indians domiciled in a dominion. The total number of Indians in the empire outside India is a little over 2 millions. South Africa has 150,000 of which 135,500 or 90 per cent are in Natal, 11,000 in the Transvaal and 7,000 in the Cape. East Africa has 47,000 of which 23,000 are in Kenya. British Guiana and Trinidad have 130,000 each and Fiji has 60,000. Canada has 5,000. Australia 4,000 and New Zealand 500. The position in various parts is as follows:—

NEW ZEALAND

The Government treats Indians on a footing of equality. Indians can live there as fellow citizens in honour. They enjoy

the franchise in common with all British subjects and are excluded from the benefits of the Old Age Pensions. The New Zealand Government has promised to give sympathetic consideration to this grievance when the Act comes up for revision. But in practice little hardship is likely to be felt, as it is unlikely that any Indian will fulfil the conditions regarding the age required by the Act for some years to come. It is to be noted that the number of Indians in New Zealand is only 500.

AUSTRALIA

Out of a population of 6 millions only 4,000 are Indians. The disabilities which the Indians suffer from are comparatively small. The Indians do not possess the dominion franchise neither have they got the State franchise in Queensland and Western Australia. As a result of Mr. Sastri's visit the respective governments have promised

sympathetic consideration, and this was reaffirmed by Mr Bruce at the last but one Imperial Conference as well. Indians cannot be employed in industries that receive bounties from the government, and in some instances are debarred from employment by industrial awards. These industrial conditions do not operate in many cases as Indians generally become small independent traders. The government agreed to remove some of the disabilities under certain Acts. An assurance was also given that steps would be taken so that Indians get equal benefits of Old Age Pensions.

It is gratifying to learn of the decision of the Australian High Court *re* the legality of the Commonwealth government's denial of franchise to Indians resident in Australia. In this particular case it has been decided that the withholding of the suffrage from the Indians is contrary to the law and the court has therefore ordered the individuals concerned to be placed on the register. The letter giving this information adds that another preliminary step must be taken before the franchise can be said to have been secured for the Indian community but no difficulty about it is anticipated.

is in British Columbia only where Indians have political disabilities. Sympathetic consideration was shown to the grievances about education. The Canadian government turned down the proposal to confer Dominion suffrage on Indians settled in British Columbia.

SOUTH AFRICA

The real crux of the Indian problem lies in South Africa. When the South African war broke out one of the chief causes was stated to be the ill treatment of Indians under the regime of President Kruger. Lord Lansdowne then expressed the view that the treatment of the Indians was the worst of the crimes of the Transvaal Republic. The war was over, the Republic became part of the British Empire and the condition of the Indians became even worse than before, and in the words of Mr Sastri, it was admitted by the Imperial Government that they were less susceptible of a suitable remedy in self governing Dominions than under foreign rule.

trader and wherever he desires to reside or to own land, it is for the purpose of trading. The question resolves itself into "On what terms is the Indian to trade in the Transvaal?"

Both Indians and Europeans require licence to trade in Transvaal. Licences are of two kinds general and special. The general licence to be a dealer cannot be refused, but the special one to be a grocer, a pedlar, a hawker, etc., is granted by the Municipal Council and could be refused on the ground that "the applicant is not a desirable person to hold such a licence." An appeal can be made to a magistrate. Appeals in 1918 in Krugersdorp Township were successful. Again, the Republican Law of 1889 prohibits the ownership of fixed property by Asiatics in the Transvaal and indicates bazaars and locations as their proper abode. This was observed more in its breach than in its observance. Indians evaded it by holding land in the name of companies. Courts have held that companies cannot be Asiatic and so could hold land. The Gold Law of 1903 prohibited a coloured person from residing on or occupying any stand on proclaimed ground except as a bona fide servant. This for sometime was not enforced. Early in 1918, the Municipal Council of Krugersdorp obtained injunction under the Gold Law restraining a European owner of property on proclaimed ground for leasing it to an Indian. This success led to a general filing of applications for eviction of Indians who petitioned Parliament for redress. The Parliament appointed a Committee. The European witnesses referred to the loss of business due to Indian competition in their midst and the depreciation of their property. They felt it an economic necessity to restrict Indian trading. Indians based their claims on status and vested rights. They had rights to trade and the Government was to safeguard it. But the Select Committee and the Parliament enacted the Asiatics Trading and Land Act. It provides that

i No new trading licences were to be issued to Indians after May 1919 except in respect to a business for which a licence was held by an Indian prior to that date.

ii In non mining areas in the Transvaal an Indian applying for a new trading licence will be on the same position as before and

iii An Indian cannot own fixed property in the Transvaal, either by forming a limited company or by becoming the mortgagee of a nominal European owner.

This led to agitation and the Asiatic Enquiry Commission was appointed in 1920 and its report was published in 1921. It recommended the retention of the law prohibiting the ownership of land by Asiatics but declined to recommend compulsory segregation. In Natal, it agreed to confine to the coast belt the right of Indians to acquire and own land. The Government of India protested against it, and this has been abandoned by the Union Government. The Commission also recommended voluntary repatriation. Some 5000 have been freely repatriated. No other action has been taken on these recommendations.

In the meanwhile the anti Asiatic party was busy in creating and initiating social disabilities such as railway regulations debarring Indians from travelling in any other carriages except those reserved for them and similar rules restricting the use of tram cars at Durban and excluding them from race courses and betting club rooms. The Durban Land Alienation Ordinance enables municipalities in selling land to assign it for particular communities and to that extent to secure segregation on condition that Asiatics are given reasonable opportunity for acquiring adequate residential sites.

Regarding the franchise Indians are helpless. Except in the Cape they have no franchise. In the Cape the principle of racial equality is still adhered to and the franchise is colour-blind. There are alternative property and wage-earning qualifications together with an educational test. In order to pass the test the applicant for a vote has to sign his name and write down his address and occupation. In the other three provinces the franchise laws are based on frank recognition of racial inequality. The Natal law which prescribes alternative property and wage earning qualifications without an educational test, excludes from the franchise natives and coloured persons unless in addition to fulfilling various other requirements they can obtain certificates from the Governor General in Council the grant of which is discretionary, and there is a bar against admission to the franchise of natives or descendants in the male line and natives of countries which have not prior to 1896 formed elective institutions founded on the parliamentary franchise. This barrier effectively excludes the British Indians. In the Transvaal and the Orange Free State there is no property or wage-

earning qualification but the franchise is confined to white persons only, all white male adults who are British subjects have the vote provided they have the qualification of six months' residence in the Union. The South Africa Act of 1909 makes a special provision for safeguarding the continuance of the existing franchise in the Cape by providing that any alteration of the Franchise Law which disqualifies a person from registration as a voter on the ground of race or colour shall require $\frac{2}{3}$ majority of both houses of parliament sitting together. But while the franchise law of the Cape is thus safeguarded, the Act in other respects makes a serious infringement on the principle of racial equality as hitherto in force in that province. It provides that only persons of European descent shall be qualified to sit in that parliament. This involved a decided check on the application of the principle of racial equality in the sphere of politics and there is not the slightest chance of this principle receiving recognition in the Franchise Laws of Natal, Transvaal and O F S State. The removal of property and wage-earning qualifications from the Transvaal and O F S Laws and prescribing 6 months residence qualification has introduced an extra difficulty against the admission to the Franchise of non Europeans.

Now what are the exceptional circumstances of the Union of South Africa that its representatives dissented from the Imperial Conference Resolution of 1921. They can be well understood from the following figures

Population figures for 1921			
	1	2	3
	White	Coloured	Asiatics
Cape	650 000	2 000 000	8 000
Natal	140 000	1 250 000	140 000
Transvaal	350 000	1 500 000	15 000
O F S	190 000	440 000	220

Voters.			
	White	Natives	Indians
Cape	156 500	14 283	2129
Natal	34 041	2	45
Transvaal	140 569		
O F S	41 000		

We find a million and a half Europeans settled in the midst of 9 million coloured people of whom 160 000 are Indians and of the voters nearly all belong to the European class. The Europeans argue in support of position that they have settled there as

pioneers of European civilisation and they regard anything which menaces it as a very serious matter. The effect of giving the vote to the Indians will be to give it to the natives also and as there is adult suffrage, so the Indians will swamp the Europeans in Natal and the blacks will swamp them in the whole of South Africa, and this is the position they do not consider to be desirable for the stability of their civilisation and their institutions. General Smuts saw that for India it might be a question of honour but for Europeans it was one of existence. Not a word is said about the capacity of the Indians or of the natives. The Imperial Conference resolutions does not speak of it, but deals with the question as one of expediency when regarded from the point of view of its likely effects on the solidarity of the Commonwealth. Whatever may be said by the Europeans there is little doubt that the real difficulty is the racial prejudice. It might be due to the fact that the European regards every Indian there as a coolie because mostly all Indians went there as such and the masterly attitude persists still. He is not prepared to share power with those who were once his employees. The Boer sentiment of exclusiveness also accounts for it. The racial prejudice does not manifest itself only in the inequality of political rights but in that of the economic and social rights as well. The latest development is the Class Areas bill introduced in the Union Parliament last February. It prohibits Indians to acquire or lease or renew a lease of immovable property in areas allocated to the Europeans and also lays down that no licences or permits to trade within the class area will be granted. It enables the Government to segregate all the domiciled Indians and other Asiatics alike for residence and trade. This segregation means the setting apart of areas and generally such locations will be far apart from the towns, where few buyers can go, and these mean ruin to many an Indian and lead to compulsory repatriation. Mr Duncan in his speech said that "the Bill was due to the pressure of the Indians in Natal and the Transvaal. The menace of competition of the Indians in South Africa did not now arise out of the influx of Indians but is due to their gradual rise in the scale of civilisation, efficiency and education. Another reason advanced was that wherever an Indian holds property, other property gets depreciated in value, for few desire to go and reside there

Sanitary regulations can well meet this difficulty. The Indians are to be insulted and deprived of their rights because they are rising in the scale of civilisation, efficiency and education and because the Europeans cannot beat them in open and fair competition. And the Europeans are to guide the barbarous blacks of Africa to civilisation! Mr Creswell very candidly confessed that as no suitable locations for decent living could be found the only alternative is repatriation. He expressed his disgust at the increasing wealth and number of traders among the Indian community. The truth is as some witnesses stated that they had no objection to the presence of the Indian so long as he remains a labourer and does not embark on commercial and other pursuits, because he would beat the western labourer every time due to low wages. No doubt the last census report of South Africa is disconcerting to the whites over there as the increase of the blacks and Indians is proportionately more than that of the whites. There is some white unemployment there as well. But the remedy is not to get rid of the other residents by sending them to their countries. Will England be justified in turning out all aliens because there is such a great unemployment here? The European in South Africa arrogantly looks to his own comfort and position and resents any rival however capable in the coloured ranks. How far this policy of racial intolerance will conduce to the good of South Africa or the relations of the whites and the coloured is for the future to prove.

KENYA

Turning now to the position of Indians in the colonies, we find the situation in Kenya very unsatisfactory. It is very deplorable as the Colony owes much to Indian labour and capital. Mr Churchill writes in *My African Journey*—

"It was the Sikh soldier who bore an honourable part in the conquest and pacification of these East African countries. It is the Indian trader who, penetrating and maintaining himself in all sorts of places to which no white man could go or in which no white man could earn a living has more than anyone else developed the early beginnings of trade and opened up the first slender means of communication.

Is it possible for any government with a scrap of respect for honest dealing between man and man to embark upon a policy of deliberately squeezing out the natives of India from regions he has established himself in under every security of good faith? Most of all we ask is such a policy possible to

the government which bears sway over 300 millions of our Indian Empire?

Yes it is possible. The immigration policy declared in the white paper on Kenya is an effective step 'or keeping out the Indian from East Africa. It is of interest to note that the Charter, granted to the British East African Company by the Sultan of Zanzibar says 'There shall be no differential treatment of the subject of any power as to trade or settlement or as to access to markets. It is now tried to take away or at any rate to restrict this ancient right. Again of historical interest is the fact that one claim of Great Britain to the protectorate of East Africa was the presence of His Majesty's Indian subjects there before the annexation. It was to protect them that the country was placed under British rule. Similarly was, this the one cause of the Boer War. It is remarkable how circumstances change the views of the governments once the objects are achieved.

Regarding the present disabilities of the Indians they come under the heads of franchise segregation ownership of land and immigration which has been already dealt with.

Indians are given the communal franchise. All adult Indians male and female are given the vote without any special qualifications. The franchise is also extended to the members of the native states of India. The Indians claim common electoral roll. The Indians elect five members and the Europeans eleven. The Indians thus get a smaller representation. Communal representation on the legislature has been demanded on the ground that the white is superior to the coloured. The government in granting it says that no justification is seen for the suggestion that it is derogatory to any of the communities so represented. Some supporters of the communal system cite the Indian example and I believe Lord Hardinge was one of them. But Indians differ as to the value of that system and even granted their acceptance in India it is based on different grounds. The Indians are not in a minority in Kenya. Why are they to have only five representatives? They outnumber the whites and make no less contribution to the resources of the state and yet they get less representation. Indians as a protest against this humiliation did not register themselves as voters and have not elected any representative to the Kenya Legislative Council.

The other grievance was about segregation.

is one of the peaceful methods to gain one's end. Retaliatory measures are not provoking measures but merely a protest against disabilities suffered abroad, and make the other people suffer the same. The last Reciprocity Bill of the Indian legislature is thus an action in the right direction.

The Indians should be careful to scrutinise every scheme for the emigration of Indian labour. The character of Indian emigration is of much importance. The mere fact that in the past mostly labourers were the immigrants in other countries accounts for the contempt with which they are regarded as a race. In any fresh scheme of emigration it should be insisted upon that ample provision be made for the settlement of Indians as independent cultivators and planters as well as teachers and ministers of religion. Emigration of unskilled labour should be allowed only when the Indian people are satisfied that the Indians already domiciled are free from any disabilities and due arrangements for the decent living of the new immigrants are made by the government desirous of Indian immigrants. It is hoped that the Legislators will be alive

to their responsibilities in the matter and that the Government of India will not override their decision in this respect at least.

The policy of the Empire is summed up in the resolution of the Imperial Conference of 1921, which runs as follows —

This Conference reaffirms that each community of the Commonwealth should enjoy complete control over the composition of its population by restricting emigration from any of the other communities but recognises that there is incongruity between the position of India as an equal member of the British Empire and the existence of disabilities upon British Indians lawfully domiciled in some parts of the empire. The Conference accordingly is of opinion that in the interests of the solidarity of the British Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised.

The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The Representatives of India, while appreciating their acceptance of this resolution nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found, as soon as may be to reach a more satisfactory position.

opinion which has always condemned British misrule and exploitation of Ireland and the atrocities which from time to time have been added in order to terrorize the people into subjection. In speaking thus plainly—let it be understood—there is no desire to pander to a spirit of patriotic self-esteem or "to stir up anti-British feeling." On the contrary there is an earnest desire to see America desist from her own imperial policies taking to heart the lesson to be learned from each and every nation that has trod the path of Empire. There is an desire to paint England black but only to examine facts calmly in the light of truth.

Public opinion then cannot harm India or hold her back from freedom. Quite the contrary. Public opinion is of the utmost importance to her if she is to arouse herself and by force of the spirit within break the shackles that bind her. It is not enough for India to struggle within herself for Swaraj; her leaders must realize the importance of world opinion and work for her on an international scale. Isolation is impossible for India. What happens there has an intimate bearing upon every question of world politics and any change in her relations to the British Empire has a revolutionary significance reaching to the remotest corners of the globe. It doubts have existed in any minds as to what position India actually holds in the minds of Britishers; the recent Imperial Conference has dispelled them. It is now definitely established that India is a Pariah in the so-called British Commonwealth of Nations. To acquire full status of nationhood there is no other way than for India to enlist the sympathetic encouragement of other peoples by establishing international relations of her own.

Mr. Thompson in his first *Preface* gives the advice "Truth has an eternal title to our confession though we are sure to be the sufferers by it as reason for his publication of the truth about the Mutiny yet in the *Preface* to the American edition of his work he sets a limit to the beneficial effects of that truth and laments that it must be known outside the Empire. He feels keenly that Britishers must know the truth; Indians, he admits, cannot help but know it, but for the rest of the world "it is not their business" (see note bottom page 120). The weakness of this attitude is apparent and it makes the author unjust. At page 123 he accuses by name the "American Home Rule League for India of spreading an atmosphere of misrepresentation regarding the facts of British rule; it is well known that men of the type of Lala Lajpat Rai and the Rev. Dr. Sunderland whom Mr. Thompson all but names are not persons to spread misinformation about India with a design to blackguard the British. Their desire has been and is exactly the same as that expressed by Mr. Thompson in his *Preface*. The futility of Mr. Thompson's wish made in the note already referred to (page 125) is only equalled by its impotence. We of America are amazed that an Englishman should have been blind to the weakness of his position which he thus unconsciously reveals.

At page 121, Mr. Thompson ridicules the idea that British influence is the principal factor in the anti-Indian legislation recently enacted in America, and indeed the general anti-Asian tendency of our

government. The facts of the case are—and it is well that the Indian public should know them—that the policy of exclusion of Indians (called *Hindoo*s in America) originated through British initiative as early as 1907-08 when the Canadian authorities shamefully ill-treated the Indian immigrants and advocated exclusion of Indians from Canada. The present Prime Minister of Canada, Mr. Mackenzie King was the first to put forward this idea. The Canadian authorities with the approval of the British Government in England and possibly with the full sanction of the India Office made the proposal to the American authorities that they should exclude Indians as they excluded the Chinese. This proposition was presented demurely as I was told on excellent authority by Lord Bryce the then English Ambassador in Washington. This proposition was made after a riot occurred in the city of Bellingham (Washington State) when several Hindu laborers working in the saw mills were mobbed by Americans. These Hindu laborers once befriended by the Indian Army and they sought assistance from the British Consul at Seattle which was flatly refused. The British Consul even refused to see the poor sufferers.

Since 1903 the British authorities have co-operated with those of America in carrying out a plan of exclusion of Hindus. I understand that some of the American officials and legislators who advocated this plan are British subjects naturalized as Americans and are in close touch with the British Embassy in Washington D. C. In reality there is nothing surprising about this especially when we consider Britain's attitude towards Indians in India. By Mr. Thompson's own confession (page 118) Britons judge Indians as slave drivers would and assess the (or) virtues as a hunter assesses those of dogs. What wonder then that the Government for India dreads the consequences should any considerable number of Indians acquire American citizenship and thereby taste the full blessings of freedom and human equality denied them in their own country? I know that in one case the British Representative twice asked that a highly educated Hindu might not be allowed to retain his American citizenship. Mr. Carnegie Ross British Consul General of San Francisco once asked the United States Government to deport a certain number of Hindus to India. Indeed it is certain beyond any possibility of dispute that the exclusion of Hindus from America has been carried on with the full consent of the British India Government which has never protested against this policy.

There are many Indians in California who by hard labour working under a torrid sun have reclaimed waste land and some of them thus have acquired large holdings. Through the anti-alien Land Law and the recent Supreme Court decision regarding the ineligibility of Hindus to American citizenship these Indians have suffered a grave injustice and lost all the fruit of their labours but the British Government has offered no protest. This is not mere indifference. It is well known that the British Government's safe-guarded the rights of British subjects in Korea when Japan introduced the anti-alien Land Law there. She does not wish to see her once Indian subjects grow rich and prosperous outside her domain lest

The white paper rejects all proposals of segregation. The commercial segregation was found impracticable and the residential segregation is to be secured by building and sanitary regulations and not by the objectionable method of racial discrimination. Segregation is to be perpetuated in the Highlands. One argument in favour of segregation which is some times advanced is that there is the caste system with its disabilities in India. General Smuts says

I do not see why compulsory segregation is resented by Indians. I have heard of such things as caste in India and have heard of such a thing as of one Indian entirely refusing to negotiate with another Indian and I do not see why these catchwords freedom and equality should be applied to Indians in Africa. It is a case of treatment on its merits. We want what is just and fair and to place the Indians where they should be."

Mr. Andrews replies "The Indians expected something better in the British connection than a return to the evils of the caste-system from which they themselves are seeking to get free. They are not prepared to be thrust back into a new caste system from out of which they are trying to escape from the old."

The policy embodied in the White Paper is declared to be based on the principle of Trusteeship for the natives. How the whites treat the natives is amply evident from their policy of reserves to which the natives are confined and whose areas are gradually diminished from the policy of taxation to which the natives contribute £500,000 and the rich Europeans only £12,000 from the policy of the hut-tax which forces every native to become a labourer and from the abominable Registration of Labour Acts and master and servants Ordinance under which the natives are no better than slaves. The recent protest of the whites against the natives cultivating cotton and becoming farmers and agriculturists clearly demonstrate their desire to keep them as labourers only. The whites argue that the sudden growth of wealth in the native community if they become independent cultivators will turn their heads and thus act to their detriment. I hope the natives duly appreciate the sympathy of the Whites. I mentioned the treatment of the natives to show that in fact there is nothing of solicitude for the welfare of the natives in the attitude of the whites. It is a purely selfish cry to get their object. The Convention of Association which some time ago was prepared to oppose

the Imperial Government if it decided against them, has adopted the motto, "Every European and every African is an asset to Africa, every Indian is a liability." The Indians in no way desire to deprive the natives of their rights and privileges. They are more considerate towards them than the British. But the racial hatred imported into East Africa from the South is forcing the issue to its extreme. The Indian Government had simply to protest against the Kenyan decision and this appeared to the noble Lord Curzon as a sin for the "subordinate dependency."

UGANDA, LTD

The Indians in Uganda have no great disabilities. In British Guiana, as mentioned before, there are no theoretic disabilities but in practice Indians suffer from many. In Fiji they have no municipal and political franchise. Thus it is seen that wherever the Indians are appreciable in number they are debarred from political franchise and they suffer other disabilities as well.

U S A.

So much for the Indians in the British Empire. The position of Indians in the United States is quite unsatisfactory. Their admission has long been prohibited. The Indians are not well treated socially and this is especially the case in the Southern States where the colour prejudice is very strong. The Indians are debarred from the rights of citizenship. They cannot be naturalised. The naturalisation law passed in 1790 provided that any alien being a free white person might become a citizen. The same words found place in successive naturalisation laws. Indians used to get naturalised and thus enjoy the rights of citizenship. But in 1923 the Supreme Court held in Mr. *Thind's* case that Indians cannot be naturalised as citizens because they are not included in the term "free white aliens." This acts retrospectively and all Indians who had been already naturalised lost their citizenship. It is now attempted in California that even children of those ineligible for citizenship born in the States should be also ineligible for citizenship though the 14th amendment of the constitution passed in 1870 says that all persons born in the U S A are citizens of the U S A and the State in which they reside.

that prosperity render unrest in India more difficult to control.

It is a fact, also beyond dispute that British authorities do not wish to see any large body of Indian students coming to America to attend our Universities for this reason it is very difficult for Indian students to secure passports to come to America. We hear it said that there are secret service men stationed here whose sole business is to keep watch on the Indian students and to black list those who may be inclined to expose the truth about British rule in India.

The most subtle anti Asian propagandists among us are the highly placed British visitors to America and their friends the Anglo-Americans. They preach Anglo-American friendship for World Peace and to conserve the supremacy of the White Race and to check the menace of the so called rising tide of color. Of these the most successful have been Lord Balfour Mr Baldwin Mr Lloyd George Mr Lionel Curtis Mr Philip Kerr of the Rhodes Foundation Sir Fredernel White, Sir Valentine Chirol and others. It is an open secret in America that the Australian Premier Bruce wants an understanding with America so that the latter will co operate with Great Britain when the time comes to attack Japan. For the same reason Americans are urged by Britishers like Mr Bywater not to relax control over the Philippines because they hope that some day the British Navy may make use of its harbors. For the same reason Anglo-Americans support the Singapore base because that will help Anglo-American naval cooperation in the Pacific. Only recently one of the highest American authorities on the Philippine question said that every British official thinks that any concession accorded to the Philippines by the American Government is a direct menace to British rule in India, because Indians may be expected to demand similar concessions.

History demonstrates unanswerably that nation-like individuals have a soul which is undying

but that Empires are doomed to decay. Great Britain cannot escape her doom it is merely a question of time. One hundred and fifty years ago the French philosopher Turgot when asked about the expediency of the Government of Louis XVI going to the aid of the revolted Colonies of North America answered by announcing as an unescapable law that like ripe fruit from its stem all Colonies will separate from the parent country and all subject peoples will emancipate themselves. This is unquestionably true but events may be hastened by wise handling and the results as in America in 1776 are to the advantage of all parties. Just as Ireland in 1923 the United States in 1776 so India today needs the backing of world public opinion before she can hope to rise to her true status of nationhood. The spirit of individualism which characterizes her ancient and honorable civilization and of which she is justly proud has of late so rapidly taken on nationalistic expression that a further development in the line of international consciousness is already manifesting itself. If the leaders of India wish to see their country free then this line of operation must not be neglected and it is high time that steps be taken to organize her people for action on an international scale. No true friend of India can object to see her working along every line that will aid her in the attainment of freedom.

Let India not forget that America looms large in world politics today and that Great Britain depends upon America for support. With her broken prestige as revealed in THE OTHER SIDE OF THE MEDAL it becomes absolutely certain that in order to maintain a grip upon her Empire in Asia the approbation of America must be with her something more powerful than battle-ships. If to gain this support thousands of Britishers come over to cultivate American public opinion then India must realize that she cannot ignore America.

GLEANINGS

The Painter of Children

Death occurred to Mary Cassatt on June 15 at the age of eighty three. A Pittsburgh was her birth place, and Philadelphia gave her the rudiments of her art but she had lived so long in Europe and become so identified with French art that nothing now labeled "American" can seem to be applied to her. Her recent utterance that "no distinctive school of American art exists" seems to solve her from any personal claim to alliance. Yet her fame, which has existed since the days of the great impressionists Degas, Manet, Renoir, Berthe Morisot, is too much for the American to surrender to any foreign ownership.

Mary Cassatt will be remembered as the painter

of children. She has the eyes of a painter and in a measure the mind of a sister of charity. wrote Achille Sezard the great French critic. Also she is devoted to her art as if it were a religion. On this theme he makes a further observation.

Her conception of life and art is profound and touching. One perceives that she has a strong feeling that the place of the child in human life is of limitless importance, hence he represents at one time both the present and the future is the gaze of immortality the necessary medium for the continuation of the race and its perpetuation.

When in 1874 Degas saw a canvas by her in the Salon and remarked "that is genuine. There is one who does as I do, —it was perhaps the beginning of that association in art that links her name with the impressionists. In *the Herald*

One of Mary Cassatt's portraits of a child. Her feeling was that "the place of the child in human life is of limitless importance."

Degas's portrait of Miss Cassatt. "I recognized my true masters," she said to her biographer Segard. "I admired Manet, Courbet and Degas."

Truth is a forceful editorial that may be safely credited to the distinguished critic Mr. Royal Cortissoz.

Mary Cassatt was a remarkable woman the comrade of those painters who under the banner of Impressionism achieved something like a revolution in modern art. The *mot* of Degas makes perhaps the best epitaph upon her whole career—That is genuine. At the close of the famous exhibition of 1899 in which she and the others affirmed their independence there was a surplus in the treasury. With her share of it Miss Cassatt bought pictures by Degas and Manet. That, too, was like her. She lived utterly for art.

She had the gift, the *flair* but it took time before she found herself. Going abroad while she was still a young girl to be a painter she strayed momentarily into the studio of Charles Chaplin, a graceful Salonier. Against his routine habit she promptly rebelled and sought instead the inspiration of the old masters. Rather oddly she found it first at Parma. This keen observer, this practitioner of an essentially French and modern directness whose tenderness never lured her away from the exact statement of fact actually began her apprenticeship by long saturation in the melting Correggosity of Correggio. After Italy came Spain but with a susceptibility to Rubens rather than to Velasquez in the stimulating paganism of the Prado a susceptibility so ardent that it ultimately carried her to Antwerp and intense

devotion to the works of the great Fleming yet these imitations were but preliminaries to the decisive development of her talent. That ensued in Paris

entrance of numerous fine pictures into divers American collections private and public. Her judgment on a work of art was impeccable

—Literary Digest

LADY AT TFA

The influence of the impressionists her always admired masters is well illustrated in this canvas by Miss Cassatt

The truth was her goal and the newer French exemplars of it were her predestined counsellors. She once told M. Segard her biographer what they meant to her. "I recognized my true masters," she said, "I admired Manet, Courbet and Degas. I hated conventional art. Now I began to live. The important point about this period in her life too, is that she began to live as an individuality. Her associations never submerged her originality. There was an organic energy in her art. Even on what was in a sense her real debut, in 1890, Gauguin could scarcely say of her, 'Miss Cassatt has much charm.' But she has more force. That force lifted her to high rank. It was as an equal that she forced herself with the Impressionist group. She and Degas were colleagues."

It is an amusing paradox in her history that her force, her penetrating vision, her technical clarity were wreaked largely upon the most fragile of themes. She excelled in pictures of children and their mothers. But her sentiment couldn't have drifted into sentimentality. She had too fire a mind. She had too much taste. Apropos of her taste, it should be added that she was a most judicious connoisseur and had to do with the

Cuff Link Watch—the Latest Style in Timepieces

This latest mode of wearing the watch has been introduced in Germany as a substitute for the wrist watch. It is a cuff link time piece, and fairly accurate in spite of its diminutive size, it is claimed. One advantage it has over the wrist watch is that the shirt sleeve doesn't have to be

Cuff Link Watch

drawn up part way to the elbow in order to see where the hands are pointing. The link on the other side is hinged and folds flat against the connecting bar to permit easy insertion through the button holes.

Portraits drawn on Typewriter

Some time ago we invited the attention of our readers to a picture drawn on a portable typewriter by a Bengali gentleman named Babu Gopinath Ghose

Lokamanya Tilak

not gun loaded with tear gas under 1800 pounds pressure, sufficient to send a mob of 2000 men home weeping bitterly.

There was a light machine gun with a demountable stock so that it could be turned into a revolver capable of firing several hundred shots in a minute, or throwing an incendiary bullet that would explode the gasoline tank of a bandit car.

Short Barreled Gun Top Can Be Fired
through the Pocket

and send it up in flames almost before the occupants could tumble out.

There was a new model revolver designed at the request of Chicago's police chief for special

use of plainclothes men. It was a 38-caliber gun firing 200 grains of lead but with a barrel so short that it slips into the coat pocket and can be fired through the coat without stopping to draw it.

There were tear gas cartridges for revolvers—one of them stopped 150 angry gamblers in a single raid one night—bullet proof vests that enable a man to walk right up to a spitting revolver hand grenades in different colors, four of them each color signifying the contents, which ranges from a mild little sneezing gas for mixed mobs containing women and children to the strongest of tear gases for barricaded desperadoes. There were motorcycles with armored shields and bullet proof glass windows their sidecars equipped with machine guns and sawed off riot guns.

There was a suitcase handle for bank messengers bags, harmless so long as the owner holds it but throwing out clouds of tear gas if any unlucky bandit should force the messenger to drop the bag and a briefcase for bond messengers that worked the same way.

A pretty little desk ornament, sometimes in the form of a lizard or modeled after a racing greyhound turned out to be a gas bomb. Connected to a radio C-battery with wires and switches at each door and window it is designed to protect your house from burglars or placed on the cashiers counter with a foot button on the floor it will guard against holdup men.

Two neat little nickelplated devices which might be mistaken for some new kind of automobile ventilator were screwed on a car in place of the cowl lights. A button on the floor connects them to a tank of gas and when pressed distributes blinding tears among all within a twenty foot range on either side of the automobile.

The exhibits of devices for fighting crime were many and varied but even more space was devoted to traffic-control equipment—something the old fashioned policeman with his locust stick never heard of. There were automatic lights of a dozen varied kinds metal markers that can be driven into the pavement and will last for years new kinds of paints for traffic signs guaranteed to stand up for weeks under constant heavy traffic and signs that come stuck together like fly paper and are unrolled slapped down and left for the passing auto tires to iron into place.

IN AN INDIAN GARDEN

By E. E. SPEIGHT

Cities and palaces arise
From the golden sea as the daywind dies
Shadows lengthen flowers lose
In twilight calm their lustrous hues
The thirsty gardens breathe again
As though they had a dream of rain
And through the floating fragrance pass
Tawny figures treading the grass

Naked and noiseless, as they bear
The boon of water everywhere—
Earthen jars of gourd like mould
Devised in the deep days of old.
On herb and root they deftly fling
The gleaming gift of life they bring
All unaware of wanderers eyes
And their delight as the daywind dies.

THE COLLEGE OF FORT WILLIAM

By BRAJENDRANATH BANERJEE

THERE have been many great empires in the world, but sooner or later they have all perished. The Roman empire lasted long because it was the rule not of a family but of a whole nation. Such also is the modern British empire in India: it has been created and maintained by the genius, energy and perseverance of the British race. Therefore the fate of this empire naturally depends upon the intellect and character of the Englishmen, Scotchmen and Irishmen who come out to rule India as civil servants and military officers.

The British Indian empire was not in its origin a deliberately planned thing. It grew up almost accidentally without any far-sighted preparations at first. But after its establishment, as soon as the neighbouring Powers had been corbed (by Clive) a new administrative system had been set up (by Warren Hastings) and the vexatious question of land revenue settled permanently (by Cornwallis) a great genius and true imperialist came to govern India. He was the Marquis of Wellesley. On the one hand he greatly expanded the boundaries of the East India Company's dominions and made the British Power paramount over almost all the Indian princes. And on the other hand he carefully planned to give permanence to that empire by improving the efficiency of the English administrators and thereby enlisting the interest and affection of the people on the side of their foreign rulers. A trading company had suddenly become the ruler of millions of men and thousands of square miles, but its servants were still chosen for the purposes of trade and not trained for the work of government. Wellesley saw this weak point in the British imperialism of his day and set himself to remedy the evil with his characteristic energy. He tried to make the raw young civil and military officers of the Company fit for their task by first teaching them the laws and languages of the people thoroughly and also improving their general education in a college directly under his control.

The internal decay of the Mughal empire and the corruption of the old civilization and government of the country which reached their climax about the middle of the 18th century had first tempted the E. I. Company's chiefs in Bengal and Madras to throw away the pen for the sword and to embark on a policy of empire-making which promised to be at once easy and profitable. But this same moral decay of the country threw a heavier burden upon the English administrators who replaced our native rulers. As the authorities in England were slow in directing their agents in India to undertake the open and full government of Bengal and the Company's factors and clerks were unfit to act as magistrates, judges and ambassadors—the newly conquered provinces of Bengal and Madras had to pass through the terrible misery of a period when the English in India enjoyed power without responsibility. For the good of the people as well as for the permanence of British rule in India it was imperatively necessary that India's new masters should be properly educated. Wellesley's statesmanship lay in seeing this need clearly and carrying out the necessary reform without waiting for the Directors' sanction.

FOUNDATION OF THE COLLEGE OF FORT WILLIAM

Lord Wellesley came to Bengal in May 1798 as the arbiter of the destinies of millions of people of various languages, manners, usages and religions. The British possessions in India then formed one of the most extensive and populous empires in the world and included Bengal, Bihar, Orissa and Benares, the Company's jagir in the Carnatic, the Northern Circars, the Baramahal and other districts ceded by Tipu at the peace of Seringapatam in 1792. These most opulent and flourishing parts of India were under the more immediate and direct administration of the European civil servants of the East India Company.

But the qualifications of the civil servants in Bengal—and still more in Madras and Bombay—seemed to His Excellency very

unsatisfactory, and his immediate attention was drawn to their improvement. He felt that the evil arose principally from a defect at the source and fountain head of the service, viz the education and habits of the junior civil servants sent to this country. The age at which they usually arrived in India was between 16 and 18 years, and the education received by them at Home was confined to commercial and mercantile studies, so that their ignorance of the languages, laws, usages and customs of the people whom they had to govern was lamentable.

As a remedy for these defects Wellesley realized that, in order to qualify for the discharge of their duties, which were of a mixed and complicated nature and involved the combined principles of Asiatic and European policy and government,—the education of the junior civil servants must be of a mixed nature, its foundation must be judiciously laid in England, but the superstructure must be systematically completed in India.

The following remarks of the Governor-General on the magnitude and importance of the duties of the European civil servants are still of interest to us —

"The duty and policy of the British Government in India require that the system of confiding the immediate exercise of every branch and department of the government to Europeans, educated in its own service, and subject to its own direct control, should be diffused as widely as possible, as well with a view to the stability of our own interests as to the happiness and welfare of our native subjects. The civil servants of the English East India Company can no longer be considered as the agents of a commercial concern. They are in fact the ministers and officers of a powerful sovereign; they must now be viewed in that capacity with reverence, not to their nominal but to their real occupations. They are required to discharge the functions of Magistrates, Judges, Ambassadors, and Governors of provinces. Their duties are those of statesmen in every other part of the world, with no other characteristic differences than the obstacles opposed by an unfavorable climate, by foreign language, by the peculiar usages and laws of India, and by the manners of its inhabitants. Their education should be founded in a general knowledge of those branches of literature and science which form the basis of the education of persons destined to similar occupations in Europe. To this foundation should be added an intimate acquaintance with the history, languages, customs and manners of the people of India with the Muhammadan and Hindu codes of law and religion and with the political and commercial interests and relations of Great Britain in Asia. They should be regularly instructed in the principles and system which

constitute the foundation of that wise code of regulations and laws enacted by the Governor-General in Council for the purpose of securing to the people of this empire the benefit of the ancient and accustomed laws of the country, administered in the spirit of the British constitution. They should be well informed of the true and sound principles of the British constitution and sufficiently grounded in the general principles of ethics, civil jurisprudence, the law of nations, and general history in order that they may be enabled to discriminate the characteristic difference of the several codes of law administered within the British Empire in India and practically to combine the spirit of each in the dispensation of justice, and the maintenance of order and good government. Finally, their early habits should be so formed as to establish in their minds such solid foundations of industry, prudence, integrity, and religion, as should effectually guard them against those temptations and corruptions with which the nature of this climate, and the peculiar depravity of the people of India will surround and assail them in every station, especially upon their first arrival in India, nor should any precaution be relaxed in India, which is deemed necessary in England, to furnish a sufficient supply of men qualified to fill the high offices of the State with credit to themselves and with advantage to the public. Without such a constant succession of men in the several branches and departments of this Government, the wisdom and benevolence of the law must prove vain and inefficient."

The importance of the mastery of Indian languages by the European civil servants was recognized by Wellesley so early that a few months after his arrival in this country he had issued a notification (21st December 1798) directing that from and after the 1st January 1801, no civil servant would be deemed eligible to any of the following offices unless he had passed an examination in the laws and regulations enacted by the Governor-General and in the languages, a knowledge of which was declared to be an indispensable qualification for them —

Persian and Hindustani for the office of Judge or Register (sic) of any Court of Justice.

Bengali for the office of Collector of Revenue or of Customs or Commercial Resident or Salt Agent in the provinces of Bengal or Orissa.

Hindustani for the office of Collector of Revenue or of Customs or Commercial Resident or Agent for the provision of opium in the province of Bihar or Benares.

The College of Fort William was founded by Wellesley in 1800. He was so eager to see the College at work, that he opened it and appointed the teachers without waiting for the sanction of the Court of Directors.

at Home. The actual opening of the college dates from the 14th November 1800 on which date lectures commenced in the Arabic, Persian and Hindustani languages.

THE COLLEGE STARTED

The Governor General was to be the Patron and Visitor of the college. The members of the Supremo Council and the Judges of the Sadar Diwani and Mizamat Adalats were to be its Governors. The posts of Provost and Vice-Provost were conferred on the Revd. David Brown, and Revd. Claudius Buchanan A B.

The primary duties of the Provost were to superintend and regulate the general morals and conduct of the junior civil servants.

The following were the first Professors appointed to the college —

For teaching the Laws and Regulations enacted by the Governor General in Council etc. for the civil government of the British territories in India. G H Barlow

(John Herbert Harington succeeded Barlow in 1801)

Hindu Law and Sanskrit	H T Colebrooke
Hindustani	John Gilchrist
Persian Language and Literature	N B Edmonstone
Arabic and Persian languages	Francis Gladwin
and Muhammadan Law	Lt. John Baillie
Greek and Latin Classics	Revd. Claudius Buchanan
Bengali and Sanskrit	Revd. William Carey
	1st May 1801
Tamil	Revd. J. Poetzold
Natural Philosophy	Dr. James Dinwiddie
	4 March 1801
Modern Languages	Monsr. Duplessis
	5 March 1802

(Matthew Lumsden appointed assistant to Lt. Baillie as Examiner in Persian 11 May 1801)

The establishment of maulvis and pandits was on a very liberal scale. The Arabic, Persian, Hindustani and Bengali Departments had each a Chief Munshi on a salary of Rs. 200 a month, and a Second Munshi on Rs. 100 a month. There were besides 50 subordinate munsis — 20 for the Persian Department, 12 for the Hindustani, 6 for the Bengali at Rs. 40 each, and 4 for the Arabian Department.

The teachership of the Braja bhasha was offered to Lalla Lal Kavi in February 1802, and that of the Marathi language to Vaidyanath—a Marathi Pandit, in February 1804, under the superintendence of W. Carey. For some important stations in the diplomatic service of the Company, proficiency in Marathi was considered an essential qualification.

The Bengali and Sanskrit Department was placed under the following heads —

Professor	Revd. William Carey, D.D.
Chief Pandit	Vruttunjoy Vidyalkar
Second Pandit	Ramnath Bachaspati
Subordinate Pandits	Sripati Mukherji
	Ananda Chandra
	Rajh Lochan
	Kashinath
	Padmalochan Churamani
	Ram ram Bose

It may interest the reader to know that Pandit Ishwar Chandra Vidyasagar was appointed Sherishtadar of the Bengali Department of this college on 29th December 1841. This was the starting-point in the public career of the greatest educationist of modern Bengal.

The Provost, Vice Provost and all the Professors after completing 7 years' service in the college, were entitled to pensions, the amount of which should in no case be less than one third of their salary, for the rest of their lives.

WHO WERE TO BE TAUGHT

The benefits of the institution were primarily extended to all junior civil servants newly appointed to the Presidency of Bengal, and to all those on the Bengal Establishment who were of less than three years' standing. They were to spend a term of three years at the college during which their sole public duty was to undergo the prescribed studies. Similar privileges were given to the junior civil servants of Madras and Bombay as, from considerations of both expense and uniformity, it was thought undesirable to establish similar colleges at Madras and Bombay. Provision was also made for the newly arrived military cadets of the Company to be admitted to the College of Fort William. This was the first step towards the regular instruction in Hindustani of the officers belonging to the native corps.

Every student in the college of less than three years' standing used to receive a fixed allowance of Rs 300 a month, with free quarters and board.

The college year was divided into four terms of two months each, with four vacations of one month each. The following list shows the number of students attending lectures in the different subjects in the third term of 1801—

Persian language	36
Arabic	8
Hindustani	32
Bengali	6
Modern languages	6
	88

The older civilians and military officers who had mastered the laws and languages of this country were to be selected for diplomatic and judicial appointments.

PROMOTION OF LEARNING

It was Wellesley's intention to make the study of Oriental literature and law the principal aim of the College of Fort William. In order to facilitate the acquisition of the different Indian vernaculars by the students, text books in these languages were composed and a number of useful Oriental works were published by the college staff, either at the expense of the Government or with the help of subscriptions from it. Learned Indians received money rewards from the College Council for producing useful literary works.

A copious library, it was thought, would be of material help to the Professors and students alike in promoting the study of the languages. The College collected many valuable printed books in Oriental languages and rare Arabic, Persian and Sanskrit MSS. The downfall of the Mughal empire had led to the masterpieces of eastern learning being dispersed over India and exposed to the ravages of time, accident and neglect. They were now recovered and carefully preserved in the library of the college where expert orientalist soon undertook to edit and print many of them. In this way the college benefited the scholarly world in general in addition to preparing the Company's officers for their duties. The splendid manuscript collection of Tipu Sultan was originally deposited in the college library, but with the solitary exception of one MS all the others were afterwards withdrawn from it

and transferred to the Libraries of the India Office, London, and the Asiatic Society of Bengal.

In its early days the college used to lend books out, but in consequence of the loss of many volumes the practice was discouraged and on 1st August 1807 a resolution was passed by the College Council imposing restrictions on the borrowers. Such learned natives as had occasion to consult books, or to make extracts, were required to visit the college for that purpose. No book was to be taken away from the library by any native, excepting such works as he might be employed by order of the College Council to translate, and even in that case a special order from the College Council under the signature of the Secretary was required before any book could be issued. In 1833 the number of European printed books was about 5,224, Oriental printed books about 11,718, and Oriental manuscripts—some of which were highly illuminated and of great rarity—4,225.

ITS ORIENTAL PUBLICATIONS

It may interest the reader to know that Bengali prose began long before Pandit Ishwar Chandra Vidyasagar. To satisfy the curious reader I give below particulars of some of the Bengali books which were published under the patronage of this College—

1. *Pratapaditya charitra*. History of Rajah Pratapaditya from the beginning of the reign of Akbar to the end of that of Jahangir by Ram ram Bose (1801). The author who was a subordinate pandit in the Bengali Department of the college received a reward of Rs 300 for its composition from the College Council. He also published in 1802 *Lajmala* an original composition in Bengali prose in the epistolary form.

2. *Rajah Krishnachandra charitra*. The History of Rajah Krishnachandra Roy of Krishnagar containing the correspondence between the Rajah and the English in the early period of their intercourse with Bengal published by the Serampur Mission Press in 1806. The author, Rajib-lochan was a subordinate pandit in the Bengali Department of the college and was himself a descendant of the Rajah's family.

3. *Baitrish-singhasan* translated from the original Sanskrit by Mr. Tintunjoy Vidyalankar, the

* In 1836 the Oriental MSS. were transferred to the Asiatic Society of Bengal the Society undertaking their upkeep and allowing the public to consult them. At the same time the European printed books belonging to the college were made over to the newly constituted Public Library on certain conditions.

Chief Pandit in the Bengali Department of the college (Serampur 1808)

4. *Riyasat* or a history of the Kings of Delhi and a *General History of the Hindus* were also composed by Mittinjoy Vidyalankar

5. *Purusha Pariksha* or the Test of Man a work containing the moral doctrines of the Hindus translated from the Sanskrit by Haraprasad Rai a pandit attached to the College (1815)

6. *Dialogues intended to facilitate the acquiring of the Bengali language* (1801) and a *Dictionary of the Bengali Language* (1813) were published by the Revd. William Carey in 1815

Apart from the grammars, books of fable, ethics, etc., which were specially composed as class books, other works of great utility and merit in the Sanskrit, Arabic, Persian, Marathi and other languages were published and the public are indebted to this institution for much addition to the general stock of knowledge. Many improvements were introduced in the various branches of Oriental printing, such as the casting of a new and improved font of Devanagari type for the Sanskrit books under the superintendence of Carey. It is with satisfaction that we find among the literary notices of the college under date 26 July 1805, that the Asiatic Society of Bengal went into half shares with the college in granting an annual stipend of £450 to the Protestant Missionaries of Serampur towards defraying the expenses of publishing the original texts of some of the most ancient and authentic Sanskrit works with English translations. The *Ramayana* was the first book to be published under this scheme.

CONVOCAATION

On the convocation day, which generally fell in the month of February, disputations in the Oriental languages were held by the students appointed by the College Council. There were one respondent and two opponents. The respondent defended a position asserted by himself in the course of a short thesis, while the chief opponent advanced four arguments and the second brought two against the respondent's proposition. Each opponent, after he had finished his arguments, had to read a short thesis stating his own opinion on the subject. A professor or examiner was appointed as moderator whose duty it was to stand by the respondent, to regulate the discussion in order that it might be conducted with becoming propriety and to confine the parties to the question. It is interesting to note that this was similar

to the practice which is still followed by indigenous pandits all over India, and which also used to prevail in the Universities of mediæval Europe.

The subjects of these disputations were very interesting, such as —

BENGALI

The distribution of Hindus into castes retards their progress in improvement (1803)

The translation of the best works extant in the Sanskrit into the popular languages of India, would promote the extension of science and civilization (1804)

A knowledge of the Bengali language is of great importance for the transaction of public business in Bengal (1807)

HINDUSTANI

The suicide of Hindu widows by burning themselves with the bodies of their deceased husbands is a practice repugnant to the natural feelings and inconsistent with moral duty (1803)

The Hindustani language is the most generally useful in India (1802)

PERSIAN

An academical institution in India is advantageous to the natives and to the British Nation (1802)

The Persian language is of more utility in the general administration of the British Empire in India than the Hindustani (1803)

Essays* or declamations were also pronounced on the Convocation day in Marathi, Sanskrit, etc. In 1806 and 1808 the subjects of the declamations in Marathi were *Fall of the Maratha Empire*, and *The Utility of the study of the Maratha Language* respectively.

When the disputations ended His Excellency the Visitor awarded to the students who had completed their three years' course of study, the Honorary Diploma inscribed on vellum in the Oriental character, purporting that the students had acquired such Proficiency in certain of the Oriental languages as entitled them to a Degree of Honour in the same. In addition to a Certificate of Proficiency and conduct, which every student received from the College Council, Degrees of Honour were considered requisite qualifications for certain high offices. Attested copies of such certificates were required to be submitted to the Visitor to be entered on the public records of Government.

After the distribution of prizes and diplomas the Visitor generally delivered a

* Every student was required to compose one essay or declamation in English during the course of each term the subject of such essays being proposed by the College Council. The first three essays of each term and the theses pronounced at the public disputations in the Oriental languages were printed in Calcutta for the years 1802 &

THE HISTORIAN RAJWADE

By JADUNATH SARKAR

I

THOUGH he had been dead to history for the last eight years and had made philology and sectarian theology the sole pursuits of the evening of his life,—the news of the actual passing away of Vishwanath Kashinath Rajwade on the 31st of December, 1926, has come as a painful shock to all who really know and care for Indian historical studies. The greatest discoverer, the life-long searcher, the exclusive devotee without a second love, the most fruitful collector of the raw materials of Maratha history,—and at the same time their most painstaking (if occasionally inexact or perverse) editor and their most speedy and prolific publisher,—has been lost to us for ever. Time may bring forth others to carry on his work, but they will be mere Epigoni,—a tamer race of the after born, scanty gleaners after his copious harvest, not one of them will devote,—as Rajwade devoted—all thoughts, all passions, all interests of a long mateless professionless life to the ceaseless touring of all possible and impossible "find spots" of historical records, amidst hopeless lack of transport, discomfort, privation and friendlessness, in the teeth of ignorant hostility and suspicion, neglect and inertia from a local public whom he had to humour, coax, educate, and when necessary delude.

Rajwade was a penniless collector,—slighted by the rich whose score he flung back in double measure in the spirit of a Diogenes,—suspected and (as he fancied) hampered by the instruments of law and order against whom he railed without bound, without season, like one possessed. But his actual performance, in spite of the severe handicaps of his fortune, temper and environment, was wonderful. He was our pioneer *par excellence*. He not only blazed the trail for us, but he was also the most daring, the most indefatigable, the most

extensive and continuous digger in our historical "realms of gold."

True, K. N. Sane had got possession of a bundle of Marathi historical letters and V. V. Khare had set himself to examine the old Patwardhan sardars' archives earlier and had actually begun the publication of their records some years before Rajwade sent his first of volume State papers to the press. But the former two had found their materials ready to hand and could do their copying and editing comfortably at home. Rajwade, unlike these, was the adventurous explorer. He was the true "wandering scholar," the typical Brahman mendicant-pilgrim (vowed, however, solely to Saraswati) roaming all over the land year after year in quest of every obscure shrine and sanctuary of his adored Goddess of History. Every scrap of old paper he found was a sacred relic to him in his careful handling and meticulous annotation of it.

II

In his passion to save and publish the raw materials of his country's history, he disregarded the laws of ownership—the unnatural ownership of the ignorant and the unworthy. He carried on his own shoulders the bundles of historical papers that he could beg borrow or steal, (or more correctly wheedle out of ignorant villagers),—and deposited them in secret refuges selected by him. These places were never made known to the public, and they cannot be learnt from his friends,—because that eager, uncompromising, solitary spirit had no friend, at least not for long. He had, after a time, parted company with every body who had befriended him, his collaboration with other Marathi historical workers had been broken off by his acrid criticism of them in public. But no such devoted explorer, collector and editor of MSS. has been known since the days of the

Renaissance in Europe His finds were, no doubt, more modern, their world-value far less, but the difficulties he had to surmount were infinitely greater

III

Vishwanath, the son of Kashinath Rajwade, was born at Vadgaon (some miles north-west of Puna) on 12th July 1864. He has given a graphic account of his school life with a rather lurid picture of the condition of private schools in Puna in those days in an autobiographical paper of his *Santarna Lekh Sangraha*. At the age of twelve (1876) he began to learn English, but left school after only four years, and finally returned to his village home, whence he passed the Matriculation examination (January 1882) as a private candidate. His college career was equally interrupted and unduly prolonged, not for any intellectual deficiency but for his financial difficulties and wayward and reckless temperament. In January 1891 he took his B.A. degree, thus spending nine years in finishing a course that normally requires three years only. But the time was not misspent. He read extensively and attentively in the Deccan College (Puna) library, and in addition studied Botany at Bhawe's school for a year and a variety of additional subjects which were not strictly required for securing the B.A. degree.

At College he shunned delights and lived laborious days. He used to row five to seven miles on the river every evening, and by plain living and gymnastics acquired excellent health and staying power. In the seven years from 1884 to 1890 I was not ill for a single day."

At College, though he neglected in preparation for his examinations, his favourite studies embraced practically every branch of knowledge in which books were available there,—European history, economics, ethics, politics, theology, logic, mental philosophy, all old and new, original and translated works. In addition he acquired an elementary knowledge of Persian and French.

Rajwade had been married young, but he lost his wife just after graduation, and never married again, though a year before his death he vainly searched for a new helpmate to smooth the last days of his life.

At first he took to teachership as a profession, but it was for three years only. Next he started with a friend a monthly magazine named

Bhashantar (Translation)¹ in 1895, in which he began to publish his Marathi rendering of Plato's *Republic* and Montesquieu's *Esprit des Lois*. The venture perished in a short time in a fire which destroyed the press and all its materials. Freed from worldly ties by his wife's death, freed from business concerns by the fire in the press, Rajwade now devoted himself, in the spirit of a true *sannyasi*, to his life's work, the reconstruction of his race's history on an enduring basis. As early as 1888 he had first conceived the idea of correcting the 'thousands of errors' in Captain Grant Duff's *History of the Marathas* by research among original materials. To this task he was inspired by reading the original historical letters printed in the series called *Kavya etihās Sangraha*, and to this task he consecrated his remaining days.

Vishwanath K. Rajwade, B.A. 1864-1926

IV

The older generation of Maratha scholars had put their faith in unauthentic chronicles, formal histories, and later narratives. Rajwade, with an impatience and contempt which he cared not to conceal—pointed out that original contemporary documents, or state papers proper, were the only reliable materials of

speech Wellesley had the satisfaction of being present, as Visitor of the College at three annual convocations, when he listened to the public disputations and delivered his own addresses, from which the following interesting extracts are quoted

WELLESLEY'S IDEA ABOUT THE COLLEGE AND ITS FUNCTIONS (AS SET FORTH IN HIS SPEECHES)

In the difficulties and dangers of successive wars, in the most critical juncture of arduous negotiations in the settlement of Conquered and Ceded Provinces in the time of returning peace, attended by the extension of our trade by the augmentation of our revenue and by the restoration of public credit I have contemplated this institution with conscious satisfaction and with confident hope. Observing your auspicious progress under the salutary operation of the Statutes and Rules of the College I have anticipated the stability of all our acquisitions and the security and improvement of every advantage which we possess.

From this source the service may now leave an abundant and regular supply of public officers duly qualified to become the successful instruments of administering this Government in all its extensive and complicated branches of promoting its resources in peace of maintaining its honour and respect its external relations with the Native Powers and of establishing (under a just and benignant system of internal administration) the prosperity of our finances and commerce, on the solid foundations of the affluence, happiness, and confidence of a contented and artful people.

The necessity of providing such a system of education was not diminished by the numerous instances existing in the Company's service of eminent Oriental learning and of high qualification for public duty. A wise and provident Government will not rest the public security for the due administration of affairs on the merits of any number or description of its public officers at any period of time. It is the duty of Government to endeavour to perpetuate the prosperity of the State by an uniform system of public institution and by permanent and established law to transmit to future times whatever benefits can be derived from present example, of wisdom, virtue and learning.

It has been a principal object of my attention to consolidate the interests and resources of the three presidencies to promote in each of them a common spirit of attachment to their mutual prosperity and honour to assimilate their principles, views, and systems of Government and to unite the co-operation of their respective powers in the common cause, by such means as might facilitate the administration of this extensive Empire in the hands of the Supreme Government.

The Professors and Teachers of the Persian, Arabic, Hindustani, Bengali, Sanskrit and Tamil languages are now diligently employed in composing grammars and dictionaries and in preparing translations and compilations for the use of the students in their respective departments. The operation of these useful labours will not be confined to the limits of this institution or of this Empire. Such works tend to promote the general

diffusion of Oriental literature and knowledge in every quarter of the globe (*March, 1803*).

Considerable exertions have been employed during the last year in publishing elementary works of general utility in the Sanskrit, Bengali, Hindustani Arabic and Persian languages. A grammar of the Tamil language has also been composed in this college. Great improvements have been introduced in the art of printing the Oriental characters, by native artists and several of the learned natives are employed in publishing various works of Oriental literature under the aid derived from the improved art of printing.

The intention of the Statutes is not only to provide instruction in the Oriental languages, and in the several branches of study immediately connected with the performance of official functions, but to prescribe habits of regularity and good order. My principal purpose in founding this institution was to secure the junior servants of the Company from all undue influence in the discharge of their official functions and to introduce them into the public service in perfect freedom and independence exempt from every restraint, excepting the high and sacred obligations of their civil moral and religious duty.

With this salutary view, the Statutes furnish the means and enforce the necessity of acquiring that knowledge, without which, every public officer must become dependant upon the influence of those whom he is appointed to control.

The high character of the East India Company, the fame and glory of our country in this remote region demand from you a correct observance of all those rules which have been framed for the purpose of securing you against the evils of ignorance, indolence, and extravagance, and of qualifying you in knowledge, in freedom in virtue, and honour to administer to these populous and opulent provinces the blessings of a just and honest British Government. (*September, 1804*)

The study of the Muhammadan and Hindu codes of law will be facilitated by the works extant on those subjects, to which the attention of the students should be carefully directed. In the course of the present year, I trust, that a considerable progress may be made with the aid of the learning and skill of the principal judicial officers of this Government, in establishing a regular course of study in the Muhammadan and Hindu codes of law.

But the accurate study of the regulations, and laws of this Government under the guidance of the respectable and learned Professor in that department, will afford ample opportunity of advantage and distinction to those students who shall pursue such a course with diligence and attention.

The due administration of just laws within these flourishing and populous provinces is not only the foundation of the happiness of millions of people, but the main pillar of the vast fabric of the British Empire in Asia. The main-spring of our Empire is situated here and it is supplied and guarded by the laws and regulations of this Government. From the prosperity of these provinces are derived all the sources of our revenue and commerce and public credit and the origin and stability of that prosperity are to be found in

the code of laws which you are now directed to study and hereafter designed to administer to expound, and to amend. (February 1805)

THE FATE OF THE COLLEGE

The Court of Directors had not Wellesley's statesmanship or foresight, moreover, their one anxiety was to maintain the financial solvency of British India. They could not fully realize the usefulness and importance of an institution like the College of Fort William which had been founded by Wellesley without any previous reference to them. In their Public letter, dated 27th January 1802, they directed the immediate abolition of the college and the re-establishment, on an enlarged scale, of Mr Gylchrist's seminary which it appears, was in existence in 1799. The Court's letter was written under an apprehension of a considerable embarrassment in the Company's finances, although Wellesley assured the Court in his letter of 30th July 1801 that he had actually provided for the current expenses of the college (estimated at 4 lakhs per annum) by new resources altogether, viz, by the revival of town duties and Government customs. The Court's orders were received by Wellesley with the deepest regret, but he was a strong man and stoutly defended his case in a lengthy letter to the Court, dated 5th August 1802 which he hoped would induce his masters to let the college continue as he had designed it.

The Court, however, modified their decision to some extent and on 2nd September 1803 directed the continuance of the college until further orders, the Madras and Bombay writers being excluded from it.

According to this reduced scale, which came into force from January 1807, the offices of the Provost and Vice Provost were deemed unnecessary, all requisite superintendence might be found in the Professors or in occasional visitations of the Governor General or the Members of the Council. The number of pandits and munshis was curtailed and the European establishment of the college henceforth stood as follows

Capt. Bailie Professor of Persian and Arabic	Rs. 1500
Capt. Moutat, Professor of Hindi taat	1000
Mr W. Carey, Professor of Bengali, Sanskrit and Marathi	1000
Dr W. Hunter Secretary and Librarian	1000
Mr Matthew Lunnon, Examiner	500
It. Macdougall Examiner	500

The Court of Directors, in their Public

letter dated 21 May 1806, declared their intention to found a college at Haileybury near Hertford upon an enlarged scale, where the writers, destined for public service in India, would not only receive instructions in all the most useful branches of European learning but would also be enabled to acquire a competent knowledge of Oriental languages. But as it might not be practicable for the students at Haileybury to attain as perfect a knowledge in Oriental languages as could be wished for, their education was left to be completed in India for which purpose the College of Fort William was ordered to be run on a moderate scale of expense. The Directors thought that the writers, after they had gone through a course of education at Haileybury, would be able to complete their studies in the Oriental branches in one year at the College of Fort William, provided they devoted their time and attention exclusively to this object.

In accordance with the Court's instructions Mr Abdul Ali and Mirza Khali were appointed in 1807 on a yearly salary of £600 and a passage to England to teach Persian and Hindustani at the Haileybury College which continued for nearly half a century.

Still further reductions of establishment were in store for the College of Fort William. Lord William Bentinck, acting upon the suggestions of the Civil Finance Committee, made a radical change in the system of the college. From 1st June 1830 the establishment of the college was confined for the future to a Secretary and three Examiners (Capt. Price, Lt. Ouseley and Lt. Todd) with the requisite number of pandits and munshis under the Secretary for the instruction of the students. Lectures for the students were discontinued, and the offices of the three Professors together with the munshis and pandits attached to them respectively were abolished Carey receiving a pension of Rs. 500 per mensem. Finally in January 1854 the college was merged in the Board of Examiners.*

* For a detailed history of the College of Fort William, see Proceedings of the College of Fort William—Home Dept. Miscellaneous No. 559/77 (one of the proceedings volumes are missing but the information contained therein can be supplemented from the proceedings of the General Department now in the Board Government's Record Office.) Capt. Roberts' diary of the College of Fort William Calcutta 1819. Rules and Regulations of the College of Fort William, 1811.

history Even before the close of the 19th century he had been seized with the passion for *documents inédites* which began to rage in France and England only a decade later His college life all spent from the point of view of the ordinary degree seeking student, had admirably equipped him for this task both in body and mind

He constantly travelled throughout India from Rawal Pindi to Cape Comorin and from Karachi to Benares In Maharashtra he visited almost every village walking on foot

Vishwanath Kashinath Rajwade. Aged 61 years

—partly from poverty and partly from an obstinate desire not to enrich the British by patronising their railways! He was not troubled by the need of carrying any baggage or even cash or credit money At College he used to enjoy a sound sleep on two tables placed together with only a horse blanket thrown over them and during his village tours he received free meals as a poor Brahman pilgrim Indeed with a grim humour he once entered his profession in the Census return as 'mendicancy'

His quiet yielded immediate and striking results His first volume of historical

letters, published in 1898 with its long careful complete and learned introduction at once established his fame as the foremost historical worker in Maharashtra This volume started the series of *Original Materials for the History of the Marathas* (*Marathanchi Itihasanche Sadhanen*) of which there were to come forth twenty-one more before his death It contained 304 historical letters ranging in date from 1750 to November 1761 or eight months after Panipat and is an invaluable source for the history of that fatal battle and the events leading up to it, as seen from the Maratha camps and courts

Rajwade had rescued a bundle of waste paper from a dry grocer's shop at Panthan it yielded 23 of these precious letters (in the original) 25 more were supplied by Vashudev Vaman Khare a poor school master of Miraj 75 by Govind Rao Bhanu of Wai and 183 by Mr Yerande whose ancestor had served in Bundelkhand and the Doab in the Panipat period These last, along with 518 other papers had been kept in a cane basket in the lumber room of their family mansion at Wai in peace and neglect for nearly a century and a half till April 1897 when Rajwade opened them

The introduction to the volume covers 127 printed pages and is full of varied information restrained in tone, and free from verbosity It strikes me as the best introduction he ever wrote as it avoids the irrelevant prolixity which became a besetting sin with him in his old age when his introductions exceeded his texts in length and dealt with every conceivable subject under the moon

But neither this volume nor any of its successors was a financial success On the first volume he incurred a debt of Rs 1400 (a part of which was due to a fire) Friends of learning like the Chiefs of Miraj and Lachal Karanj, gave some help Prof Bije purkar printed five of the volumes at his own expense at a cost of Rs 2100 and gave the author 50 copies of each on the sale of which Rajwade lived! Thus he got only Rs 600 out of these books as he tells us in the preface to his sixth volume During his travels in search of historical papers up to 1905 Rajwade piled up a debt of Rs 500 though he lived like a hermit But the work went on It is the most glorious example in our own days of the triumph of the human spirit and true devotion over every

obstacle on earth. The sannyasis *sadhana* has won for him the realisation of his soul's quest, in spite of the world the devil and the flesh.

Rajwade's literary output forms 22 volumes of materials (*sadhanen*) six volumes of other historical works and six volumes of miscellaneous papers. There is hardly an issue of the annual *Compte Rendu* and *Conference Report* of the Puna Itihas Mandal that is not enriched with his learned and informing papers.

Later in life Rajwade left the Puna Itihas Mandal—he could not long agree with anybody—and joined the Ramdasi sect at Dhulia. His later writings and discoveries mostly appeared in the two monthlies *Itihas ani Atihasi* and *Ramlas*. His latest undertaking left incomplete at his death was a gigantic dictionary of the verb roots in the Marathi language of which he collected about 20,000 examples. We pass over his philological studies and excursions into the history of ancient Aryan culture colonisation and ethnology as whimsical or hypercritical like Tilak's ventures into the same field.

VI

In politics Rajwade was typical of a certain section of the Chitpavan or Puna Brahmins. As his friend and admirer Dr. S. V. Kettar writes—

"Mr. Rajwade believed in the racial superiority of the Chitpavans (his own community) and thus indulged in many controversies. He once told me that he had taken the count of the first rate men in India during the 19th century and mentioned among them the names of Nana Saheb [of Bithur] and Tatya Tope of the famous Indian Mutiny of 1857. He disbelieved that it is ever possible for Englishmen to do justice to India. The political duty of India is no other than to kick the British out of the land."

But there was a slight difficulty in carrying out this agreeable operation. The English are not only not very kickable, but also very scientific. Rajwade had after all realised that until the Indians became a highly scientific people they will *et cetera* remain slaves and subjects. The whole phenomenon of the disappearance of the Maratha Empire was simply the result of inferior science. European nations with their superior science were bound to capture India.

This view is easily understandable. But the ignoring of the moral factor in history that immediately follows this declaration is pathetic in its simplicity when we remember Rajwade's age and antecedents. He continues: "During the times of the last two Peshwas British India was regarded as more safe and therefore all the Maratha gold had already gone and settled in British territory prior to the Fourth Maratha War (1817) and the gold had gone there because the Englishmen had a gun with a longer range and a more systematic judicial system. The Maratha Government failed also in giving to its subjects the sufficient sense of protection by a systematic judicial system the lack of which shows inferior science."

Rajwade with an insane hatred of modern Europe could not realise in spite of his omnivorous reading in libraries that behind a modern European army there are years of self control hard training exact co-ordination of individual effort, and the brain power of the General Staff—that discipline is a moral product and not a matter of long range guns—that an honest law court implies something different from physical science or even knowledge of jurisprudence. To the gross venality of the Peshwa officers, the debasing vices of the Peshwas' family, the selfish discussions of their highest nobles and their lack of public spirit (not merely in the days of the last two Peshwas but even in Shivaji's time) the peculiar mentality of Rajwade made him blind.

The wide synthetic power, the passionless superiority to time and place the Olympic calm the supreme common sense and the select and well digested reading—I shall not say of Gibbon—but even of a second rate European historian were denied to Rajwade. And hence he lived and died a collector and could not contribute a single history worthy of the name. His racial prepossessions, his fiery temperament, his lack of balanced judgment and sanity and his indiscriminate uncritical reading robbed him of intellectual honesty and he was denied the historian's supreme achievement of visualising the *truth* of the past, though he gained the applause of a certain class of narrow provincial (or rather caste) chauvinists with whom past history is only the bondmaid of current politics of the stump orator brand. But rest perturbed spirit! rest. Others will reap where you merely sowed.

IS INDIA ADVANCING INDUSTRIALLY?

B. S. G. WARTY, M. A.

I propose in this article to examine the trade figures of recent years to see if they indicate any progress of India as a manufacturing country. My study is by no means comprehensive. For such a study, not a short paper like this, but a bulky volume would be necessary. My object is to bring out prominently so far as I can, certain indications and signs, and not necessarily proofs and demonstrations. I should be content if what I have tried to bring out herein would provide food for thought and matter for detailed investigation to more adventurous inquirers.

To arrive at correct results in such a study, statistics of industrial production are necessary. For the present, however, they are not available except in the case of cotton mills. When "Statistics Bills" of the kind recently proposed for Bombay will be passed into law all over the country and details of production in all the manufacturing industries will thus be made available on a reliable basis, India may be in a position of correctly gauging her industrial progress from time to time. So far, therefore, as it is possible to undertake such a study under present limitations, there is no course but to proceed on the basis of trade figures, supplemented, wherever suitable, by available figures of production. I therefore, desire to proceed on this basis in my study and see what results it yields.

I have stated that I wish to confine my study to "recent years." By "recent years" I mean the period between 1908-09 and 1924-25, a period of 17 years. It may be necessary to explain briefly why this particular period has appealed to me. Those who have been in touch with Indian economic literature since the late Mr. Dadabhai Naoroji first published his estimate of the average Indian income per head would remember that in 1893 the late Mr. Justice Ranade gave a highly instructive address on the state of Indian industries during the period 1878-79 to 1892-93, wherein by proceeding on the basis of trade returns, he was able to show that India had made very

considerable progress in manufactures. Then in 1910, Prof. V. G. Kalo of the Ferguson College proceeded on the same basis and carried the study up to the year 1907-08 and found further improvement in the process, though the rate of progress during the latter period, *i.e.*, from 1893-94 to 1907-08, did not prove to be as satisfactory as in the first period. Since then no further inquiries in this respect have been made, and that is the reason why I have taken the particular period from 1908-09 to 1924-25 for my purpose. It is plain that I wish to bring the inquiry up-to-date. I cannot but think that it would have served our purpose better if we were able to mark certain periods in Indian industrial development on a somewhat scientific basis. But for this purpose an exhaustive examination of figures from year to year may have to be independently undertaken since 1878-79, which, at least for the present, I have not found practicable. I have therefore confined myself to the period from 1908-09 to 1924-25 as a *matter of mere convenience* and would complete the structure begun by the late Mr. Justice Ranade and partially built by Prof. Kale. In India's transition from a purely agricultural into a partly manufacturing and trading country, it is highly useful, if not necessary, to note from time to time whether India is making progress at all and if so, "whether the direction of the movement is correct and its velocity satisfactory."

One of the first results of India's being brought into the whirl of world commerce was the collapse of Indian domestic industries and the gradual rustication of the chief occupations. Up to 1875 things were as bad as they could be. Then, however, the tide turned and, about the year 1878-79, signs of a revival began to be visible. This revival continued with more or less velocity but in the right direction until 1907-08 and we shall now see whether in the examination of the figures since then the process has continued at all and if so what rate of progress. Mr. Ranade applied five different tests which may form the chief general fea-

tures of industrial revival and growth. The first test was the increase in the exports of manufactured and partly manufactured goods. During the period from 1878-79 to 1922-23, the period which Mr Kanado examined, the annual increase of manufactured exports was 15 per cent., but during the latter period, i.e., from 1923-24 to 1927-28 examined by Prof. Kalo the annual increase was only 9 per cent. In the third period now under examination the manufactured exports increased from 39 crores in 1927-28 to 64 crores in 1928-29 i.e. by 215 per cent. This means an annual increase of 12½ per cent. as against 9 per cent. in the previous period. From this, it may at first sight appear that our rate of progress has increased whereas it is not necessarily the case. The prices of manufactured goods have gone up abnormally during recent years, especially since the declaration of war, on which account the value of the manufactured goods appears to be swelled. It should not also be forgotten that this after all is one of the first tests and its indications may prove incorrect when other tests are applied.

The second test applied by Mr Kanado was the percentage of the increase in the exports of raw produce. If this percentage happened to be less than the percentage of increase in the exports of manufactured goods there was reason to think that India was advancing as a manufacturing country. In the period from 1927-28 to 1928-29 the absolute rise in the exports of raw produce was from 134 crores to 297 crores i.e. 221 per cent., in other words the annual rise was 13 per cent. This, compared with the annual rise of 12½ per cent. in the exports of manufactured goods does not speak well for India's industrial progress. In the period from 1878-79 to 1922-23, which was examined by Mr Kanado, the annual percentage of increase in the exports of raw produce was 3 as against the percentage of 12 in the case of manufactured exports, which was a clear sign of industrial progress, that is to say, of a greater utilization of the raw products for industrial use in the country itself. In the second period also, i.e., from 1923-24 to 1927-28, the annual percentage of increase in raw exports was only 4 as against 9 in the case of manufactured exports, which was also an indication of progress. Only in the period now examined herein, i.e. from 1928-29 to 1929-30 the annual percentage of increase in raw exports far from being less

than the percentage of increase in manufactured exports was actually a little more than the latter. Further, this position would appear to be still more serious when it is considered that the increase in the price of raw produce during the period was not so high as in the case of manufactured goods. Roughly, while the price of manufactured goods is now about 150 per cent. higher than in 1913-14, the pre-war year, the price of raw produce has risen only by about 30 to 40 per cent., which means that if it were possible to compare these percentages quantitatively by reducing the various kinds of goods to one unit in standard as is possible in the case of values there would be found to be a very serious disproportion between the percentage of increase in raw exports and the percentage of increase in manufactured exports, showing the latter in an exceedingly unfavourable relief.

Thus the first two tests have not given us satisfactory results as to the state of industrial progress in India, so far at least as trade figures can interpret it. Let us see if the third test applied by Mr Kanado gives any indication of progress in manufactures. This third test is the percentage of increase in the imports of manufactured goods, which if found to be less than the percentage of increase in the exports of manufactured goods, may be taken as an indication of progress in indigenous manufacture. In the first period examined by Mr Kanado, the annual percentage of increase in the imports of manufactured goods into India was 2.8 only as against 15 in the exports of manufactured goods. In the second period, this percentage worked out to 0.2 as against 9 in the case of manufactured exports. But in the third period now under examination, the imports of manufactures rose absolutely by 264 per cent. during the period, or by an annual percentage of 15½ per cent., while the percentage of the increase in the exports of manufactured goods was only 12½ per cent. How can this be explained unless by supposing that India has in fact suffered a set-back in her industrial advance during the period? There is no question here of the differing increases in the level of prices, since it may be taken for granted that the comparison being between manufactured goods on both sides, the prices were almost the same in both cases. One explanation of this increase in the imports of manufactured goods is surely to be found in the fact that the

standard of living in India has increased in recent years very considerably, that is to say, the average Indian to day is consuming more goods than he used to do formerly. This does not necessarily mean that he has grown richer, but it certainly means that he has become a seeker after modern comforts and it is possible his standard of decency has in recent years increased in a larger proportion than his earning capacity. It may also be that a larger proportion of Indian manufactured goods is being consumed in the country, leaving a comparatively small surplus for exports. It deserves to be mentioned in this connection that it was during this period from 1903-09 to 1924-25 that the Swadeshi movement was in energetic operation. And besides India being a very extensive country, with a wide market of her own, the increase or decrease in the exports of manufactured goods does not apply to her as a test of her industrial progress to the same extent that it may apply to another country which has largely to depend upon foreign markets for the manufactured goods. Therefore, the larger percentage of increase in the imports of manufactured goods as compared with the percentage of increase in the exports of manufactured goods can be explained to some extent by other hypotheses than a mere set-back in the industrial progress. Nevertheless on the basis of the figures the set back theory would still seem to hold good.

As if to corroborate this theory the fourth test applied by Mr Ranade points to the same conclusion. The imports of raw produce into a country may form a test of its industrial progress, especially in the case of a country situated as India is, i.e. where food stuffs are ample and therefore the raw produce imported would be as a rule of the kind necessary for industrial production. The imports of raw produce in India in the period examined by Mr Ranade increased by 6 per cent. annually, and in the second period also increased by $8\frac{1}{2}$ per cent. annually, but in the third period herein examined, not only did they not increase but absolutely declined by 5 per cent. or say by an annual percentage of 0.3. Thus this test provides further indication of a decline in industrial activity.

There remains now the fifth test, which we shall now apply. This test consists in the first place in the proportion which manufactured imports bear to the total imports and secondly in the proportion which manufactured exports bear to the total exports.

Mr Ranade, during the period which he examined found that in 1878-79 manufactured articles formed 65 per cent. of the total imports, but in 1892-93, they formed only 57 per cent. of the total imports, showing a proportional decline in manufactured imports or an indication of a proportional increase in indigenous manufactures. This satisfactory state of things, so far as was apparent from the interpretation of trade figures, continued to exist in the second period also, though the process seemed to be slower, for while the manufactured imports formed 57 per cent. of the import trade in 1892-93 they formed only 53 per cent. of the total imports in 1907-08. In the period under review, however, i.e. in the third period from 1908-09 to 1924-25, manufactured articles formed 75 per cent. of the total imports. Thus the process visible in the former two periods, of a steady decline in the proportion of manufactured articles to the total imports, completely disappeared, and on the other hand things seemed to be pushed back to what they were even before 1878-79. However if we take into consideration the fact that there has been a high disproportion between the rise in the prices of manufactures and the rise in the prices of raw produce the former having risen to about 150 per cent. above the pre-war year, and the latter to only about 40 per cent., the rise in the proportion of manufactured articles to the total import trade may not prove to be as great as at first sight it appears to be. This much, however we can say with certainty that the encouraging process visible in the previous two periods, which we regard as an indication of industrial progress, has not continued and that if anything there has been a set-back.

That the process has come to a stand still during the period under examination, is further evidenced by the fact that the proportion of the manufactured exports to the total exports has also not shown any improvement during the period. During the first period manufactured goods forming 8 per cent. of the export trade in the beginning, reached a percentage of 16 in 1892-93, in the latter period this percentage still further improved to 22. But in the period from 1908-09 to 1924-25, in spite of the extraordinarily high rise in the prices of manufactured goods as compared with raw produce, the percentage did not improve but stood at 22 only.

Thus after applying all the five tests which Mr Ranade himself used we come to the painful conclusion that while the first period (1878-79 to 1892-93) examined by Mr Ranade disclosed extremely satisfactory progress and the second period (1893-94 to 1907-08) examined by Prof Hale also showed continuation of the same process though at a slower pace the third period which has now been examined herein does not yield results which we can by any means call satisfactory. On the other hand there is every indication of a set back in progress. We shall however sum up the results of our examination in a tabular form before discussing them at length. The tables would appear as follows —

TABLE I

1907-08 1924-25 Percentage of increase
Total Annual

	Rs. crores	Rs. crores		
Manufactured exports	39	84	215	12½
Raw exports	134	297	221	13
Manufactured imports	70	185	164	15½
Raw imports	60	67	Decreased	5 p c

TABLE No II

Percentage of the annual increase

	First period 18 8-79 to 1892-93	Second period 1893-94 to 1907-08	Third period 1908-09 to 1924-25
Manufactured exports	15	92	12½
Raw exports	3	4	13
Manufactured imports	28	62	15½
Raw imports	6½	8	Decreased by about 03 p c.

TABLE No III

Proportion of manu-
factured imports to
total imports

Proportion of manu-
factured exports to
total exports.

18 8-79	6	8
1892-93	57	16
1907-08	53	2
1924-25	5	2

The tables above show clearly so far as trade figures are capable of showing that during the last 17 years from 1907-08 to 1924-25 India has not shown any progress as a manufacturing country and if anything there has been a set back. This result, which

our examination has yielded is rather astounding because it was unexpected. For it was during this period that we expected considerable progress. The Swadeshi movement was particularly active. The war has given a material impetus to industrial enterprise. Enquiries into industrial matters were under taken and Government showed special anxiety for the development of Indian industries. Industries Departments were created in most of the provinces and the reasoned impression came to exist that a new industrial era was at hand. How then are things to be explained?

In the first place we have to note that the method of our examination does not give unfailing results and does not necessarily lead to unchallengeable conclusions. Trade figures can only give us indications and do not necessarily form proofs and demonstrations, especially when they are handled to interpret the manufacturing progress of a country. To arrive even at an approximately correct conclusion statistics of production would seem to be necessary and these in present circumstances do not exist. Therefore though the trade statistics give us results pointing to a decline in Indian manufactures the results may not necessarily be correct. Next, we have to remember that a considerable part of the imports of manufactured goods consists of machinery which in itself is a sign of industrial growth in a country. These imports of machinery have been on an increasing scale in recent years and therefore there is reason to think that India is being steadily industrialised. As regards the imports of electrical goods and motor cars and omnibuses it will be a long time before India will be able to manufacture these kinds of goods. The most important imports are textile manufactures and iron and steel goods. The imports of the latter have indeed increased considerably during the period but this is to be explained by the fact that large development works were undertaken in India and the Indian demand for steel and iron increased somewhat abnormally. As regards textile manufactures their imports to day are certainly much less than what they were in the pre-war period. On all these grounds the results arrived at in our examination can only be accepted with substantial qualifications.

With regard to the textile and iron industries, which are to day beyond doubt our great national industries something more

may be said here, for these industries have given definite proofs of material advance during the period. Let us take the cotton mill industry, of which statistics of production are available. It has been calculated that the average pre-war consumption of cloth (excluding hand loom production) in India was 116 yards per head, which declined to 86 yards in war years but improved to 111 yards in 1924-25. Of the pre-war consumption of 116 yards 3-4 yards per head were supplied by Indian production. In 1924-25 out of an average consumption of 111 yards per head, 5-6 yards were of Indian production. Thus within the course of about a decade, from meeting rather less than one third of her requirements with her own mills, India now meets more than half. That is surely solid progress of which we may well be proud. And this dispels to some extent the pessimism created by the results that we obtained in our examination of Indian industrial progress as reflected in trade figures. We feel somewhat heartened by the trembling hope that those results may not be correct.

Further, we have not taken into our calculation the hand loom production at all, contrary to the general impression our hand-loom weaving industry is an important asset to India, and is by no means of less importance than the mill industry. The industry has shown considerable revival during recent years. Mr R D Bell I C S, who was Secretary to the Indian Industrial Commission which reported in 1910 and thereafter as the Director of Industries in Bombay has recently prepared an exhaustive memorandum on the hand-weaving industry in India. By a careful handling of statistics Mr Bell shows, that the hand weaving industry has shown steady progress in production since 1896 that it was particularly prosperous during the quinquennium 1911-12 to 1915-16 and that though during the next five years it somewhat declined owing to the effects of war, the recovery after the armistice was rapid and in 1922-23 the production reached a much higher figure than in 1915-16.

We next turn to the iron and steel industry, and we have no doubt whatsoever that during the 1907-08 to 1924-25 period there has been a very remarkable progress. It would even be more correct to say that a great industry has come into new existence. In 1907-08 Indian production of iron and steel was inconsiderable. In 1924, the year for which statistics are available in a recent publication of the Geological Survey Department, the production of pig iron altogether reached 872,500 tons the production of steel amounted to 218,500 tons and even ferro-manganese, in the production of which India is regarded to be at a disadvantage, reached a production of well nigh 9,000 tons. This is of course very recent progress but it controverts the indications given by the results of our previous examination that industrial progress in India in the period from 1907-08 to 1924-25 has been nil. I do not propose to examine the state of other industries for the very reason that reliable statistics regarding their production are not available. But I think I have given sufficient evidence to show that the results that we got in our examination of industrial progress as reflected in trade figures, require to be qualified in a great deal.

However, after all is said and done, a solid substratum remains as food for thought. Our mind is not entirely at ease. There must be something wrong somewhere. It may be that we have progressed in some directions and lost in other directions, so that the total result is what is indicated by the examination. Though it is difficult to arrive at any definite conclusion one thing at least seems to be certain that whatever industrial progress there was in India during the period from 1907-08 to 1924-25 was much slower than what it was during the period from 1874-79 to 1892-93 the period examined by Mr Ranade, as also in the period thereafter to 1907-08. I do not desire to put it above that and yet it would appear the position is sufficiently grave.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu Newspapers, periodicals, school and college text books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses etc. will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No criticism of book reviews and notices will be published—Editor, M. R.]

ENGLISH

DRAVIDIAN GODS IN MODERN HINDUISM—A STUDY OF THE LOCAL AND VILLAGE DEITIES OF SOUTHERN INDIA. By Hubert Theodore Elmore. Ph. D. Reprinted from the University Studies of the University of Nebraska. Vol. XI, No. 1, 1915, and published by the Christian Literature Society of India, Madras etc. pp. 163. 1925.

The interest of the work is mainly ethnological. It is one of the two convenient books on the ideas and practices of what may be called the lower religion in the Dravidian country, the other book being Bishop Whitehead's *Village Gods of South India* (Oxford University Press 1916). Bishop Whitehead wrote on the same subject in a *Madras Government Bulletin* several years earlier. Bishop Whitehead may be said to have inaugurated a systematic study of this subject in the Telugu Kanarese and Tamil lands. Dr Elmore's own enquiries have been almost exclusively confined to the Telugu people, mostly in Nellore District. A great deal of material, naturally enough, is common to both these writers, but Bishop Whitehead's seems to be the more original work, wider in its scope and much better arranged and with a title which properly indicates the subject of enquiry. The title of Dr Elmore's book *Dravidian Gods in Modern Hinduism* it must be confessed is a little too far reaching and even a trifle sensationalistic. Dr Elmore speaks of the political conquest of the Dravidians by the Aryans in the second chapter of his book. This is somewhat problematic, if we consider the whole of India, and specially the present-day Dravidian lands of the South. He describes in some detail the typical deities of this lower religion as prevalent in the South like the Seven Sisters the Sakthis the Perantals and Kanaka Durgamma and Poshamma and gives the legends connected with them and with other deities as well as the ritual of worship and practices like exorcism connected with this religion. He also discusses the general features and the fundamental conceptions of this religion, the local origin of the deities and the inter-relation of the South Indian village cults and those of the gods of Puranic Hinduism. The descriptive part will be useful in so far as it supplements the work of Bishop Whitehead and others and the chapter on the fundamental conceptions of Dravidian worship views the subject from the standpoint of primitive faith religion and ritual and makes some pertinent suggestions about the basic ideas underlying this

worship—e.g. the village deities which are mostly the spirits of departed people have originated from the primitive belief in ghosts and the reason of the village deities being mostly female is also discussed as well as the nature of the animal sacrifice. The book has partly the same value for South India as Crooke's *Religion and Folklore in Northern India* (Oxford University Press 1926), a much more detailed and scientifically conceived work, but for Northern India.

The use of the term *Dravidian* to mean all non Brahmanical or non Puranic elements in South Indian popular religion is open to question. This use is due to the old idea that the white Aryans originated everything that is noble in Indian religion and culture and all that is dark and vile, cruel and superstitious like much that we find in the popular cults of the South (and also of the North) and even in Puranic and Tantric Hinduism must come from the dark skinned aboriginal non Aryans. We need not go into the psychology underlying this idea, whether among Europeans or among high caste Hindus. The popular religion of the country side in India with its crude notions and its primitive rites has been frequently contrasted with the philosophy of the Brahman and the Buddhist and with the nobler faiths of Vishnu and Shiva and compared with the beliefs and practices obtaining among the wild tribes of India. There is certainly a great deal in this comparison and contrast but we should not yield to the temptation to theorise by associating cults and practices with races about whose origins and early culture and thought we know nothing. Bishop Whitehead does not label the worship of the village gods of South India as specifically Dravidian, while contrasting it with that of Vishnu and Shiva—with Hinduism as a scriptural religion in a word. But Dr Elmore does that, and herein he is not fully warranted. He is of course awake of the fact that 'Hinduism' itself is a compound of the old Vedic religion and the ideas and cults of the non Aryans—the Dravidians and others. The Aryans when they came into India brought their anthropomorphic religion, their worship of gods like Indra, Agni, Varuna, Surya, the Asvins, Ushas and the rest and their religious ceremonies like the fire-sacrifice and when they were settled in India, in the North Indian plains, gradually imposing their language on the original inhabitants of the land who were far superior numerically (and as recent excavations in Sindh and the Panjab have shown were certainly not inferior in material culture either) they could not help being

influenced by the religion and the mentality—in fact by the culture as a whole—of these. In course of time by the fusion of the culture and religion of the Aryans and of the non Aryans—the Kols and the Dravidians—in Northern India a new culture and religion arose—complex in its origin but synthesised into something like a well ordered whole through the attempts of the best intelligence of India for over a thousand years and this new culture and religion we call Hindu. If the ritual of the *Yajur* is a beautiful and bloodless rite with a deep philosophy behind it, in which flowers and libations of water or milk and incense and the produce of the earth—fruits and leaves and grain—feature as offerings, and in which music plays its part, is really Dravidian in origin and is to be contrasted with the Aryan rite of *homa* with its animal slaughter and burnt offering and its butter and *soma* libations into the fire (Vidya M. Collins in *Madras University Dravidian Studies* No III 1913 pp 961) if the conception of Siva and Vishnu and of the Great Mother as cosmic powers which also have a personal relationship with the worshippers as deities of grace and mercy is also originally Dravidian as it is conjectured by many, in contrast to the nature gods of the Veda with much more limited powers and grandeur if in fact the fervour of the Tamil devotional poetry as in Manikkavasakar and in the Sitar and the Azhvars is characteristic of the Dravidian temperament—and in all likelihood it is essentially of the South since the North Indian *bhakti* and *sant marg* poetry has a distinct type of glow or fragrance of its own if the basis of the transmigration and *Jarna* speculations is non Aryan (Dravidian or Kol) animism, and not the vague belief in a dark abode of the dead which is Indo-European and Aryan if in all the above points Hinduism is indebted to the non Aryan, at least as much as to the Aryan, then one would be hardly justified in labelling categorically as Dravidian all the religious superstition and the silly and often cruel rites originating in the fear of ghosts which obtain in the South as well as in the North. The history of Indian Culture, of the development of Hinduism is not the simple matter it has seemed it is not exactly a case of black savages conquered and civilised by an enlightened white race which itself succumbed to the influence of environment and of a fusion of cults and culture resulting from an inevitable mixture in which all the better elements were contributed by the white race and the bad things are due to the mentality of the black barbarian which could not be suppressed. It is in fact far more complex. The pre-Aryan peoples of India were no savages but, as the recent Mohenjo-Daro and Harappa excavations have shown were a highly cultured people at least in some tracts possessing well built cities long before the wandering Aryans came a great many of the characteristic Hindu or Brahmanical beliefs and cults were pre-Aryan probably Dravidian probably also Kol and the Aryans themselves after all were a barbarian people when we first find them emerging into history—barbarian but virile and well-organised under their military aristocracies and although culturally on a far lower level than the civilised peoples of the Near East with whom they first came in touch they were able to subjugate some of these latter by their drive and their line, and by their possessing the horse. So

that the Aryan's advent into India did not mean the bringing in of a higher type of culture or religion. The Aryan religion which is best preserved in the Vedic Samhitas cannot be said to be superior as a repository of high culture and philosophy and faith to the later Puranic Hinduism which is the obvious result of a contamination with the religious world of the non Aryan the Dravidian and the Kol. The possibility of survivals from the pre-Dravidian and pre-Kol records of Southern India—the *Nagas* of Old Tamil literature (Vidya Kanakasabharu Pillai's *The Tamils 1600 Years Ago*)—of their animistic cults and their rites is not precluded. We should take into consideration the fact that the Dravidians are not an aboriginal people of India, but, according to some recent opinions have their affinities with peoples elsewhere outside India,—the Eastern Mediterranean tracts, for instance.

From the above point of view, the second title of Dr F. Mores's book *A Study of the Local and Village Deities of Southern India* would suit it far better than the other one and the remarks about Dravidian gods and Dravidian religion should consequently be modified. With these reservations, Dr F. Mores's book gives a good survey of the animistic and fetichistic cults which are still living things in Southern India, and as mentioned above, forms, with Bishop Whitehead's work a valuable contribution to the study of popular religion folk lore and ethnology of the Dravidian country.

NAN VERIAN.

SWINBURNE By Harold Nicolson (*English Men of Letters Series*) MacMillan 5s

For this generation of students of English literature there have been no hand books more helpful than the works in the famous series edited by John Morley and it was a happy idea on the part of the publishers to continue the series by adding volumes on authors who had not previously been included. Yet on going through the four new volumes—on Melville, Meredith, Swinburne and Whitman—one has a feeling that the application of the old name is perhaps a misnomer. Ideals of literature and literary criticism are never static and in 1926 they are materially different from what they were in 1837 when the first volumes of Morley's series were published. The aim of those earlier volumes was to subordinate literary criticism to biography proper and details of the authors' life occupied the greater portion of the works. Now one feels that while the materials of the lives of our authors have been investigated with thoroughness by one official biographer or other there is ample room for a new interpretation of the authors' genius as an interpretation based on what we consider the sane and balanced canons of literary criticism devoid of all suspicion of bardolatry.

So Mr Nicolson with all his experience of biographical work as evidenced in his volumes on Tennyson, Verlaine and Byron does not want to supply a rival to or an understudy of the official Life of Swinburne by Edmund Gosse whose intimate friendship with the poet undoubtedly equipped him for the task. The main details of Swinburne's life must be enumerated and Mr Nicolson hurries over them as quickly as he can busying himself more with a truer understanding of the

author's work. He has to offer an explanation for the disfavour into which Swinburne has fallen for the fact that Swinburne who to his contemporaries was the most exciting thing that ever happened appears to our later generations as almost utterly dull. It may even be said that the poet fell into disfavour long before he died. The older critics of the present-day recall the excitement of their undergraduate days on the publication of the "Poems and Ballads" or "Heptalogia" and how "almost suddenly all this enthusiasm died down" and while Swinburne went on writing writing of stars and love and waves and flames that were deathless or breathless, or battered or shattered none of them mattered none of them contained any longer any hope all were galvanic-reflex action of genius after death.

Mr Nicolson finds an explanation for this attitude towards Swinburne's work in the narcotic effects of his melody—the lack of co-ordinated meaning in his images and the absence in his poetry of any wide basis of common experience. But to Mr Nicolson the examination of Swinburne's unreality is far less interesting than that of his essential reality the discovery of what constituted his internal centre. This internal centre he is convinced, was "composed of two dominant and conflicting impulses namely the impulse towards revolt and the impulse towards submission. The essence of his genius as seen in his best works is his exquisite adjustment to the tensions between these two impulses between 'the instinct of self-assertion and the instinct of self-abasement. This is the main thesis of Mr Nicolson's study and it is fully developed in the four important chapters of his book—those on "Atalanta, the "Poems and Ballads" first series "Songs before Sunrise and Poems and Ballads" second series. The examination of the classicism of "Atalanta" brings out the success of Swinburne's attempt to "reproduce for English readers the likeness of a great tragedy with something more of true poetic life and charm than what is found in *Catactacus* or *Merope*." The Phidian symmetry of the scheme as also the melody of the lyrical passages are properly pruned and Mr Nicolson finds here a solution of an almost intolerable problem of emotional adjustment bringing intense emotional relief, an attitude of liberation an attitude of acquired balance.

In the "Poems and Ballads" of 1866 John Morley found only the feverish carnality of a school boy over the dirtiest passages in *Lempriere* the carnality of the libidinous lanreate of a pack of satyrs. The present-day critic does not base his objections to the seventeen poems of passion in the volume on any excessive prudery but rather on intellectual considerations. As subjective lyrical poems their fault is that they are based on an experience which is neither permanent nor general. The supreme crises of physical sensation are too fugitive to provoke more than a superficial and temporary response. The experience is generally blurred and its subsequent evocation can produce no fine emotional vibration and no permanent appeal. The interest of the volume is however in the "savour of a tideless sea," in the sense of utter weariness as brought out in "the Garden of Preserpiné," in the note of wounded dignity of sorrowful forgiveness of "local reserve in *The Triumph of Time* and "A Leave-taking

The *Song Before Sunrise* bring out Swinburne's Passion for Liberty to him the symbol of youth and health and light and the Thesis is most explicit in *Genesis* the Hymn of Man and Hertha, the last named being perhaps the best organised of Swinburne's poems. In the "Poems and Ballads" of 1878 one finds a certain tremulous lethargy a certain frightened wistfulness the most noteworthy compositions being "A vision of spring in winter *Ex voto* *A Forsaken Garden* and *Avo atque vale*. The last thirty years of the poet's life occupy but two short chapters and however interesting they might have been to Watts Duntton or Mr Gosse, Mr Nicolson and ourselves are inclined to slur over them. One may come across delightful pieces like *Thalassius* or *Pan* and *Thalassius* one may like to pause for a while over "Tristram of Lyonesse" but Mr Nicolson has brought out the salient points of Swinburne's genius in the preceding four chapters and this is only an epilogue.

If the task of the literary critic is to point out to us beauties that we could not have discovered for ourselves to enable us to appreciate an author more truly than before then Mr Nicolson has succeeded as few critics can and we leave the book convinced that all students of literature in general and of Swinburne in particular will regard it as one of the greatest achievements of recent literary criticism.

N K. SIKHANT

RURAL ECONOMY OF INDIA By Radhakamal Mukherjee
M 1 Ph. D Longmans Green & Co Ltd 1926
1P 249 cr octavo Price Rs 3 12

This is a remarkable publication the right thing at the right time. We are glad to find Dr Mukherjee again in the realm of realistic study of India. The humble Pali Serval has presented the various facts about Indian village life and agriculture with great ability and in a style at once attractive and thorough. Agriculture in India ranges from burning or brand cultivation to the elaborate system of rotation of crops and garden cultivation and consequently the physical and social background of rural life are highly varying. Dr Mukherjee has dealt with types of village organization as diverse as the compact villages of the Indo-gangetic plain or the scattered hamlets of the Central Provinces or the terraced settlements of the mountain regions. Some of the chapters are mere reprints from the same author's book on *Ground Work of Economics* yet every page of it is full of information. Although we have not always seen eye to eye with the author throughout the book and particularly when he draws up the Balance sheet of the Bengal Economic holding yet we are entirely at one with him when he says that the problem of population growth is the problem of the use of land and the organisation of agriculture and the solution of the agricultural problem can be provided chiefly by the combination of scientific peasant farming and the spread of agricultural co-operation. The form of land tenure and the law of inheritance require also to be modified and above all there is need of comprehensive policy of education.

The study of Indian Economics at our colleges or in the University will be incomplete without a knowledge of the contents of this instructive little book.

N S

KEATS *By H W Garrod Oxford at the Clarendon Press 1926 Pp 157 2s*

This new presentation of Keats poetic life and genius is one more valuable addition to a number of excellent studies on the same subject that have appeared one after another during a comparatively short period of time. Prof Garrod the author of the present volume is an eminent scholar and a keen student of English poetry; his reputation as a critic has been already established by his book on Wordsworth. In this book on Keats he has brought a ripe scholarship vitalised by a fine affectivity to bear upon the achievements of one of the greatest of English Romantics. The task the author has set himself in this study is it would seem to extricate Keats's personality and poetry from all doubts and misconceptions regarding his place among the great poets and the exact value of his poetic gift particularly from that over-emphasis, to which some of his critics have been too much prone on his being next only to Shakespeare by reason not only of what he had achieved but what he would have achieved in the maturity of his genius. Prof Garrod dissociates himself from this view and what with a masterly sifting of evidence both internal and external he appears to have been able to establish in this that the real effectiveness of Keats lies in the exercise of the five senses and that though *par excellence* the poet of exquisite sense impressions he is never at peace with himself being continually tormented by shadows of thought, scheming himself out of his world of sheer poetry into that of un-realizable ideas. This vacillation between sense and thought a divorce between imagination and experience is the source of his weakness and makes him the pure Romantic poet that he is. He lacks that robustness of conception and serenity of vision without which no poetry can satisfy the demands of a complete humanity. His genius has found its fullest blossoming in the Odes and nowhere else in his poetry has he attained that perfect poise of expression and mastery of form which is exclusively his own. In the course of his study the author has also furnished a very lucid exposition of the process by which Keats evolved the structure of his Odes out of the sonnet forms. Though it is difficult, perhaps not to agree with some of his conclusions (for the critical apparatus employed is so delicate as it is firm) yet, in confining Keats's gift to a mere luxury of sensuous impression the author betrays, in spite of himself a certain intellectual bias in his appreciation of poetry. For who will deny to the consciousness of Keats that miraculous faculty of perception where thought and sense are one and which in a poem like the Ode on a Grecian Urn seizes on the immutable amid the flux of forms, marking the Cold Pastoral bloom like a flower on the loftiest peak of the mind? Still we are grateful to the author for this little but not slight book on Keats in that he has fully demonstrated what he said in the beginning that to read poetry with full pleasure and profit one should come to it after a spiritual preparation and with a method of scholarship somewhat more rigorous perhaps than custom prescribes.

M M

ABOUT SHAKESPEARE AND HIS PLAYS *By G F Bradley Lo don Oxford University Press Humphrey Milford 1926 Pp 32 2s 6d*

We Bengalees have an age of Shakespeare as well as the English. It was when Derozio and Colonel Richardson lectured in the Hindu College. Every man who called himself educated knew his Shakespeare intimately if not by heart. To-day things are not what they were. I believe not one among the innumerable graduates who are compelled to read Shakespeare at College, reads him again for pleasure. The loss of course is theirs. I think no one will seriously argue that translations of Scandinavian fiction is quite an adequate substitute for England's finest contribution to human civilisation.

Here is a small and inexpensive book which will rekindle the interest of the man whose knowledge of Shakespeare has grown rusty. It is an epitome of Shakespeare criticism. In the short compass of ninety pages the author manages to touch upon all the important aspects of Shakespeare's life and work. The appendix gives chronological tables of events and the plays some very interesting contemporary references to Shakespeare and a short bibliography. It will be of great use to students as an introduction to a more profound study of Shakespeare being more manageable than Raleigh's book and more up-to-date than Dowden's Primer.

N C C

HINDI

KAMALA KUTUM *By the late Girjadesi Published by the Ganga Pustakmala office Lucknow 1925 Pp 132*

A domestic novel with quite a simple plot. There are a few illustrations.

LAKSHMI *By Mr Girjakhumar Ghosh Published by the Ganga Pustakmala office Lucknow Pp 6*

A social novel written for instructing young girls there are several coloured pictures.

MAHILA MOTHA *By Pandit Mahabir Prasad Dwivedi. Published by the Ganga Pustakmala office Lucknow 1925 Pp 61*

Some important topics in connection with feminine life are touched upon in this work.

AROGYA PRADIPA *Translated by Mr Gulab Chand Jain. Published by the Rashtriya Hindi Mandir Jubbulpur 1925 Pp 30*

The interesting subject of natural cure is dealt with in this work which is translated from a Marathi book compiled from various sources. From very simple facts of health and hygiene the subject matter is elaborated up to Auto-suggestion and suggestive Therapeutics.

MANGAL PRADIPAT *By Mr Chand Prasad Hridaya B A Editor The Chand Allahabad 1925 Pp 724*

This original social fiction will be hailed by the lovers of creative literature which is so rare in Hindi. The vast panorama of incidents, the variety of characters and the style of the work will commend themselves to the readers catering to the Indian taste like other Hindi

whom prefers comedy' to tragedy, and so the motto is 'All's well that ends well'

MAY RANJAK KAHANIAN *By Professor Sahur Bakhsh, Published by the Chand' office Allahabad 1925 Pp 268*

These charming tales are intended for the boys and girls and are written in a very simple style

MASOHR ARTHASH KAHANIAN *By Professor Sahur Bakhsh, Published by the Chand' office Allahabad 1925 Pp 255*

These interesting historical tales from the various parts of the world numbering 107 are sure to catch the imagination of the juvenile readers. We strongly recommend this book which is calculated to acquaint our boys and girls with what is good and beautiful in other nations of the world.

RAMES BASU

URDU

1. TAFSIH I L I HTAY *By Mr Gopi Nath Singh Farina B A L T Pp 344 Price Rs. 1 8 Publishers—The author Mohalla Qumungoyan Bareilly (U P)*

A students' hand book of the English history, concise yet it omits no essential details, written in a simple and popular language. Though not thorough, it is nationalistic in term yet much better than the average textbook written by foreigners. Also contains some maps and charts. Get up poor.

2. BUDH AUR US KA VAT *By Mr Shua Varan, Shamsi, Parts I and II Pp 234 Publisher The author Lahore*

Mr Strass in American Buddhism recently wrote an interesting and comprehensive treatise on Buddhism and his teachings. This is a free Urdu translation of that English treatise. The translator seems to be an ardent Buddhist himself so his work has been a labour of love and in sublime disregard of filthy lucre he distributes his valuable book gratis. The only recommendation he asks for from the readers of his book is its careful perusal. To the book proper the translator adds a very interesting introduction of his own. The style is throughout charming. The book contains almost all that is worth knowing in respect of the history of Buddha and Buddhism.

3. SILAHAN E WALWA *By Maulvi Amir Ahmed Ali Pp 129 Price Rs 1 Publisher Mollammad Hassan Anwar-ul-Makabe Victoria Street Lucknow*

A short narrative of the rulers of Walwa and Gujarat for the period between 804 A D and 965 A D written in a most attractive style. A model of clear exposition and beautiful language.

4. SALONI *By Mynum Pp 87 Price 12 Annas Publisher The author Ahar Khurd Gorakhpur (U P)*

Osar Wilde a world famous French drama & drama rendered into Urdu. The translator has fairly well succeeded in his double attempt to be faithful to the original and to be interesting to the Urdu-knowing public.

5. KHUTUT SHAI *Compiled by M Mohi Uddin and Syed Mahi Yunus Qasr Pp 129 Price Rs 1 Publisher Zulfiqar Sultan Book Agency Bhopal State*

A collection of Maulana Shihab's letters addressed to his two lady friends of Janjira (Bombay) with an introduction by Maulvi Abdul Huqna. The late Maulana was one of the best known Urdu men of letters. This collection though small is from the literary point of view an acquisition to Urdu literature.

6. ISLAMI GAU RUDSHA *By Syed Nazir Ahmed Vaid Pp 56 Price not given Publisher The author Sitapur (Oudh)*

A pamphlet written in the interest of cow protection by a Muslim. The author though well meaning has defeated or at least weakened his good cases by over doing his propositions.

7. MIRAT USH SHEH *By Maulvi Ameer Rahman of St Stephen's College Delhi Pp 503 Price 1 s 3 Publisher The author*

A reprint revised and enlarged of the authors' lectures on Arabic poetry in the Delhi St. Stephen's College. The book is a veritable mine of information dealing not only with Arabic poetry but also with Persian poetry, Urdu poetry and poetry in general. It includes long and learned chapters on metaphor, similes, poetical figures, rhyme, meter, criticism and many kindred subjects and has immense value both for the student and the lay reader. The only defect is that the style is rather pedantic and at places too heavy.

A M

GUJARATI

THE POEMS OF VIR BHAKTAMAR AND NEHU BHAKTAMAR *By the two Jain poets—Padhyas, Shri Dharma Vardhan Gani and Shri Bhayprabha Suri with an appendix consisting of the Bhaktamar Slotra and Shri Girnar—Girishwar Kalpa with a translation into Gujarati and explanatory notes by Prof. Harlal R. Kapadia M A Printed at the Anantaji Printing Press Bombay Cloth Cover Pp 197 Price Rs. 3 1926*

These poems are written by way of Padpurti to some verses of the Bhaktamar Slotra of Shri Mantung Suri. Prof. Kapadia has collated, translated and annotated them and produced a scholarly work. These are but two out of such six Padpurti poems.

ALHIYA JO MUNO ALHADO *By Jagjivandas Trilokji Kothari B A, LLB printed at the Sorathi Prakash Press Junagadh Thick board cover Pp 279 Price Rs. 2 8 (1926) (With pictures).*

This is a collection of Mr. Kothari's humorous articles and skits contributed by him to various periodicals and under the assumed name of Aliya Jaiji (the simple-minded Astrologer). He has an established place amongst the very thin ranks of humorous writers in Gujarat and his contributions are gobbled up with avidity by the middle class reader with whom he has become very popular.

as his skits touch their every-day life in its various phases—literary, religious, social and domestic. He hits out boldly and his close study of our various institutions gives a spiciness to his statements which inspite of their concealed sarcasm are uniformly relished.

LIFE OF SHRIMAD DEVCHANDRAJI By *Shrimad Bhatta Sagar Shrivastava*, printed at the *Prana Bhairava Press Ahmedabad*. Cloth Cover Pp LxIV 100 51 Price Rs. 0-12 0 (1926)

Devchandraj (S. Y. 1746 1812) was a very learned Jain ascetic, responsible for many acts of charity and known as a writer. An introduction of great value by Mr. Mohanlal Desai adds to the utility of the book which contains striking extracts from his works.

PIRANA SATPANTHA VI POL By *Patel Narayan Ramji* Contractor of Cutch. Printed at the *Iditya Press Ahmedabad*. Cloth Cover Pp 552 with photos Price Rs 4 (1926)

In various parts of Gujarat Cutch and Kathiawad there are followers (mostly Kunbis) of a creed called the Pirana Panth which in its tenets is an amalgam of Hindu and Mahomedan religions. It stands so far midway between them. As to how Hindus came to be converted to this creed and as to how strong is its hold over its followers is very interesting history. Its present tendency is to make its followers lean towards non-Hindu tendencies. This is asserted by those who have deserted it and want to save others from its influence, and for a long time a controversy has been going on between its followers and opponents. The present substantial volume is from the pen of one who has seceded. He calls it the "Pol or Hollowness of the creed" and has marshalled in it all facts which go to show that it is a concealed form of a non-Hindu creed. The book is written with great vigor and feeling.

K M J

MARATHI

PRANAYOGI ASANA FOR MEDITATION OF THE SUPREME BEING By *Dr. S. M. Vaidya* I M S. *Isampur Publisher*—the author himself. Pages 120×16 Price Rs. two

In the minds of a vast majority of our English educated countrymen there lies a deep-rooted prejudice that Upasana is a business of those who have nothing better to do or who are idlers and the ecstatic states are only intended to impose upon a simple and gullible public. The existence of pseudo-Sadhvas has undoubtedly contributed not a little to deepen this prejudice. But intellectual honesty and canons of critical scholarship require that the vast mass of Vedic literature should be carefully explored before judgment is given for or against the claim of the subject to rank as a science. Considered in this light the book under notice deserves a hearty welcome inasmuch as it gives very briefly and concisely the main principles of this solemn subject.

The book is divided into ten chapters and the topics treated in these chapters range from the necessity for Upasana, Japa, Dhjāna, the Chakras etc., to the practice of Hathayoga and Pranayama

etc. Manu and other law givers have strictly enjoined upon every Dwija (or twice-born) the utterance of Gayatri mantra at least no matter if he does not perform Sandhya. It is commonly believed by religious minded orthodox Hindus that the Gayatri mantra leads to the Turja or the fourth or the highest stage of the soul in which it becomes one with the Supreme Spirit, whereas other Mantras do not take us so far. The author has further mentioned some rules which have to be observed in the practice of meditation and the difficulties coming in this way. The seven Chakras or plexuses in the human body the author confidently asserts are not creations of imagination but are realities. The author being himself a medical man is competent to give his opinion on the subject especially when he says it from his own experience and the authority of the late Mahatma. Sri Datta Maharaj though sceptics would like to have a fuller treatment of the subject with a corroboration from the researches of Western Scientists. Similarly while describing the several stages of Sandhya wādan and their consequent advantages should have been scientifically demonstrated to carry conviction to lay minds. This is exactly what the author has failed to do and has simply described the several processes of performing Upasana. This is a serious defect in the book and it considerably detracts from its value, though otherwise the book is highly valuable to those who are already initiated in the mysteries of the subject and deserves a careful study by those who desire to be enlightened on the subject of meditation and to desire practical benefits in the realm of spiritual ecstasies.

V G ARTE.

KANARESE

UPANISHAT PRAKASH PART II with an introduction. Price annas 12. Author and publisher, *R. R. Dugarhar M. A. I. L. B. Editor Karmaveer Dharwar*

As promised the author has presented in pretty good time the second part of his book. This part also bears all the features of the first part and also contains a long introduction discussing the source, greatness and purpose of Hindū Philosophy.

In the introduction the author refrains from entering into the controversial matter regarding the stages of moksha—final liberation—and also the theory of creation and dissolution or absorption. As all systems of philosophy derive their existence and importance on the views over these topics the author has inspite of himself, to say something on them.

It is certain that Mr. Diwarkar's views on the Upanishado Thought militate against every one of the existing secular interpretations of it but at the same time it must be said of them that as far as they go they are evident and consistent. He holds that All is One and that that All is true as the manifestation of that One gross or subtle though they may be. He further explains that the good of all these manifestations is eternal bliss. Mr. Diwarkar stops at this point—as per perhaps he intended—and desists from describing the relation of the One with the All at this stage of evolution of the latter i. e. eternal bliss. Therefore,

no only defect in his attempt to give a new, yet and consistent theory—of course, based on the Upanishads—of creation and dissolution or absorption is that he has not explained, as he ought to have done, the finale of God's work. We hope he will remove this defect in the next edition. After all, Divine knowledge is certainly as abstruse as the creation is limitless.

Except in these abstruse points which though supremely important in the development of collateral religious thoughts, are still too far above practical philosophy, the author has been eminently successful in creating interest and love for Hindu Philosophy. His style is vigorous and penetrating, none can escape its bewitching, and at times, its masterful influence. It is equally superb in respect of clarity: his thoughts are never couched in nature verbiage. The language of his explanation of the harmony between philosophy and action, superiority of soul happiness to worldly or object-pleasure and the true meaning of Moksha as eternal bliss is incomparably impressive. He tries to bring within easy comprehension the knotty ideas with regard to the Source of Evil and those on the origin and nature of the Vedas and the Upanishads. He has characteristically exalted every human being into "a lover of moksha" and has shown him the way and also the nature of his moksha.

It may not be deemed a grievous offence in a Hindu by his fellow Hindus if he maintains that Upanishads lend thought to the philosophy of all times and country, if he maintains that the Vedas are the repository of all esoteric knowledge hardly realised by any in modern times and that foreign scholars hardened with a sense of the greatness of their own civilization are only content with a superficial survey of these scriptures and if he opines that his mother-country is in a hellish condition of slavery and senescence due to our negligence of Brahma Vidya or Divine knowledge.

There is no manner of doubt that Mr Dwarkar's book will be welcomed by all Kannare people as a treasure of knowledge and invaluable argument feelingly presented for the study of our sacred

books. We earnestly wish that the author should engage himself further in similar exegetical pursuits of permanent interest and importance and give Kannatak, in his incomparable Kannada, the torch to our ancient religion.

A. S. HANUMALLI

ORISSA

The Sahitya Prachar Sangha which has been the fruit of the energy of one man Babu Laxmi Narayan Pattanayak B.A., munsiff of Puri has during the short period of its existence of one year published several books of importance. We have received four books for review. These belong to three different series. Of the first series of the Lives of Heroes we have received the first (1) MAHADEV GOVINDA RANADI (3 Rs) By S. Akh Prasad Das which is the first book of its series. The second is the LIFE OF THE LATE MOHARAJA SHRI RAJAHENDRA BHANJ DEO (6 Rs) By Dr. Jyoti Dhyasingha Panigrahi B.L. Both the books are well written. There is a Board of the Sangha, who examine the manuscripts presented to them for publication and they select the best of all manuscripts that may be available on any subject or if none of the manuscripts are found suitable some other fit person is entrusted with the work of writing a new manuscript and it is published.

The second is the Literature series for Boys and of it ARABIA KAHANI containing stories of Sindbad ALLADI'S WONDERFUL LAMP, ALI BABA etc. By Prof. Ananthan Mohanty M.A. (5 Rs) is the first production.

The third is the Science Series of which Khasi TATVA By Babu Brajramohan Senapati L. Ag of the Ravenshaw College (Price Rs 1 Rs) is the first production. This book has been written with great pains and the author has spent the best and several years of his youthful energy over it.

All these books are well printed and fairly cheap in price. We congratulate the Sahitya Prachar Sangha of Orissa on the good work it has been doing.

A. B. C.

TOLSTOY AND THE ORIENT

By PAUL BIRUKOFF

[Mr Paul Birukoff is one of the leading Russian biographers of Leo Tolstoy and the constant companion of the Russian sage during the last few years of his life. Like a true disciple Mr Birukoff has dedicated his life to illumine the different chapters of Tolstoy's life by preserving and publishing letters studies and other valuable documents which are deposited in the Tolstoy Archive and Museum of Moscow. His latest book, *Tolstoy und der Orient*, published by Rotapfel verlag, Zurich and Leipzig shows how from his very youth Tolstoy was drawn towards the East and how he continued to adore the Orient down to the last days of his life. The following article is a translation of the foreword to this book made with Mr Birukoff's consent.]

AFTER finishing my extensive work, the Biography of Leo Nikolaevitch Tolstoy, which gives in outline the picture of the great man, I think, it will be proper to make exhaustive researches with reference to some particular sides of his life. Firstly I wish to confine myself only to that region on which Tolstoy has spoken with particular clearness, and which contains some of the burning questions for men of to-day.

The enormous biographical materials to the study of which I have devoted more than

twenty years of my life, will I think, lend me ample support.

We know the charges brought against our civilisation from all sides. The accusers mostly refer to the East as a region in which the evil of civilisation has not yet developed to the full extent, which may be saved from the western pest and where might be received fresh strength for the rejuvenation of the world. And Tolstoy turned his eyes often to the East.

We hold it to be important to get a more or less complete picture of the connections of Tolstoy with the Orient by compiling original documents, letters, diaries, and remarks as well as his correspondence.

Further, we also take it to be necessary to give this review a historical biographical outline which would explain to us Tolstoy's active interest in and his predilection for the East.

Such a predilection for the East may be seen in Tolstoy even in his childhood. In the memories of his young age he speaks of how he was gripped by the fables of the Thousand and One Nights, the varied adventures of which were told by a blind man every evening in the sleeping room of his grand mother in a mysterious tone in the faint glimmer of the night light till the old lady fell asleep. The memory of these fables left a deep impression on the soul of Tolstoy for the whole of his life and a certain horror which seized the susceptible mind of the later genial artist.

When he joined the university of Kazan he took up the reason of it is unknown to us, oriental language and literature as the subject of his study. But he was not successful. He changed it for jurisprudence but here too he was unsuccessful and after two years left the university altogether.

In the first pages of his diary he speaks of how he passed a few days in the hospital of Kazan on account of a trifling illness. It was in the year 1847. In his conversations with himself Leo Nikolaevitch told me that beside him a Buryat Lama lay in that hospital, who had fallen in with a highwayman on the road and had been wounded by him. On questioning him Tolstoy learnt from him to his astonishment that as a Buddhist the Lama did not try to stand on defence against the robber but awaited his death with closed eyes and prayers. This incident left a deep impression upon the young mind of Tolstoy and produced in him

a deep regard for the wisdom of the Orientals.

After a few years of lawless life, Leo Nikolaevitch was prevailed upon by his eldest brother to go to the Caucasus. This afforded him the opportunity of frequent contact with the peoples and the culture of the East, particularly the Mohammedans.

Tolstoy was astonished at the resignation, wisdom and temperance of the religious Mohammedans. And he reproduced these impressions in artistic works such as *The Prisoner in the Caucasus*, *'Haji Murad'* and others. After the year 1856, when he quitted his military service, he passed a few years without any connection with the Orient, but rather in constant connection with the Occidental nations and this connection, it must be emphasized, in no wise gave him peace.

When in the year 1862 his health was shattered he gave up his occupation with the question of schools and travelled to the Bashkirs in the steppes of Samara for the restoration of his health by *Kumys* treatment. [*Kumys* fermented horse milk]. There he lived in the tent with the nomads, Bashkirs, and Mohammedan Tatars, made friendship with many of them learnt their customs and usages and represented them in numerous artistic works.

In the seventies during the pause between the writing of the novels *'War and Peace'* and *Anna Karenina*, Tolstoy compiled a whole series of readers and put in them legends and fables of various nationalities among them a number of Indian and Arabian legends. He must therefore have been familiar with the literature of the East already at that time.

In that part of his life which preceded his religious crisis, he stood in almost unbroken spiritual communication with the Orient. And this communication left its trace in the heart and world outlook of Tolstoy.

In his confessions Tolstoy tells the oriental legend of the wanderer, the dragon, the tiger and the mice, in characteristic human form generally and particularly his life, without guide and without the understanding of the meaning of life. So we see him in the most important crisis of his life seeking for ideas among the orientals to illustrate the condition of his soul.

Now however he had at last found the meaning of existence and for himself a new Christian doctrine free from the prejudices of the church. With his strenuous voice he

turned upon the world and called the people to practise self-denial and was the first to set foot on the path pointed out by himself. The Christian theories did not give him enough peace and he fell to studying the religions of the Orient. In them he found new sources of strength for the perfection of mankind.

At first he occupies himself with the Chinese philosophy. He reads the 'Sacred Books of the East' and writes down many remarks in his diaries in this connection. In 1884 it is once written —

"Confucius' doctrine of the middle path—wonderful the same as in Lao-Tse the fulfilment of the law of nature, it is,—wisdom strength, life. And this law is fulfilled quietly incomprehensible to the senses. It is Tan when it creeps imperceptibly without coercion develops itself and then it is of powerful influence. I do not know what is still to come out of my study of the doctrine of Confucius, but already it has done me a great deal of good. Its distinguishing feature is veracity, unity, not discordance. He says, Heaven acts always with veracity."

After he had thoroughly investigated the religion of ancient China he occupies himself with the study of Indian wisdom. He reads the works of Burnouf, Max Mueller, Rhys David, Subhadra Bhikshu and others and projected a sketch of the life of the Buddha, though he does not finish it being occupied with more pressing duties.

But the thought of making the wisdom of the Orient accessible to the Russian people never left him. He projects a short compendium of the most important religions and points out their essential unity. This work too he cannot finish and finally contents himself with 'The Thoughts of the Sages,' in which first appear the Gospel, beside the ideas of Socrates, Buddha, Krishna, Lao Tse, Pascal and others.

At that time, i.e., at the end of the former and the beginning of the present century, Tolstoy comes to be regarded as an international genius in the whole world in all its five parts, and his personality becomes the

centre of all the exertions connected with him.

He receives the works of authors and thinkers from all sides of the earth and exchanges letters with them. Always, however, his attention is riveted on the East and the Orient receives his sympathy above all.

He reads the works of Swami Vivekananda about the philosophy of Yoga which appealed to him extraordinarily. He reads Baba Bharati's book about Krishna, the works of Shri Shankara Acharya about the philosophy of Vedanta and others.

Finally he comes into immediate epistolary communications with the Japanese, Chinese, Indians, Brahmans, Mohammedans, with revolutionists and with those who

Count Tolstoy at work in his study at Yasnaya Polyana
(From the Painting by Repin)

condemn force of every kind. India, ancient and modern, attracts him above all. He earnestly asks these Orientals to keep before their eyes the value of their precious ancient wisdom and warns them against the dangers of the West, and points out to them what the light of Christianity might give them undisfigured by the priests whom the State has bought up.

Such communications and considerations caused Tolstoy to augment the collection of doctrines of wisdom and to edit the so-called 'reading circle.' He passed the last years of his life by working upon it, and gradually this collection develops into a basis of the future international human religion, without distinc-

tion of races and creeds. He died over this work, which in the meantime had sufficiently increased to be able to be published. Therewith he bequeathed his spiritual legacy, an oblation for the brotherly unification of all mankind.

He himself had peace from this work, he said. I think that all my artistic works are unimportant and will be forgotten. This work however will remain, because it will be of service to mankind."

In the development of his religious ideas we can clearly follow his gradual liberation from all forms and outer distinctions where by mankind is divided in its search after the truth.

In his answer to the Syood which had excommunicated him out of the orthodox church, he speaks of these ideas very clearly in these words—animated by egotistic impulses he had originally adopted a national faith, then however he received a singular pure, universal truth through the cosmopolitan teachings of Christianity.

In the diary of his last year Tolstoy has written down in short that his religion is free from every kind of narrowness as it gives expression to a universal truth and therefore must have an international character.

We hope that this collection of original documents about the connections of this great occidental thinker with the Orient would pave the way for universal peace and lay the foundation of the reign of true peace and prosperity of the earth and bring about a synthesis of the truths prevalent in the two worlds.

The great Indian poet and thinker Tagore has said "The great contribution of India consists in the unification of Hinduism, Muhammadanism, Buddhism and Christianity, a unity neither by coercion nor as the result of apathetic self denial but in the harmony of activity in co operation."

We hope our book will contribute to the realisation of such an idea.

Another great Indian Mahatma Gandhi, came in immediate correspondence with Tolstoy out of the works of the Russian poet he received strength for his struggle and expressed his admiration. And Tolstoy answered him in touching and loving manner.

Yes India in particular was that country with which Tolstoy had most in common, and to this people in suffering and to its great leader we dedicate our book.

Translated from the German by

BATA KRISHNA GHOSH.

TOLSTOY—GANDHI CORRESPONDENCE

[The letters given below have been translated by Mr. Batakrisna Ghosh from the same book from which the Foreword has been translated by him. With Mr. Paul Burakov's consent Mr. M. K. Gandhi's letter to which Count Tolstoy's first letter is a reply has been lost.]

To M. K. Gandhi Transvaal

I have just received your highly interesting letter which gave me great pleasure. May God help our dear brothers and co-workers in the Transvaal. This battle of mildness against roughness of humility and love against arrogance and violence, is becoming more and more perceptible among us, particularly in the conflict of the religious sense of duty with the laws of the State, in consequence of the refusal to do military service. These refusals are becoming more and more frequent.

The letter "To an Indian" I have written, and the translation has thoroughly satisfied me. The title of the book about Krishna may be communicated to you from Moscow. As regards 'Rebirth', I would not omit anything for my part for as it appears to me, the belief in rebirth will never be able to gain so firm a footing as that the immortality of the soul and the divine truth and love. Still I give you permission to learn out the passage if you wish it. I should be very much pleased to benefit by your publication. The translation and dissemination of my writings in Indian language can only be agreeable to me.

The question of compensation, i.e., of payment in money, should not, in my opinion, be raised in connection with a religious matter.

I greet you as a brother and am glad to come in contact with you

LEO TOLSTOY

Johannesburg, 4. April '10.

To the Count Leo Tolstoy, Yasnaya Polyana, Russia.

Dear Sir,

You will remember that I wrote to you from London where I was staying for a short time. As your most devoted follower, I send you along with this letter a booklet which I have written. I have translated in it my own writing from the language of Gujarat. It is remarkable that the original was confiscated by the Indian government. Therefore I hastened to publish this translation. I am afraid of troubling you, but if your health permits and you can find time I need not express how highly I would value your criticism. I send you along with it a few specimens of your letters to an Indian which you gave me permission to publish. It was likewise translated into an Indian dialect.

Your devoted servant

M K GANDHI

[The following note is by Mr. Birukoff) Attached to this letter was a brochure of Gandhi "Indian Home Rule". It made a deep impression upon Tolstoy and confirmed the fruitful relation between these two men so different in exterior.

At once after reading that booklet Tolstoy wrote to Gandhi.]

To Mahatma Gandhi

Yasnaya Polyana
8, May, 1910

Dear friend,

I have just received your letter and your book "Indian Home Rule".

I have read your book with great interest for I think the question, which you have dealt with in it, passive resistance is a question of great importance, not only for India but for all mankind.

I cannot find your first letter, but searching after it I came across Dole's biography, which captivated me and gave me opportunity to know you better and to understand you.

At present I am not quite well and therefore I cannot write to you about all that I have in my heart on reading your book and about your activity generally, which I value very highly. I shall do it however as soon as I recover.

Your friend and brother
LEO TOLSTOY

[After some time as soon as he recovered from his illness, he fulfilled his promise and addressed

a letter to Gandhi which gave this remarkable man called 'Mahatma' i.e., 'great soul', it may be said the basis for his further social activities—Birukoff.]

To Gandhi, Johannesburg, Transvaal, South Africa 7, Sept., 1910, Kotschety

I have received your journal "Indian Opinion" and am glad to know what has been written there about the followers of the renunciation of all resistance by violence. All at once the desire came over me to express to you the thoughts which rose in my mind on reading it.

The longer I live—and particularly now, when I clearly perceive the approach of death—the stronger it presses upon me to express what I feel to be more luminous than everything else and which in my opinion is of enormous importance. It is about what is called the renunciation of all resistance by violence, in which however, in the last analysis is expressed nothing but the law of love not yet corrupted by fraud. That love in other words, the effort of the human souls for unity and the attitude towards one another arising out of it, represents the highest and the only law of life and in the depth of his heart everybody knows it and feels it (as we see in the clearest manner among children) he knows it, so long as he is not entangled in the net of falsehood. This law was proclaimed by all the sages of the world, Indian as well as Chinese and Jewish, Greek and Roman. I think it has been most clearly expressed by Christ who directly said that therein are included all the law and the prophets. Still it is not sufficient. In view of the distortion which happens to this doctrine and may happen to it any time be expressly refers to the danger of a misrepresentation, as is possible for people who are not free from worldly interests, namely, that such a person could take upon himself the right of safeguarding his interests by violence, or, as he expresses it, to retaliate a blow with a blow, to fetch back his stolen property by force, etc., etc. He knew, as every sensible man must know, that every use of force is irreconcilable with love as the highest law of life, and that as soon as force seems permissible even only in a single case, thereby the law is at once denied. The whole Christian civilisation, so dazzling externally, grew up out of this evident and enormous, partly intentional but for the most part unconsciously, misunderstanding and contradiction. At bottom, however, the law of love no more

exercised influence and could not do so, according as beside it was placed the defence by force—and as soon as the law of love did not succeed, there was no other law but that of "might is right." So Christianity lived through nineteen centuries. All allsorts peoples of all ages permitted themselves to be guided by force as the highest law of their society. The difference between Christian and other nations lies in that in Christianity the law of love was proclaimed so clearly and in so fixed a form as in no other religion* and that its followers solemnly acknowledged it. In spite of everything, however they considered the application of force as permissible and established their life upon the basis of violence. Therefore the life of Christian nations in a singularly glaring contrast between what they profess and upon which they establish their existence a contrast between the love which is laid down as the law of conduct and the violence which is acknowledged under various forms as there are governments, courts of justice and the military, which are represented as necessary and are praised. This contrast became more and more glaring with the development of the spiritual life of Christianity and in recent times, it has developed to its greatest extent. The question now stands thus we must choose one of the two, either admit that we observe no religious principle and the conduct of life is determined for us only by the law of 'might is right,' or require that all raising of taxes by force should be discontinued and all our institutions of law and police should be given up.

In this spring, in a girls' institute in Moscow, at the religion examination at first the religion teacher and then the archbishop, who was likewise present, examined the girls about the ten commandments and particularly about the fifth. After the correct recital of the commandment, the archbishop raised the question is it always and in all cases forbidden to kill? And the unfortunate girls, corrupted by their teacher, had to answer and answered too not always, for, in war and in execution, killing is permissible. When however to one of these poor creatures (what I say is not an anecdote but what actually happened and was reported to me by an eyewitness) the customary question was put whether it was always a sin to kill, the girl

turned red and replied angrily with decision, 'always!' And she clung to it tenaciously in spite of all the sophisms of the archbishop: "to kill is forbidden on all occasions, even in the Old Testament, Christ has forbidden not only to kill but generally to do wrong in the neighbour." The archbishop in all his majesty and eloquence was silent and the girl gained the day.

Yes, we may write in our newspapers about our progress made to gain mastery over the air, about complicated diplomatic connections about various clubs, about discoveries and all sorts of alliances and we may overlook what that girl replied but we cannot hush it up while a single Christian feels it, however imperfectly it may be. Socialism, Communism, Anarchism, Salvation Army, increase of crime, unemployment, the abnormal luxury of the rich and the distress of the poor, the fearful increase in the number of suicides,—all these are the result of that internal contradiction, which must be solved and will be solved. And of course, solved in such a way that the law of love would be recognised and every kind of force would be rejected. Therefore, your activity in the Transvaal, which for us lies at the other end of the world is nevertheless of the highest interest to us and represents the most important work in which the world may take part at once and in which not only the Christians but all the peoples of the world will take part.

I think you will be pleased to hear that among us too in Russia such an agitation is fast gaining ground, that the refusals to do military service are increasing from year to year. However small, the number of those with you who renounce all resistance by violence, and with us the number of people who refuse the army service—they can both say to themselves God is with us. And God is more powerful than man.

In the profession of Christianity, although disfigured in such a manner as it is taught to us, and at the same time in the belief in the necessity of armies, there is such a glaring and revolting contrast that it must be exposed in all its nakedness, sooner or later, probably very soon, either it will destroy the Christian religion, which is indispensable for the maintenance of the power of the State, or it will sweep out the military and all kinds of violence connected with it, which are none the less necessary for the State. All governments feel this contradiction.

*This assertion will be challenged by the followers of some other religions.—Editor, *M.R.*

your British as well as our Russian and therefore its experience is energetically pursued as any other activity detrimental to the State, as we have lived to see in Russia and came to notice from the headings of your journal The governments know

from where the greatest danger threatens them and watch with careful eyes not only their interests in this respect but engage here directly in a life and death struggle

With eminent regard

LEO TOLSTOY

MEXICO AND THE UNITED STATES *

By DR. SUDHINDRA BOSE

Lecturer in Political Science State University of Iowa

I visited Mexico a few months ago when the fight between the government and the church was at its hottest. Mexico was then in a swirl of excitement. The immediate cause of the trouble was the determination of the Mexican government to enforce the provisions of the law prohibiting clergymen and churches from interfering in political affairs or maintaining institutions proscribed by the Constitution. The church was joyfully branding the government as immoral, atheistic and hell bound. It was cheerfully predicting a dreadful smash up for Mexico. Anything to this point uproar? Nothing but camouflage pure bunk.

I came away with the impression that Mexico in spite of all clerical hullabaloo is at bottom sound. It is now going through a period of transition. It is in the process of becoming a unified nation. Mexico at the present time is very much alive and kicking. It will not die. This country like the United States is a land of the future.

MAKING A NATION

Mexico is officially called Estados Unidos Mexicanos and Republica Mexicana. It has an area of 767,290 square miles.

That is to say Mexico has one third the area of the United States but it is larger than Japan, Italy, Germany, France and England combined.

Mexico is a Federal Republic with centralized executive powers. Its political divisions

include 28 States having independent local governments, 2 Territories, and 1 Federal District in which is located the National Capital.

The population of Mexico totals about 16,000,000 including a foreign population of 600,000 representing 40 different countries. Of these 600,000 foreigners, 60,000 are Americans who are principally engaged in oil and mining industries and in the liberal professions.

The population of Mexico is not homogeneous. Less than one-fifth of the population is classed as whites, 33 per cent is Mexican Indians, and 43 per cent is Mestizos or offsprings of mixed Spanish and Indian parentage. Then too the Mexican Indians are anything but homogeneous among themselves. They are split into some 150 different tribes speaking many dialects and practising different customs. These internal divisions have been one of the greatest curses of Mexico.

The political history of Mexico is much older and in some respects more stormy and picturesque than that of the United States. The Spanish colonial history in Mexico began a century earlier than the English colonial period in America. The Spanish invaders under the bloody Cortez overthrew the empire of the Montezumas and destroyed the ancient Aztec civilization in 1519. And it was exactly a hundred years after this that the Pilgrim Fathers landed at Plymouth Rock, Massachusetts. The Spanish domination of Mexico lasted 300 years. Mexico won its independence in 1821.

* This is the outline of an address recently delivered before the Des Moines Women's Club.

It is sometimes asserted that Mexico is a land of perpetual disorder and violence. That is not exactly true. If a man keeps his wits about him he is no more in real danger in Mexico than in Brooklyn or Chicago which is the crime capital of Christendom. There is perhaps more banditry in the United States in a single week than in Mexico in a whole year. By what

PLUTARCO ELÍAS CALLES
President of the Mexican Republic for the
term of six years commencing
Dec 1 1924

other words the trade between these two countries was conducted at the rate of three million rupees a day. The importance of trade between Mexico and the United States can be further understood when one remembers that Mexico leads all Latin American continental countries in this respect. At any rate Mexico is not all a sink of crime or a den of vice as some have pictured it. The fact that the two neighbors across the Rio Grande can talk in economic terms means that they have common business language that they have common interests and that they should arrive at a better understanding.

Another fact of capital importance in regard to Mexico is that the present regime is an extension of the revolution began ten years ago. The present Constitution adopted in 1917 had never been put into full operation. The former governments since the revolution were either too occupied with the problems of military pacification or too busy enacting reconstructive measures to fully enforce the constitution. It is only with president Calles that Mexico has now started upon the path of technically legal administration. What he is attempting to do is to enforce every clause of the 1917 Constitution. In this connection it should be observed that the three most recent Mexican governments which were recognized by the United States, have all been founded upon this Constitution born of the revolution.

One of the most direct results of the Mexican revolution is the growth of nationalism. Mexico for Mexicans is the cry of the day. Self respect, self help, self development and self determination are the watchwords of the Mexico of today. The Mexican nationalists want their fatherland to be independent, religiously, politically as well as economically. Foreigners may come in Mexico but they must not dominate it. Mexico is awakened.

The Mexican nationalistic movement is of tremendous dynamic force and is packed with thrills and human interest. The nationalistic tendencies are specially noticeable in their church laws, petroleum laws, and in their various other attempts to protect and conserve their national resources from unjust foreign exploitation.

Throughout the greater part of four centuries of Mexican church history, the ecclesiastical authorities have been fanatically intolerant. The present conflict is nothing but the continuation of a state of affairs existing since 1521. Writes Senor Jose Miguel Beja and the well known Mexican publicist,

"The Mexicans then had their own religion, their highly developed arts, their gods, and their temples and although some time elapsed before a Pope decided that the conquered people were human beings and had a soul, the first act of the Spanish soldiers and the Spanish priests upon taking possession of the land was to demolish the magnificent places of worship in the Mexican towns and to erect upon the debris Roman churches. The idols and icons were destroyed, the religious monuments razed to their foundations, and the Mexicans baptized en masse.

The church in Mexico was an instrument of fanaticism and bigotry. Only fifty years after the Spanish occupation the Holy Inquisition with its fiendish fire and torture was introduced into Mexico to hunt out the heretics. No one lived at ease. Fear swept over the country like plague. History records that in one day alone, on April 11 1619 one hundred and seven persons were burned alive or tortured to death by the Inquisition in Mexico.

The church whose sole duty was supposed to be to teach the self-deceiving doctrine of the humble Nazarine Carpenter became the extractor of most of the gold and silver that went to Rome and to Spain. It took Rs 71,000,000 in gold in one year. In three centuries it has been estimated that the church grabbed nine billion rupees worth of silver and other metals.

"Ten per cent. of the product of the land was for the church the ground had to be blessed by a priest before sowing, processions and religious services were organized to pray for rain in times of drought. Even domestic animals had to be taken to the church once a year to be blessed. The priest was pastor, physician, chief of police, school teacher and judge.

In the past the church was an instrument of conquest. It is now frequently a handmaid of the exploiting class. Many a rich manufacturer desiring to safeguard against sabotage, finds it profitable to hire Catholic priests in order to bless the machine with holy water and prayers before they are used! The idea seems to be that when a priest has mumbled a few Latin words and sprinkled a few drops of Jordan water over a machine it becomes holy, and that the ignorant workmen would not injure it during labor troubles.

To the pleas of intelligent, educated, patriotic Mexicans that they are starved, robbed and degraded the Christian divines have just one answer. Get Jesus in your hearts, and these questions will take care of themselves. Church a mighty helper indeed! Is it any wonder that religion is already headed for the refrigerator?

Typical Mexican Indians

The Roman Catholic church in Mexico has accumulated vast property. Professor Ross of the University of Wisconsin states that by the middle of the nineteenth century two-thirds of the productive wealth of the country was in the hands of the church. The government has now nationalized all religious property as regards ownership and control in its attempts to deliver the country from the dominance of a clerical medievalism. Mexico is inspired by the examples of France, Russia and other progressive nations. Mexican leaders note that even the Asiatic Turkey has disestablished the Islamic ecclesiastical organization.

From a historical and administrative point of view the church in Mexico is a foreign institution imposed upon the country from outside largely by force of arms. It has not built up a strong native priesthood. The church not only controls large areas of Mexican lands but its foreign priesthood practically control the Mexican system of education and encourages the ignorant masses to disobey land laws. The claim is made that the natives are exploited—economically and politically—by foreign bishops and priests especially Spanish and Italian. The

An Aztec calendar carved on a huge monolith in stone centuries before Christ

making decree as summarized by the American Foreign Policy Association provides

1 No foreigner may exercise the religious profession in Mexico

2 Education must be given in official schools and be secular. No religious corporation or minister of any creed may establish or direct schools of primary instruction

3 Religious orders, convents and monasteries will be dissolved

4 Any minister who incites the public to refuse to acknowledge public institutions or to obey the laws will be severely punished

5 No publication either religious or merely showing marked tendencies in favor of religion, may comment on national political affairs

6 No organization may be formed whose title has any word or any indication that it is connected with religious ideas

7 Political meetings may not be held in churches

8 All religious acts must be held within the walls of a church

9 No religious order of any creed may possess or administer property or capital

10 The churches are the property of the nation. Other ecclesiastical properties such as bishops' palaces, houses, seminaries, asylums, colleges, convents and all buildings constructed for religious purposes pass into the possession of the nation, the use to which they are to be put to be determined by the Government

11 Heavy penalties may be imposed upon ministerial or other authorities who fail to enforce the above provisions.

The church authorities instead of submitting to the laws of the country have openly defied the government by resorting to their ancient weapons of excommunication, the interdict, the boycott and the terrorizing of people of weak conscience. This is flat rebellion. Religious bigotry has gone to seed. The Mexican government was compelled under the circumstances to expel some twenty foreign ecclesiastics. Who shall say that a nation has no right to throw out undesirable aliens in self defense?

The leading Roman Catholics in the United States have been urging the Washington government for some form of interference. They would doubtless be pleased if America would intervene and gobble up the southern neighbor by annexation. Fortunately there is not yet a substantial body of public sentiment favoring annexation. And unless the government in Mexico City weakens under pressure all undesirable "sky pilots" will have to get out and keep out of Mexico.

LAND LAWS

Mexico possesses a very limited amount of productive land at present. Only about

one-fourth of the land is arable. Americans and other foreigners own millions and millions of acres of this land. The new Constitution prohibits any foreigner whatever from acquiring possession of real estate within sixty two miles of the boundary lines and thirty one miles of the sea coasts. This is a measure of national defense against possible military and naval aggression.

Aliens who already own land in the prohibited zone, are permitted to hold it throughout their life time. Their heirs also may inherit it, but they must dispose of it within a period of five years or become naturalized Mexican citizens. Failure to comply with the law will result in the sale of the land at public auction.

Outside of this forbidden zone foreigners may acquire ownership of lands or acquire concession to develop natural resources, if they sign a pledge that in any question affecting the ownership of such property they will forego the privilege of appealing to their own government. Aliens must submit their claims, in so far as they affect the property to the laws and courts of Mexico. Violation of the pledge will result in the forfeiture of their property rights to the Mexican government. Foreigners already owning property in Mexico will not be required to sign this pledge, but their heirs must either sign it or dispose of the property within five years. Failure to comply will result in the sale of the property at public auction, the proceeds of which will be turned over to the Mexican government.

Another provision of the Alien Land Act requires that fifty percent or more of the stock of any company owning land shall not be acquired by foreigners. However a foreigner already holding stock in excess of that percentage may keep it until death and a corporation owning such excess shall have ten years in which to dispose of it. The purpose of this clause is to ensure to Mexican citizens an adequate supply of agricultural land.*

PETROLEUM LAWS

Nearly everybody knows that Mexico is the largest producer of silver in the world, but it is not so generally known that in the

production of petroleum Mexico is only second to the United States. Now in view of the fact that much of this petroleum is in the hands of the foreigners the Petroleum Act provides that the ownership of all minerals including oil is vested in the nation. This provision is intended to keep the control of such natural resources out of the hands of the foreigners. In granting concession to develop resources the Mexican government will doubtless favor Mexicans over foreigners. Moreover, the law prohibits monopolies and requires the foreign concessionaires to pay taxes.

High pressure diplomats have asserted that these laws are confiscatory and retroactive. Indeed the State Department at Washington has protested against them. The Mexican government, however, takes the ground that as a sovereign power it has undisputed right to legislate concerning land and natural resources within its jurisdiction. All lands and properties within the limits of the national territory belong originally to the nation. It has the right to transfer their ownership to individuals or corporations and may determine the requirements for such transference. These rights are inherent in Mexico as a sovereign nation.

The Mexican Ambassador to the United States has recently pointed out that the Mexican land laws are not, in their essence very different from those of America. In several of the United States foreigners are not allowed to own real estate under any conditions.

This is notably true of the District of Columbia as also of Kentucky, Missouri, Oklahoma, Washington, Texas, and other States. An exception is made of foreigners who first announce their intention to become naturalized citizens of the United States. In Oklahoma, if an alien acquires property by inheritance, he must either become a citizen within five years or forfeit the holding to the State.

Then again in most of the States on the Pacific Coast discrimination is made outright against the Oriental people as a class. The Alien Land Act of California, for instance, rigidly forbids Japanese, Indians and Chinese, not only from owning agricultural land but also from leasing it, even for a single year. The law also forbids their purchase of stock in any company or corporation that is entitled to possess or acquire agricultural land. How can the United States, having such anti-alien land laws on its own statute books, bawl against those of Mexico?

* For a thorough study of the Mexican agrarian situation consult *Land Systems of Mexico* by G. M. McBride.

LABOR MOVEMENT

It is interesting to note that the policies of the Calles administration are backed and supported by the Mexican labor movement. Indeed it has assumed responsibility for the acts of the government. The Mexican Federation of Labor has a membership of a million and a half, and it is estimated that at the end of the present year the membership of the Federation will be 2,000,000. It is a powerful political force.

In the last labor convention President Calles expressed his determination to make life easier and more attractive for the workers. His government is exerting every effort to build a better and a newer country where there will be more social justice and where the poor will not be ground down by the rich. He is the friend of the oppressed and the toiling masses. It is not therefore surprising that he should be described by his critics as socialistic and radical in his views.

The interest of the present government in the welfare of the laborers is not merely academic. Senor Calles is right on the job at all times fighting for the best interests of the laboring class. The Mexican Congress now in session has a bill before it which is designed to make employers share profits with their employees or to pay them a fixed bonus. There are also other measures pending such as a minimum wage requirement, eight hour day, workmen's compensation for injuries and preference to Mexican citizens.

Are these measures too radical? Are they too revolutionary? Perhaps. But are they singular? Are they without their counterparts in the advanced countries of the world? Most of these measures are already in force in America. In the United States, observes the Boston *Christian Science Monitor*, which can never be accused of sympathy for any radical expedient,

are found statutes creating employer's liability. The eight hour day is not unknown in American industries, and is actually enforced by statute in many cases. Wages are fixed by government mediators and the wage scales in a great many instances have been determined upon the earning power of the companies involved. The bonus system is not unknown and is a matter of fact all those measures spoken of in Mexico as radical labor reforms have their counterpart in the United States, if not as laws, at least rules fixed by custom.

The fact is that President Calles and his supporters are convinced that the revolution can be preserved and made to move forward

only by progressive reforms. Life is progression. Progress is change. Progress demands a break with the dead past, and Mexico is striving to make that break peace fully, if it can, but break it must.

The Mexican labor leaders have been severely criticized in the United States for their extreme nationalistic policy. They seem to have acquired the reputation of being Xenophobic. One should remember, however, that Mexico for many years was subjected to a series of measures actually designed to favor the foreigner at the expense of the native American. English, and other foreign capitalists vied with one another in controlling Mexican natural resources and Mexican economic enterprises. Industrial development was fostered by concessions to foreigners under special legislation, writes an authority on Mexican affairs, "often granting monopoly privileges, exemption from taxes and from duties on imported machinery, etc. Bankers were established with exclusive rights of currency issue, to the amount of two or three times their currency reserve, exemption from federal and municipal taxes, and the right to foreclose on mortgage securities by private action of bank officials without judicial procedure. These banks were controlled by small groups of capitalists who lent large sums of money to their friends and rendered small land holders helpless." It is only natural that the labor unions, which are the only organized force in the country excepting the army, should resist economic exploitation vigorously, henceforth no one shall prey upon Mexico.

Moreover the Mexican labor movement is an important social influence in improving the standard of living among the working people. In twelve years the labor unions have raised according to the General Secretary of the Mexican Federation of Labor, wages an average of eighty five per cent.

AGRICULTURAL DEVELOPMENT

The agricultural resources of Mexico are large and unusually varied but the methods of farming are as primitive as those of India. The present government is endeavouring to modernize farming and improve the conditions of the lowly farmers.

The Federal government, the State govern

* A comprehensive treatment of the subject is to be found in *Mexican People and Their Detractors* by E. Guozales Itoa.

ments and the various municipalities have been in some cases selling, but in most cases distributing free among the new farmers seed, implements, and agricultural machinery. Mexico has recently bought in America and sold to Mexican peasants 5,000 sets of modern plows and harnesses, at a cost of Rs. 75 per set and on three years' credit. This same equipment costs Rs. 375 per outfit through private channels.

As a necessary step in the development of agriculture, the government has opened the National Agricultural Loan Bank in Mexico City. It lends money at a reasonable rate of interest to the peasants, who are fleeced by private money lenders. The loan-sharks charge an interest rate from 24 per cent. to 48 per cent.

The government does not intend to stop with one agricultural bank. It is planned to start regional agricultural banks under the supervision of the central bank in Mexico City. Moreover, it is proposed that in each community where a bank is opened a co-operative society of farmers will be formed and this co-operative society will have an interest in the bank. What these banks, which will bring the much needed credit within the reach of the starved peasantry, will mean for the development of Mexico requires no great powers of divination to foresee. They will stabilize agriculture and ensure increased prosperity for the nation.

SPREAD OF EDUCATION

Mexico is confronted with a gigantic task in changing from a sixteenth century seifdom to a twentieth century democracy. In order to bring about the desired transformation, Mexico is turning more and more to education.

The majority of the people, estimated at from 60 to 80 per cent., are illiterate. This does not, of course, imply that Mexicans are stupid or of a low order of intelligence. The great mass of the people in Mexico, as in India, have not enough educational opportunities. Popular education is, however, being introduced with splendid success. Already Mexico has a fine nucleus of an educational system. The National University in Mexico City, which lacks only about quarter century

of being 400 years old, is a flourishing institution. It is attended by 13,000 students, a large number of them being women. With the spread of education, the spirit of narrow sectionalism is waning. The rising tide of nationalism is sweeping all classes of people into unification.

Elementary education of all children between the ages of six and sixteen is compulsory. In actual practice, the law is not enforced. This is due to the fact that there are not as yet enough schools to meet the requirements of the compulsory law. The schools are, however, rapidly increasing. Calles has stated that now schools are being built and opened at the rate of 1,000 a year and the government will continue this building program until the nation is provided with school room for every child.

Mexico has at last awakened from its febrargy. We are today witnessing in that country a colossal struggle—a struggle for religious, political, and economic emancipation. The ideals of Mexican nationalists are those of liberty and enlightenment. The dream of Young Mexicans is the dream of a greater and happier Mexico. They hope to conquer a better material existence here upon this planet Earth before reaching Heaven. The hungry Mexican peons like the starving Egyptian fellahs and Russian muzbiks, have no desire to chant

You will eat, bye and bye
In the glorious land above the sky,
Work and pray live on hay
You'll get pie in the sky when you die!

The present administration may not be all that is desired, but it is a long and important step forward. President Plutarco Elias Calles is a man of high character, unselfishness and rare executive ability. Life stands before him an adventure of service not yet lived. His clean-cut program of nation building, which has earned him popularity in his native country, may well serve as a guide to Indian leaders.

Mexico by fighting for its rights is fighting for all oppressed peoples in all other countries. The question that Mexico is facing is this: Can a poor, oppressed, exploited people have the right—to quote the words of the American Declaration of Independence—to "life, liberty and the pursuit of happiness" when threatened by the wealthy and mighty?

BINDU'S SON

By SARAT CHANDRA CHATTERJEE

THAT Jadab Mukherjee and Madhab Mukherjee were not born of the same mother was history which they themselves had forgotten, so had all outsiders. Jadab who was poor, had at great sacrifice, trained up his younger brother Madhab in law and after much trouble had secured Bindubashini, only child of a rich landowner as the latter's bride. Bindubashini was possessed of uncommon beauty. On the day that she came to live in their house with her matchless beauty and ten thousand rupees in Government promissory notes, the elder brother's wife Annapurna shed tears of joy. The family had no mother or daughters. She was the head of the show. She held up the young bride's face and said proudly to the admiring neighbours "This is what one should bring home, when looking for a bride! She is like a statue of the goddess Lakshmi!" But she was disillusioned in about a couple of days. She discovered very soon that the young bride had brought, along with her share of charms and cash mountains of vanity and an undue sensitiveness. One day the elder lady of the house called her husband aside and said "Dear, you have no doubt secured a sack full of grace and gold for a bride for your brother, but my goodness, she is a real jungle cobra!"

Jadab did not believe her. He scratched his head and said, 'so then', 'really', is that so? a few times and went to the Zemindar's Office.

Jadab was a quiet and peace-loving sort of a man. He used to work as a rent collector at the Zemindar's Collectorate and spent his time at home in religious duties. Madhab was ten or twelve years his brother's younger. He had just commenced to practise as a lawyer after passing his examination.

He came and said, "Bou than" Did dadaji find money to be greater than all else? If he had waited a few days, I could have earned enough to satisfy him."

Annapurna kept silent.

There was an additional danger which prevented anybody from attempting to discipline Bindubashini. She suffered from hysteria and bad fits. She could make such scenes that it made one's head reel even to look at her and it generally required medical help to bring things to the normal. It was, therefore, that everybody believed the much-coveted alliance to have been a great mistake. Only Jadab stuck to his faith. He stood alone against everyone and said, 'No, no, you will see later on. The little mother (meaning Bindubashini) is beautiful as the Goddess Jagatdhatrī, could she be a failure? It is absurd.'

One day, after a little exchange of words, Bindubashini was sitting silently with a dark cloud on her face. Annapurna was put into a panic when she saw these symptoms. She suddenly had an inspiration. Rushing into her room she brought out her little eighteen-month-old son Amulya, who was fast asleep, and dumping him on Bindu's lap, she disappeared.

Amulya began to howl as a mark of protest against this rude interruption to his unfinished sleep.

Bindu struggled with all her might to save herself from the clutches of hysteria, won, and went into the room with the baby.

Annapurna saw this from a corner and felt extremely elated to have discovered such a miraculous cure for her sister-in-law's fits.

Annapurna had to do all the house-hold work of supervision and management and found little time to look after her little son. It made her sick if she got no sleep at night after the fatiguing duties of the day. So, Bindu took up the work of looking after the baby.

About a month after the incident referred to above, Bindu entered the kitchen one day with the baby in her arms and asked, "Didi* where is Amulyadhono's† milk?"

Annapurna left the work in hand and said

* The form of address used in Bengal to address one's elder brother's wife.

† Term of address used to address an elder brother.

* Form of address used to address an elder sister or sister-in-law.
† Amulya's full name.

in a frightened voice, "Just a minute, sister, I am warming it for you."

Bindu had already seen that the milk was not ready. She lost her temper and said sharply, "I told you also yesterday that I wanted the milk before eight but it must be nine before I get it. If you find the work so heavy, why don't you tell me so? I can manage it in some other way. And you," (now addressing the cook), "O daughter of a Brahmin, have you too lost your senses? Would it turn creation upside down if you cooked the pindi* for the whole house a few minutes later?"

The Brahmin woman kept quiet.

Annapurna answered "We could have retained our senses if all that we had to do consisted, as in your case, of dressing and undressing the baby. Couldn't you wait even one minute?" Bindu said in answer, "You will have a curse on you, Didi, if you ever again touch Amulya's milk! I, too, may I have a curse on me if I ever asked you for his milk!"

So saying, she thumped Amulya down on the floor and taking hold of the milk pan, placed it on the stove. Amulya began to sob as a result of these extraordinary happenings. Bindu pressed him hard on the cheeks and shouted, "Shut up at once, you son of a pig, shut up, or I will strangle you!" Kadam, the maid of the household, rushed up seeing how Bindu was going on and attempted to take the baby in her arms. Bindu stormed at her, "Get out, leave my presence at this very moment, do you hear!"

She stood where she was, as if petrified with fright, and did not come a step nearer.

Bindu did not say another word to anybody and engaged in warming the milk with the little boy in her arms.

Annapurna stood still. When, after a little while Bindu had left the place, she said, addressing the cook, "You heard her, didn't you? I had told her one day in joke to take Amulya. Now, on the strength of that, she places a curse on me!"

However, it was thus that Annapurna's son began to be nurtured into manhood by Bindubashini, and the result was that he learned to call his aunt "mother" and his mother "didi."

*Food offered to the dead. Here used to signify Bindu's angry desire that the other members of the house, died rather than deprive the baby of his timely supply of milk.

About four years after this Amulya had his *hate khari** with great festivity. The day after the ceremony, Annapurna was busy in the kitchen when Bindubashini called her from outside, "Didi, Amulya has come to give you his *pranam*†, just come out for a minute."

Annapurna came out and was staggered by the make-up of Amulya. His eyes were nicely painted with *Kajal*,§ he had been given a beauty spot on his forehead and his hair was gathered up and tied on the crown of his head. A yellow-dyed dress, an earthen ink-pot slung from a string in one hand and a few palm leaves (for writing purposes) wrapped in a small mat under his arm, completed his equipment.

Bindu said, Do your *pranam* to Didi, dear!"

Amulya prostrated himself before his mother. He had no shoes, no socks, no burden of a variety of foreign clothes—Annapurna smiled at these eccentricities and said "Oh, you have a head for ideas, Chhota Bau** Is your son going to school?"

Bindu smilingly answered, "Yes, I am sending him to Ganga Pandit's Pathshala (village school). Bless him this day that he may realise his highest destiny." Turning to the servant, she said, "Tell Bharrab Pandit Mahasbaya, in my name, to see that no one bullies or beats my son! Didi, take these five rupees, prepare a nice *sadha* (a present of food-stuffs), and send it to the Pathshala by Kadam." So saying she kissed her son, picked him up in her arms and went away.

Annapurna's eyes overflowed with tears of joy. She said to the cook, "She is all engrossed in that boy! Yet, she did not bear him—had she done so, I do not know what she would have done!"

The cook opined, "It is probably due to that that God has not given her any of her own—she would, be eighteen or nineteen—"

Before the cook could fully unburden herself of her wisdom, Chhota Bau came back, alone this time and said, "Didi, couldn't you

*A ceremony inaugurating the student life of a child.

†Prostrating oneself before an elder as a mark of respect.

§Preparation of lamp black made from vegetable oil flame.

** Meaning the younger bride of the family

ask Bar'thakur * to arrange to open a Pathshala in front of our house? I shall pay all expenses'

Annapurna laughed out. She said, 'Good gracious, he hasn't even gone two steps away from you and you have already lost your determination? Why not go to the Pathshala with him and keep watch there?'

Bindu was disconcerted and said 'No, no, I have not lost my determination! But I am thinking that it is one thing for him to be within my sight and another to be out of it. The other students are all wicked boys. Suppose they thrashed him. He is so small!'

Annapurna answered "And if they did, what of it? Boys will be boys and will fight. Moreover, all children are the same in their parents' eyes. If they could send their children to school why couldn't you?"

Bindu thoroughly disliked comparison with others. So she said probably a bit displeased inwardly 'You have a way of talking! Suppose some one poked him in the eye with a pen or something—what then?'

Annapurna understood her feeling, smiled and said 'Take him to a doctor, no doubt. But I tell you that even if I had spent days over it I could never have thought of that poke in the eye! So many boys go to school, but I have never heard of any one being poked in the eye!'

Bindu said 'Lots of things may happen of which you have no idea or knowledge. Who can make sure of accidents? Never mind all that, why not ask him once and let things follow their natural course after that?'

Annapurna said gravely 'I know what will happen. When you have set your heart on it once, it must come about. But I shall not be able to say such unheard of things. You speak to him don't you? Then why not suggest it yourself?'

Bindu was now angry. She said, 'Yes I will. I shall not send my son so far every day—it does not matter if it displeases any one, nor even if it stopped his education altogether. Hadam, didn't I ask you to take the *Sidha* to the Pathshala? Then why are you standing and gaping?'

Annapurna hurriedly said, 'I am arranging the *Sidha*. Don't let such little things upset you so much! Really, is not your son going to grow up? Do you expect to keep him under your wings for ever? Why don't you think?'

Chhota Bau did not answer her question. Instead she addressed the maid servant, Kadam, 'Go with the *Sidha*, and bring back the boy after he has taken the dust of the Gurumahashaya's feet. Request him also to come this way some time in the evening. It is impossible to persuade one who will not be persuaded. I am telling her that a little boy may be thrashed and bullied and I am told that I could not keep him under my wings for ever! I have not come for anybody's advice regarding what I could and what I could not do!'" So saying she walked away at great speed.

Annapurna was dumb-founded and stood still. Kadam said, 'Don't stand there any longer mother*', she might come again. When she has set her heart on something, even God almighty will be powerless to keep her from it."

That evening when the oldest member of the family after taking his daily dose of opium, was reclining on the bed with the hubble-bubble pipe in his mouth and attempting to whip up his sweet hallucinations there was a sudden knock at the door.

Jadah opened his eyes after great effort and said, 'Who is it?'

Annapurna entered the room and announced, 'Chhota Bau has come to say something to you, just listen to her!'

Jadah hurriedly sat up and said 'Who, the little mother†? Why, what's wrong, mother?'

He had great affection for the Chhotahon (Bindu). As Bindu did not answer, Annapurna said, 'She fears that the boys at the school will be poking at her boy's eyes with their pens, so she wants to have a pathshala started within the house.'

Jadah looked very much upset, dropped his pipe and asked, 'Who, who has poked into his eyes? Let me see what has happened.'

Annapurna lifted the pipe back to his hand and said with a smile 'No one has done so yet. We are discussing probabilities.' Jadah was mightily relieved. He said, 'Oh, probabilities! I thought—'

Bindu was standing out of sight and wriggling inwardly with rage. She said, however, in an undertone, "Didn't I tell you absolutely incapable of uttering unheard of things—then why are you talking?"

* In Bengal servants address the lady of the house as mother.

† Affectionate way of referring to one's younger brother's wife.

Annapurna also was realising that her way of putting the thing had not been very happy and was spoiling the case. She understood the full implication of Bindu's undertone and got frightened. Her passion was vented on the poor inoffensive husband, to whom she said, "I did not know that opium shut one's ears also, I thought its effects were restricted to shutting the eyes alone. What have I been telling you? And what have you heard? Let me see, what has happened? Did I say that some one had put Amulya's eyes out? It seems that I must suffer for every thing!" The poor, harmless Jadab felt his dreams crumbling away, he lost control of his senses and said, "Why my dear, what has happened?"

Annapurna got furious. She cried, "Every thing and nothing! It is sinful and stupid to talk to such persons." Then she swept angrily out of the room.

Jadab asked, "Tell me everything little mother."

Bindu stood by the door and said softly, "If we could have a pathshala outside, near the store-room—"

Jadab said, "That is nothing much. But who will teach?"

Bindu said, "The Pandit mahashaya has been here. If he could get ten rupees per month, he would gladly bring over the pathshala. I think we could pay the expenses from the interest of my money."

Jadab was satisfied. He said, "Certainly, I shall set men to work from to-morrow. If Oangaram brings over his pathshala here, it would solve the problem very nicely indeed."

As soon as Madhab gave his consent to her plan, Bindu lost all her anger. She went into the kitchen with a smiling face and found Kadam expounding something with great flourishes of her arms to cheerless Annapurna. Kadam choked off all of a sudden at the advent of Bindu and could only manage a "Goodness, here is—" as a finishing touch. Bindu knew that she herself was the subject and asked, "Goodness, here is, what? Let us hear the rest of it."

Kadam swallowed and stammered with a dry palate, "No, didi, it was—Bara ma* said—let us see—suppose if—"

Bindu said harshly, "Yes, I have supposed. You go off and finish your work."

Kadam cleared out without another word.

Then Bindu said to Annapurna, "Our lady of the house has excellent advisers! They should get an increment of pay; why not ask Bara thakur?"

Bindu addressed Annapurna as didi when she was in a good mood. Otherwise she called her the lady of the house (Bara ginni).

Annapurna flared up, "Go and tell him," she cried, "He would cut my head off, would he? And your Bara thakur? He will at once whine, 'Oh yes, little mother, perfectly right motaer.' I have seen lots of fortunate persons, but none to beat you, chhota bou! What a luck you were born with! Everybody is simply living in terror of you!"

Bindu was in a temper, but the way Annapurna talked made her laugh out. She asked, "Well, you do not seem to be frightened of me?"

Annapurna answered, "Don't I? She who does not go cold with fear when you behave like one of the Furies, is still unborn! But you know, chhota bou, so much of anger does no good! You are no longer a child, are you? Had you borne children, you would have had a good few by now. But what is the use of my blaming you! It is that old simpleton who spoils you!"

Bindu said, "I agree that I was born with a portion of good fortune. But I must say one thing. Lots of people get riches and social status in this life, but few get such a godlike bhasur* as I have! One has to do hard tapasya† to deserve such a one. It is my luck, didi. What is the good of your being jealous? But, if any one has spoilt me, it is not he, it is you!" Annapurna waved her arms and exclaimed, "I? Nobody could say that! I am a hard disciplinarian—but I am unfortunate, no one fears me—even the maids and servants quarrel in front of me and cheek me, as if they were the master and I their underling. It is because it is I that such things go unpunished, otherwise—"

Her contradictory ramble brought forth a giggle from Bindu. She said, "Didi, you belong to the golden age! Why on earth were you born now? But no one cheeks or quarrels with me!" She then suddenly knelt down in front of Annapurna, put her arms round her neck and said, "Do tell me a story!"

*Bara ma—elder mother. When there are many ladies in a joint family, the wife of the eldest member is called Bara ma, and Bara thakur means one's husband's eldest brother. In this case, Jadab.

†Poenas, performed to please the gods for a boon.

Annapurna got furious and said, "Let me go! Go away!"

Kadam came rushing up and said "Didi, Amulya has cut himself with the betelnut-cutter" Bindu at once stood up, letting Annapurna go and said, "Where did he get the betelnut-cutter? What were you doing?"

"I was making the bed when he went into Bara ma's room and—"

"Yes, yes I have understood, clear out from here." So saying Bindu went to search for Amulya. After some time she reappeared with Amulya whose finger was bandaged with a wet rag, and remarked "Well didi how many times have I asked you not to keep your cutters and things within reach of children, but—"

Annapurna got still more angry and said, "Your talk is absolutely without any sense! Must I lock up all household utensils in the safe to keep your son from mischief?"

Bindu said, "No I shall chain him up from to-morrow," and went out. Annapurna addressed the maid "Did you hear Kadam? Do people keep betelnut cutters in the iron safe?"

Kadam attempted to say something but left it unsaid.

Bindu came back and said, "If I again catch you discussing our affairs with servants for opinion and arbitration, I shall go away with my son to my father's house!" Annapurna replied, "Why don't you go? But remember, once you go, I shall not ask you to come back even if you knocked your head on the door and died!"

Bindu said, "I should not think of coming back," and left the room with a glum face.

About two hours later Annapurna marched into Bindu's room with steps that resounded all over the house. Madhab was examining his briefs at one corner and Bindu was lying with Amulya on the bed, telling him a story. Annapurna said, "Come and have your meal."

Bindu said, "I am not feeling hungry."

Amulya said, "Go and eat a little, mother."

Annapurna scolded him, "You keep quiet! This boy is at the root of all mischief. What a spoilt child you are making of him, chhotu bhai! You will realise when it is too late. Then you will weep and say, 'yes, didi told me so!'"

Bindu whispered something into Amulya's ear and he shouted, "Why don't you go away, didi! Mother is telling me a fairy tale?"

Annapurna repeated threateningly, "If you desire peace and welfare, come away chhotu bhai! Or, if I don't send you both away to-morrow, let people call me by a name different from Annapurna!" She then marched out as heavily as she had come.

Madhab asked, "What's up? What have you two been up to?"

Bindu answered, "What always happens when didi loses her temper. I had only asked her to keep her betelnut cutters and things away from the baby—and she has kicked up a terrible row."

Madhab said, "All right, go and finish it now. The way Bouthan is marching about! She will soon wake up dada!"

Bindu picked up Amulya and went to the kitchen with a smile on her face.

(To be continued)

RAISON DETRE OF "THE LEAGUE OF NATIONS"

By KAZI MAHABBAT ALI

IT is now about six years that the League of Nations came into being and the time has come that its activities and work may be surveyed and criticised. The work of the League during the past six years will give enough materials for the study of its real design, which has been manifest on many occasions in the past. An attempt will be

made to expose the League in its true colours through its various phases and I shall try to show that the League—the so called saviour of the world peace and prosperity, is more or less a hoax. To a serious and critical observer of the League's activities, the pomp and show so lavishly displayed at Geneva every year, the courtesy and mutual good wish

so profusely expressed during the Assembly sitting at the secretariat will appear to be a piece of meaningless performance so far as the League's avowed objects are concerned. The fact, however, that it may possess a great potential power none will dispute. But my analysis of the situation will show what the League professes to do, what its covenant allows it to do and how far it has practically been successful in its mission which it so loudly advertises throughout the world. From this analysis I hope I shall be able to convince my reader that the League deserves the epithet I have given it.

Before going into the actual activities of the League it is desirable to give a very brief history of its origin. The League of Nations officially came into being on January 10, 1920 when the treaty of Versailles concluded on January 28, 1919 between Germany on the one side and the allied and the associated powers on the other, came into force. The League as all know, was the outcome of the last great European war that broke out on July 28, 1914 and ended by an armistice on November 11, 1918.

The establishment of the League was due to the efforts of the late President Wilson (U S A) whose intention of creating such a body was embodied in one of his famous fourteen points, and the 14th point of Mr Wilson runs thus.

"A general association of Nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike."

Mr Wilson as an arbitrator offered these fourteen points to all the nations then at war and asked them to cease further operations on acceptance of these conditions. The allies then in hopeless confusion as to the result, of the war readily accepted these terms and assured the world that they would act up to them. An armistice was signed after this. After giving a little further history of the League I shall try to show how these 14 points which were to be made the basis of the League have been honoured more in the breach than in their observance by the League.

The first draft of the covenant of the League of Nations was published on February 14, 1919, and accepted after modifications by the representatives of the allied and associated powers in the plenary conference held at Paris on April 28, 1919.

A few words are also necessary to explain the constitution of the League. The League has three main organs, namely, the assembly, the council and the secretariat. Under the League there are as many as six departments. The secretariat has been permanently established at Geneva in Switzerland which became conspicuous by its perfect neutrality during the war. The secretariat consists of the Secretary general of the League and his staff—the first Secretary general being Sir James Eric Drummond.

England, France, Italy and Japan shall be the permanent members of the League council which is acting as the chief executive of the League. Germany, which has been admitted into the League in September, 1926, has also been given a permanent seat in the council after protracted negotiations. The council practically speaking, is the most important body since all international conflicts referred to or undertaken by the League are decided by this body and the formal approval of the assembly to its decisions is obtained by a simple majority. America, although she was the initiator in this matter, is not a member of the League, since she could not accept in toto the covenant framed by the allied powers.

The first and foremost objects of the League are to restore peace and prevent war all over the world. But my contention will be that the League by its very covenant is incapable of yielding such results, because article 5 of the covenant states that except where otherwise provided decision at any meeting of the assembly or of the council shall require the agreement of all the members of the League represented at the meeting. I should say that such a unanimity of agreement is not possible even in the council when matters of conflicting interests among the members are to be decided. As an instance of this it may be pointed out that Germany could not be admitted into the League in the beginning of the session, 1926, simply because Brazil retained its intention of veto to Germany's obtaining a permanent seat in the council. The possibility of such unanimity in the council may be admitted in cases of minor and non controversial character. But the difficulty of unanimity has now all the more been aggravated by the raising of the number of non permanent seats in the council from five to nine.

It is ridiculous to suppose that fourteen members, representing fourteen nations who

will now be composing the League council, would be of one mind regarding questions of extremely controversial nature.

In the second place, it is an observed fact, as will be soon illustrated, that decisions in the League council are not influenced by legal and moral considerations, but mainly by political considerations that serve best the interests of different members that sit as judges. In the face of this fact, which is indeed painful, the decisions of the council, even when they could be unanimously arrived at cannot rouse the sympathy and obtain moral support of the unbiased people outside.

The next point is that a member according to the covenant, "may, with a previous notice withdraw from the League" if his purpose is well served by doing so. It may be taken for granted that any member when it finds its position or interests shaken within the League will at once withdraw and thus get out of the clutch of the League. But the most serious defect of the League is its total incapacity to enforce its decrees or decisions even if they could be unanimously reached. Now the whole thing becomes a farce. Just imagine a case in which a judge can sentence a man to imprisonment but there is no executive to put that man into jail. So until this so called confederation can interfere with the sovereignty of a state its decision in the true sense of the term has no meaning at all. It may be argued that the League has settled some European disputes. But the answer to this is that the League has been successful on very few occasions with respect to some minor disputes concerning very petty states of Europe—chief of which being the Bulgarian dispute over the boundary line and the Åland island dispute between Finland and Norway. But the League's dealings with a great power have been confined to mere appealing to its good sense and it is helpless in that case. Some instances of the kind are necessary at this stage.

It may be recalled that there was a dispute over Upper Silesia in 1921 between Germany and Poland. The treaty of Versailles provided that in the eastern part of the German provinces of Upper Silesia a plebiscite should be held and whether this province ought to go to Poland or to remain with Germany should be decided by the majority of votes of the people of Upper Silesia. A special committee was appointed by the allied powers to report to them the result of voting. The voting was, however, in favour of Germany, the ratio

being seven to four, and Germany now claimed the Government of that province according to the terms of the treaty. But France rejected the claim and the League, which was ultimately invoked, divided the province between Germany and Poland since it did not want to incur the displeasure of France. But what was a matter of pleasure to France was a vital question for Germany, and then under too much economic distress and pressure of the allies, was compelled to obey the decree, however unjust it might be. This is the first piece of justice done by the League.

The same year the League made itself ridiculous by handling the dispute between Poland and Lithuania over the city and province of Vilna. It wanted in vain to enforce such a decision as was rejected by both the parties. It made itself still more ridiculous by deciding military action against the powers concerned to enforce its decrees and abandoning the idea at the last moment.

Some time after the treaty of Versailles, which reduced Germany to an insignificant state France under M. Poincaré's regime all on a sudden attacked Ruhr, purely a German possession, and occupied it on the plea that Germany was not duly paying her war debts to France.

But the League maintained a proudest silence over the matter since it could not do anything against France, though the French action was declared by the British Government and others to be absolutely illegal, mean and against the spirit of the previous treaty. And every one knows that France evacuated Ruhr only when her economic and financial stringency would not allow her to be there. Such is the dealing of the League with its powerful members.

Another instance is afforded by Italy in her duel with Greece in the Corfu matter in 1923. Despite the League's warning and orders Italy under proud Mussolini occupied Corfu by force of arms and the matter ended there, since Greece had not the power to measure her strength with Italy. It was on this occasion that Lord Cecil in a statement regarding the activities of the League admitted that the authority of the League had been practically repudiated by a great power. Representatives of many governments even in the League council held that the Italian contention during the Corfu crisis constituted a definite challenge to the authority of the League. Now the commo-

tary on article 17 "of the League's covenant that any act of war is henceforward a breach of the peace of the League which will exact due reparation" becomes a downright mockery in the face of the fact that the League did nothing against France and Italy for such breaches of the peace in defiance of the League's authority

Above all, the dealing of the League with Egypt, comes to the forefront. It is to be recalled that Egypt, while she was being racked by British soldiers after the murder of Sir Leo Stack, appealed to the League requesting its intervention for the cause of peace and justice. But thanks to European diplomacy, this fervent appeal could not meet the hard-hearted Geneva Secretariat, since acceptance of such appeal might result in incurring the displeasure of the British lion and the ultimate decision might be favourable to a non-European Muslim country, and the hesitancy of the League Secretariat was totally removed by the bold announcement of the British Foreign Office that it was a domestic affair and that it would not tolerate outside intervention. This rendered the League quite helpless and inactive. But the answer to the British contention to which the League acquiesced, may be found in article 3 of its covenant which says that the League may deal with any matter affecting the peace of the world. Moreover there is no mention in the covenant that any country which is not a state in the true political sense is not competent to lodge a complaint with the League and to get proper redress.

The same applies to Morocco and Syria. When one reads article 3 and particularly the main objects (stated previously) of the League one fails to realise why it should maintain such a dead silence over the two bloody and ruinous wars that are still devastating Morocco and Syria where two Moslem countries are endeavouring heart and soul to shake off the European yoke. But the League knows it well that these two small Moslem countries cannot hold out long against two of the strongest powers of Europe such as France and Spain. It is for this indifference and apathy of the League towards these two small countries, that Sir Abdur Rahim in his famous Aligarh speech gave the League a mild rebuke.

It is now necessary to describe the treatment and nature of justice that Turkey has received from the League. What was the

League council's verdict with regard to the Mosul question? The council had to admit with much pain that from documentary and legal points of view Mosul belongs to Turkey, but strange to say the award goes to Britain. The decision had to be unanimous and the Swedish delegate to the council, M. Unden one of the three members of the League's commission to the Iraq Frontier who had intimated his intention after thorough enquiry to support the claim of Turkey, had been prevailed upon only at the eleventh hour to vote against the Turkish contention. He would have certainly voted in favour of Turkey as he had announced, but for the pressure brought upon him by England and other interested members to keep the prestige and integrity of the League by giving unanimous decision in favour of England. This is how unanimity was arrived at. From these facts it may be realised how far the Mosul decision was just and fair. France had however a large share behind the screen in this matter. Anxious to get Britain's support in Morocco and Syria, where her position had been very much shaken at the time she too eagerly lent her support to the British claim over Mosul. It has already been stated that judgments in the council are influenced mainly by political considerations and self interest of the members that sit as judges and not by legal and moral convictions, and the French behaviour in the Mosul question is an instance in point. Mosul as all know had been a Turkish possession till the last great war and is part and parcel of Turkey and a great injury has been done to her in this respect. Turkey has justly pointed out that she cannot expect justice from the League executive composed then entirely of the Christian powers of the European countries with the solitary exception of Japan. Although a treaty regarding Mosul and its oil fields has been concluded between the Turkish and the British governments to the considerable advantage of the latter and much loss to the former, Turkey cannot forget that England made this timely but immoral bargain when she (Turkey) was threatened with an impending attack by Italy. She also suspects some dark hands to have worked behind this threatened attack and her feeling of resentment may burst out at any moment.

A few words should be said about China, which is groaning under foreign exploitation

and oppression although she is an independent nation and a member of the League. It may be known to many that China had been forced to sign the Washington treaty according to which the ports of China shall be in the hands of England, America and Japan and it is they who will realise and have the customs duty and direct the policy of opium. The Chinese seas are also under foreign control. All the bloody fights that are being waged for a long time specially against the lust of these imperial powers have their roots in those unequal and unjust and humiliating treaty terms. China is not a domestic concern of anybody and why is the League which is so very forward and eager to settle disputes among the Christian nations of Europe now so prudently silent? China is the just cause and she deserves the sympathy and support of the League. But alas! what is the League after all? It is nothing but a mere tool in the hands of the powers now opposed to China and another fact should not be lost sight of that China is a weak nation professing a religion which is not Christian and that she is unfortunately not within the boundary of Europe. Her position might have been quite different had she not occupied the much accursed land of Asia.

The League has thus become an extraordinary and effective weapon to enhance the aggressive policies of Britain, France and Italy in whose hands it is certainly a tool. It is a mischievous scientific institution calculated to obliterate and ruin powers other than European but veiled under a hypocritical seal of benevolence. In the September session of 1926 of the League when the Persian delegate expressed the opinion that two out of the nine non permanent seats ought to go to Asiatic powers it provoked only a good humoured laughter in the Assembly. A careful study of the comments of the whole European press on Germany's admission to the League with a permanent seat in the council will reveal the real motive of European nations. They all in one voice emphasised the only fact that Europe's stability and unity would now be complete, as if the League were a concern of Europe alone. The confusion is uncanny but it is a fact. After extending their fire throughout the whole world and juggling many other nations it is natural for European powers in this age of general killing of dependent nations, should now be

anxious to consolidate and retain their power in other parts of the world by mutual bond of friendship amongst themselves. The League is the best instrument for that purpose and this is the real spirit behind the Locarno pact and the subsequent admission of Germany into the League. People could understand the League better if it were termed no European clique and not a popular body for the good of the world at large.

A word or two should now be said in connection with Disarmament for the considerable reduction of which article 8 of the covenant makes provision as a necessary step for the maintenance of peace. Disarmament, so far as Germany who had been so long outside the League, is concerned is complete to a great extent under the constant pressure of the allied powers. But as regards other advocates of disarmament namely Britain, France and Italy it has remained merely a profession. Italy on the contrary has answered this pledge by increasing her armaments and naval establishments. This is how they are disarming themselves.

Another important function of the League relates to its mandatory system. It is scarcely necessary to say that the mandatory system of the League has been vitiated beyond repair. Not to speak of the principal allied Powers even Australia so long purely a British protégé has been given a mandate by New Guinea. Some time back a very high Australian officer serving in New Guinea described how the womanhood of that area is being molested by European soldiers and other European officers. These soldiers, as he says send their boy servants to fine-looking women for their satisfaction.

Let us now examine the work of France as mandatory over Syria and Palestine. It may not be out of place to describe here in a few words how Syria and Palestine became mandated territories in utter disregard of the pledge given by the allies before the signing of the armistice. The 19th point of President Wilson to which all the allied powers then under fear of defeat, readily agreed was that the Turkish portion of the Ottoman Empire should be assured a secure sovereignty. But the mischievous 12th article of the League covenant which makes provision for a mandatory over some Turkish territories is a counter answer to the above pledge. The League, on the strength of this

article has thus entrusted the mandates of Syria and Palestine—countries snatched from Turkey after the war—to the French who have raised there nothing but hatred and discontent,—nay, they have committed massacres and sheer vandalism perpetrated at Bagdad and other parts of Syria. These are but a few of the many instances with regard to the mandated territories.

Now the question is what is the League's responsibility in this matter? According to its covenant the League is bound to enquire and demand reports of management of all mandated territories. It must see that good government is carried on in all these countries and that peace is maintained everywhere. But up till now the League has scarcely demanded such reports. The few that have been submitted to the League are merely nominal and formal. The League council, on the other hand will resent any criticism made by any mandates commission appointed by the League. Thus in the September session of 1926 of the League Sir Austen Chamberlain strongly objected to the proposal of the commission headed by H. Lunden (Sweden) to address a questionnaire to the mandatory powers dealing with the administration of mandated territories. He also opposed the commission's bearing verbal petitions from the inhabitants of the mandated territories without first hearing the mandatory's observation on the subject. It was also suggested that the mandates commission was exceeding its powers as regards supervising the administration of the mandated territories. It is needless to say that other members joined in a chorus with Sir Austen Chamberlain and the report of the mandates commission had to be materially changed. The fun however lies in the fact that

members of the council are almost all mandatory powers who sit as judges to decide their own cases. This explains the silence and negligence of the League as regards massacres and vandalism perpetrated in Bagdad and other places. One may reasonably ask if the mandates were entrusted to these nations for doing nothing towards developing those territories save and except committing notorious deeds in them. Let any supporter of the League's mandatory system answer if Syria and Palestine are now more happy under the League's mandate than they were under Turkey.

In conclusion it will rather be an act of uncharity not even to hazard a prediction of hope about the future activities of the League. Let us hope that the League in future will give a better account of what it stands for since in hoping so we do not lose anything but we gain some consolation that the energy and activities of such an influential gathering which on most occasions have been so lamentably misdirected in the past, may ultimately change their phase and lead to the happiness peace and progress of the world. It has been hinted at the outset that the League possesses great potential powers and so it is reasonable to expect that good results conducive to the happiness of the world at large are bound to come out of it only if the mentality of its European members in particular is changed and their policy rightly and unselfishly directed. Let us have consolation in the hope—be it hoping against hope—that the malignant spirit and shrewd diplomacy of the League's exponents may change for the better and a new era of peace and brotherhood may dawn upon the world.

ANTHROPOLOGY AND ADMINISTRATION*

By J. H. HUTTON, C. I. L., M. A., D. SC.

AS I am not the first district officer to have had the honour of occupying this place there is perhaps no need of an apology for the anomalous usurpation of a pandit's

throne by a man of affairs. If any justification were needed I should look for it in the fact that a district officer who is also an anthropologist is in the fortunate position of having as it were a footing in two opposing camps. For it must be admitted that in anthropology as in other directions, the bond between Science and the State

* Presidential Address delivered before Anthropological Section of the All India Science Congress, Lahore 1927.

is not so close as reason and expediency would seem to demand. The state has always distrusted science and under the banal conditions of latter day politics the proletariat dislikes the genuine intellectual as much as the tyrant and the oligarch have done in their day. Napoleon could not bear what he called *idéologues* though he did not actually persecute them but Russia makes pogroms of her intelligent *sia*, while even the U S A prosecutes theirs. Indeed, this is perhaps but part of a general world movement for even psychology nowadays tends to exalt *kinaesthesia* to a level with the recognized methods of intellectual activity. * Of course this attitude is not without some justification.

It was said of the Athenian the cream of Greek intellectuals that he was *proshapan xunetos epi pan argos*—In everything enlightened and at everything ineffectual. Many of us will recall from undergraduate days a certain almost contemptuous distrust of *dous* as a class whatever our feelings for particular individuals, and this I take it is merely another symptom of the same general idea. A recent writer has stated that in France intellectual influence was at its strongest in politics from 1875 and that those thirty years witnessed a shrinkage in political virtue, a lowering of the national pulse, a gathering indifference to national name and heritage, and that if France awoke again it was because she has listened not to the intellectual, but to those who have rebelled against their doctrines.

Still there is a great deal to be said on the other side for the scientist. He is at least the first man to reach the Socratic stage of knowing enough to be aware that he knows nothing and even if it be objected that the mental attitude of a man of science will lead to a doctrinaire and academical spirit useless for practical administration as engendering weakness and indecision it can at least be claimed that one of the leaders among recent anthropologists, the late Dr. Rivers, recognized this danger, and would have been the first to condemn any course that created such an attitude. †

It cannot be denied, I think, that both Governments and Missionaries, who must, at any rate for the purposes of this discussion, be reckoned with administrators rather than scientists, have not infrequently pressed their side of the case much too far, their outlook is too apt to be obscured by ideas of efficiency, philanthropy, 'civilization and progress', not to mention religion, they have their minds already occupied to quote Rivers again, with an organized body of knowledge, the fruit of the gradually acquired experience of those who have been concerned in the work of Government in the past. It is in the satisfaction of rulers with this knowledge and their failure to recognize its incompleteness and even its too frequent falsity, that there lies the chief obstacle to the recognition of the value of science in their work. ** When truths which clash with the methods based on such a body of knowledge are brought to notice, they are perhaps too ready to say that the necessities of administration, or Ministration as the case may be are in conflict with the anthropologists' view and that the latter must go to the wall. Barth on the eyes of Oran! † is really their cry. It is so much simpler not to know that you are wrong.

Let it be granted however, that everyone distrusts a professor, and none more so than other professors, let it be granted that all scientists are suspect do they not foolishly ensue knowledge for its own sake regardless whether it be of any practical value or no? Nevertheless, some knowledge of anthropology is in truth very necessary for all those branches of administration which entail the control by a highly civilized race of another race whose culture is what is commonly called primitive.

Damage enough has been caused to subject races by deliberate cruelty and hostility arising from a complete divergence in ideas and a conflict of material interests. The pitiable cases of the Tasmanians, the Bushmen, the Hereros, the Easter Islanders occur to one at once and the list could unhappily be considerably extended. But it has not been by blood and thunder alone that primitive races have been exterminated. Ignorant and arrogant attempts to improve have probably done almost as much to destroy native races as the cupidity and prejudice of amateur hoaxers possibly

* See T. H. Pear, *Remembering and Forgetting*, in *The Respectability of Muscular Skill*.

† See W. H. R. Rivers, *The Government of Subject Races*, in *SCIENCE AND THE VISION* (3 vols.), Cambridge 1917.

even more. After the last Taimanian war everything that could be thought of for the welfare of those who had survived extermination was attempted but it took the remnant only forty-five years to become extinct under the aegis of civilization. Rivers examination of the causes of the depopulation of Melanesia is well known, and as a result of their contact with more civilized races of both east and west the Marquesans and the Caroline Islanders have likewise almost died out. And we read of the Fijians "the intrusion of the white man has brought with it the usual blight—poverty, sickness, selfishness and loss of self-respect." Nor can the Fijians expect to escape the same censure as the European since from the point of view of the bottom grades of society he has been a greater enemy of self-respect than colour or wealth.

A race adapts itself through many generations to its environment then comes a civilized intruder and finds its customs strange uncouth repulsive perhaps. Regarding such customs as bad from its own point of view it conceives of them as bad in themselves, and promptly starts a policy of destruction in the belief that its substitution of higher and better ways. The destructive programme is easy enough: the customs and their sanctions that held society together are obviously powerless to bind the intruders; their value is not realized and they are too lightly cast away. The construction of substitutes is however quite another thing and the far too frequent result is a rapid moral and physical decline following on a decay of the bonds which have kept the community solid and healthy in the past. Civilization is as it were a drug, which however harmless or even beneficial to the hardened and immune, is a rapid poison to those unaccustomed to its use. It is no less destructive than opium or alcohol, and like them needs to be controlled and that straitly in the interests of the weak. Unhappily the poisonous nature of the drug has been far too little realized and philanthropists of all sorts have combined to administer the biggest dose that the often too willing victim could be persuaded to swallow with lamentable results. In India and Burma there are still several remote corners where the inaccessibility of the country or the intractability of its inhabitants has left islands of primitive culture almost

untouched by the surrounding waves of progress, and it must for long remain a problem to administer these areas in such a manner that the touch of civilization shall not destroy their inhabitants as the brass pot in the fable destroyed the earthen pot that swam with it on the flood. It is here that anthropology has her part and I propose to indicate briefly a few of the ways in which she serves this end.

Now the first necessity for any man in dealing with a race of so-called primitive culture is to understand its point of view and such an understanding depends on a particular sense of sympathy by which I do not mean the feeling of compassion experienced by the philanthropist for the underdog or by one of those who have found salvation for the unregenerate. That sort of sympathy sometimes does even more harm than good. But I mean the attitude of a man who can direct himself entirely of his own outlook on life who can ignore the values which he himself places on the things of this world and of the next, and who can regard everything from the point of view of the members of the other race as they exist for themselves in their own scheme of life. A sympathy of this sort presupposes an intimate knowledge of the general conditions to meet which that scheme of life has through untold generations been built up of the details of the scheme itself and of the conduct of the individual within that scheme. But it requires more than that. It requires ability to appraise (not excluding the appraiser himself and all his works) from the point of view of one living in the scheme referred to and with reference to the details of that scheme alone thus giving values often entirely at variance with those which the sympathizer feels in the light of his own society and of the circumstances of his own life to be the values satisfactory to himself. He must be able in fact to think at will in terms of thought and value entirely other than his own. It may be that this goal is never wholly attainable but any progress that is to be made towards it is facilitated in an almost unbelievable degree by familiarity with the science of anthropology.

I have in mind an instance in which an official who was sitting to interview some unsophisticated villagers was angry because they spat before him instead of standing in his presence but as a matter of fact no disrespect was intended. On the contrary it

would have been highly disrespectful for them to have elevated their less worthy heads above his head the sacred part of his person the seat of his soul This of course he did not know but had he cared to look both sides would have understood each other and gained accordingly And I would here reiterate that to the anthropologist all customs are natural and even head hunting human sacrifice and cannibalism however necessary it may be to suppress them are not revolting and atrocious crimes but reasonable and meritable acts resulting from beliefs and ideas logically applied to circumstances and environment Seen in this light measures taken to put an end to them are much more likely to be humane and effectual than more prohibitions and punishments enforced on people who know perfectly well that the point of view is unappreciated unconsidered and ignored People in this frame of mind can not appreciate the motives which lead to interference with their customs and will distrust accordingly those who interfere. Probably all the rebellions which have taken place in Assam for instance since its occupation by the British have taken place as a result of ignorance or misunderstanding both of the rulers by the ruled and of the ruled by their rulers I do not suggest for a moment that this particular ignorance or misunderstanding could have been avoided but merely that any knowledge which tends to prevent or to remove its existence is of great administrative value But while mutual ignorance may sometimes lead to rebellion or disturbance it must in the end lead to apathy depression and degeneracy and I suggest that this is one reason why so many primitive tribes decay under administration Even in Assam where in general the hill tribes have been well looked after such decay is frequently apparent. Thus the Mikirs are related to have been once a virile and warlike race but to have been deprived of their arms by the Ahoms The rather wretched opium eaters who are their descendants show little signs of having ever been a power in the land The Khamtis when we first came into contact with them were a vigorous martial and energetic race but they are now described as inconspicuous and opium sodden

I have taken sympathy in an anthropological sense as the first necessity in the administration of wild men but there are a number of ways in which an anthropologist's knowledge of custom enters directly into the

daily life of administration and the most obvious of these is in the administration of justice An application of intricate codes of law and elaborate juridical systems with their delays their formalities and their nice distinctions are probably necessary in civilized life but they are likely to operate very hardly upon a primitive community to cause much injustice and to give little satisfaction to anyone In the first place such communities though often following intricate and difficult customary rules have generally speaking entirely different standards from those to which we are ourselves accustomed Torts for instance are everywhere recognized but crime as such hardly at all If it is recognized it is in the breach of some taboo likely to bring disaster on the community and punished by some sort of action taken to avert that disaster, whether by sacrifices at the expense of the offender or by his expulsion from the community in order that the latter may escape the consequences of his act Thus in a case which recently came into my court, a man whose small daughter had committed some fault, probably not for the first time, succeeded to frighten her into good behaviour by tying her up and putting her on the swinging shelf that hangs over every Naga hearth to prevent sparks rising to the thatched roof and to receive meat and fish placed on it to be smoke dried When his wife's mother interfered to release the child he struck her Being a man of more than usual truculence he refused to pay the compensation assessed by the village headmen who brought him to me I dealt with the case as between the man and his mother in law's relatives and then asked the headman what ought to be done to a man who thus ill-treated his daughter what was the village custom? The answer was Nothing The daughter was his own If anything happened to her the loss was his who would have cause to complain? If Government regarded his action as an offence to be punished let Government see to it it was nothing to do with them I therefore saw to it, but the offender and his friends considered that he was treated with injustice on account of the mild punishment accorded On the other hand in cases of homicide even if accidental the culprit is banished from the village probably because his presence is likely to entail a serious blood feud and more killings and so to disturb and weaken the community Offences

such as incest, though regarded with aversion and even horror are allowed by most tribes to go unpunished by man

Detailed knowledge of custom is often of great value as when guilty intention was proved in a case of homicide by the precise manner in which the killer subsequently washed his hands but acquaintance with beliefs and ideas which are usually unexpressed in words and are often unexpressible in words in languages lacking in any means of conveying an abstraction is much more valuable still. This is particularly the case in dealing with the obscure and rather indefinite workings of the mind obsessed by witchcraft. Often the magistrate or judge has to reckon with the fact that the person accused of witchcraft genuinely believes in his or her own powers even if they are exercised involuntarily as in the case of a woman who admitted to me that it was quite true that a child had died merely because she had handled it. How could she help it, she said there was no ill intention on her part, but she had the misfortune to have a poisonous hand. Which being so of course she had no business at all to touch anyone so susceptible to evil influences as a small child and knew it.

In anything of this nature belief has obviously a very important influence over the actions of primitives, but they are so incoherent and obscure when it comes to trying to put that belief into language that it is often only the knowledge of what the mental process is likely to be that makes it possible to follow the thought and to deal with the case in a manner which is at least comprehensible and may with luck be satisfactory to the people concerned. And it is in cases of this sort that it is probably hardest of all to give satisfaction. It would never be regarded as just merely to dismiss accusations of witchcraft as mere superstition nor would it do anything to solve the difficulty which has led to the complaint in court. Those accused of witchcraft do believe in many cases that they possess supernatural powers and in all cases that if they do not themselves, others do. They therefore consider perfectly just forms of procedure and punishments which appear to us unreasonable and iniquitous or at any rate inequitable but to which they are surely entitled as long as their point of view remains unchanged. All sorts of other similar cases occur. For instance, an old

Sema who had come to the conclusion that his bad health was caused by the absence of his soul from his body a frequent cause of illness according to Semas went down to the fields where he thought he might have lost it killed a chicken for it and called it. He went home calling to his soul by his own name of course from time to time to make sure that it was following. A personal enemy aware of what he was doing took a stick and hid by the path. As the old man went by calling over his shoulder to the invisible soul his enemy leaped out of the grass suddenly and brought his stick down with a thwack on the ground just behind the old man's heels. The timid soul was frightened and fled and the old man died on the third day and his relatives rightly accused his enemy of murder. Now this business of calling back the soul may appear to us to be a farrago of foolishness, but it is very real indeed to those that believe in it, and though it may be said that what actually killed the old man was the unaccustomed effort of going down to the fields and climbing back again it is equally likely that he died as the result of auto suggestion thinking that he could never more recover his soul which was scared away for good. That at any rate is what all the Semas concerned thought and it may be taken as certain that even if it was not the sole cause the idea largely contributed to his death. The enemy got off as he denied the act entirely and on oath and there was no evidence beyond the dead man's statement to his friends but had there been enough evidence he would probably have been convicted under the penal code and rightly convicted of causing death and his fellow villagers would have held this to be entirely just and proper.

Nor is it merely judicially that anthropological knowledge is useful. It was recently suggested to me that some system of memory training was urgently required in primary schools in the Naga Hills district. This on the face of it might sound absurd as generally speaking the Naga has an amazing memory and an interpreter can take out, say thirty processes on a fortnight's trip and serve them all correctly explaining the wherefore of each without being able to read one of them. But it is well known to anthropologists that the acquisition of a knowledge of reading and writing is only too apt to kill out all folk memory and that

traditional lore which is handed on from generation to generation by word of mouth, and to kill it out so quickly that it is lost before it can be recorded

But the greatest importance of anthropology to administrators is in informing them and warning them of the evil effects which follow universally the contact between a lower and a higher culture. Much information has now been amassed, which makes it more possible to gauge the probable results of impact generally, and both the immediate and remoter effects of measures taken. That it is necessary to take action and that the old policy of *laissez faire* will not do, has been brought out very emphatically at the recent meeting of the British Association at Oxford. The Revd Edwin Smith speaking on this subject in regard to Africa, stated that the decrease in population in French Equatorial Africa as a result of contact with civilization was three millions in fifteen years, and that in most of East Africa the deaths exceeded the births in spite of the abolition of intertribal warfare, human sacrifice and the smelting out of witches, and Dr Schwitz, a leading Belgian authority, put European civilization in the forefront of the causes of African depopulation. * Captain Pitt Rivers had also much to say on similar results of racial contacts both in the Pacific and in Africa. The problem inevitably varies according to local conditions but general lines of action can be determined with reference to the science of anthropology and no administration has the right to balk the question.

No less a responsibility lies with the missionaries. Captain Pitt Rivers has recently described their activities as "an irrelevant hobby", and there is this much to be said for his view, that their work from its very nature, is fraught with the peril of doing more harm than good. *Non mores sine legibus*, perhaps, but *non leges sine moribus* for certain. For the generality of men morality depends for its sanction on religion, so that religion is the cement of society. When that cement crumbles and is loosened the danger is that the whole building may collapse. This is what is to be feared from any proselytism which ignores the dangers with which it is involved. If we treat as contemptible, says Frobenius, † "what to another is sacred we ruin him", and

this has too often proved to be true. Thus Professor Smith, himself at one time a missionary, writes of the Ao Nagas "Boys in Christian families are refusing to serve at the young men's house. This was an important educational institution for boys. There were regular ranks through which the boys passed until they attained to adulthood and were admitted to full membership. Each order had to perform some distinctive service for the men who belonged in the bachelors' house. The break from this destroys a valuable disciplinary agency, and causes the boys to lose respect for the authority of their elders." * Sn, again, the Census Report for Assam of 1921 says that Ao girls educated by missionaries neglect work in the fields, for which their bowly adopted long skirts are quite unsuitable, and idle in the village instead. So, too Mr J P Mills says of "civilized" Nagas that they "almost invariably become parasitic on the community, and are content to wait for 'suitable appointments' entailing no manual labour." The model to which the Naga is being assimilated is a civilized type that in Naga surroundings "must either be fed by others or perish" and it is this type of civilized Naga that the missions tend to produce. † "The mere fact," writes Cooley, of discrediting noted beliefs and habits, in order to substitute something unfamiliar, is almost inevitably destructive. Many individuals may be really Christianized while at the same time the overthrow of the native institutions is causing another class, possibly much larger, to become irresponsible and dissolute. § So serious is this danger, that the Royal Anthropological Institute has formed a special committee with the purpose of allying missionaries and anthropologists in the investigation of the means by which the evil effects of racial contact may be studied counteracted and avoided.

I do not therefore suggest that missions cannot play a useful part in aiding the accommodation of primitive tribes to fresh contacts, but I do suggest, from my own experience, that they are apt to destroy more than they create, and in so far as they do

mith, *Ao Naga Tribe of Assam* p 193. More same effect will be found in Mr Mills' *The Naga*, recently published in *India* III 222
he Social Progress p 189 quoted by Smith

that they do more harm than good* Man at any rate the average man cannot live by religion alone In the case of the Naga a very important part is played in village life by feasts and dances. These are not essentially religious, though as into the festal life of any civilized community religion inevitably does enter It is in these occasions that all the village looks forward for a break in the monotony of life for an opportunity to give free rein to the artistic senses whether in colour or in motion or in song The gala dress of almost any wild Naga shows an admirable taste expressed in white and scarlet and black in a most pleasing accord with the reddish skin that wears it An Angami festival is a feast of gorgeous and harmonious colouring and in some tribes the dancing is of a very high standard indeed. Yet of these only singing in the form of hymns is allowed to survive conversion to Christianity Bright clothes and gay dances are heathenish and therefore taboo The Lhota Christian may wear only plain cloths, and a sanctimonious countenance; laughter savours of pagan levity † This is assuredly all wrong I can see no reason (but I speak as a heathen) why a sense of colour and a sense of rhythm no less than a sense of song should not redound to the glory of God who gave them And I suggest that to deprive simple men of their use in the name of religion is a sin Not thus did the fathers of the ancient Church who incorporated the heathen feasts of Europe into the Christian calendar as Easter, Whitsuntide St John's Day Michaelmas, Halloween, Christmas and many others If there is one thing more than another which suggests that there is something wrong with Christianity as practised and preached to-day, it is its apparent inability to shed the incidentals and while retaining the essentials to adapt itself to the life and needs of those to whom it is newly preached. I should be sorry however to suggest that missionaries alone adopt this attitude. The Commissioner for Indian Affairs in the United States of America has forbidden dancing by the Indians of that country He apparently considers that valuable time is given to dancing that might be devoted to industry and that it encourages

a religious disposition which induces an uneconomic generosity in the individual. Could any materialism be grosser?

To turn from the moral effects of contact to the purely physical side the apparent rapid deterioration of physique on the part of a primitive tribe is often remarkable The Nagas living on the south border of the Lakhimpur District of Assam probably afford as good an example of this as any but occasional observers in the Naga Hills district, in particular I may mention the name of Mr Henry Balfour have commented on the fact that the independent Nagas across the frontier are of finer physique than those of the administered district Mr Balfour went further and said that it struck him that the Nagas of the more recently administered parts were again finer in physique than the inhabitants of areas long taken over* If this is so it is a serious reflection on the evil effects of administration and a short enquiry into the facts and their causes may perhaps not be out of place The question is complicated by the varying physique and appearance of tribes which naturally differ as a result of racial composition and by the inevitable climatic effects of different habitats The Lhota living in the lower and hotter ranges near the plains is likely to be of poorer physique than the tribes living in the high hills and the Ao living inside the frontier is of inferior physique to the Chang living alongside him but just across it, owing probably to racial difference the Ao appearing to be of superior physique to the Phom also his transfrontier neighbour and the neighbour of the Chang as well On the other hand the administered Semas are unquestionably I think of poorer physique on the whole than those across the frontier and Angamis of the village of Khonoma once told me that they have deteriorated in stature and stamina since being administered Generally speaking however I doubt if the Angami tribe now all administered has suffered much in that way The deterioration in Khonoma has probably been due partly to distilling and consequent drunkenness in the village and partly in the importation of malaria and other diseases by traders as Khonoma has replaced raiding and war as the primary interest in life by long trading expeditions, men of that village

* cf Buxton, *Depopulation of the New Hebrides*, Transactions of the Royal Society of Tropical Medicine and Hygiene, vol. XIX (1925-26) p. 4

* Presidential address to the Folk Lore Society Folk-Lore March 1923 p. 21

visiting Calcutta and even Karachi and Madras to buy beads and wandering all over Burma to sell them. This practice, (as that of distilling) is of course consequent on administration, but supplies a badly needed outlet for the energies formerly spent on war. In most Angami villages the practice of intensive cultivation and the preservation unimpaired of village festivals and feasts for the acquisition for social status by individuals seem to have been successful in maintaining the interest in life which is necessary if the tribe is not to deteriorate. In addition to which the Angami is conscious of not being dependent on administration for his survival, whereas the Ao and to some extent all the neighbours of the Angami except perhaps the Sema tend to regard Government as a source of protection. The Angami on the other hand as also the Konyak in the north are probably still inclined to regard the British Government as a temporary evil which will pass in due season, and the Angami like Konyak again, is far more conservative than the other tribes and much less receptive of new beliefs, the fact being that he has confidence in his own view of the nature of things and has not yet had that view undermined and exploded. His real religion is rather ancestor-worship than anything else and it is not nearly so easily undermined as are the vague beliefs of other tribes already shattered by migrations and invasions among themselves. The Angami in fact has been able to retain his belief that he is a better fellow than anyone else at all, and his excellent system of cultivation has prevented his suffering like the Sema from scarcity of food. The Tengma Angami probably thinks that if he could only get hold of suitable weapons he could drive the Sahibs out of his country—and long may he continue to think so, for there is nothing so stimulating as a good opinion of oneself. To return to the case of the Semas, a tribe whose country is overpopulated and whose food supply is always on the scarcity margin, the effect of administration has been to restrict expansion at the cost of less warlike tribes and thus to cause inevitable deterioration as a result of shortage of land and an inadequate food supply. The tribes across the frontier have naturally suffered less, and until quite recently at any rate, the transfrontier Semas have been expanding at the expense of their neighbours.

As regards all the administered tribes the prevention of head-hunting and war have, of course, had a detrimental effect in some ways. Across the frontier there is more competition and a harder life, more need for vigilance, resource and address. Personal efficiency is the primary standard and wealth secondary, whereas under administration wealth stands first and the tribe suffers by the change. Also it is true that across the frontier the hills are higher and colder and the land inhospitable, and it takes a tougher digestion to live on *coix* *lachryma* than on rice. Still, I think, the vital factor is that under the conditions obtaining before administration it is necessary for everyone to live on the alert, a state of things undoubtedly contributing to active habits of mind and body, while under administration the partial loss of these habits is inevitable. But there are other effects which can be checked if not prevented. Perhaps the most important of these is the spread of disease. Under the old conditions in the Naga Hills many diseases now common appear to have been practically unknown, and it is safe to say that one of the first effects of administration is to spread epidemics which cause far more loss of life in a short time than head hunting ever did in a long one. Small pox, measles, influenza and syphilis are probably all new in these hills. Tuberculosis which seems to have been unknown 20 years ago is now common. I remember, a medical missionary telling me 14 years ago that in his experience there was practically no tuberculosis in this district. A few years later he commented on having had to treat several cases, and now the disease is of comparatively common occurrence. Two at any rate of my interpreters have died of it in recent years.

As in Melanesia the introduction of European clothing and its misuse are probably responsible for certain amount of disease. We read of Melanesia that decrease in population is in progress since the administration of the white man owing to changed conditions of life, among which preference is given to the injudicious use of unsuitable clothing which is a fruitful cause of disease and the introduction of new diseases. I think there is a very serious danger of a similar result in the Naga Hills.

and probably the process is already actually in operation. So too, a change in the method of building houses, leading to the adoption of a type now to the environment may be dangerous. It has been pointed out that in the Cook Islands the indigenous type of house is ventilated throughout as a result of its method of construction, and overcrowding is immaterial. People sleep as many as a dozen together in a small room shut up at night for fear of ghosts. When however this practice is followed in the modern houses built on huts taught by missionaries, it results in a very unhealthy atmosphere indeed and the practice immediately becomes favourable to the spread of disease.*

Another cause of the decline of population in certain localities of the district is probably to be found in an undue amount of compulsory load carrying. Of course without a certain amount of such carrying work the administration of the district could not be carried on and it is necessary to call villages to supply carriers but it will be found that in the hot climate of the lower hills where work of all kinds is much more trying than in the high ranges there is noticeable decay in the population of all villages lying near a Government road. That this is not merely due to the climate is suggested by the fact that such decay is much less noticeable in villages further from such routes. Thus villages on the outer range such as Haung Toluha, Aonokpo, Yamho, Yantha, Yamho seem to have suffered considerably less from loss of population than villages actually on the road like Changbang, Lakhuni, Bhaudiri and Yimbarasa. So too in the Angameouny the villages on the original route to the plains are much decayed though this may be due to disease imported by strangers after the opening of a cart track as well as to load carrying before that. I believe there is a similar scarcity of population along the Manipur Cachiar bridge path. That this decay really is due to excessive exertion is suggested by the extraordinarily high death rate among the Lhota coolies who went to France with the Labour Corps or who carried loads during the Kuki Operations in 1918-19. A noticeable point about the Lhota coolies who were found to have died when their belted medals came to be issued was that although

most had married very few left children. Apparently their fertility had been affected by the strain they had undergone.

An entirely unexpected result followed the introduction of monogamy in the New Hebrides. Instead of reducing as might have been expected the extent of the practice of abortion it increased it, as husbands of one wife found that pregnancy caused an inconvenient interference with the daily routine which was not experienced in the former polygamous households and abortion was more freely resorted to in consequence.*

I have referred to one or two aspects of the contact question in the area with which I am familiar as examples. There the most important need appears to me to be to control the contact between civilization and the wild tribes so that progress is very slow and that the wild man may have time to accommodate himself gradually to new conditions. The greater danger is in introducing change too fast. It is considerations of this sort that will cause serious misgivings in the minds of many anthropologists at such news as that of the simultaneous release of all slaves in the Hukong Valley by money payments. Such a proceeding must inevitably disturb the whole of the economic and social life of the people affected. The system of slavery in that part of the world is generally speaking a very mild one and it could surely have been put an end to gradually by prohibiting transfer of ownership redeeming all children in the present and for the future or by some similar method which would have allowed the change to take place gradually. It would have given a chance to the people affected to accommodate themselves to the new conditions of life in a way that must be decided them by a sudden and sweeping change. Cash is no substitute for labour in the wilds; it is no substitute for crops and where there are no banks or investments it may soon be spent. To effect the change gradually would probably have been cheaper and would certainly have been more humane but of course it would not have been spectacular.

However different areas will have their differing problems and there is no one remedy for all but I think that many of you will agree with me that the present position is unsatisfactory and could be much improved. Among other things much greater freedom

* M. Kenz e—*Observations on Filariasis etc. in the Cook Islands* Transactions of the Society of Tropical Medicine and Hygiene XIX (1924-26) p. 139

is needed in regulating the communications between primitive tribes and the more civilised world. Enlightened countries like Australia have gone so far as to prohibit the entry of any persons whatsoever into their native reserve except occasional scientists and the administrator of the tribe. Even schools and missions have been barred, as this appears the only way at present of protecting the remnant of their aborigines from extermination. There is no reason why legislation on somewhat similar lines should not be applied to these primitive areas of India and Burma and it would vastly improve the present position with regard to the acculturation of aborigines if the entry of civilized foreigners and of their trade goods into such areas was put under very much severer control than it is at present. As I have said before civilization is a drug and its consumption needs very careful regulation and supervision. Primitive man is perfectly capable of a gradual

accommodation to changes which will kill him if introduced suddenly, and it is probably wrong that he should be killed. At any rate it is inimical to the acquisition of knowledge. Another measure that I would advocate would be to make examinations in anthropology—Physical, Social and Cultural, carrying effective marks compulsory for entrance to all the public services on which the administration depends. Anthropologists know that haste in civilizing, educating, and acculturating is likely to do more harm than good. The difficulty is that other people do not believe it. The facts are at variance with political and philanthropic tradition, and therefore unwelcome. It is not an easy thing to induce a large number of persons to discard the familiar and comfortable ideas of a lifetime in reluctant exchange for new and unaccustomed views, but it is our duty to keep trying even though we feel, as I so often do myself, like a sparrow disconsolate on the house top or a voice crying in the wilderness.

LETTERS FROM THE EDITOR

V

AS in my previous letters so in this, I shall not mention or describe all that I have seen, but shall only make a few observations on some of them. Had my intention been different from what it is it would have been impossible to describe London thoroughly in the course even of a good many letters, not to speak of one or two. The administrative County of London comprises 116½ square miles with a population of 4,483,249. Greater London is 699 square miles in extent and comprises about 7,000 miles of streets and nearly a million inhabited houses, with a total population of 7½ millions. Needless, therefore to say that, during the few days at my disposal I did not attempt the hopeless task of seeing even all the most important sights of the great metropolis. I saw only a few of them.

At the time of my visit, Parliament was not sitting. The edifice where the two houses of Parliament hold their sessions is the richest Gothic style and has a somewhat

cathedral like appearance. It looks quite imposing. The still frequent allusions to St. Stephen's are due to the fact that St. Stephen's Chapel built by Edward III, was for centuries the meeting place of the House of Commons. The old building having been destroyed by fire in 1834 the new building was commenced in 1840 and completed in 1857. It occupies an area of eight acres and contains eleven quadrangles. It cost 3,000,000.

The magnificent Westminster Abbey has been the growth of centuries. Its north transept is generally known as the Statesmen's Aisle. Here are either the graves or the monuments of the elder and the younger Pitt and of Fox, Castlereagh, Grattan, Palmerston, Peel, the three Cannings, Disraeli, W. E. Gladstone, Lord Salisbury and many others. The south transept or Poets' Corner is famous throughout the English speaking world because of the memorials of all the greatest English poets and other writers, from Chaucer to Tennyson and Ruskin, which it

contains These memorials in Westminster Abbey of British statesmen and authors cannot but fill patriotic British hearts with pride and an earnest desire to follow their example The National Portrait Gallery serves the same purpose, besides gratifying the aesthetic sense, as the memorials in Westminster Abbey The collection comprises about 1900 portraits of eminent men and women of all ranks and ages Royal personages, statesmen, poets judges, writers scientists, warriors, actors all who have played a part in British history are represented here All the paintings and drawings bronzes, marbles, medals, specimens of hand writing autographs and other personal relics, have been kept here well arranged and with the greatest care Wherever I have been in Europe I have found scrupulous attention paid to cleanliness in public places and buildings, which we cannot boast of in India, though our frequent baths and washings make for personal cleanliness

While on the subject of national memorials, I should mention the grave of the Unknown British Warrior in Westminster Abbey The latter part of the inscription on it runs as follows —

Thus are commemorated the many multitudes who, during the great war of 1914-1918 gave the most that man can give—life itself for God for King and Country for loved ones Home and Empire for the sacred cause of justice and the freedom of the world. They hurried him among the kings, because he had done good toward God and toward his house

We cannot be so presumptuous as to assert dogmatically that nobody fought in the great war for God, for the sacred cause of justice and the freedom of the world But the more one comes to know the motives, causes and objects of the war as well as its real direct results so far at any rate as these results concern the non European peoples of the earth, the more one becomes convinced that to connect God and the sacred causes of justice and freedom of the world with it is nothing short of blasphemy One can only hope that the great wrongs done or perpetuated during or after the war will rouse the subject peoples of the earth to obtain justice and win freedom

Opposite the National Portrait Gallery stands the Nurse Cavell Memorial with a fine symbolic figure of Humanity She was a nurse in a Red Cross Hospital in Brussels where wounded Belgian German French and English soldiers were nursed after the

outbreak of the world war Brussels was then (1915) under German military occupation Nurse Edith Cavell was instrumental in conveying about 60 English and 15 French derelict soldiers and about 100 French and Belgians of military age to the neutral Dutch frontier and had sheltered the greater number in her house The German Court martial which tried her, held that as a Red Cross Hospital nurse she ought not to have done this and sentenced her to death She was shot on October 11 1915 The British people considered her a great patriot, which she undoubtedly was and removed her body to Norwich cathedral on May 15 1919 The memorial originally bore only an inscription to the effect that she died for God King and country—I do not remember the exact words. In 1924 when the Labour Government was in power were added Nurse Cavell's memorable words shortly before her execution

"Patriotism is not enough, I must have no hatred or bitterness for anyone"

An Indian student who was with me when I stood in front of the Cavell Memorial told me that this addition to the inscription was made in the course of a single night, because it was apprehended that people under the influence of fanatical patriotism might possibly try to prevent the addition

Lovers of humanity as a whole cannot but derive strength from the thought that one who risked and lost her life for her countrymen and their allies had realised before her death that there is a greater entity than one's country which includes it and that one should not hate or harbour bitter thoughts against any one

The Nelson Monument stands in Trafalgar Square so named in commemoration of Nelson's victory The monument is a granite column 185 feet high surmounted by a statue of Nelson over 17 feet high The column is no doubt imposing but the square is really a dreary waste as one critic has called it I have seen only a few places in England but perhaps the Nelson monument is the loftiest erected by the British people to any of their famous men I am not sure that as a man and judged according to even ordinary moral and intellectual standards Nelson can be said to stand in the front rank of British men of all ages or that he was the greatest benefactor of the British race But from a worldly point of view, he was no doubt a

saviour of British imperial interests at a very critical period of British history

A different kind of memorial of a different kind of man is the Bird Sanctuary in Hyde Park. In this sanctuary no bird may be killed or molested. It is in the form of a grove. I could wish that there were hundreds of such sanctuaries in India. The bird life of London is remarkably rich and varied, and that is due in great degree to the sanctuary provided by the many Parks in London, of which the area in the County of London alone is over 7000 acres. The Bird Sanctuary in Hyde Park forms a memorial of W. H. Hudson, well known as the author of *The Naturalist in La Plata*, *Green Mansions*, *British Birds*, *Birds and Man*, *Adventures among Birds*, etc. "The pretty bird bath is, in the opinion of many, marred by Epstein's Panel of Rima (see Hudson's *Green Mansions*). I have seen this Panel. Oo it is sculptured in low relief the figure of a man with his head thrown back a little and his right hand stretched out in the gesture of protection. The palm of this hand is disproportionately large. It is perhaps this disproportion which is objected to. But, as I understand it, the artist probably wanted to make the idea of giving protection very prominent and so made the hand larger than anatomically it should have been. Art is not science—it is not anatomy. The Hindu goddess Durga is represented with ten hands to denote that she protects the eight points of the compass and also the regions above and below. Anatomically, no figure like that of a human being can have ten hands, nor can the point of attachment of the ten arms with the shoulder be made sufficiently thick if due regard be had to anatomy. But in iconography it is allowable to make a figure with ten hands to represent the idea noted above. Similarly, in my opinion, the sculptor was justified in making the hand in the Panel of Rima very large to emphasise the idea of giving protection. I was told when I saw the Panel that when the bird bath was constructed and this Panel put up, crowds assembled near it and there was much excitement and controversy.

Reference to this work of Epstein's reminds me that, during my short stay in London, I paid a visit to Epstein's residence and studio. I wanted to see his bust of Rabindranath Tagore. When I called he was engaged in modelling some new work—the plaster was still sticking to his fingers.

So be shank bands with me with some hesitation. Tagore's bust I could not praise. The likeness did not strike me at once. But what was worse, the face looked blank; there was no character, no expression, in it. The bust of Conrad, the novelist, appeared to me to be a true work of art. There was character in it. I saw there also a bust of James Ramsay Macdonald. I liked the bust of a Hindu boy made by the sculptor. I do not know who he is. I thanked the artist for courteously showing me his works and bade him goodbye.

It is meet that after mentioning the bird sanctuary in Hyde Park I should say something about the park itself. It is the largest of the public Parks in London proper and, with Kensington Gardens, covers an area of 638 acres. Hyde Park is very frequently used for public demonstrations of all sorts. Any agitator, idealist, faddist, etc., of any sort who wants to air his views is quite free to speak in the bare and flat open spaces here, and crowds, large or small, are sure to gather round him. The political meetings here often attain to huge proportions. When I entered the Park I had already become tired with long walks. So I sat down in a chair to take rest. Shortly after a man came and asked me to take a ticket for the use of the chair during the day for two pence, which I did. The most attractive feature of the Park is the Serpentine, an artificial sheet of water where bathing is allowed from 5 to 8 a.m. and on summer evenings during certain hours. "A few hardy enthusiasts have achieved a well-earned notoriety by taking their morning dip all the year round." Boating can also be enjoyed for 1s. to 1s. 6d. per hour. I saw many aquatic birds enjoying their life on the waters and in the small islands of the Serpentine. There were notices put up asking visitors not to pelt or molest them in any way.

Readers of English literature must have often come across the name of Rotten Row. When I entered it from Hyde Park corner I found the adjoining drive thronged with the motors and carriages of the aristocracy, and wondered why it was called "rotten." The fact is, the name is a corruption of *route du roi*, the path of royalty, it is a course of a mile and a half reserved for riders. The flower-beds which I saw on the Park Lane side and between the Serpentine and Hyde Park corner, were a blaze of colour. Wherever I have been in Europe, I have

found the love of beauty and order a feature in the character of the people. Perhaps the absence in Europe generally of the kind of destitution with which we are familiar everywhere in India, has enabled Europeans to develop and gratify their love of beauty.

The Royal Albert Hall, built 1867-1871 as a memorial of the Prince Consort, at a cost of £200,000, is one of the largest halls in the world, and will comfortably seat 8,000 people, with another 1,100 in the orchestra. Though frequently used for political demonstrations and other great gatherings, it is principally famous for musical performances on a large scale. Such use of the hall gives proof of the vigorous political life of the British people, as well as of their love of music, though they are not among the pre-eminent musical people of Europe.

It would be futile to attempt to describe even briefly what I saw in the British Museum. It would have required months to become acquainted with all its contents. But I could devote only the hours after breakfast one morning till midday to walking along the halls, rooms and galleries of this vast national storehouse. It is national only in the sense that it belongs to the British nation, but the objects kept here have been collected from all countries of the earth. It is one of the most extensive and valuable in Europe. Experts conduct parties round the galleries every week-day at 12 noon and 3 p.m. No charge is made. Particulars of each day's lectures can be gleaned from the notice boards. Private parties are conducted if application has been made four days in advance. To go round the halls and galleries and to listen to these lectures is in itself a liberal education. Our museums in India are much smaller. It should be easier therefore, to make arrangements for such lectures therein by experts and for conducting private parties. The facilities for education which we have in our midst are not at all sufficient, but even those we have are not properly utilised owing to the absence of suitable arrangements. There should be guide lecturers attached to all our museums.

Though I will not attempt any detailed description of the Museum I must try to give some idea of its library and reading room.

In 1850 in point of magnitude, the British Museum stood fourth in the list of European libraries. It now holds the second place, the Paris National Library ranking as first.

In foreign books the British Museum library is the finest in the world. In 1923 it contained nearly four million printed volumes, the number is certainly larger now. For since 1900 the annual additions from all quarters, exclusive of about 350,000 continuations, music, newspapers, etc., average about 30,000. Another account says that the annual increase is at the rate of 50,000. The length of shelving is 50 miles.

As I was only a visitor, not a ticket-holder, I could obtain permission to go into the reading room only as far as the doorway and see the room. It is a huge circular hall, accommodating between 450 and 500 readers, who sit at desks radiating like the spokes of a wheel from two concentric circles, in the inner of which sit the officials, while the printed catalogue, comprising about 1000 volumes, is ranged round the outer circle. The dome is 106 feet high and has a diameter of 140 feet, being second only to the Pantheon of Rome and that but by $2\frac{1}{2}$ feet. About 20,000 volumes most in request, such as dictionaries, encyclopedias, etc., are ranged in shelves round the Reading Room itself and may be consulted without filling up a form. Readers' average nearly 400 daily. The number of visitors to the reading room of the Imperial Library in Calcutta was 41,660 in 1923-24 and the number of requisitions for books not in the open shelf collection to the reading room was 25,664 in the same year. Considering that Calcutta is a much smaller city than London that it is less literate and that the Imperial Library is a much smaller library than the British Museum Library, Calcutta's record is not quite discouraging.

To return to the British Museum

From the doorway of the Reading Room I saw a few hundred readers studying and consulting books in perfect silence. One of the porters showed me the arrangement of the movable or sliding book cases. Of course he expected a tip which was paid. Europe Great Britain not excepted, is considered a part and the principal part of Christendom, it might also be justly styled Tip dom, the payment of tips being the rule everywhere.

At present the contents of the museum are arranged under twelve departments—viz., *Bloomsbury*: Printed Books with printed music and maps, Manuscripts, Oriental Printed Books and Mss., Prints and Drawings (with the sub-departments of Oriental Prints and

Drawings) Oriental Antiquities, Greek and Roman Antiquities, Coins and Medals, British and Mediaeval Antiquities, Ceramics and Ethnography, *South Kensington* Zoology, Entomology, Botany, Geology and Mineralogy

I can now only enumerate the galleries and rooms I saw. The Roman gallery, the three Oratio Roman rooms the gallery of casts the Archaic room the Ephesus room the Elgin room the Phigaleian room the Mausoleum room, the Nereid room the Assyrian saloon the six Egyptian rooms the Nineveh gallery the four Vase rooms the Bronze room the room of gold ornaments and gems the terra cotta antiquities room, the principal staircase on the walls of which are Buddhist sculptures, the Plaquette room, the coin and medal room the Roman Britain room, the Asiatic saloon containing specimens of Japanese and Chinese porcelain carvings and metal work the Indian religious room the Buddhist room the Iron Age gallery the Maudslayi collection of Maya sculptures from Central America the Ethnographic collection pottery glass and mediaeval antiquities the manuscript saloon newspaper room etc. The rooms are all large halls.

The Egyptian sculptures represent human and allegorical figures sometimes of colossal size. Some of these gigantic statues look as fresh today as when they were cut and chiselled. I saw the famous Rosetta Stone which furnished the key to the Egyptian hieroglyphics. Of very melancholy interest were the Egyptian mummies. They must have originated in a longing for immortality or rebirth—perhaps in immortality or rebirth in the original human body. One grave has been kept in an Egyptian room with its mummy reduced to skin and bones and the earthen vessels containing the food and drink (no longer to be found) placed in the grave by the relatives of the deceased for his use in the next world. And the object of all this solicitude of theirs is now none of the gruesome things to be seen in a museum!

The Assyrian antiquities mainly consist of sculptures in low relief the subjects being the exploits of the king whose palace walls they ornamented. The Hittite remains with hieroglyphic inscriptions as yet undeciphered are also here.

Some of the Maya sculptures from Central America were colossal. The inscriptions on

them are in an as yet undeciphered script or hieroglyphic.

I do not know whether I saw all the Indian antiquities but it struck me that the Indian sculptural collection was not as large as some of the others. This is rather fortunate. For the less we have to go to foreign countries to study even our own history, etc., the better. The sculptures from the Amaravati stupa which I found adorning the wall of a staircase were generously (!) donated by some former Secretary of State for India. As soon as I read the words to that effect, I was reminded of our proverbial expression, *parer dhan poddari* to be generous at others' expense. But is not might right?

The British Museum and other similar museums ought to give their visitors an adequate idea of the vastness variety and antiquity of human civilisation and cure them of narrow patriotic pride and vanity. I do not know whether the British Museum has contributed to any extent to make the British people broad minded and free from insular pride and vanity. Nor do I know whether they realise that this vast collection represents robbery and plunder to some extent at least. But however the collection may have been made, let us hope that the British people will make not only an intellectual but also a moral use of it.

Such collections have many lessons for us, too. One is that we do not take a sufficient interest in the antiquities of even our own country, whereas the range of interest of European nations embraces the whole world. Many of them are authorities not only in subjects relating to their own national culture civilisation history, etc., but in those of foreign countries too. But in India, how few of us are authorities even in subjects relating to India? As for foreign countries, I cannot just now call to mind any Indian who is an authority on any subject relating to a foreign country.

Here I may also be allowed to observe that in Europe the number of men who try earnestly to tackle problems involving the weal or woe of the whole of humanity or at least of some foreign peoples, is much larger than in India. In fact, there are scarcely half a dozen outstanding Indian names among those who are trying to tackle problems affecting the whole of humanity. Some of the causes responsible for such a state of things we all know. Our political subjection is so depressing in so

many directions and so much of the time and energy of so many of our educated men, and recently of women too, has to be devoted to the attainment of political freedom (the methods thereof I need not here discuss), that there are little inclination, time and energy left for paying attention to or even getting acquainted with wider problems. Political subjection has undoubtedly narrowed our mental horizon. The system of caste and the fact that most of us profess an ethnic religion, may also have had something to do with narrowing the sphere of our human interests. And then we must not forget that the vast majority of our countrymen are steeped in ignorance of which illiteracy is only one of the outward signs. I condemn the political and economic imperialism of European nations, and their habit of exploiting. I have more than once condemned their intellectual and spiritual imperialism and drawn attention to the fact that Europeans generally want to monopolise all scholarship, virtue and spirituality. Virtues are Christian virtues, scientific methods are European methods. But we should not be blind to the existence among Europeans of men however small in number who are sincerely interested in the solution of problems affecting the whole of humanity. Nor should we encourage in ourselves the habit of speaking sarcastically of the very few men among us who have a wide human outlook, as if humanitarianism were opposed to patriotism of the right kind. On the contrary, we should look at even our national problems from a broad humanitarian point of view as a small number of Europeans do in the case of some of their own national problems.

I shall now mention some of the other things I saw in London. The India Office, I, of course saw. India has paid for its construction and also pays for its upkeep, including the salaries of its officials though India is governed mainly in British interests. The sight of this building, therefore, did not make me either proud or glad. I went there to obtain some information about the "Indian Delegation to the League of Nations," and wanted to do some sight-seeing also. Having gone there I thought it my duty to see our fellow countryman, Sri Surenranath Mallik, member of the India Council. But he was not in his room when I called. I wanted to know his private address, but the porter said it was against the rule of the office to tell it to anybody. He, however, agreed to

give my card to Mr. Malik the next day. On thus coming to know of my presence in London, he kindly invited me to a tea party in Hotel Cecil which he was giving in honor of Lord Lytton. Fortunately I received the invitation too late, having gone out sight-seeing. I must nevertheless thank him for his courtesy. What, however, I appreciated was his invitation to tea at his own residence. When I reached it, he was not at home, but Mrs. Malik, a *pardanashin* lady, very courteously received me, though I had never been introduced to her before. Mr. Malik came in soon after and the guests enjoyed the delicious Indian sweets and other Indian refreshments which the gracious hostess had prepared with her own hands.

I saw also the hired buildings in which the Indian High Commissioner's offices are located having gone there twice to see Sir Atul Chandra Chatterjee, the High Commissioner for India at his request. The High Commissioner's office employs several hundred men. But only some 12 Indians have permanent clerkships there and some 18 more Indians similar temporary appointments.

At the time of my visit to London, the educational institutions were enjoying their vacation. So I could not see much of them. I however went into the Imperial College of Science and Technology partly because my eldest son was educated there. I saw the chemical laboratories of the college. On asking a young English assistant whether any Indian student was then getting his training there, I was told that an Indian young man was at that very time carrying on some research there. On my expressing a desire to see him, he was called. His name is Jogendra Kumar Bardhan. He was then doing research work in vegetable dyes, and showed me some fabrics dyed therewith. It gave me much pleasure to see an Indian young man working hard even during a vacation.

I paid a visit to the famous Royal Botanical Gardens at Kew. I strolled over many of its parts and went inside the large palm house, kept always at a temperature of 80 degrees.

"Among other works of universal importance carried out at Kew was the raising from seeds specially brought from Brazil—at that time the world's sole source of rubber supply of the 1000 plants with which the rubber industry was introduced into the Malay Peninsula and Ceylon. Kew

was also instrumental in introducing the almost indispensable quinine plant from South America into India.

In going from one part of London to another I have used all the different kinds of conveyance available—motor taxi cabs, buses, tram cars, underground railways and the tube railways. And of course I did some sight-seeing on foot also. Horse-drawn conveyances for men have entirely gone out of use in London at least I did not see any. There are, no doubt, big wagons drawn by big horses for carrying goods. Considering the high cost of living in London, taxi cabs appeared to be cheap: the first mile or part of it costing only one shilling and each succeeding quarter of a mile or less three pence. Many people prefer travelling on the tops of the omnibuses to sitting inside because they have fresh air there and can also see sights better. In travelling by rail I found several Englishmen, railway officials and others

polite and helpful. They helped me quite unasked. I did not experience any rudeness or incivility anywhere. I mention this fact, because in India Anglo-Indians (old and new style) are not famous for politeness to Indians. Before going out to England I had heard much about the London policeman. I found him to be in reality a sort of walking directory and also polite and obliging. There are no tube railways in India. Nor are there escalators or moving stairways by means of which passengers get down to the tube railway platforms.

I did not see the slums of London. In the parts I saw and at the time I saw them, the streets were quite clean: there was no dust or mud in them. The modern buildings, not only in London but in the other cities of Europe, appeared to be generally characterised by dull uniformity, though the size and height of some of them were imposing.

INDIAN PERIODICALS

The Future Development of Asia

The Hon. Bertrand Russell writes in the *Hindu Annual* regarding the future economic development of Asia—

There can be no doubt that all Asia will be industrialized to the extent warranted by the natural resources. In Western Asia, the most important industrial asset is oil. I speak of it as an asset though from any but an economic point of view its existence is a misfortune to Asia. Minor Persia and Iraq. It has enlisted all the great Powers, not excluding Russia and the United States in the great game of grab, and has made genuine independence very difficult for all the regions which are interesting to the oil magnates of the world. It is true that Turkey has achieved a greater measure of freedom than at any recent former period, though at the expense of a great loss of territory, in particular the territory containing oil. But in spite of Turkey it seems probable that the economic development of Western Asia will continue to be controlled by Europe and America until the rest of Asia is in a position of greater independence than at present.

In India, industrial development has already made great strides. So far as can be seen, there is only one cause that might retard it in the future, namely internal anarchy. If after achieving independence India were to fall into a condition of chronic civil war that might cause a reversion to

more primitive economic conditions. But this would be temporary, for unless a stable government were established, some foreign Power or Powers would again acquire control and reestablish industrialism. The maintenance of national freedom in the modern world demands a developed industry without which military defence is impossible and in the absence of national freedom foreigners will introduce modern economic methods. There is therefore no escape from these methods, whether we like them or not.

Regarding the future political development of Asia, he says—

The domination of the white man, which characterised the 18th and 19th centuries, is not an eternal fact of nature: indeed, there are abundant signs that it is already coming to an end.

In India, the dominion of Great Britain becomes more and more precarious and is likely to fall if Great Britain becomes involved in another first class war.

I fully expect that the bulk of the population of Asia will be freed from the domination of the Europeans within the lifetime of those who are now young.

Europe was saved by the invention of science and embarked upon centuries of conquest which ended at the battle of Mukden. The spread of science in Asiatic countries is giving them renewed strength and Europe's star is sinking—no doubt to rise again some day.

This see-saw conflict is devoid of serious significance it advances no human values and retards the progress of mankind. Will the time come when each continent will allow freedom to the other? I hope so but that time is still distant. Let no one fancy that the ideas which inspire the League of Nations are strong enough or will soon be strong enough to prevent great wars. There are causes of conflict between Europe and Asia which lie very deep. The standard of life is higher among Europeans the pressure of population is greater in Asia.

As regards cultural development he writes —

It would be ridiculous to speak of two cultures European and Asiatic. The division is rather (1) the Judeo-Christian (2) the Mahomedan (3) the Hindu (4) the Confucian Buddhist. I find things to admire in each of these four cultures and I shall not attempt to appraise their relative merits. All four have been superseded by the mechanico-scientific culture, invented by Galileo and Newton propagated by schools and books. This new culture has reached its most advanced point of practice in America, and of theory in Soviet Russia but Japan lags not far behind. For good or evil the new culture, which is an inevitable adjunct of industrialism must conquer the world before anything else can have a chance. The only road to future happiness lies through the victory of the machine and its subsequent subjugation to human welfare.

The New Opium Policy

In his fourth article in *Welfare* (January) on the New Opium Policy of the Government of India Mr C F Andrews observes —

To every modern educated mother who has obtained a clear opinion about the harmfulness of the opium drug habit for little babies the very thought of this thing going on day after day for millions of babies in India must be intolerable. They know how they themselves would never for a moment allow it for their own children. If an ayah were ever found giving opium to their own babies to keep them quiet she would be dismissed at once. For they fully understand how the digestive system of the tiny babies may be injured for life and constipation becomes chronic even from infancy where such practices are allowed. All this very nearly goes without saying. Yet the way in which this crying evil is handled by Government appears to show that the loss of public revenue which would immediately ensue from any drastic dealing with the evil acts as a deterrent. Things that would not for a moment be tolerated in the West, simply because revenue has never been made out of opium in the West, are still tolerated in India, where important revenue has been made out of opium year after year. To say this, is not to blame Indian officials more than other ordinary mortals. For it revenue had been made for half a century in England out of opium it would have been no less difficult to register reforms quickly than it is in India.

If however this indictment of official India is vehemently denied then I would only ask one thing. Let the opium revenue be kept entirely apart from the ordinary public revenue for five years and let it only be used for the prevention of opium smuggling and for the instruction of the ignorant public against the opium vice. Let not a single anna of the opium revenue be used for ordinary education or for ordinary police, or other purposes then I would guarantee that opium reforms would take an immense bound forward and we should have no more lame apologies made by Government officials for the doping of little babies.

Mr Andrews describes at some length the results of scientific experiments in support of the following sentences in his article —

The Central Government had held up for an example of what they themselves admired the output of the Royal Commission Report of 1893. They commend its conclusions except with regard to the use of opium for malarial fever which they recognise to be antiquated and unsound. But they do not at all acknowledge as they ought certainly to do that other parts of the Report of 1893 are equally antiquated and other conclusions equally unsound. They appear to be strangely unaware of the fact that the use of opium as a prophylaxis against other diseases of an epidemic character, such as cholera, dysentery, beriberi, kala-azar, and the like (for all of which opium has been indiscriminately used) has now been scientifically condemned. What is now made clear by Science is this that the use of opium in large quantities diminishes the resisting power in the blood and therefore makes the opium consumer more liable to catch the disease than the non consumer.

Laughing at Children

Lenora Bailey concludes a short article in *Welfare* thus —

You think then that children are affected in one or two ways by older persons laughing at them. Either they are made very timid—sometimes morbidly shy—or they immediately begin to perform all sorts of ridiculous actions upon the slightest notice.

Exactly right. Mary Both are equally harmful. Children need to be watched carefully but not laughed at. As I said before laugh with them all you wish. There's a great difference.

The Murder of Swami Shradhdhananda

The Islamic World condemns the murder of Swami Shradhdhananda and observes

Such cold blooded murders are absolutely against the teachings of our faith and can advance no cause. It is a matter of deep regret that in some quarters this tragedy is looked upon as something

communal Let us assure our Hindu fellow-countrymen that Islam has nothing to do with such black deeds, and it stands for universal peace and toleration. If there are any persons who think otherwise they are sadly mistaken.

"There is no progress in Philosophy"

Mr H. N. Randle writes in the *Allahabad University Magazine*

Socrates claimed a special kind of knowledge, you will remember, but at the same time he made profession of his ignorance. It was in virtue of his knowledge that he was aware of his ignorance; other men lacked his knowledge and therefore were not aware of their own ignorance. Therefore the sense in which I denied progress in philosophy still holds good. And it will now perhaps appear that it holds good in another sense, too, that is to say even in the respect in which I have claimed that philosophy can offer certitude. For this is a sort of certitude which every individual and every generation of men has to achieve anew for himself or themselves. Philosophy is an individual achievement and one therefore which has to be repeated by every man for himself, so that there is no such thing as *teaching* philosophy, and no such thing as learning it from books. You can no more learn philosophy from lectures than you can learn morality from moral discourses. The teacher here is not an impartor of information which the generations of his predecessors have gradually garnered, so that each generation starts where the last left off. The teacher in philosophy (not of philosophy) is at best—to use the Socratic metaphor—a midwife to the birth of men's own thoughts. For as Locke puts it, "so much as we ourselves consider and comprehend of truth and reason so much we possess of real and true knowledge. The floating of other men's opinions in our brains makes us not one jot the more knowing though they happen to be true." And again speaking of the satisfaction to be derived from the search for truth, "He who has raised himself above the aims basket, and not content to live lazily on scraps of begged opinions, sets his own thoughts on work to find and follow truth will (whatever he lights on), not miss the hunter's satisfaction every moment of his pursuit will reward his pains with some delight, and he will have reason to think his time not ill spent,—even when he cannot much boast of any great acquisition."

Standardization of the Essentials of Economics

Mr B. G. Bhattacharya says in the *Indian Journal of Economics* of July 1926, received in January 1927—

Economics is a subject of great practical significance under modern conditions of life, and without a sound grasp of its essential principles one cannot take his proper place in the legislative and administrative spheres of life. All the time of our students is wasted in mastering the

unessential confusions of impossible terms, and the real subject matter is completely ignored. And that is why a Hailey can make an unchallenged statement in the Assembly that currency is a difficult subject and that there are very few people who really understand it. If we want to increase the number of people well versed in the lore of the science of Economics we must do something to standardize its technical terms.

[This journal is issued by the Department of Economics, University of Allahabad, and is the organ of the Indian Economic Association. It has an Editorial Board consisting of the following gentlemen: C. J. Hamilton, W. H. Myles, N. S. Subba Rao, C. D. Thompson, and S. K. Rudra (Managing Editor). It is a quarterly. The price of a single copy is Rs. 3. A single copy consists of 60 pages, each page containing 37 lines of printed matter. Such being the facts, it is a matter of surprise that the Indian Economic Association, the Department of Economics of the Allahabad University, and the Editorial Board of the Journal make such an economical use of their time, energies and abundant knowledge of economics as to issue the July 1926 number of the Journal in January 1927. Some Indian periodicals are not published punctually. But this Allahabad Journal has perhaps beaten the record—Ed., M. R.]

India's Expenditure in Motor-cars

We learn from *Indian and Eastern Motors* that the value of motor-cars imported into India from abroad during the seven months, 1st April to 31st October, was in 1924, 1925, and 1926 Rs. 1,21,10,755, Rs. 1,30,18,440 and Rs. 1,52,33,495 respectively. The cars came from USA, Canada, the United Kingdom, Belgium, France, Italy and other countries, the largest exporters being USA, Canada and the United Kingdom. Of the cars Bengal took 30 per cent, Bombay 29, Sind 15, Madras 15 and Burma 11. Besides cars, during the same seven months in 1924, 1925, and 1926, motor cycles were imported into India of the total value of Rs. 541,741, Rs. 461,083, and Rs. 607,623 respectively.

When will India manufacture her own motor cars and motor cycles?

Insect-borne Diseases.

We read in *Indian and Eastern Engineer*: ITALY has taken some of the most decisive steps in the campaign against mosquitoes, recognising

that wherever scientific war has been waged against the mosquito malaria has practically disappeared. Italian treatment of the subject may be shown by the fact that in malarial zones workmen are properly treated for the disease and even children have preventative quinine treatment administered to them concealed in chocolates. Malaria is a centuries' old scourge of the Italian peninsula and the Italian Government have made a wise step in publishing cinema films for the instruction of the nation in the best methods of frustrating the ravages of the enemy. In days of old men fled from malaria districts, and for that reason a district became worse and worse. But to-day where men stand and fight with scientific weapons victory is assured and regions once devastated by the scourge are devoted to cultivation. In Great Britain the Hayling Island Institute has taken a large share in the campaign and the need for definite action is shown in the fact that already there are about 25 malignant species of mosquitoes found in Great Britain and in all some 150 varieties of the gnat type. The Institute has prepared a film in which the various varieties of mosquitoes, their habits, life and development in successive stages are clearly shown, and, starting at home it has succeeded in ridding Hayling Island of the salt water type which used to be such a pest. The British Mosquito Control Institute at Hayling has now become a very well known body and local authorities throughout the country seek its advice and help which are always readily given. The Institute is now embarking on a programme of lectures, and demonstrations to be given in public and private schools and sets of films and slides are supplied on request. This invaluable service is capable of infinite extension.

Again —

The average expectancy of male life in the United States is about 50.6 years. In Sweden it is about 59.9 years. In India it is about 23 years. The combination of insects ignorance and insanitation is the explanation.

As an indication of what can be accomplished the African Gold Coast annual death rate from 1881 to 1897 was 7.8 per thousand. In 1911 it had been reduced to 1.39 per thousand and the reduction was practically all in insect borne diseases.

The general rules to be followed with mosquitoes are

- (a) Prevent as far as possible all mosquito propagation.
- (b) Kill all mosquitoes possible of those that do breed.
- (c) Keep habitations away from mosquitoes and mosquitoes away from habitations.
- (d) Protect the sick from mosquitoes.
- (e) Protect the well from mosquitoes.

It was the application of the above rules which made the building of the Panama Canal possible and life there as safe as in the temperate zones.

There is no question that the common house fly is the most common transmitter of disease.

Among the diseases which the domestic fly carries are typhoid fever, cholera, a bacillary dysentery, bacillary dysentery, gangosa and oriental sore or Baghdad boil.

Bubonic plague might be described as a disease

of the rodents transmitted to man by means of the flea which serves as intermediate host.

The diseases more commonly transmitted by lice are typhus fever, trench fever and a form of relapsing fever.

The bed bug is responsible for the transmission of the European type of relapsing fever found especially in Russia.

There is an old saying that virtue is its own reward. Cleanliness has a much greater reward in the way of health, longer life and happiness. There are languages and dialects which have in them no words corresponding to disinfectant, insecticide, antiseptic, etc. It would seem that those who are engaged in making the world cleaner and destroying the causes of disease are engaged in a most important and responsible duty and should have the thanks and co-operation of all concerned and that is everyone.

Suggestion for ending Communal Conflicts

In *Morris College Magazine*, Mr N. A. Abbott makes some suggestions for putting an end to Hindu Moslem conflicts. We quote a few sentences below.

Untouchability not only amongst the Hindu sub-castes but also between the Hindus and Muslims should be at once removed or at least the priest-class of both should be made to meet and live together as much as possible. It should be so arranged that the *Mulla* of a mosque and the *Pyari* of a temple mess together the former cooking and the latter helping. The food will of course be strictly vegetarian. The *Mulla* will be sore to feel it but there is no help. Napoleon made the Pope fast for his misdeeds.

We, with an admirably happy audacity of self-sufficiency exhibit the greatest possible variety in head-dress. No country in the world can compete with us in this respect. A Bengali's bare-headedness, a Punjabi's manifolded heavy turban, an Oudh man's thin flimsy muslin *Topi*, a Bombay merchant's richly gold embroidered round cap and an Afghani's red felt fez, whether these are or are not sanitary and comfortable under a strong tropical sun is a very interesting subject in itself. But we are here concerned only with the National side of the question. The headwear in India has unfortunately become a patent sign of caste and creed. The mere sight of a man is enough to single him out to be a friend or a foe. The different head dresses have intensified (please excuse this new word) the feelings of rivalry and estrangement, and this is why this unfortunate diversity and variety should be discouraged and uniformity be established at once. It is for our Scientists to declare whether we should go about quite bare-headed or with a hat. Economically the former is preferable.

The slaughter of cows ought to be stopped at once (sometimes I really don't get milk for my tea). This also just like the music and mosque, is rather a question of sentiment and obstinacy than religion.

A Message to Postal Workers

Mr F W Petluck Lawrence M P has sent the following message to postal workers, printed in their organ *Labour*

As a socialist I am always especially interested in the development of the postal service. In every country in the world with which I am acquainted the Post Office is owned by the community and runs in the interests of the community. It is the purveyor of knowledge. It provides for the needs of the same facilities that the roads and railroads provide for their bodies. Finally through its international links it unites the whole world.

For these reasons it should be a model service in all respects. It should be a model of intelligent co-operative service by every grade in the staff. It should be a model of good pay and good conditions of labour with full facilities for the presentation and redress of grievances. It should be a model of efficient, progressive and economical administration.

The Indian Institute of Science

The editor of the *Educational Review of Madras* whose name is not printed in it observes in its (rather late) November 1926 number

It is a great pity that the magnificent endowment of the late Mr Tata embodied in the Indian Institute of Science at Bangalore should not have been worked satisfactorily and complaints should be heard about it in various quarters from time to time. An esteemed correspondent, writing in the *Hindu* catalogues a long list of grievances which constitute an indictment on the working of the Institute under its European Professors. It is complained that there is an air of aristocratic pride about them and students never approach their Professors on a footing of equality or trusted cordiality. So nothing indescribable but well known to every one keeps them at arms length and therein is all the rub. It is surprising that the Indian agency should be so carefully excluded from the higher ranks of its service. The latter is likely to be not merely more patriotic and willing in service but also more economical to the Institute. We are also told that in atmosphere has been created in the Institute foreign to Indian students.

The latter have to live in a style which is utterly beyond the means of an average parent or guardian in this country. Apart from the scholarships the high standard of life expected and imposed on the part of the students here could not bear too close a scrutiny. For us, who are after all a very poor people compared with the other nations of the West, for us to imitate Oxford or Cambridge life is not only ridiculous but suicidal. The very atmosphere to say the least is choking. Is there nobody to look into these grievances which seem serious?

Prohibition of Opium

The editor of *Prohibition* thinks —

The Government of India's views on the use of opium in India make any hope of the prohibition of the traffic very distant. It has no evidence that there is any serious and widespread abuse of the drug and it would regard as entirely unjustifiable any departure from its present policy of non-interference with moderate use. Nevertheless there is a partial prohibition of opium in Burma and in Assam which have a system of selling the drug to pass holders only. In Bengal the local Government has approved of a scheme for the introduction of a method of registration of opium consumers in two districts of the Presidency with a view to obtain as accurate data as possible regarding the proportion of the drug used purely for medical purposes and the proportion used for intoxicating purposes. In the Central Provinces, the Commissioner of Excise notes that more than one of his district reports bear witness to the extent to which the demand for opium is stimulated by the deplorable practice of administering it to children.

Newspapers and Liquor Advertisements

The same editor writes —

Some of our readers will not know that *Punch* is a humorous weekly paper published in London which has been described as a great national organ. Its subscribers list is over 2 millions and it goes to all parts of the British World. It is a paper with a great and glorious record. It recently made the announcement that it will take no contracts to advertise alcoholic liquors in its pages after March 1927. By this action it follows the example of the *Spectator*, the *Observer* and other papers. Temperance journals in Britain have rightly waxed jubilant over this decision. For it can only mean that the proprietors of *Punch* have joined those who regard the liquor traffic as a menace to the public welfare.

We purchased a number of Calcutta Indian papers to see how far Indian journalism is on the right road in this matter. We found the Calcutta *Swarajist* papers free of such advertisements. They were acting up to the principles of Congress as expressed by resolution at Belgaum in December 1921. The Congress is of opinion that the policy of the Government of India in using the drink and drug habits of the people as a source of revenue is detrimental to the moral welfare of the people of India and would therefore welcome its abolition. To our discomfort we found other papers owned and edited by Indians with prominent drink advertisements. May we not appeal to the Press of India, especially where it is under the control of Indians to follow the example of *Punch* and give up all such tainted revenue?

Jain Versions of the Story of Rama

The Jains have versions of the story of Rama different from the Hindu version.

Prof. A Chakrabarti of Madras gives these versions in brief in *The Jaina Gazette*. Here is the first portion of one version —

The story starts with an ominous prediction—'The birth of Sita will be the cause of the ruin of Lanka.' Vibishana the brother of Ravanaesvara hearing of this prediction from the sooth sayers tries to avert the calamity by nipping the whole thing in the bud. He wants to destroy both Dasaratha and Janaka so that there may be no Rama or Sita. This is to save his brother's kingdom of Lanka. But Vibishana's design on the lives of Dasaratha and Janaka is made known to them by Narada. These are advised to protect themselves by setting up their likenesses on the throne temporarily and to spend their time in disguise elsewhere. Vibishana destroys these two representations and goes out with the satisfaction of destroying the enemies—not knowing the real truth Dasaratha and Janaka make a tour together and arrive at Kantala mangalapura. There they find preparations going on for the Swarajvara of kakayi. They attend the ceremony when Dasaratha is chosen by the bride. The other suitors attack Dasaratha, who has to defend himself. kakayi takes place of his character when the latter is killed. For this timely aid the king offers her a boon which she accepts and reserves for a future occasion.

education must have been in vogue amongst females in the days of Gantama Buddha.

Party Names and the Political Outlook of Indians

The editor of the *National Christian Council Review* rightly observes with regard to the recent elections

The party names however are not very important. The fundamental outlook of almost all Indian political groups towards the question of self government is the same. There has been difference on the question of method. If the Gauhathi Congress permits co operation and the taking of office there is likely to be a considerable uniting of parties as far as the Hindus are concerned but the Hindu Moslem problem remains.

Mr Gandhi's plans are not yet disclosed. Politics are not a grateful field to him but we cannot help feeling that, whatever he may bring to politics should he return at least he will bring a loathing of communalism and a contempt for petty self seeking.

The Aim of Catholic Missionaries

We read in the *Light of the East*

Each man is inclined to interpret the intentions of his neighbor in the light of his own purposes. The man whose only aim in life is pleasure can hardly fancy that there are men who freely seek out sufferings rather than earthly joys. How could others be so different from himself? The miser whose only ambition and desire is to gather heaps of gold cannot realise that another man may for the sake of higher goods forsake riches and embrace poverty. How can one believe so the miser thinks that there are higher goods than gold? Other examples might be given. These two are enough to make us realise that according as one thinks, so one judges. Everyone is at least tempted to suppose in his fellow men the thoughts, intentions and purposes which he discovers in his own soul.

The best ways of answering all these accusations whose source is prejudice, might perhaps be to oppose them to one another. As there are men in India who accuse the missionaries of trying to make money so there are others who condemn them because they say they spend too much gold trying to make converts. As there are anti-Britishers in India who maintain that the missionaries are out to maintain the British Raj so there are pro-Britishers who maintain that, being mostly foreigners, the same missionaries sympathise too much with Swaraj. Etc. etc. That these accusations are contradictory never seems to worry those for whom the sight of a missionary is an eyesore. But we may be forgiven if we do not take the trouble of refuting allegations that refute each other.

Female Education in Buddhist Literature

Dr Bimala Charan Jav writes in the *Indian Review*

Ladies who came under the influence of Buddhism appear to have followed religious teachings without much difficulty. They were not altogether steeped in ignorance. As a matter of fact some women of the Buddhist period were not behind their male brothers in education. The verses in the Theri gatha are attributed in the tradition of the Pali canon to certain saintly sisters and we are not entitled to entertain any doubt about Indian women's erudition. The religious harangues of Sukka and the philosophical discussions of Khema and Dhammadinna may be cited here as instances of Indian women's attainments to ignore the reality of which is to wilfully disregard the quantum of historical truth buried deep in the Buddhist literature. Names of certain ancient Indian women notable for their scholarship are still in the living memory of the present generation. But then it is still disputed on the basis of slender hypotheses that the authorship of the verses in the Theri gatha cannot be ascribed to the women who sang them. Be that as it may there is no gainsaying the fact, in the absence of any historical truth to the contrary that in the Buddha's days, women who broke through the fetters of worldly life and gained the joys of rational beings, sang extempore learned and thoughtful verses on many occasions—especially when Mara, the Buddhist Satan tried in vain his level best to lead astray these saintly sisters sometimes by joyful or lewd temptations and sometimes by frightful sights. The gathas were sung by women and the record of the educational career of certain individuals evince the fact that

Allegations against the Nizam and his Administration

Professor G R Ahhyankar gives in the *Hindustan Review* the following summary of the allegations (which he amplifies in his article) against the Nizam and his administration —

(1) The Hindus who form nine-tenths of the population of the dominions of the Nizam are not allowed the legitimate exercise of their religious faith and are molested in the performance of several rites by vexatious firmans (2) The Hindus feel an insecurity of person and property under the autocratic rule of the Nizam (3) Educational facilities are not given to the Hindu population and even private efforts at spreading education are being stifled (4) From the State Service, whether superior or inferior civil or military Hindus are studiously excluded (5) Public offices are filled by unqualified persons (including outsiders) solely because they are Mahammadans and the public service has become a field for jobbery (6) There is a huge waste of public funds in the administration (7) The Nizam engages in the vicious practice of taking *namas* from his subjects (8) *Imams* and *Jahgirs* are illegally confiscated and properties are taken under the court of wards without any justification (9) Numerous complaints of violation of personal liberty and also of the honour of men and women are constantly brought to the British Resident by the aggrieved parties (10) State resources are squandered outside the State limits on objects which have no concern whatsoever with State interests (11) The management of the Customs Department is very harassing to the people. The income of this department is not appropriated to the needs of the state and not more than 20 per cent of the Customs revenue finds its way into the public treasury (12) The administration of justice is often in the hands of incompetent officials, chosen simply because they are Mahammadans or related to some high Mahammadan official. Failure of justice is thus occasioned in many cases and causes serious discontent. (13) State resources are utterly neglected and no efforts are made to improve the moral and material condition of the population who are labouring under the incidence of heavy taxation and are suffering from chronic poverty owing to the Nizam's misgovernment. (14) The Nizam has not shown any form of representative government. (15) No local self government exists in the State. (16) In spite of the pretension of the Nizam to confer responsible government on the people of Berar there is absolutely no association of the people with the administration no freedom of the press no liberty of meeting and no desire to establish constitutional rule. (17) Every agitation is ruthlessly suppressed and orders of extermination and internment are passed in a high handed manner. Even men like Mr Jinnah are ordered summarily to leave the Nizam's territory

India's Future

The editor of *Probuddha Bharata* does not despair of the future of India Says he —

We do not despair. We have faith in the future. We *know* India cannot die she has yet to fulfil great things in the life of humanity. And we shall be unsparing in voicing the truth for which India lives the message of the spiritualisation of life. We shall tirelessly repeat our warnings to our West-infatuated countrymen till the true glory of India is revealed to their vision and the nation comes into its own.

We do not look upon our nation as an irreconcilable element in the scheme of humanity. We are the only people who are national and yet international. For the ideals of our nation are the same as those of humanity, and by being truly national we become also truly international. And no nation can fall in a line with the larger movements of internationalism unless it makes its ideals purely spiritual. Anything less than that would be prejudicial to the realisation of the brotherhood of men which is the brightest dream of the age. Our plea to both our eastern and western readers has been the same. Be truly spiritual where you lie both individual and collective salvation. No greater message can we conceive of in this juncture of history than the call to the life and the truth of the Spirit. All our present complications are traceable ultimately to the neglect of our spiritual nature. We stand on the widest basis of spirituality on which alone the diverse nations of the world can be made one. And surely ours cannot be the voice of one crying in the wilderness.

To have a whole year of health

In the opinion of the *Oriental Watchman and Herald of Health*,

To have a whole year of health you need but to have it a day at a time, and to make a day of health you need but to watch the details of your living programme. It is the habitual doing of things that makes either for health or for disease. The habit method is just as powerful for good as for ill and it is not much more trouble to form right habits than wrong ones.

Plan your daily schedule so that all you do will count for health. Study your own needs in nutrition, exercise and rest, and insist on securing what you need of each. Start the day with a wholesome mental attitude and spiritual setting. The early morning hour is the best for your devotional reading. Getting up early is fine if you went to bed early enough the night before.

Defectives and Mysore

We read in the *Light to the Blind* —

Some time ago there had arisen some confusion regarding the use of spending public funds for maintaining schools for defectives in Mysore in

that it was suggested that the five year old Deaf and Dumb School at the seat of the Mysore Government, Bangalore should be closed immediately. It created not only stir in the public mind but also grief in the minds of the few who were responsible for the opening of the school as well as of those who have elected themselves to do a piece of duty to the suffering humanity—the Deaf Dumb and the Blind. How badly it was felt that there ought to have been an organisation of the defectives themselves or a member in the Representative Assembly or Legislative Council representing the minority interests of these defectives. The recent census puts the number of defectives in Mysore at more than 10,000 and we will be grateful to the enlightened Government of his Highness the Maharaja of Mysore if they take up the cause of the helpless state children and see that their (defectives) interest is constitutionally represented in the State Administration. May we live in the hope that our prayer on behalf of the not seeing and the not hearing touches the kind and benevolent heart of our illustrious sovereign and that of our popular God fearing Dewan?

It is not in Mysore alone but all over India that defectives require looking after. They can be made happy and self supporting members of society.

Causes of the World War

Prof Sri Ram Sharma writes in the *D A V College Union Magazine* —

One of the propagandist lies so sedulously repeated during the last war was the assertion that the outbreak of the War in the middle of the year 1914 took the allied powers by surprise. The lie was necessitated by the continuous defeats of the allies during the first years which called for an explanation. It could be proved to be true by reference to certain German war appliances which whether prepared during the War or before it made their first appearance in those days.

This myth also helped in fixing the sole responsibility for the war on the central powers who could thus be made to appear all the more criminal in forcing a war upon an unsuspecting world. Now that the war clouds have rolled off and historians need not be forced to choose between their patriotism and their love of justice the blame is being more equitably apportioned. One result of these new studies has been the horrible knowledge that the world storm of 1914 was only one of the series of conflicts which had threatened the peace of the world since the beginning of the century.

In 1906, 1909, 1911 and during the Balkan wars the peace of Europe was preserved as if by a miracle. The war God cheated so many times of his prey would not let go his chance in 1914 and the Russian general and mobilizations coupled with the criminal Austrian ultimatum to Serbia gave him his opportunity.

The root of the matter lay in the fact that "unappeased ambitions, wrongfully wrested territories, suppressed national aspirations and immoral ideas about international relations had so undermined the peace of Europe that the old world had degenerated into a powder magazine in which the dropping of a lighted match by accident or design was almost certain to produce a conflagration."

Dr Muthulakshmi Ammal, M L C

The Women's Indian Association of Madras congratulated Srimati Dr Muthulakshmi Ammal on her nomination as a member of the Madras Legislative Council at a special meeting. According to *Siri Dharma*, the speakers

All dwelt on the practical aspect of it, how the presence of a lady doctor of her position in the Council would help the cause of women and children in their education and physical welfare. Dr Muthulakshmi Ammal's reply was marked by spirit of real earnestness. She answered most effectively the usual charge made against women that they are ignorant of politics. She said, that while men politicians were clamouring for communal and other sectional benefits the women presented their claims on no such narrow grounds and whatever they do and win will be for all without distinction. Women's active part in all departments of national life is sure to have a harmonious and whole-some effect on it.

A Woman President of a Labour Union

We read in *Siri Dharma*

Trade Union movement is very young in India. The hardships of the workers in India in organising themselves are greater than they were in England owing to illiteracy and ignorance and the general indifference of the public in our country. So the record of successful work of a workers' body like the Textile Labor Union of Ahmedabad, is a matter for sincere congratulation. The case is also one for great pride when we learn that its President is Srimati Anasuya Sarabhai. Under her and her colleagues' guidance the Labor Union has been carrying on splendid work in all directions.

As regards welfare work the Union maintains two Dispensaries and a Hospital equipped for surgical work. Day and Night Schools and a Nursery School run on the Montessori system, home industry classes to women who cannot work in the mill, a library and reading room, a weekly journal of 5,000 copies circulates freely and two cheap grain shops. The union provides also legal aid, cheap loans at 6½ per cent to pay off previous debts carrying 7½ to 120 per cent interest, advances for current expenses at an easy rate against the prevailing 300 to 1,000 per cent, charged by Pathan money lenders. Savings Bank facilities and help to secure compensation in cases of accidents, 77 cases, resulting in the total award of nearly Rs 10,000 being attended to in the year under report, and further the task of securing various Municipal facilities for the workers is duly carried out. These are but the bare headings of the extensive work carried out under each of them.

The Government should nominate Srimati Anasuya to the Legislative Assembly where as in the Provincial Councils labor interests are not sufficiently represented. Her presence in the Legislature will be of immense help in framing measures for working people's welfare, especially of the women and children employed in industries. Her noble example can be also followed by other women by taking some interest in the conditions of labourers around them.

Ignorance Worse than Darkness

E. E. Slosson writes in the *Modern World* —

In considering the extension of scientific knowledge and in particular the incantation of the scientific method of thought, we must beware of being misled by convenient analogies.

For instance, it is common to symbolize knowledge by light and ignorance by darkness. The metaphor is as old as science itself yet it is essentially misleading for darkness is negative is nil, offers no resistance whatever to the diffusion of radiant energy.

But ignorance is not an inert entity a negative fiction offering no resistance to the expansion of knowledge. No cranium contains a vacuum. It is always filled with something and in the case of certain individuals filled with matter which is impenetrable or at least difficult to make an impression upon.

In actual life ignorance is allied to conservatism and the combination is a strong one. In order to introduce a new idea into the mind of man it is generally necessary to eject an old idea. The eviction process often has to be accomplished by violence. Even a child's mind is not a *tabula rasa* is on the contrary a palimpsest written over a previous inscriptions from Paleolithic times to present. To move in new furniture one has to move out the old.

'The Review of Nations'

Mr Felix Valpy of 6 rue de Hollan Geneva, Switzerland, has founded a review called the *Review of Nations*. Its contents are mostly in French. But there are contributions in English, too. Mahatma Gandhi has written the editor a letter in which he says —

"What message shall I send you save to say that my nationalism is intense internationalism? I am sick of the strife between nations or religions."

Regarding the intentions, ideas and hopes of the editor, he says in part.

The new international magazine of which this is the first issue is an enterprise of universal character. Universality in the true sense of the term is our aim. Universality of mind of sympathy for all nations. Universality of Knowledge and of Science including in our field of research and study everything human. Political Science as well as History Philosophy and Psychology of Nations as well as Economics. World Finance, International Law. Sociology of Religions. The Social Teachings of Old Civilizations as well as the sympathetic consideration of new efforts towards the Synthesis of Human Culture as a whole.

India's Future

Pandit Jawahar Lal Nehru writes in the *Review of Nations*

The terrible fact which stares every one in India is the appalling poverty of the people. India is not a country of gaily bedecked Maharajahs displaying themselves and their jewels periodically in the west after the manner of star artistes of the cinema world as many people seem to imagine but a grim land full of millions of poverty stricken peasants and labourers for whom the next meal is always a problem a problem which is often not solved. Competent observers have come to the conclusion that poverty has increased greatly since the coming of the British and is still increasing. But indeed statistics are hardly necessary to establish this for he who leaves the few towns with their thin veneer of activity and prosperity and goes deep down into the villages can see it for himself in the sunken eyes and the hopeless looks of the people. What will India be like in the future if this continues?

Meanwhile many of the best of India's sons lie in jail or in forced detention. Many of them are exiles in foreign lands unable to return to their motherland. Under the Bengal Regulation one of the gifts of Lord Reading and the last British Labour Cabinet to India large numbers of young men have been in jail without trial or without even the form of any charge. Conspiracy trials are frequent and young men whose chief fault was that they loved their country too ardently if rashly and foolishly suffer the extreme penalty of the law. This is the *par britannica* in India and it is not surprising that the Indian is thoroughly dissatisfied with it and looks forward to the day when he will have no more of it.

What the future will bring it will be vain to prophesy but it is clear that no settlement short of complete self rule will solve the problem. That self rule may mean complete independence or it may mean what is called Dominion status. Most Indian politicians talk about Dominion status but perhaps they do so because it is apparently easier to achieve. In reality the vast majority desire independence and some have the courage to say so. The chief link between England and the Dominions is one of sentiment, but sentiment does not carry one far when interests clash. If India were a Dominion there would be little of this sentiment in fact at present there is something very much the reverse of it and her economic interests are bound to clash with those of England. It is thus a little difficult to see how India could continue as a free member of the British Commonwealth. But perhaps the future may bring its surprises and India may find a place there. For India has no desire to nourish past grievances. She looks to the future.

'Pat' Drawings

Mr Ajit Ghose gives an account of the old Bengal paintings known as Pats, in *Indian Art and Letters*. Says he —

From the word Pat we have its derivative *Patkar*, to mean a painter. But in Bengali we

are really happy or not. What we need is more sobermindedness. And as "every sinner must have a future just as every saint has had a past," may we hope that the prodigal son some time returns.

Professor Radhakrishnan also commented upon the problem of sex. With the increasing masculinization of woman he predicted that people will ask the Lord one day to give back to them their good old days again. On the matter of religion he insisted that the ideal religion should be one of love and peace. And yet, he said as he quoted the Bible Jesus told his disciples to buy a sword. Gandhi next came into his discussion. The Indian reformer was convincingly described as a personality far more inspiring at least in several respects than the Great Jewish carpenter.

Prof. Dasgupta's Reception

We learn from the *Hindustanee Student* that

The New York Chapter of the Hindustan Association and India Society arranged a farewell dinner in honor of Professor Surendranath Das Gupta. The guests mostly American friends of India, enjoyed a real Hindu dinner.

In introducing Prof. Das Gupta Dr. J. T. Sunderland, the chairman of the evening, took the occasion to point out the great glory of India's past and her present renaissance as exemplified in the persons of Gandhi, Tagore, J. C. Bose and such scholars as "our guest of the evening."

Prof. Das Gupta was not well disposed to speak. He was suffering from an operation in his throat. He requested Mr. N. B. Parulekar, the Vice-President of the Chapter, to read his extremely interesting and profound paper on Mysticism and Yoga. As the paper, along with his other lectures, will soon be published in book form by the Open Court Publishing House, Chicago, Illinois, it may not be worthwhile to give a brief summary of it. It must be read as a whole to grasp the deep meaning of Yoga Mysticism.

Prof. Das Gupta, however, in spite of his ailments, said a few words. He traced his throat trouble to the eighty lectures he had to deliver in twenty universities within a short space of time. Many invitations he had to reject. He had come here, he said, to create an interest in Indian Philosophy. The pioneer in the field was Vivekananda, he observed. And then Tagore, through whom the best of India has flowered, came to America. During his stay Prof. Das Gupta endeavored to imprint in the minds of his audience wherever he went the fact that much of the European thought, even in detail, was anticipated by the various philosophic systems in India.

The Poison Gas Controversy

A keen controversy was going on in America during last Christmas Week—the season of "peace on earth," as to whether the U. S. A. Government ought to sign the Geneva protocol barring the use of poison

gas in warfare. A few opinions are extracted below from the *Literary Digest*:

Those in favour of signing the treaty—which include Secretary of State Kellogg and General Pershing—believe that, since the use of gas in warfare has received the condemnation of the civilized world in general, as the *Brooklyn Eagle* remarks, since it produces unnecessary suffering and is certain to endanger the lives of non-combatant men, women and children in "the next war," its use should be outlawed. Those approving the use of poisonous gases declare that this is a humane form of warfare, that the provisions of the Geneva protocol would be promptly broken in the event of war, and that the United States would need poison gas for its own defence against the world.

General Pershing, says an Associated Press dispatch, believes that to sanction the use of warfare gas in any form would open the way for the use of the most deadly gases and the possible poisoning of whole populations.

Senator Wadsworth, Chairman of the Military Affairs Committee, observes:

"The use of gas is cruel but so are all weapons of war. If we are to abolish weapons because of their cruelty, why pick out gas, and not high explosives and shrapnel and the bayonet?"

Origin of the Syrian "Rebellion"

L'Europe Nouvelle, a Paris Liberal foreign affairs weekly, explains the origin of the "rebellion" in Syria as follows:—

France, a Mussulman Power, at first relied on Christian support against the Moslems. In any case, she gave to the Arab world the impression that she was establishing herself firmly in Lebanon where the majority of the population was Christian. What is more, she increased the province of Lebanon and annexed territory both north and south, where Christians were not in the majority. She created Greater Lebanon and seemed rather indifferent toward the rest of Syria.

It goes without saying that neither the spirit of the mandates nor the principles that govern the political action of the French Government permit the mandatory power to take the side of one religion against another, or to follow the Turkish practice of cultivating disorder by repressing one element after another. But matters of principle aside, the eloquence of figures shows how hopeless it is to set the Christian minority against the Mohammedan majority. The Christians in Syria number about seven hundred thousand, compared to two million, three hundred thousand of Mohammedans. The latter, it is true, are divided into two groups, the Sunnites and the Shutes, but the Christians are very much fewer, and their numbers are decreasing every year through emigration, while the Mohammedan population has a tendency to grow. This is not all. In Lebanon itself, which has now become Greater Lebanon by the inclusion of these new territories dominated by Islam, Christians are in only a very small majority. They represent fifty-two per cent of the Lebanon population.

have the word Potua to denote one who makes Pats and his word has become a class name applied to both Muslims and Hindus. The Potuas are artisans who are now principally engaged in decorating pottery which gain is a dying craft. At one time when families of Potua congregated together in a quarter their community was of sufficient numerical importance to give its name to the quarter thus there was an artists quarter in Dacca which is still known as Potuatuli while the name of a thoroughfare in Calcutta even now recalls an old settlement of Potuas who have long left the locality. The Potuas also painted and decorated images of the gods, but it is as folk artists of Bengal that their name should be handed down. Another caste of folk artists associated with the art of the Pat were in their origin carpenters and are known as Sutradhars. They are hereditary makers of images and painters. They are scattered all over Bengal but are chiefly to be found in Bankura Bardwan and Birbhum districts. In Murshidabad, under the name of Chitrakars they have become a caste, exclusively employed in making pictures the members of which will not intermarry with other Sutradhars. A third caste employed in making painting and decorating images are the kumbhars or men of the potter caste, but they are not known to paint pictures nor have they any such tradition.

"Feminism Destructive of Woman's Happiness"

This is the title of an article in *Current History* by Gina Lombroso Ferrero daughter of Cesare Lombroso famous criminologist and wife of Guglielmo Ferrero the Italian historian and herself a distinguished author, says she in part

Some women wish to win for women the right to do all that men do others wish women to develop more completely their femininity some demand a more rigorous morality than that of men others free access to all professional careers now monopolized by men still others ask for legislation to protect the working woman.

There is one point in common between all the feminist movements in all countries—the demand for woman of all the rights possessed by man the determined effort to bring woman to the enjoyment of all privileges enjoyed by man on the understanding that in this way woman will enjoy these which only men enjoy.

That the movement has succeeded in imposing its program none can deny. All the barriers against which feminism has struggled all the barriers that seemed to bar women from happiness, all the differences of class and profession formerly standing between men and women have fallen. Woman today has the vote as well as man, she can study in the same way and as much as man she can become a priest or minister in certain religious communities she can be a chauffeur a diplomat or an astronomer she can aspire to all positions and to all honors, she can

participate in all games and sports enjoyed by man. It can even happen as Miss Lenglen has shown that a tennis champion can earn vast sums of money.

But when I am asked if these victories have increased woman's happiness I reply that I doubt it.

Love is the fixed unchangeable aspiration of woman. Love is the glowing sun of her heaven—not love in its vulgar and sensual form of physical attraction but as conceived by woman having some one to think of and who thinks of her some one to devote herself to and who devotes himself to her as in the case of a mother and her child. Let woman make this her aim and it will appease her longings better than freedom independence the franchise wealth power or glory.

Men not Schooled for Prosperity

In *Current History* Prof. T N Carver observes—

Men have been more carefully schooled for adversity than for prosperity. During the greater part of the life of man on this earth he has had a constant fight with adversity and has acquired considerable experience to help him in his fight. He has not had time to accumulate any thing like the same experience in meeting the problems of prosperity. All his moral and religious systems that have been of any use to him have provided him with disciplines against the demoralizing tendencies of poverty and adversity. Where he has lived up to these disciplines they have fortified him and neither poverty nor adversity could break him. Special classes have here and there escaped from adversity only to come in contact with the demoralizing influences of prosperity. There is not and never has been a religion or a moral discipline that fortified the prosperous classes against these new dangers as the old religions and moral disciplines had fortified them or their ancestors against the old dangers. Consequently every aristocracy which the world has ever known has been a decaying aristocracy not because it was an aristocracy but because it was too prosperous. It has either disappeared or has been nominally preserved by constant recruiting from below. When all classes become prosperous, all will alike be attacked by the same enemy, and all alike will be in need of experience moral discipline or religion to fortify them against the new danger.

Intelligence Tests of Geniuses

We read in the same magazine—

Scientists throughout the United States are becoming increasingly interested in trying to determine how best to educate and apply the ever rising generation to the work of the world. One of the centres of research for this purpose has been Stanford University where an intelligence test has been given to 301 of the geniuses of history John Milton Michelangelo,

Napoleon Samuel Johnson and 297 other famous men and women born between the years 1400 and 1800 were in this way subjected to investigation by Dr. Catherine M. Cox assisted by Dr. Lewis M. Terman, Lela Gillan and Ruth Lavesay. His tonal records showing childhood traits and mental talents of the geniuses were used as a basis for giving out the intelligence ratings. John Stuart Mill, the English philosopher and economist was awarded the highest rank of all the 301 famous children. His intelligence quotient (IQ) was placed at 190 which is 90 points higher than average mentality. At six years of age Mill wrote a history of Rome and at eight he gave Latin lessons and was held responsible for the errors of his pupil. Three children were given intelligence ratings of 180. These were Goethe the German poet, Grotius the founder of modern international law and Leibnitz the German mathematician and philosopher. Napoleon and Beethoven received ratings of 130 on their childhood mentality. Byron was given 150, Michelangelo 145, Lincoln 125, Mme de Staël 150, John Q. Adams, 160, Coleridge 170, Washington 120, Raphael 110.

To be Free yet Active

If a man does not take any active part in the world's work he may enjoy a kind of freedom. But the ideal is to be a world's worker yet free. Betty Webb gives in *The World Tomorrow* an inkling of how such an ideal may be realised. Says she —

Before our generation will be able to live lives which are free and yet harnessed to do the work of the world, we will have to grow into different kinds of persons. It is going to take people a lot keener about all these matters than most of us are. It is going to take young people who are not afraid to doubt the *status quo* and furthermore, who will do something besides talk about it—young people who love the going forward better than the place we now are, who love the growing better than what we now are, the seeking more than anything we yet have found. This is the creed of an experimentalist, an adventure one who at all costs would go and see what lies around the next corner. And those who venture take risks but so do those who do not venture—not the risks of slupwreck but the risks of rust and decay.

And with this spirit thousands of students are wanting to venture forth yet without knowing where they want to go—with no real goal. Here we are—with all our doubts, with all our energy and fine spirit of adventure—going whichever way the wind blows—with no determined direction of our own. Do you remember this conversation in *Alice in Wonderland*? It rather characterizes us.

Cheshire Puss, Alice began, would you tell me, please, which way I ought to walk from here? That depends a good deal on where you want to get to, said the cat.

Medicine and Industry

Dr. L. P. Lockhart observes in *Industrial Welfare*

A survey of scientific progress during the last

fifty years is remarkable for the very great strides which have been made in the arts of medicine and surgery. Whatever may be our views on the actual value of many individual pieces of work I think we may say taking a moderate and even at times a sceptical view point that the really concrete advances have indeed been enormous. Even if at the end of a brief review we realise that many of the most promising laboratory researches have proved to be sterile in practice, we can at least claim that wherever we light upon a really striking step forward it is nearly always connected directly or indirectly with the prevention rather than with the cure of disease. There are brilliant exceptions to this general statement, but the fact remains that the prevention of disease is the real goal towards which medicine and surgery are slowly but surely progressing and it is in this particular branch of the science of medicine that the most tangible advances of the future will be achieved.

There can be no doubt in the minds of us all that good health should be within the reach of everybody and not merely the prerogative of the few. It must be placed, in so far as in us lies, within the reach of all. It is this feeling which has of recent years, been behind the increasing interest which the State has shown in the health of the industrial worker. The Factory Acts of a hundred years ago have been increased in scope protecting the worker in dangerous trades from many of the hazards of calling. Welfare Orders have been promulgated relating to many aspects of daily industrial risks and of recent years a Minister of the Crown has been appointed to the control of the national health.

Prof Radhakrishnan on Civilization

The following passages are taken from a brief report in the *Hindustan Student* of Prof S. Radhakrishnan's lecture in America on 'What is happening to our civilization'.

Professor Shepherd of Columbia University who presided suggested that what Professor Radhakrishnan perhaps really meant was 'What is the matter with our civilization'. This Professor Radhakrishnan emphatically denied. In his own words 'our civilization would be a dead one if nothing had happened to it. Civilization is a living process and things are continually happening to it. The lecture then goes on with an enumeration of the various conflicting tendencies now raging in our modern institutions like the home, the church, the school etc. The keynote of these conflicts in his opinion is the opposition between dogmatism and skepticism or conservatism and radicalism.

Leaving aside the subject of conflicting tendencies Professor Radhakrishnan commented critically, if not humorously upon current social problems. Economic exploitation of one country by another is summarily attacked and denizens of the modern world are compared with their Darwinian ancestors. A monkey he tells us may be taught to ride a bicycle, to smoke a pipe and to do a host of other things but a monkey is still a monkey. Skyscrapers, flappers—what nonsense is all this? With all our radios and automobiles it is doubtful what

adoring contemplation of the mystery of God but can we say that the New Testament ever commends this to the dwellers upon earth?

A similar question arises with regard to the immanence of God in nature. This too is a commonplace of the Upanishads and the Bhagavadgita. It is true that sometimes they go further and pass over into pantheistic ideas, but it may fairly be claimed that the thought that God is in all is more frequent and more characteristic than the thought that He is all. Here too we notice a powerful response in the modern mind. Especially since Wordsworth and Shelley Christian thinkers have delighted to find God in all that is beautiful and good. But again can we claim this undoubtedly valuable idea as a true part of New Testament Christianity? The Epistle to the Ephesians says that God is in all and St. John affirms that the Word was in the world but such phrases do not carry us far. The New Testament as a rule is content to think of God as immanent in His saints rather than in this world and leaves the matter there.

He summarizes his conclusion as follows

When the question is asked Can Hinduism contribute anything to Christianity? we must at once define more closely what we mean by Christianity. If we mean the religion of the Christian Churches as we see it to-day then the answer is in the affirmative. It can recall us to some of our own half forgotten ideals. If we mean the religion of the New Testament the answer is again (though less confidently) in the affirmative. There are ideas such as those of contemplation and divine immanence in nature which seem good yet have but little attention in the New Testament. But if by Christianity we mean the whole wealth of that great river of religious thought which took its rise from Jesus but has gathered into itself subsidiary streams from elsewhere in the course of its history, then the reply seems to be in the negative. Christianity so defined may find rich illustration from Hindu thought but no real addition to its message.

Less Talk, More Work

A. M. K. Kumaraswamy writes in *The Hindu*

The Indian students are often considered speculative as the Scottish Calvinist would say. That the opinion is entirely just I do not believe but one sees in it much thought for reflection. I asked an Egyptian gentleman of importance how it was that they seemed to be getting almost all they wanted while we failed to secure even our most modest demands. He replied without a moment's hesitation "because you talk while we work." His answer obviously is not the whole truth yet it set me thinking hard. It may be that because my own profession, as a schoolmaster is that of "talking" I saw a greater force in the Egyptian's answer than there was in reality. In any case, I have been constrained by circumstances to consider these remarks seriously. I feel compelled to admit that we Indians are prone to spend time

and energy in purely academic discussions. It was my good fortune two years ago to make some close contacts with Chinese students in their own country. Every one of the Chinese Universities I visited brought me fresh confirmation of the discovery that the Chinese student was intensely practical in his outlook and in his discussion. For abstract principles he has no use or perhaps no time but he is eager for any practical solution for the problems of his country. We have seen how powerfully articulate Chinese student opinion has often manifested itself as a result of this attitude.

India the Cradle of Religion

In Dr. A. Brodbeck's opinion as published in the *Young East*,

India is the cradle of religion and of civilization in more than one sense. Gautama Buddha, about 2500 years ago, rationalized religion for India and for the world. Buddhism was a great power for good in India for about a thousand years not only for religion proper but also for fine art and literature. Even when it was driven out of India, it left deep traces in Brahmanism and Jainism. One of the reasons for the decline of Buddhism in India was its overdone asceticism - there were too many monks and nuns, laziness and superstition were their principal faults.

Shinran Shonin in the twelfth century about 700 years ago evolved in Japan a metaphysical system which is essentially identical with that of Spinoza in Europe, and 400 years before Spinoza. This fact is little known. Shinran broke the monastic style in Buddhism. He married a sweet woman and from them on in Japan Buddhist priests married also. It was a step similar to that taken 300 years after Shinran by Luther in Germany. Shinran properly maintained that Gautama Buddha was also married and had a son. Original Buddhism in India may be compared with the Protestant reformation in Europe in the 16th Century.

I have stated above that India was the cradle of religion not only for Buddhism in India and other countries but also for other religions of the world. I mean here especially Christianity. Christianity is a form of Buddhism as it was shortly before Jesus partly degenerated into a belief in miracles and a material heaven and hell and mixed especially with degenerated Mosaism, as it existed in Palestine in Jerusalem at the time of Jesus.

Paul the Apostle changed the almost pure Buddhism of Jesus to Jewish Phariseism.

Let me incidentally mention here that Chinese missionaries brought Buddhism in the third century after Christ into America, where it was for one thousand years the leading religion until the Aztecs killed it off shortly before the time of Columbus. This fact is also little known.

A Tagore Society

The same magazine records

Countess Metaxa, a Greek lady of high culture, who is teaching in Waseda University, has founded

a society for the study of the works of Rabindranath Tagore. She is an ardent admirer of the great Indian poet and thinks that his teachings are antidote to the materialistic tendencies of the modern world. She has a great many supporters among well known Japanese thinkers and writers in her movement. A lecture-meeting is shortly to be held in Tokyo by way of announcing the birth of the society.

Leading Japanese Papers and their Capital

The same magazine contains interesting information about the capital of the leading Japanese papers. For instance,

The *Osaka Asahi*, one of the two biggest Japanese papers, was founded in the 14th year of Meiji (1881) by Mr Ryuker Murayama the present president of the paper and Mr Ueno with a capital of 30,000 Yen. Keeping pace with the success of the paper the capital was increased to 210,000 Yen in 1895 to 800,000 Yen with the establishment of the Tokyo Asahi Office in 1903 to 1,200,000 Yen in 1910 to 1,500,000 Yen in 1919 and finally to 4,000,000 Yen in 1922.

The *Osaka Yomiuri*, the rival of the *Osaka Asahi*, was established in 1889 with a capital of 50,000 Yen. With the increase of the circulation the capital was increased several times i.e. to 150,000 Yen in 1899 to 300,000 Yen in 1906 to 500,000 Yen 1909 to 1,200,000 Yen 1918 to

2,000,000 Yen 1922, and finally to 5,000,000 Yen in 1925.

The Yen is equal to about Re. 1-9

The Name Unitarian

Mr Arnold Lupton writes in the London Inquirer —

"I take an intense interest in the controversy as to the name 'Unitarian'." I think it is an honourable title. Why limit it by adding any words such as Christian? The Unitarian pure and simple is a brother of the Jew and the Moslem. In the days when the Trinitarians tried to exterminate the Unitarians it was the Moslem warriors that saved our ancestors from destruction. It was the Unitarians of Palestine Syria Mesopotamia, Egypt, North Africa and Spain who welcomed the Moslem liberators and gave them an easy conquest. The Moslems to-day are the descendants of the Unitarian Christians of those countries.

It was the Moslems of the Mediterranean and European Turkey that saved the Protestants from extermination by the Roman Catholics in the days of Philip II of Spain. The Moslems also preserved those priceless treasures of ancient Grecian literature that Trinitarian bigotry had destroyed wherever its hands could reach and so made possible the renaissance of Europe from the Dark Ages. These Dark Ages were made by the deliberate destruction of all scientific and all wise philosophic books in order to support the silly stories of Trinitarian Christianity. The Scriptures were also falsified to justify the horrible persecutions of the Jews in order that "Peter's Pence" might go to Rome.

NOTES

The Indian Science Congress at Lahore

The fourteenth session of the Indian Science Congress was held at Lahore from the 3rd to the 10th of January last under the presidency of Sir J. C. Bose. The Congress was opened by His Excellency Sir Malcolm Hailey, the Governor of the Panjab on the 3rd instant in the spacious hall of the Panjab University where also the presidential address was read. In an able speech Sir Malcolm Hailey described the importance of scientific research for national advancement, and, speaking of the recent progress made in this direction by Indian investigators, quoted felicitously from a great English paper which, writing in 1896 on the original scientific work of Sir J. C. Bose remarked—

"There [is] something of rare interest in the spectacle of a Bengalee of the purest descent lecturing in London to an audience of appreciative European savants upon one of the most recondite branches of modern physical science. We see no reason why the oriental mind, turning from its absorption in insoluble problems, should not betake itself ardently thirstily and hungrily to research into Nature which can never end yet is always yielding results upon which yet deeper enquiries can be based. If that happened, that would be the greatest addition ever made to the sum of the mental force of mankind." Writing in June last the same paper said, "The prediction has been fulfilled. In Sir J. C. Bose the culture of 30 centuries has blossomed into a scientific brain of an order which we cannot quite duplicate in the West. He is a prince among physiological research workers and a prophet of this age which has brought so many new powers to life."

Sir Malcolm Hailey concluded his excellent speech by saying that "what appeared

to him to be even more important than the acknowledgment that Sir Jagadis has earned from the world is the promise that his success holds out for India the promise that he may be but the forerunner of a great school of workers whose efforts may not only bring new treasures to the world of science but may give mankind a new and higher conception of the place of India among the great civilisations of the modern world."

The presidential address of Sir J. C. Bose which followed His Excellency the Governor's speech breathed a lofty ideal and for the first time gave a connected account of his investigations for nearly a third of a century and was a tremendous success. In language which could be understood by all Sir Jagadis showed the long stairway of the ascent of life from the plant to the animal and the higher and higher expression of that evolutionary process by which life rises above and beyond all the circumstances of the environment and fortifies itself to control them.

The subject of his discourse was the establishment of the great synthesis that all life is one, resulting from investigations that had been initiated and continued in India for nearly a third of a century. The establishment of this generalisation will always be credited to India as a great contribution made for the advancement of the world's knowledge. From the establishment of the generalisation of the Unity of Life

It followed as a corollary that there must be a unity of all human efforts, and that in the realm of the mind there can be no boundaries and no separations. It is a misreading of the laws of Nature to regard conflict as the only factor in evolution far more potent than competition is mutual aid and co-operation in the scheme of life. Nothing can be more untrue than the ignorant assertion that the world owes its progress in knowledge to any particular race. The whole world is interdependent and a constant stream of thought has throughout the ages enriched the common heritage of mankind.

From Tuesday forenoon to Saturday the various sections were at work.

In the Physics and Mathematics section, the president, Dr D. M. Bose of the Science College Calcutta, gave an interesting address on recent theories of Magnetism and the investigations that he and his students had carried on for the last few years. The most notable papers read before this section were those by Drs. Meghoad Saha, Satyendra

Nath Bose, Nikhilranjan Sen and Satis Ranjan Khastagir.

In the Chemistry section, the president, Dr H. K. Sen of the Science College, Calcutta, delivered a very valuable address on the fuel problem. The leading papers read before this section were those by Drs. Joaopendra Chandra Ghosh, Joaopendra Nath Mukherjee, Nilratan Dhar, S. S. Bhatnagar, B. B. Dey and Prof. Naik. By far the largest number of papers were sent to this section which shows the great activity of the section founded by Sir P. C. Ray.

In the Zoology section Major R. B. S. Sewell in his presidential address gave some extremely valuable suggestions as regards the future teaching of Zoology in India—suggestions which the authorities of our Universities should seriously think over. Among the interesting papers read before this section were those by Dr S. L. Horn, K. N. Bahl, Bishwanath and H. R. Mehra.

In the Medical and Veterinary section, the president, Major R. N. Chopra of the Tropical School of Medicine, Calcutta gave a timely warning against the evil effects of over-drugging and the irresponsible manner in which certain patent medicines were advertised. Major Chopra showed that defective medical education in India was due to the fact that most of the teachers were not research workers but busy practitioners. According to him this state of things could only be remedied by the establishment of a central government organisation like the Medical Research Council in England with experts in all branches on its staff. Majors Acton and Chopra and Drs. Muir and Chondler of the Tropical School of Medicine, Calcutta read some very important papers before this section.

In the Agricultural section, presided over by Mr F. J. Worth, Mr Howard pointed out that a novel obstacle to the production of pure seed was that cattle fed on cotton seed often passed out undigested seeds capable of germination. The only safe way, in his opinion of avoiding the risk was to feed cattle on crushed food. A very important paper was read before this section by Dr S. S. Nehru of the Indian Civil Service showing the successful acclimatisation in U. P. of Broom Corn from seeds procured by him from North West (Liguria Province) Italy.

In the Anthropology section, Dr J. H. Hutton of the Indian Civil Service who

presided pointed out in a very able address, printed in this issue of our Review the great harm done to primitive tribes by civilisation and the ignorant zeal of missionaries. The rapid spread of disease and the consequent extinction of aboriginal peoples in various parts of the world were to be attributed to these two factors. Among the important papers read before this section were those by Rai Sarat Chandra Roy Bahadur, Mr Cammada, Mr H. C. Chakladar and Dr B. S. Guba.

In the Psychology section Lieutenant Colonel Owen Berkeley Hill pleaded strongly in his presidential address for the creation of a Psychiatric Department in India. Prof. G. C. Chatterjee of the Government College, Lahore, read a very interesting paper before this section on the application of intelligence tests to College students in the Punjab. Prof. H. C. Bhattacharyya's paper on Inferiority Complex was also very suggestive.

Owing to the absence of Prof. L. Duthy Stamp the Geology section was presided over by Prof. Birbal Sahni and among the interesting papers read before this section mention must be made of those read by Prof. H. C. Das Gupta, G. de P. Cotter and H. L. Cabibber.

The Botany section was presided over by Dr M. A. Sampathkumaran and among the important papers read before this section were those by Drs. D. Sahni, S. R. Dose and Messrs Panja and Kashyap.

The great success of the Science Congress this year was due to the keen interest taken by the Governor of the Punjab, the presence of Sir J. C. Bose and the excellent local arrangements for which last Prof. S. S. Bhatnagar was mainly responsible. The Science Dinner in which covers were laid for 400 people and the trip to the archaeological remains at Harappa, all speak highly of the excellent organisation. The presence among others of Prof. Compton, the distinguished American physicist, also added to the success of the Congress.

The Congress next year meets at Calcutta, and it will be the duty of all here to show that alike in hospitality and organisation the people of Calcutta do not lag behind the people of any other part of India. The session at Calcutta will be presided over by Dr. Simonsen of the Tata Institute, Bangalore and Dr. J. N. Mukherjee of the Science College has been elected as the Local Secretary. The following sectional Presidents

have been elected to preside over the meetings of the different sections —

- 1 Physics and Mathematics—Mr Graphbunter
- 2 Chemistry—Dr S. Bhatnagar
- 3 Zoology—Mr Sundar Raj
- 4 Medical and Veterinary Science—Major Knowles
- 5 Botany—Mr P. Aiyangar
- 6 Geology—Prof. H. C. Das Gupta
- 7 Anthropology—Dr B. S. Guba

A Young Sculptor of Mysore

The work of Mr V. R. Madhava Rao, a young sculptor of Mysore, got in his teens

Bust of Sri Vajra prepared in 3 hours by the sculptor

has been attracting some notice of late. He appears to be a talented sculptor of much

promise It would do him good if he could get some years of education and training under proper guidance. And if in that way his gifts bore full fruit that would do credit

R. Madhawa Rao the boy Sculptor of Mysore

to Mysore and India. Those in Mysore who have the power should see to it that he gets facilities for experience and education

Saradeswari Asram

The Saradeswari Asram, an educational institution named after the wife of Paramahansa Ramakrishna and founded by disciple Gouri Puri Devi, who is now past eighty and has led a life of celibacy, has now been able to have a home of its own built on a piece of land purchased for the purpose at 16 Ram Hemanta Kumar Street, Calcutta.

The aims and objects of the Asram are—(1) to promote female education on lines recommended by Hindu society and religion, (2) to provide a Home for orphan girls and helpless women of respectable Hindu families and to train them to a life of usefulness and (3) to further the growth of ideal and temperate womanhood. The institution is run on strictly national and progressive lines in keeping

The host of the Sculptor's younger brother

with the Brahmacharyya system and has a Boarding House and a Day school. Tuition is free in the school. The teaching and internal management are entirely in the hands of competent lady workers. Apart from the ordinary school course training is imparted in household duties spinning weaving sewing tailoring cooking and other practical arts so as to enable them to earn their livelihood if required honestly and honourably. Higher education is also being imparted and some of the inmates have been awarded Sanskrit and University Degrees.

Money is still required to finish the building to provide omnibuses for the day scholars to maintain helples-girls and women and generally to extend the usefulness of the school and place it on a secure and progressive basis.

We are glad to find that the education of girls and women is gradually finding favour even with the orthodox section of the Bengali Hindu community. But it cannot make sufficient progress unless the *purdah* system and the custom of child marriage are done away with. For the expense of conveyance of girls from and to their homes is so great that girls' schools

cannot be multiplied adequately, and if girls are married before they have entered their teens, no education worth the name can be given to them. But so long as the men of Bengal are not willing and able to take the risk of defending girls and women from molestation by bad characters it is felt that girls cannot in all places walk to and from their schools.

Bombay and Madras, which are not *purdah* ridden to the extent that Bengal is, are bound to forge ahead in the educational progress of girls and women and, therefore in general social, moral, economic and political progress also. As in Bengal the majority of the inhabitants are Musalmans who are more *purdah* ridden and illiterate than Hindus, the Hindus must become more than ordinarily courageous and also active in the cause of the education and emancipation of girls and women, else Bengali Hindu society would be doomed to decay.

In the Saradeswari Asram in addition to the school courses there are special arrangements for preparation for the higher examinations under the University or the Calcutta Sanskrit Association and for the study of the Hindu systems of philosophy. In the boarding department every inmate, young or old, rich or poor is required to do with her own hands all the household duties of the Asram.

The League of Nations and Asia

In the Notes on the proceedings of the League of Nations which we sent from Geneva and which were published in the last November number of this Review, it was pointed out how the outlook of the League was essentially European. All the efforts which it has hitherto made to prevent war have been made to maintain peace among European nations. Consequently, it was not a matter of surprise that it did not at all interfere to prevent or put a stop to war in Syria for the sufferers there were Asiatics, not Europeans.

Similarly, when at the fifteenth plenary meeting of the Assembly of the League, held at Geneva on September 24th last, the Chinese Delegate M. Chao Hsin Chu made the statement printed below the League took no notice of it, taking shelter behind a technical plea. M. Chu said —

On July 8 August 2 and August 29 several British merchant ships sailed up the Yangtse at full speed. A number of native wooden ships and small boats were wrecked by these British merchant ships and more than 100 passengers military officers and soldiers were drowned and goods and silver lost.

When the Chinese authorities sent soldiers to make an inquiry on board these British merchant ships they were interfered with by a British

Sri Sri Saradeswari Asram and Free Hindu Girls School

cruiser (sic) which happened to be on the spot. Moreover the British cruiser threatened the villages on both shores with its cannon.

The Chinese authorities were obliged to detain the British merchant ships and take up the matter with the British Consul at Chuogling.

Unfortunately before the case was settled a much more serious incident followed. It was reported that a British gunboat had arrived at Wansien on September 5 and had opened fire on the gendarmerie in the town killing more than 100 of them.

Following this other big cruisers (sic) used their big guns to bombard the town of Wansien. More than 1000 houses were destroyed and thousands of civilian lives were lost as a result of the bombardment.

The Chinese soldiers were obliged to return the fire in their self-defence.

Owing to such an extraordinarily serious incident of international importance which if it developed would endanger peace in the Far East, the Chinese delegate has been instructed to make known these facts as a matter of record

Sannyasini Mother Gauri Puri Devi
(The foundress—Saradeswari Agram)

Viscount Cecil delegate of the British Empire said —

I have heard with some astonishment the statement which the Chinese delegate has thought it right to make from this tribune. He did not give me or my Government any kind of notice or intimation that he was going to raise this matter or was going to make any such statement to the Assembly. I cannot but regret that this very strange method of procedure prevents me from replying in any detailed way to his remarks. I happen however to know sufficient about the facts as reported to the British Government, to say at once that we do not in any way agree with the statement that the Chinese delegate has made and that our view of the incident is entirely different from that which he has laid before the Assembly. I am able to agree that the matter is the subject of negotiation in China, and it is to be hoped that a peaceful and friendly settlement will be reached. I cannot pretend to think that such a statement

as that just made by the Chinese delegate is in any way likely to assist in obtaining a peaceful and friendly settlement of the question

After Viscount Cecil had spoken the President said —

It is impossible to open a discussion on a question which is not on the agenda. I therefore close the present discussion

It is well known that though according to Viscount Cecil the matter (was) the subject of negotiation in China in September last, peace has not been concluded between China and Britain, on the contrary, British war vessels and troops are on their way to China

The President of the League closed the discussion on the Chinese Delegates statement on the technical ground that the question was not on the agenda. But four months have passed after that incident in the Assembly meeting, yet the matter has not been placed on the agenda of any League Council meeting so far as we are aware, in any case the public does not know that the League has done anything to secure a peaceful and friendly settlement.

Had China been a European country and had Great Britain not been the most influential and powerful member of the League it might perhaps have made some efforts for a pacific settlement

India and the League of Nations

Politically one of the objects of the League of Nations is to maintain the *status quo* to see that the territorial integrity of any of its member states is not impaired. And according to its Covenant, it cannot interfere in the national or domestic concerns of any member state. Now India being a part of the British Empire the League cannot directly or indirectly help India to sever her connection with the British Empire and become independent, because thereby the territorial integrity of that empire would be impaired. Nor can the League do anything to improve the political status of India by for example obtaining home rule or dominion status for her for India's political status is a domestic or national concern of Great Britain and India. Besides even if there had not been any technical difficulty in the way the League would not have dared to do anything disagreeable to Great Britain.

Article X of the Covenant of the League

is the pivot of the whole institution It runs as follows —

"The Members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League. In case of any such aggression or in case of any threat or danger of such aggression the council shall advise upon the means by which this obligation shall be fulfilled

It may be argued that as the members of the League undertake to respect and preserve the territorial integrity and existing political independence of all its members against external aggression therefore it is not bound to do anything to prevent internal rebellion whether violent or non violent—neither being just now within the range of practical politics—for obtaining independence Moreover as India does not enjoy any existing independence Article V does not exactly apply in her case But assuming that the interpretation we have suggested here is correct, the League could at best remain a non interfering spectator in case India made any active effort to be free as it (the League) has done in the case of Syria India can never expect the least help or sympathy from the League in any fight for freedom

In fact, though not being thought readers we do not know the chief object which its principal founders may have had in the depth of their hearts there can be no doubt that it is calculated to perpetuate the political and economic dominance of the European nations and other nations descended (partly or entirely) from European For look at the present list of members of the League Of these fifty seven states only seven namely Abyssinia China India Japan Liberia, Persia, and Siam are purely non European and would be in a hopeless minority even if they combined And Afghanistan, Nepal some kingdom in Arabia Turkey Mexico Russia, and the United States of America may also become members In that case out of sixty four members some eleven would be purely non European Even supposing they could combine they would be in a hopeless minority against the European and the wholly or partly European descended group of nations And the cases of Morocco Syria, and China have shown that where European interests are pitted against non European liberty and just rights the League will not go out of its way to exert its influence in the cause of justice and freedom.

As the majority of the peoples of the earth who are the peoples of Asia and Africa are at present politically and economically subject to the European and European descended peoples and as the League is bound to maintain the *status quo* it may without injustice be considered to be in fact if not in intention also an organisation for the maintenance of European or white and semi white supremacy in the world Where in former times three or four or five nations entered into a treaty to defend themselves and their unjustly acquired foreign territories or interests as against others, here in the League is a combination of fifty to perpetuate the present political condition of the world which means the maintenance of the despotism of the dominant nations and the slavery of the subject peoples This may or may not have been the original intention of the powerful and subservient members of the League But intention or object has to be inferred from the natural results of any organisation And we have shown that the natural result of the League organisation is the perpetuation of the enslaved condition of the majority of mankind in the greater portion of the inhabited surface of the earth

Some persons think that though politically India might not be a gainer by being a member of the League she may derive some advantage from the hygienic and other humanitarian organisations of the League Our reply is that India may derive such advantage without becoming a member, if her Government so desires as Russia Turkey and the United States have done Our reply also is that India has so far derived no advantage from the hygienic organisation of the League This has been shown in an article contributed by the editor of this review to the current February number of *Welfare* by making extracts from the publications of the League and Reports of the Indian Delegation Our readers are referred to that article for details

We do not urge that India should give up her membership of the League which in fact she is not free to do To gain experience of world affairs is of great importance to India. One of the ways of doing so is to attend the meetings of the League Assembly at Geneva as delegates In order that this experience may be of use to India, non official Indians should be sent to Geneva as delegates not Government servants or ex Government servants British or Indian and also not

life or property of any of them has been actually in jeopardy, and whether in the history of the British Empire, troops were ever sent to any foreign country for the protection of Indians alone residing there.

Whatever the Viceroy may have considered it necessary to say here, in England the exact truth was told. During a speech at Tipton the Solicitor General said —

"The Division going to Shanghai goes for the purpose of seeing that the sixteen thousand British women and children who cannot be evacuated are as safe as we can make them."

Addressing the 1st Battalion of the Devon Regiment who are under orders for China, Sir Philip Chetwode, Commander in Chief of the Aldershot Command said —

"You are going on what is not a pleasant job. There is no state of war existing in China and it will not exist if we can prevent it. You are going to protect British lives and property which we hold by treaty. In doing so it may be difficult to keep your tempers. There will be plenty of people who will try to tempt you to lose your temper and commit an act of war. I am confident that as British soldiers you will keep your tempers and keep smiling — (British Official Wireless.)"

China knows to her cost that British soldiers have on previous occasions lost their tempers because of her refusal to buy opium from the Britishers and other highly provocative causes such as the wealth of the Chinese Imperial Palace, etc. Therefore, there may be plenty of causes to ruffle the tempers of the British military followers of Christ leading them to do much execution.

There are many more Japanese in China than Indians or British. But Japan has not sent any troops yet, nor is she going to follow the lead of Britain. Australia, a British Dominion, has not sent any troops because she is free. The United States of America, too, has not followed the British example. It is because India is an enslaved country that she must send troops to fight the friendly Chinese people.

The Eight Kings of the British Empire

The reader will find overleaf a group picture of the eight kings of the British Empire. He may, no doubt miss too weighty figure of the Maharajadhiraj of Burdwan. The Happy Fight do not miss him however. Their picture has been reproduced all over the world. That we are not joking will appear from the following extract from the Report of the

Inter Imperial Relations Committee of the Imperial Conference, expressly stating the equality of each of the Dominions with Great Britain.

Nothing would be gained by attempting to lay down a Constitution for the Empire.

Great Britain and the Dominions are autonomous communities within the British Empire, equal in status in no way subordinate one to another in any aspect of their domestic or external allegiance though united by a common allegiance to the Crown.

Treaty making rights. The plenipotentiaries should have full power issued in each case by the king on the advice of the Government concerned.

The Governor General of a Dominion is a Representative of the Crown, not the Representative of the Government in Great Britain or of any Department of it.

The recognised official channel of communication should be between Government and Government direct.

It is the right of each Dominion to advise the Crown in all matters relating to its own affairs.

Every self governing member of the Empire is now the master of its destiny.

The Daily Chronicle asserts —

Each Dominion is entitled if it choose to have its separate Ministers at foreign capitals—Canada and the Free State having their own representatives at Washington. The same right applies in foreign affairs and the making of treaties—a treaty will only bind the Empire when it is ratified by all its members.

Though there are henceforth to be eight kings, the Empire remains an Empire still, because the three hundred and twenty millions of India who are far greater in number than all the other inhabitants of the Empire put together are there to slave for them all. In future the Indian who would agree to attend any meeting of the Imperial Conference as a representative, not of India of course but of the Government of India, must possess an extraordinary amount of shamelessness. For in spite of his possibly gilded robes all the world would know him to be the lackey.

Among British newspapers the *Daily Herald*, in a critical leading article is not so enthusiastic as other newspapers.

It concludes by stating that there is not a mention of India not of Malaya, of Nigeria of Kenya, of the Sudan of all those colonies and protectorates and dependencies and mandated areas which have no free institutions and know nothing of free co-operation. Not a mention of all the subject peoples of the Empire. Their existence may be profitable but the recollection of it would be embarrassing at such a moment.

Therefore they are justly ignored even in the devising of the king's new title. And the Conference, by this act of ignorance is all once more to reconcile the profession of liberty with the practice of domination.

The King and the Premiers at the Buckingham palace
 From left to right: W. M. Bruce, Newfoundlander Premier Baldwin, J. I. Coates, New Zealand, King George V, S. M. Bruce, Australia, Mackenzie King, Canada, General Hertzog, South Africa, and W. T. Cosgrave, Ireland.

The Daily Herald is not literally correct when it states that there is not a mention of India. There is a mention which however is a greater indication of contempt than mere silence would have been for it practically tells the world that, though Britain has felt the need of coming to terms with her grown up children abroad there is no change required in her treatment of those eternal Pariah babies the Indians. Here is what is said of India in the Report:

"It will be noted that in previous paragraphs we have made no mention of India. Our reason for limiting their scope to Great Britain and the Dominions is that the position of India in the Empire is already defined by the Government of India Act of 1919."

Of American comments, we extract the following from the *Washington Post* —

"The British Empire survives in name only. Had the Government in George the Third's day possessed the wisdom of the Government of George the Fifth there would have been no declaration of independence and the United States would now be part of the British Commonwealth."

credit for the abolition of slavery in that independent kingdom. The hollowness of this claim has been exposed in this Review, but nevertheless it finds place, unaltered in the Final Report of the Delegates of India to the Seventh (ordinary) Session of the Assembly of the League of Nations (1920). We suggest that some future delegate of India should claim that the abolition of slavery by Great Britain and by the U. S. A. in the last century was due to the retrospective influence of the League.

A Novel Proscribed

A novel named 'Pather Dabi' or 'The Paths Demand' by Babu Sarat Chandra Chatterjee, has been proscribed by the Government of Bengal and copies of it, wherever found would be confiscated. Babu Sarat Chandra is a leading no elit of Bengal. This particular work of his appeared serially for a long time in a Bengali monthly published from the residence of the late High Court Judge Sir Ashutosh Mukherjee by one of his sons who is a High Court Judge and Fellow and member of the Syndicate of the Calcutta University. The Government said nothing so long as it appeared serially but now it has found something very seditious in it, though what that is the public has not been told.

born of any preventible causes. By the by, if so large a proportion of them be naturally sickly what are the reasons for the C I D to think that heroic revolutionaries are made of such stuff as they?

Bengal Detentions and Discoveries of Bombs

By the discovery of bombs in a Suleka Street house in Calcutta and the conviction of the inmates of the room where the discovery was made the police officers concerned have proved to the satisfaction of the Government that some terrorist association or other is still very much alive and ticking. Therefore, when a few days after the conviction of the accused the Viceroy spoke as follows in the Legislative Assembly it at once became clear what great service some police officers render the Government at a pinch—

Before release can be sanctioned Government must be satisfied either that the conspiracy has been so far suppressed that the set at liberty even if they so desired would be unable to revive it in a dangerous form or if the organisation for conspiracy still exist that those released would no longer wish to employ their freedom to resume their dangerous activities. The Government have always made it clear and I repeat to-day that their sole object in keeping any men under restraint is to prevent terrorist outrages and that they are prepared to release them the moment they are satisfied that their release would not defeat this object.

The pity however is that it has never been proved that the men detained without trial had ever anything to do with any organisation for conspiracy. So the Viceroy merely begged the question and it was only his autocratic powers which saved him from discomfiture. The last sentence in the passage quoted above implies that the detenus may be released on their giving an undertaking that they would not in future join any terrorist organisation. But that would be to admit their past guilt. How can men who have never been brought to trial and must be presumed to be innocent expected to incriminate themselves in this way?

S N Mitra's Futile Election

Babu Satyendranath Mitra, one of the Bengal detenus was duly elected to the Legislative Assembly. But the Government would not allow him freedom to come to the Council Chamber and take the oath and perform his duties. To draw attention to

and discuss this matter, an adjournment motion was moved in the house and carried by a large majority. That practically amounted to a vote of censure on the Government.

The Government's position seems to be briefly this—The electors are told, 'You knew that we won't allow this person to enter the Council Chamber, so you are to blame for electing him.' The electors reply may be stated thus, 'You, O Hazurs, know that you would not allow him to do the duties of a legislator. Why then did you not nominate his nomination paper and nip this futility in the bud? That would have saved much time and waste of money and energy.'

The fact is, autocracy requires no other argument but that might is right. And it is being proved again and again that the Government of India is an autocracy and rules without the consent of the people.

South Africa and India

Very pleasing reports have come from South Africa relating to the agreement arrived at between the Indian deputation and the representatives of the South African Government. But we must not say anything before seeing the text of this agreement. One must not shout before one is out of the woods. Remembering what happened to the Gandhi Smuts agreement, we have to repeat the Bengali adage 'জোক্তোর বড়ীর কলার, না ঝটালে বিবাস নাই.' 'When one is invited to a feast in a swindler's house, one can not be sure of it until one has washed his mouth after enjoying the feast.'

Satyagraha at Patuakhali

The Hindus at Patuakhali in the district of Bakarganj have been trying for the last five months to maintain their right to lead musical religious processions along public roads. Batches of volunteers go every day once or twice up to the point in a public road where the prohibited area begins and are arrested and sent to jail. Volunteers have been coming from such distant places as Cawnpore, Benares, etc. The volunteers have been carrying on this struggle in quite a non-violent manner. But recently there has been a fracas in the town jail and outside between Hindus and

Musalman. As this has taken place after the publication of a somewhat one sided communique issued by the Bengal Government, a suspicion has been expressed in some quarters that the fracas might have been due to instigation on the part of some persons who wanted to please the Government by providing it with an excuse for suppressing the satyagraha at Patuakhali. This movement of civil disobedience is perfectly legitimate. We should however, be glad if an amicable settlement of the differences between the Hindus and the Musalmans were speedily arrived at. For every movement of civil disobedience not only causes much suffering but creates much bitterness of feeling also. Moreover, there is also much expenditure of time, energy and money which might be utilised for other beneficent purposes. If according to any local understanding the Hindus used formerly to stop music before an old mosque, they should continue to do so now, provided the Musalmans on their part agree not to try to stop music before newly built mosques. Non Musalmans cannot accept any General claim that music should stop before all mosques old or new irrespective of local practice. For the acceptance of such a claim would give the Musalmans a stranglehold on the religious and civic rights of non-Musalmans relating to musical performance and processions.

Sri Kailas Chandra Bose

Sir Kailas Chandra Bose who passed away in his Calcutta residence on the 20th of January last at the age of 77 was one of the most successful medical practitioners of this city and was the first doctor to be knighted. He had great influence over the local Marwari community who looked upon him as their trusted adviser. He served them in various ways. He was the Vice-President of the All India Medical Congress held in Calcutta in 1894 and was one of the Plague Commissioners. He was the oldest member of the Faculty of Medicine of the Calcutta University and the oldest member of the Calcutta Corporation. He was the president of the Anti-malarial Society and the Calcutta Medical School and one of the founders of the Tropical School of Medicine, the only research medical institution in India where a ward exists in his name. Many institutions such as the Veterinary College, the

Marwari Hospital, the Pimpri, the Teper Asylum, owe their existence partly to his exertions and influence.

Women's Conference in Poona

The women's conferences held in December last in various parts of the country led up to the First All India Women's conference held in Poona on January 5, 6 and 7, which was attended by delegates from all parts of India. As chairman of the Reception Committee the Rani of Sangli said in her address that the time was now ripe for women to help in formulating the basic principles of educational policy and programme. It should be of great help she thought if women themselves declared what they should have their children taught. Whatever the policy and plan of female education laid down by the Conference as a result of the discussions, she was emphatic that Indian culture, Indian tradition and all that was best in the past of Indian womanhood would have to be preserved and secured in any future scheme.

The presidential address of the Maharani of Baroda was a rousing call to action. Some of its salient points are noted below.

A few decades saw the curse of *untouchability* removed from our land. With a like determination these social evils can all be overcome, she declared after a brief review of the many social practices retarding women's advance. Women of Turkey broke from the bonds, so can we. A noteworthy feature of the rapid progress women had made recently had been the sincere co-operation of the 'fairer sex' in contrast to the experience of other countries.

Referring to physical training she said that girls should receive it.

Turning to the subject of co-education the Maharani observed though it must be admitted that separation of sexes was in itself artificial, separation was also required in order that a peculiar type of mind of personality and of culture which constituted the attraction of womanhood might be developed. There was thus a definite need for separate schools and colleges for girls and women in which life and not merely courses of study shall have reference to the nature of pupils and character of women we wish to cultivate.

On compulsory primary education what the Conference had to consider was not the necessity of such a measure but the *ways of removing difficulties* in the application of an educational policy which they desired.

Coming next to the economic value of education the Maharani said there was a tendency to retard even to oppose many reforms in women's education because it was believed that for women's education to have economic value it must be on

the same lines as that of men. The Conference must show it to be false.

The whole question of the legal status of women in marriage with regard to property, divorce, control of children and many other matters, should be systematically enquired into and proposals discussed.

A preamble to the resolution adopted maintained that

The present system of education was thought out primarily in the interest of the boys and was formulated by men. The time has now come for women to revise and reform this system and resolutions hereinafter to be adopted would offer a constructive programme to those who had already shown a sincere desire to promote advancement of education.

Resolutions were also passed advocating compulsory moral and physical training and urging that to the education of girls and women teaching to the ideals of motherhood, beautifying of homes as well as training to the methods of social service should be kept uppermost.

In some respects the boldest and most important resolution passed was the following:

"This Conference deplores the effect of early marriage on education and urges the Government to pass legislation to make marriage below the age of 16 a penal offence. It demands that the age of consent be raised to sixteen. It wholeheartedly supports Sir Hari Singh Gour's Bill which is to come before the Legislative Assembly this month as a step towards raising the age of consent to sixteen and sends a deputation to convey to the Legislative Assembly the demand of this Conference on this vital subject."

A standing committee was appointed consisting of the Maharaja of Baroda as President, Rani of Saogli, Mrs. Naidu Lady J. C. Bose and Rani of Vizianagaram as Vice-Presidents, Mrs. Cousins as Chairman and Kamaladevi Chattopadhyaya, Secretary with 14 other members with powers to co-opt.

Brahmo Samaj Anniversary in Calcutta

Besides the separate celebrations of the Brahmo Samaj anniversary last month by the three sections of the Brahmo Samaj a joint celebration was this year attempted and carried through successfully in the City College grounds. The elders of the three sections are to be congratulated on the encouragement which they gave to their youngmen to whose zeal and active exertions the success of this joint *utsava* or religious festival was mainly due. A day was set apart for the ladies the leading parts being taken by the Dowager Maharani of Cooh

Behar and Mayurbhanj, Lady Abala Bose, Mrs. Hemlata Sarkar and others. A large number of Hindu ladies were present throughout and took their meals with all present without any regard to caste divisions. One practical outcome of this day's worship, discourses and conference has been that many ladies, headed by Lady Bose, have come forward to work in unison for promoting the cause of the higher liberal education and vocational education of girls and women and other activities conducive to women's progress. The young men of the Brahmo Samaj had also their day on which some of them themselves spoke. Their speeches were followed by an eloquent, learned and inspiring address by Babu Bipin Chandra Pal. On the last day, mostly some elderly gentlemen spoke and conducted divine service. Among the speakers was Sir R. N. Mukherjee who paid a tribute to the good work done by the Brahmo Samaj saying that as an outsider, though not quite so he could claim to speak impartially. Lord Sinha sent the following brief paper, which was read by one of the youngmen:

My Sir,

In this season of stock taking of ideas and ideals I am asked to send my contribution. I feel acutely how poor my own stock is, and yet my mite might prove useful. So I send it, with much fear and in trepidation.

"What should be the motto for our League of Youth? I can think of none better than the motto of the Shaftesbury family in England viz.,

Love and Service"

'Simple words but how hard to carry out!'

Has that been the motto of India too? I do not know. And yet, is not India the land of Gautama? Did not Bengal give birth to Chaitanya? And who has ever taught the doctrine of love better than those two? Yet it seems to me for some reason or other, the doctrine of loving service has not taken root in Bengal—it has not become a part of our everyday life, in the same way as it has in England, the country in Europe I know best and love most. I grieve to think of our poverty in this respect. Why have we not got any names which we can proudly compare with those of Lord Shaftesbury, George Peabody and Arnold Toynbee, to mention only a few of the glorious host?

'It seems to me one of the reasons, it

not the chief reason of our spiritual poverty. It is due to the fact that we of the Brahmo Samaj at least have been paying greater heed to religious creed than to religious life. Why else have we got 3 Samajes where there is no essential difference.

"We may perhaps go further and trace the chief even further down. Is our sense of humanity as large as that of England notwithstanding our lip service to "Dandya Narayan. Is not our idea even of salvation only for our own individual souls as isolated units and not for the soul of humanity at large.

"Here perhaps I am going beyond my depth into regions of theology and of metaphysics, which to me are as unfamiliar as they are repellent. I ask myself have I any practical any tangible suggestion to offer how best we can carry into practice the doctrine of Love and Service I can only think of one. "Form a band of volunteers, who will go out into the stricken villages of Bengal to love and serve the people who are dying of disease and dirt and death. How will these voluntary missionaries live? I don't know. Let love find out. In what way will they serve the people? I do not know. Let love find out.

"The Brahmo Samaj has done immense service to Bengal. If the acerbities of caste are less in Bengal than elsewhere in India, it is due to the influence of the Brahmo Samaj. If the women of Bengal are better educated on the whole than before it is due to the influence of the same Samaj. If women are free to enjoy the sun and air more than before it is due to the same potent influence. The ideals of the Brahmo Samaj have permeated the people in general what matters if the number* of enrolled members is stationary or even decreasing. The whole of Bengal has become *Brahmo*. Praise be to God.

"I appeal therefore to that Samaj once more to lead the way. I suggest that steps may be taken to call for volunteers who without any promise or even hope of financial support are willing to go forth into the wilderness, so to speak and by love and service help to make the lives of the people in the villages of Bengal a little less unhappy.

The times are propitious the signs are encouraging for many years the Rama

* The number has been steadily increasing, though not by leaps and bounds. Ed. H. J.

krishna Mission has been by their benevolent work showing us the way. Thousands of young men have distinguished themselves by loving service in times of famine fire and flood and fairs Societies for helping the depressed classes and League for Social Service are steadily though slowly gaining public support. The spirit of service is abroad. It only requires organisation to harness this spirit and curb our tendency to fitful work under feverish excitement and direct our energies along a perennial stream of daily beneficence. I can think of nothing more useful towards that end than a scheme by which a fairly large number of young men from all our Samajes who hear the call of the villages should be recruited every year. They will take the place of curates rectors and vicars in our National Church of Holy Service. Can we do it?

It may be mentioned here incidentally that, owing to Lord Sinha's political opinions being somewhat different from those of many politically minded Indians, the educational and other social service work which has been carried on in his native district and elsewhere through the help and encouragement given by him has not received the appreciation that it ought to. We write this not with a view to give publicity to the good work done by him directly or indirectly but only to assure the young men whom he has urged to hear the call of the village that he has himself heard the call and has responded to it in a practical manner. It is perhaps permissible to hope and believe that though the professional and political careers of Lord Sinha may be at an end the career of Satyendra Prasanna Sinha the social servant has just begun.

Professor Raman's Convocation Address

The last convocation address of the Hindu University at Benares was delivered by Professor C. V. Raman of Calcutta. Convocation addresses are generally taken advantage of to place before youth noble ideals so that they may devote themselves to the pursuit of knowledge and the service of humanity. But Professor Raman made a new departure by disparaging the work of and making unworthy insinuations against a scientist whose name is known all over the world. For this reason a well known Malabar daily has called him a green-eyed scientist and

subjected him to much not undeserved criticism

We will merely remind Professor Raman that when he gave up the prospect of becoming at least an Accountant-General and accepted a professorship which carried a much lower salary because it would give him opportunities to do original work in science, he showed that he could respond to the appeal of idealism. Let him strengthen that earlier impulse in his nature instead of giving way to baser impulses which are unworthy of the vocation of a teacher of youth. One can become truly great only by making the fullest and noblest use of one's gifts and opportunities, not by trying to pull others down to a level lower than what one himself occupies.

Professor Raman desires very much that Government should not make any grant to a particular scientist. He forgets that scientists of far greater achievement and celebrity need other men of far higher distinction than himself have urged Government to do exactly the opposite. Or perhaps the memorial of these Fellows of the Royal Society and of well-known authors, journalists and educationists like Sir Michael Sadler may have stimulated Professor Raman's unscientific self into activity.

One discovery of Professor Raman which he has published through the medium of his convocation address we can unreservedly accept and praise. It is of the truth. Self-praise is scientific suicide. Professor Raman's friends and admirers need have no anxiety now that there will be any scientific *felo de se* in the Calcutta Science College.

Dr Raman is known as an original worker in some branches of physics and chemistry and in these we laymen can accept his authority. But when he trespasses on the biologist's province and asserts dogmatically that a scientific man after the age of sixty even when apparently active and energetic, is in reality living on his reputation, he will excuse us for treating his dictum as we would that of an impostor or a pseudo-scientist. We do not know the data on which his dictum is based. But we find his and our next-door neighbour Sir P. C. Ray who is nearer seventy than sixty still making original contributions to chemistry either singly or in collaboration with his pupils in spite of his pre-occupation with *Lhaddar* as the Report of the Indian Chemical Society for 1926 shows. Dr Raman may not be

willing perhaps to admit anybody's claim to be a scientific man who is not an F. R. S. though there are numerous European, American and Japanese scientists of the front rank who are not F. R. S. and do not care to be, and there are also British F. R. S. whose scientific achievement is quite insignificant. Let that pass however. Dr Ray's neighbour Sir J. C. Bose is an F. R. S. and is in his 63rd year. But last year saw the publication of his *Nervous Mechanism of Plants* and within the last few years his *Ascent of Sap*, *Photosynthesis* and other works have been published. This year at least another work will be published shortly. The hundreds of experiments on which these works are based were not performed in his 20th or 35th or even 50th year but after he was 60.

If Indian examples be not acceptable to Dr Raman may we mention the name of the famous scientist and inventor Edison who is eighty and still active in his scientific researches and inventions? May we mention the name of Lord Kelvin? May we mention that of Darwin whose *Descent of Man* appeared when he was 62, *The Expression of the Emotion in Man and Animals* when he was 64, *Insectivorous Plants* when he was 65, *Climbing Plants* when he was 66, *The Effects of Cross and Self Fertilisation in the Vegetable Kingdom* when he was 67, *Different Forms of Flowers in Plants of the same Species* when he was 69, *The Power of Movement in Plants* when he was 71 and *The Formation of Vegetable Mould through the Action of Worms* when he was 73? But we have already given Professor Raman's irresponsible utterances greater importance than they deserve and must stop.

The Indian Chemical Society!

We are glad to find from the Report of the Indian Chemical Society for 1926 that it is making good progress and that its promoters and workers devote to it not only their time and intellectual powers but their money also. Another matter of satisfaction is that chemical research is no longer confined to Bengal where Sir P. C. Ray's school of chemistry was born but claims its votaries all over India. The third annual general meeting of the Society was held at Lahore on January 6 last. The Presidential address by Sir P. C. Ray was read in his absence by Mr. Priyadarshan Ray, M. A. of the

University College of Science Calcutta The subject was 'The Variability of Valency of Elements with special reference to that of gold and platinum' The author, as the result of his investigation during the last seven years, has prepared a large number of compounds of these noble metals It is found that gold and platinum can have any valency of combining power from one to eight In the light of this fact the existing notions as regards valency have to be revised The author also shows that Werner's coordination theory, which has hitherto been generally accepted, is inadequate The investigation bids fair to open a new chapter in theoretical chemistry

A Lady Deputy President of Council

A constituency in Madras, by not electing Dr Muthulakshmi Ammal as their representative in the Madras Council, lost the credit which it might have had and which was earned by the Madras Government which nominated her The Madras M. L. C's have, however, earned praise by unanimously electing her as their Deputy President In Bengal women have not yet got the right to be elected members of council

Stiffening the Law Relating to Offences against Women

We are glad to read in the papers that Mr K. C. Neogy intends to introduce a bill in the Legislative Assembly to stiffen the law relating to the abduction of and assaults on women It should be made the bounden duty of the police to investigate such cases on their own initiative and to bring offenders to book as for punishment it should be considered whether in addition to rigorous imprisonment, flogging may not also be administered in very flagrant cases If we remember aright, in some states of America vasectomy is performed in the case of some convicts as a curative and remedial measure We think it should be prescribed in India also

The Indian National Movement and the British Memorandum on China

Major Graham Pole Honorary Secretary to the British Committee on Indian Affairs,

points out in a letter to the *Manchester Guardian* the vital importance to India of the British Foreign Office Memorandum on China addressed to the representatives of the nine Washington Treaty Powers interested in China. After stating that it has 'met with practically unanimous approval in' Great Britain, he goes on to observe —

One wonders however if there is enough co-ordination in the British Cabinet to cause them to think what the effect of this Memorandum must be on India. China for many years has to a considerable extent been under the dominion of foreign Governments. This British Foreign Office Memorandum refers to the growth in China of a powerful national movement which aims at gaining for China an equal place among the nations and failure to meet this movement with sympathy and understanding would not respond to the real intentions of the Powers towards China. Can our Government not similarly look facts in the face with regard to India? There has been (especially since India took her place and obligations as an equal in the Great War) a growing and powerful nationalist movement in India also with the aim of gaining for India an equal place among the nations. One would fain wish to see something of that sympathy and understanding with the movement in India for the government of which we are alone responsible that the British Government expresses towards China, where we are only one of nine interested Powers.

While agreeing entirely with all that the writers say we may be allowed to point out here that the causes of the British 'sympathy and understanding' in the case of China are obvious. The Chinese have shown by inflicting very heavy pecuniary losses on the British people by their boycott of British goods that they are not to be trifled with. They have also compelled the British to evacuate some settlements and have proved that they possess some military strength. Besides, Britain knows she cannot expect any help from any of the great powers in the adoption of a coercive policy towards China. So what was left for her but to make a virtue of necessity and profess sympathy for the Chinese national movement? It would be easy for Major Graham Pole and other intelligent persons to see that if India could have extorted sympathy and understanding from China Great Britain would have been equally ready to profess them for her.

But let us return to the Major's letter. Says he —

The Foreign Office Memorandum goes on to say that his Majesty's Government desires to go as far as possible towards meeting the legitimate aspirations of the Chinese nation and then adds

the significant words that the Powers should abandon the idea that the economic and political development of China can only be secured under foreign tutelage. They should expressly disclaim any intention of forcing foreign control upon an unwilling China.

But why China more than India? China begins at home and our declarations as a nation, would have much more force in the eyes of foreign Powers if they saw us carry them into practical effect in India, where we can do so without the necessity of their consent or concurrence.

The Memorandum calls upon the Powers to make a declaration that they are prepared to consider in a sympathetic spirit any reasonable proposals the Chinese authorities may make even if contrary to the strict interpretation of treaty rights.

We are a curiously unimaginative nation and seem to divide our thinking and our policies into water tight divisions, without realising or trying to imagine, the effect that, for instance this declaration with regard to China must have on the 320 millions of Indians who are much more under foreign tutelage than are the Chinese, while they are no less fitted for looking after their own affairs.

Here again Major Pole is right but he has put it very mildly when he says that the British are a curiously unimaginative people. Possibly they are, though we are not convinced. For, has not Britain produced Shakespeare and some of the other greatest poets of the world? How could an unimaginative people produce such imaginative writers? Our reading of the British character is that there is plenty of imagination in it. Only some sufficient stimulus must be applied to make that faculty active. China has been able to apply the stimulus, India has not. Examples may be given from British Empire history, too. In Canada in the thirties of the last century there were two rebellions, and supplies were also refused. During that period therefore the British powers of imagination and "sympathy and understanding" found expression in Lord Dufferin's Report, which led to Canada's obtaining the real beginnings of self government. We write all this neither for blurring nor for suggesting that India should get upon armed rebellion for a successful armed rebellion does not appear to us feasible. Some other way has to be found out. What we want to assert is that it is perfectly futile to appeal to the sense of justice and generosity of the British people. They will agree to our having self rule only when they find that they will otherwise themselves lose and suffer.

Major D. Graham Pole concludes his letter thus —

The British Memorandum goes on to point out that in 1921 "it was natural" that the Powers should demand guarantees for the due fulfilment of the purpose of the Washington Conference, and adds "But what might have been practicable in 1921 was no longer possible in 1926." Can our legislators imagine that this applies only to China?

The Montagu-Chelmsford Reform scheme was passed through the British Parliament in 1919 and inaugurated by the Duke of Connaught on behalf of the King Emperor, in India in 1921. What might have been considered practicable in 1921 is certainly in 1926 no longer practical politics as an instalment to India of self government. The pity of it is that we so seldom do the right and generous thing until it is too late to have any real value. There is in India a movement for complete independence and separation from England. It is small, it is entirely ineffective at present, but it is growing and it will continue to grow. The only thing that can effectively curb or kill such a movement is a big and generous grant to India of real self-government. And nothing could so effectively ensure the permanence of the connection between Britain and India.

But there are very large numbers of Britishers—perhaps they are the majority who believe that they can rule India for ever as they are doing now and that India, too can never do without British rule. These Britishers are determined to rule for ever if they can no matter whether it is just to do so or not. It is for us to prove practically—not merely in words, that they cannot. Then but not till then, will their imagination sympathy sense of justice, generosity, understanding and every other vaunted virtue and faculty come into play.

A Swiss Anthropologist on Neglect of Anthropology in India

As announced in the last issue of this journal, Dr. Hans J. Wehrli, Professor of Ethnography in the University of Zurich, Switzerland, has arrived in India to collect ethnographical objects from various points of anthropological interest in India. Nineteen years ago Prof. Wehrli made an extensive tour in Indo-China and India in company with Rudolf Martin whose death a year ago has removed the most distinguished student of Anthropology in Europe. During this tour Prof. Wehrli was able to study various tribes in the Burmese frontiers and the unexplored regions lying between Assam and Burma. His investigations specially on the anthropometry of the Kachins, when published will go a long way in clearing up many obscure points in the anthropology of these regions.

Prof Wehrli paid a visit to the Calcutta University and was introduced by Dr Kalidas Nag to the members of the anthropology department. At the request of some of the members, Prof Wehrli spoke of his experiences among the Kachins and their probable relationships with other tribes on the Assam borders specially the Nagas. At the end of a couple of hours interesting discussion Prof Wehrli suggested that one way of co-operation between the Universities of Calcutta and Zurich would be by exchange of ethnographical objects useful to both. At the suggestion of Dr B S Guha Prof Wehrli promised to send a representative collection of ethnographical objects of the Swiss Lake Dwellers in exchange for ritualistic and cult objects of the Indian people.

Prof Wehrli also paid a visit to the Indian Museum and was taken over the Ethnographical Gallery and shown the recent consignment of artifacts and human skeletons from the Indo-Sumerian sites in the Indus valley by Major R B S Sewell and Dr B S Guha. Prof Wehrli was greatly impressed by the latter and their great importance for the early history of Asia, but expressed surprise that very little appeared to have been done in the matter of exploring the vast anthropological resources of this country either in the way of prehistoric research or the cultural and physical affinities of the present inhabitants. He was disappointed to find that the Ethnographical Gallery of the Indian Museum had received very few additions since he last visited it 10 years ago. If systematic efforts are not made to collect ethnographical objects now the process of contact metamorphism that is taking place among the primitive tribes all over India, will see the complete extinction of these ancient institutions in a few years time before any record of them could be made. This is one of the reasons why he is visiting India to collect ethnographical objects, before it becomes too late. Prof Wehrli spoke of the activities of the Berlin Ethnographical Museum in this connection whose collection of Indian ethnographical objects far surpasses anything that he had seen anywhere in India and he had no doubt that unless immediate steps are taken Indian students would have to go to Europe to study the institutions of their own people. He did not understand why the Government of India had no whole time trained officer to take charge of the Ethnographical Gallery in the Indian Museum

who could make systematic enquiries and collect materials on the primitive institutions of Indian aborigines which are fast dying out. It would be a great loss to science if no efforts are made to record these vanishing customs. He appealed to the Government of India as well as the authorities of the Universities to take serious steps at once for systematic investigations into the cultural and physical characters of the primitive folks of India so that their great importance to the student of human institutions may not be irreparably destroyed. The interest shown by the Government and Universities of the West should open the eyes of Indians as regards the profound importance of anthropological studies in India.

Faculties of the Calcutta University

Every living organism operates differently through each of its different organs. If one organ were to usurp the functions of another or dominate all the rest, there would be chaos in the body. This chaotic condition had marked the Calcutta University in recent years. Like other universities it has the Faculties of Arts, Science, Law, Medicine and Engineering. But since 1917 all sorts of men have been given seats on two faculties at the same time so as to swamp the Faculty of Arts with non-Arts men and turn this Faculty into a miniature Senate composed of chemists, physicists, lawyers and medical men. There were last year quite 40 of these pluralists in a Senate of only 100 Fellows. It was amusing to study the Faculty list and find among the pluralist members of the Faculty of Arts one professor of philosophy, two of chemistry, two of physics, eight practising lawyers more than one doctor of science and so on and so forth—all these being also members of certain other Faculties to which they more legitimately appertained. Sir Asutosh Mukherji's young sons and a son-in-law were each double Faculty men. But this year there has been some return to decency and as we find from the papers the Senate has had the sense to reduce the number of pluralist Faculty men to fourteen.

Major Pole on Congress President's Plea for Self rule

In the article on India's Claim to Freedom contributed by Major D Graham

Pole to the London *Daily Herald*, occurs the following passage —

India ultimately must be a Federation, a single unity, to embrace what is now known as British India and the present Indian States.

There can be no question of the justice of Mr Srinivasa Iyengar's proposition that self government is a mere travesty of the actual fact so long as full control of the Civil Services the military naval and air forces and political relations with the Indian States were denied to the Indian Legislature.

The progress towards such an ideal is slow under a Conservative Government, and one is tempted to believe that they see no future even far ahead when such an ideal would be either realised or even considered desirable.

Major Pole on Indian Liberal Federation President's Address

The same article in the *Daily Herald* contains the following paragraphs on Sir P S Sivaswamy Aiyar's Presidential Address to the Indian National Liberal Federation —

Sir P S Sivaswamy Aiyar's Presidential Address to the Indian National Liberal Federation is equally important for his appeal to Indians to allay the apprehensions of Britain that the grant of responsible government might be accompanied by a desire on Indians' part to injure British interests or to sever the British connection. [But no Indian political party ever had or expressed any such desire. Ed M R.]

If self government were demanded for the purpose of injuring British interests there might be quite understandable opposition here. But it is equally understandable—and it should be quite frankly faced—that full self government is India's legitimate goal quite apart from the possibility that British interests might quite conceivably be injured.

India for the Indians' is quite as legitimate a slogan as China for the Chinese. And if India is to have full Dominion status within the British Commonwealth of Nations—as I sincerely hope and believe she will have—she must be at free to break the connection if in India's interests alone she deems desirable so to do as is Canada or South Africa.

My own firm belief is that India will be stronger and Britain will be stronger and the peace of the world will be more secure by India being a full free partner in the British Commonwealth at the earliest possible date with every right and privilege of every other partner in that Commonwealth of Nations.

The 1917 Declaration

In his address to the Legislative Assembly the Viceroy said —

Every British party in a succession of Parliaments elected on the widest franchise and therefore representing in the widest possible manner the British

people has pledged itself to the terms of the 1917 declaration. They have implemented those terms by legislation and thus given practical proof of their sincerity by introducing wide and far-reaching changes into the structure of the Indian Government. From those undertakings no British party can or will withdraw, and although the British race may lack many excellent qualities, they can afford to remain unmoved by charges of bad faith which their whole history denies.

The Viceroy will pardon us for reminding him if he ever knew or for informing him if he never did, that the course of British history, so far as India is concerned, is strewn with broken pledges. Has he never heard of Lord Salisbury's famous confession relating to breaches of promise made to India?

The 1917 declaration, the Montagu-Chelmsford Report and the Government of India Act of 1919 nowhere say definitely that India shall have self-rule. And the implementing of the terms of the 1917 declaration is not such as to lead inevitably to self-rule.

Right of Parliament to be Arbitrator

The Viceroy has discussed the right of Parliament to be the arbiter of the fashion and the time of India's political development. He might as well have spared himself the trouble. The *de facto* right of Parliament nobody denies or can deny unless India can overthrow British rule by force, for a fact is a fact. It is the moral right of a foreign people to determine the manner or pace of our advance which we emphatically deny. Even in the case of the most oppressive tyrant no one can question his right *de facto* to do as he likes, it is only his moral right that is questioned.

What makes the assertion of Parliament's right in this matter both tragic and ridiculous is that the vast majority of its members have never taken any interest in Indian affairs. The Indian Debate has been always a signal for the emptying of the benches. Repeatedly have members rushed in to prevent a count-out, and have left the chamber as soon as the counting was over. Never were a responsible body of men guilty of greater irresponsibility and criminal neglect of duty.

Bengal Detentions and Constitutional Advance

The Viceroy's speech also contains the following passage —

It is said the alleged sincerity of Parliament receives practical contradiction on the one hand by the arbitrary executive acts such as the detention of certain men without trial in Bengal on the other by the reluctance of Parliament to give a firm time-table for the completion of its loudly professed purpose of making India herself responsible within the Empire for her own government.

The first question concerns the exercise of that executive responsibility which must rest upon any administration however constituted and though I am well aware of its political reactions it is a question which must be dealt with on its merits and has no direct relation with the general question of constitutional advance for constitutional forms may vary widely but the maintenance of law and order is the inalienable duty of all those on whom falls the task of Government.

This is very curious reasoning indeed. How can there be any constitutional advance if the Governor General possesses and exercises the power to make ordinances, having the effect of statutory laws by virtue of which any men including the leaders of the struggle for constitutional advance may be deprived of their liberty without any trial? It seems we must admit the sincerity of Parliament's professed desire to give India self rule on the Greek calendar even when it says in effect: You may go on making speeches appealing to our sense of justice and generosity in order to obtain the boon of self rule but remember that our highest functionary in India can shut you up if you are inconveniently serious about winning self rule. And we must also admit that those British kings who worked the Star chamber and made Hampden and Pym and the Seven Bishops famous were sincere and direct promoters of the cause of British freedom.

Coerce or Convince

His Excellency went on to say —

Those anxious to see constitutional advance must either coerce Parliament or convince it. He could not emphasise too strongly that Parliament would not be coerced. It would resent such an attempt and would be gravely disquieted by language appearing to be inspired by hostility not only to legitimate British interests but also to the British connection.

We admit Lord Irwin has placed us between the horns of a dilemma as it were. For though we believe it is possible to coerce the British nation because it is composed of ordinary men not of superhuman beings we have at present no power to coerce it and as for convincing it, none are so blind as those who will not see. How can we convince those whose interest it is for the time being not to be convinced? If Canada

in the last and Ireland in the present century were never told 'Parliament would not be coerced' why are those words addressed to the mild Indian? Is it because he is mild and weak?

In the opinion of Lord Irwin

Parliament would like to examine the practical success achieved and while it would be prepared to introduce improvements it would not understand the argument that because the present foundations were alleged to be at fault this must necessarily be remedied by immediately asking those foundations to bear the entire weight of the whole edifice.

No my friend. We do not want those foundations to bear the entire weight of the whole edifice. We want other stronger and more stable foundations to bear it.

Parliament is inviting India to co-operate in the working of the constitution did not desire any party or individual to forego the freest and fullest right of criticism and constitutional opposition but it wanted Indians to show whether the ultimate structure it was seeking to erect would suit Indian conditions and Indian needs.

If it saw a large section of Indian opinion however vocal in its desire to further the cause of Indian self government steadily adhering to obstructive machinery Parliament was more likely to see in it evidence that the application of Western constitutional practice to India might be mistaken than proof of wisdom of immediate surrender to India of all its own responsibility.

Yes Parliament is quite sincere in its desire for the exercise of the freest and fullest right of criticism and constitutional opposition only such exercise must be tempered by the Government's right to imprison the critics and opponents without trial.

Is not even the most steady adherence to obstructive machinery included in "constitutional opposition"?

The last sentence in the passage quoted above is a threat, though it is not couched in such blunt language as has previously been used by other British politicians to tell us that unless Indians co-operate that is were subservient they would not have any further rights. So it is quite polite and wise and just and natural to try to coerce us but it is blasphemy to think that Parliament can possibly be coerced.

The interference of the British Government was fiercely denounced by the French politicians and a rebellion broke out in Lower Canada in 1837. The year 1838 witnessed another rebellion. This time the infection spread to Upper Canada as well (*Towards Home Rule*, part III pp 104-5). There was also the refusal of supplies in Canada mentioned in a previous note. All these

did not appear to British statesmen of these days—particularly to Lord Durham to be evidence of Canada's unfitness for self government Ireland's long and often bloody resistance to the working of such home rule as Great Britain gave her did not also furnish such evidence. The comparatively mild criticism and bloodless opposition of some Indians however do furnish such evidence.

Lord Irwin further observed—

Parliament itself had spent hundreds of years in extending its powers by custom and precedent. There was the instance of Canada, where differences between Protestants and Catholics were supposed to constitute an absolute bar to full self government but after a few years owing to the good sense of the Canadian Legislature, the British Parliaments very real powers were silently allowed first to fall into disuse and then to disappear. Parliament knew too that by this means everyone of the Dominions had obtained fully responsible self government.

It is absurd to argue as the speaker did by implication that because the British Parliament took centuries to arrive at its present condition India must also take as long a time. The beginnings of the steam engine are traced to Hero's apparatus constructed in 130 B.C. Must a young man who wants to build a steam engine now be born again and again in locomotive works for 2057 years to be entitled to build one? But we need not argue from analogy. Japan has evolved and is working Parliamentary institutions in less than 50 years and we have been under British rule for more than three as long a period.

Of the introduction and establishment of self government in Canada and the other Dominions Lord Irwin has given an entirely misleading account—whether owing to ignorance or any other cause we cannot say. Those who want to know the true story in brief may read the present writers' *Towards Home Rule* part in pp 104-112.

University "Affairs"

In connection with the recent developments in Calcutta University affairs *Forward*, the Swarajist daily, has been making unfair attacks on some members of the Senate. In a recent editorial of that paper we read the following unctuous lucubration—

We think that the University is a nursery of genius and culture and is a sacred institution. The noxious fumes of party strife and party intrigues should not be allowed to vitiate its atmosphere. (*Italics ours*)

A systematic attempt is being made to officialise the University in fact to convert it into a wing of the Secretariat.

We had occasion to notice that members of the Senate had to attend a conference at the Writers Buildings etc etc.

We strongly condemn such overt references as the above words doubtlessly are, to eminent scholars like Dr Pramathanath Banerjee and Mr Pramathanath Banerjee. What if the former is approaching the Government frequently for reappointment to his Minto Professorship? What again does it matter if the latter is attempting as Dame Rumour has it to give up his practice at the Chakr Bar and devote his life to important educational work? We do not think that, in the interest of social progress, modesty should deter meritorious men from claiming their due place in the scheme of things. Mr Pramathanath Banerjee who as we know got into the Syndicate this year with the help of friendly votes naturally feels grateful to his patrons and has accordingly done his little to pay back his debt of honour. One good turn calls for another. *Forward* may lose sight of the first principles of human gratitude and mutual service in her blind and ferocious anti-governmentalism but we cannot blame Mr Pramathanath Banerjee for developing new friendships specially when it is likely to be so satisfactory financially and when the legal profession is no longer as lucrative as it used to be once upon a time. \ \ /

THE SUDRA HABIT

BY RABINDRANATH TAGORE

EVEN where no artificial barriers are set up in the way of the individual choosing the means of his livelihood fate in most cases does not leave him free. The man who is entitled to dream of becoming Prime Minister may, as a matter of fact, be forced to sweep the streets for a living. In such case he cannot but be in a state of inward rebellion.

The mischief is, that while the State can not do without the services of the sweeper all honour is accorded to the Minister—honour which clings to him even when he holds only the office but has no duty to perform. If, on the one hand fate had been good enough to join hands with individual ambition in regard to its freedom and all sweepers had become ministers not only would the work of sweeping have come to a standstill, but the business of statesmanship would not have flourished either. On the other hand, the work of the sweeper being indispensable, his sense of degradation due to a compulsory acceptance of his fate has to remain.

India of old had solved the problem thus arising by making occupation hereditary. In compulsion by the State lies the insult of servitude that leads to brooding rebelliousness. Here the compulsion was of *dharma*—to follow the occupation of one's caste was enjoined as a religious duty.

Dharma asks of man renunciation—a renunciation however which is not a deprivation but is glorious. The Brahmin was required to give up all desire for wealth and luxury but he was compensated by the award of ample honour. Had that not been so he would not have been able to perform

his function in the social system. The Sudra was likewise compelled to renounce a great deal, but on him no honour was bestowed. Nevertheless reward or no reward he had his compensation of self-satisfaction inasmuch as his ignominious state was accepted for the sake of *dharma*.

To look upon one's livelihood as *dharma* is only possible where the good of society is recognised to be superior to the good of the individual. If the Brahmin can uphold his ideal in its purity in spite of his acceptance of external poverty, then though such profession of his may be the means of his livelihood it also transcends it, because he thus serves society. Even in the case of the cultivator, since the mass production of food is essential for a social life the acceptance of such occupation as his *dharma* cannot be called false unsustained though he be by any hopes of thereby being elevated to status as the Brahmin is. The principle that occupations demanding the exercise of man's higher attributes must naturally win the greater respect was accepted by all concerned, open eyed.

In countries where the earning of livelihood has nothing to do with religion the fact nevertheless remains that society cannot get on without the performance of the work of the lower orders, and therefore the greater portion of the people have still to go on doing such work. There the social structure remains intact only because owing to stress of circumstance or lack of other opportunity, there happens no dearth of such workers. When the instability of this equilibrium is now and then brought home to the idlers—the parasites,

or the intelligentsia by some protest of the labouring classes, an upheaval takes place. Whereupon efforts are made, here by concession there by increased rigour, to maintain the *status quo*.

We may, therefore claim that, in our country by making the distribution of duty and status a matter of *dharma*, the very root of such tendency to discontent and disruption had been cut away. But the question has to be carefully considered how far by this means our national efficiency has or has not been achieved.

Certain types of work are not a mere matter of external habit, but depend for their proper performance on intelligent initiative. It does not make for efficiency to relegate these to some hereditary caste for they require individual capacity. By confining them to a particular caste the outward paraphernalia may be retained but the inner living quality of the work is inevitably lost.

The mental and moral qualities of Brahminhood demand personal power and effort,—it is only the external observances that belong to tradition. The practice of these latter, generation after generation, may conduce to a rigid perfection of form as well as an overweening sense of importance but such killing of the spirit cannot but lead to a defeat of the original object. The *upanayana* (ceremony of initiation) for instance was at one time a reality for the Aryans—the education training and attitude of mind it implied were all suited to the attainment of the ideals of the time. Now that these ideals have died out, the sacred thread investiture has been reduced to a farce. The *kshatriya* is in the same plight—in fact he is nowhere to be found. The caste which goes by that name keeps up only some of the old rituals in connection with births marriages and deaths.

The words of our *shastra* still ring in our ears—*Better death in one's own dharma for the dharma of another is even more to be dreaded*. But this has come to mean that each caste must at all costs follow its traditional rules, which again in practical effect, is reduced to this, that the fixed external observances must be kept up without reference to their significance or utility, whatever may be the individual loss due to such curtailment of freedom. That is why it becomes possible for the woman who indulges in ceremonial baths on any and every occasion, to nurse a feeling of contempt for her betters judged by this standard of observance, though

it is *she* who has thereby lost the ideal of a higher inward striving for purity. And for the same reason is the display of vaingloriousness by those who regulate their conduct according to the dictates of their orthodox leaders, so unmeaning, so intolerable.

To go on generation after generation, making pots, or pressing oil, or rendering manual service to higher castes is not a difficult matter,—rather, the greater the consequent deterioration of the mental faculties, the easier it becomes. But to make improvements, even in the products of manual labour, the application of mind is necessary. When that is destroyed by hereditary pursuit of the caste avocation, man is reduced to a machine, and can but keep on repeating himself.

Be that as it may, the *dharma* of the Sudra is the only one that is as a matter of fact extant to day in this land of India,—a state of things complacently accepted by the orthodox believers in the perpetuation of the *dharma* of caste. And so we often hear Anglo-Indian ladies, who have long eaten of and been eaten by India's salt, complaining when they return home that now there are such servants to be had as in the land of their exile. Where else indeed, in all the world can be found the like of those whose very *dharma* has reduced them to hereditary slaves? Neither hurt nor insult can make them shrink from clinging fast to this *dharma* of theirs. Never have they known what it is to demand or receive respect, though the ages have they deemed themselves fulfilled by sheer persistence in the duty of their Sudra estate in all its purity. And if, to day, the modern spirit imported from abroad occasionally causes them to forget themselves, the orthodox leaders are there to administer correction for their uppishness.

As I was saying the Sudra obsessed with the observance of his own *dharma* forms the vast majority in India which has thus become the land of the *Sudra dharma*. Under the oppressive burden of this Sudra habit groans the Hindu bowed in abjection. Any achievement of welfare demanding intellect, knowledge or character, that we may attempt, must struggle through this deadweight, any gain that we may still make must be entrusted for its safe keeping to this ubiquitous blindness. This is what we are now called upon to ponder over.

Of the many pictures of degradation that we come across in this Sudra ridden India of

ours, I have lastly to speak of one of the most deplorable

On my first journey to Japan, when our steamer touched Hongkong my head was lowered in shame, for I caught sight of a Punjabi policeman on the landing place, taking hold of a Chinese by his queue, on some trivial pretext, and licking him. In India I have often witnessed the same kind of treatment accorded to its people by their liveried brethren in government service, it was my lot to see a repetition of it here on this distant shore, showing how true the Sudra remains to his *dharma* both at home and abroad, how proudly, nay joyfully, nestretches the doctrine of loyalty to his salt beyond all conceivable limits. These were the people who had helped England to wrest Hongkong from China and many a scar of their dealing disfigures the fair breast of our neighbour—the China who once treasured within her heart the footprints of the Buddha the China of I Tsang and Huen Tsang.

War clouds lower to day over the sky of humanity. The cry resounds in the West that Asia doth prepare weapons in her armories of which the target is to be the heart of Europe and nests are being built on the shores of the Pacific for the ravaging vulture ships of England. True Japan of the furthest East is already awake. China in her turn is being roused at the sound of robbers breaking through her walls. It may be that this gigantic nation also some day, will be able to shake off the weakness of repeated blood letting the fumes of opium and become self conscious. And of course those who have been engaged in rifling her pockets will be bound to look on this as a menace to Europe.

But what will then be the function of Sudra India? India will once again be the bearer of chains forged in the factories of Europe for fettering the limbs of her friend of old. She will slay and be slain, with no question on her lips of why or wherefore for that is forbidden by her *dharma*. She will say *Better to die in one's dharma—to deal death in one's dharma!* She neither receives nor expects respect in any part of

the British empire. Everywhere is she the bearer of menial burdens in a service that has neither meaning nor justification. Those whom she rushes to attack at the behest of her British master are not her enemies. And as soon as her fighting is done, she is hustled back into her servants' quarters.

So as I was saying in this work of the Sudra there is neither self interest, nor any higher interest, much less any glory—all that there is in it is the shibboleth *Better to die in one's own dharma*. Opportunity for such death he does not lack but what is even more fatal for his manhood is the belief which he accepts so easily, that it can be his duty, at the call of others' self interest to be the instrument of others' undoing. If at any time by decree of Providence Britannia should lose India her wail will be *I miss my best servant*.

There is a report in *The Nation* (of America) on the recent strike in Shanghai by Paul Blanshard from it I reproduce the deposition of a witness who is described by the writer as A Chinese graduate of Glasgow. His English is faultless. His labour library is the best I have seen in the East. His pictures are hung in international exhibitions.

I am a pacifist but I shall tell you a story that will show you how I feel about this strike. It will show you how hard it is to be a pacifist in China to-day.

There is a park here in Shanghai which is paid for chiefly by Chinese taxpayers but no Chinese person is allowed to enter it. One day I was walking by the park when I saw a Sikh policeman chase away a group of ricksha-men from the gate curve them, and deliberately tip over one of the rickshas. He had lost his temper because one of the men had come too close to the forbidden territory. He took the license of the ricksha man away from him while the poor fellow stood in the road with the tears streaming down his face.

I walked over to the Sikh policeman and said: If I were hired by the British to police India for them I would never treat your countrymen as you are treating these ricksha men.

He cooled down very quickly and was about to give the license back to the ricksha man when two Englishmen came up.

They said to me: What are you doing here interfering with the policeman? Don't argue with us. You have no business here. You're nothing but a damned Chinaman. Get out of here.

They said that to me in China.

(Authorised translation for the *Modern Review* of an article published in the *Prabasi* of October, 1924 Kartik, 1332 B S, about two years ago)

PRIMARY EDUCATION IN INDIA

By Prof S C GHOSHAL, BA BSC, LLB

THE Indian Census Report of 1921 affords interesting material for study to students of education. It would appear from that report that while the percentage of literacy in British India excluding Burma is 65 the proportion of the people in the Central Provinces who can claim to be literate form only 43 percent of the total population of the province. This is indeed a deplorable state of things. This means that educationally we are one of the most backward provinces in India, there being six provinces who are ahead of us in regard to spread of education. The seriousness of the situation becomes more evident if we remember that British India cannot hold her head high as regards literacy if her educational progress be compared with that in other countries. Not to speak of countries in the West or America the place of India is very low indeed even when compared with some of the advanced Indian States, as will appear from the following table¹

Province or State.	Percentage of literacy
1 The Central Provinces	43
2 British India, excluding Burma	65
3 Baroda	144
4 Cochin	216
5 Travancore	286
6 Burma	311

Figures for Japan are not available but the following gives an approximate idea of educational expansion in Japan. Very few Japanese are found unable either to read newspapers or to write simple letters². When it is remembered that the literacy test in India does not include the capacity to read newspapers³ and that even with this lower test only about 4 to 7 persons out of every hundred can be called literate, one can form an idea of the depth of ignorance prevailing in the country.

After what has been said above the great urgency of the need for immediate and rapid expansion of primary education in India in general and in the Central Provinces in particular does not need to be advocated. Under the Reforms Act of 1919, certain powers and privileges have been transferred

to the people and their representatives. It is beyond the scope of this discussion to ascertain if these are of a substantial nature or not. But it would appear that important rights can be exercised in the field of the transferred departments by the Ministers acting in consultation with the majority parties in the provincial legislatures. Within the limits of the budget allotment, large sums of money can be spent on appropriate heads, more money can be raised by fresh taxation, new policies may be initiated, administrative machinery can be controlled, overhauled, on the requisition of the majority in the Legislative Council and with the final approval of the head of the government. Whether the powers and opportunities of the Council are large or small seems to be a debatable matter on which unfortunately, political opinion, at the moment of writing, is sharply divided. But the exercise of these powers under the Reforms Act is dependent on the selection of the right type of men for the Councils.

Now it has got to be remembered that the electorate which elects these representatives is an extensive body, including within itself not merely the educated or the landed or the moneyed section of the population, who can be assumed to have some fair sense of responsibility but it reaches up to the lowest strata of social life—it includes those who are wholly illiterate and devoid of any culture and incapable of forming any idea of the great responsibility of their votes. It is true that in the history of the civic evolution of all countries the widening of the political franchise has been always attended with grave risks, but the fact must be taken to heart seriously by our leaders that the political sense of the electorate must be developed if any real progress is to be made. The ultimate control of the Councils is in the hands of the masses and the type of the Councillors their achievements are dependent on the right exercise of discretion by the people in electing their representatives. Mere electioneering lectures cannot educate the people. The task is harder than that. The question of wide spread primary education

must be taken up immediately, seriously and practically.

It is said that real India lives in her villages. The village population has, but one profession—agriculture and this of a primitive kind. Adoption of modern methods of agriculture is out of the question for the Indian peasant on account of his extreme poverty. Agriculture has a great contribution to make to the wealth of India and for this, scientific agriculture is urgently wanted. There are two possible solutions of the peasant agricultural situation. Large scale agriculture by western methods may be taken up by capitalists, this would deprive the peasant of his holding and with it eventually of his freedom and reduce the whole agricultural population of the countryside to the position of wage-earners. This is not at all a pleasant prospect to contemplate. Systematic agriculture can, however be pursued by the existing village peasantry on their own account on a co-operative basis. The co-operative system alone can save the cultivator from the clutches of the moneylender and enable him as an active part of an economic organism to adopt gradually intensive agriculture by scientific methods. Experience has shown that the co-operative system can be successfully worked only by an educated village population. The economic salvation of the country is thus dependent on the education of the masses.

Mass education is not merely necessary for the political or the economic amelioration of the country. It is urgently needed for providing a moral tone to the life of the people. Anybody who has come into contact with village life in India, will have been struck by the absence of any positive spiritual force in the lives of the masses. The old ideals of honesty, truthfulness, service and sacrifice are not kept alive and illustrated in the lives of living saints and holy men. Elements of morality and religious ideas which used to be invariably associated with the *lots* or the *mulis* of the old self-contained village units do not form a part of the curriculum of today. Institutions like the *kuthas*, the *kirtanas*, the *manhood sharcas* which were great shaping forces of character among the people and at the same time the means of innocent enjoyment, have become rare comparatively. While the ancient traditional vehicles of education have been destroyed by the forces of time, the chief method of education in the modern world

through the spread of literacy and the provision of facilities for reading has not yet much advanced in India. It is therefore no wonder that although we inherit an ancient civilisation and have a hoary tradition replete with great educative potentiality, the life of our people is marked by a sad spiritual poverty. Whilst our ancestors proclaimed to the world the identity of the individual soul with the universal soul—*Tat Savamasi* 'thou art He' *Soham* 'I am He' *Tayam amritasya putra* 'we are the children of immortality' the average educated Indian of today is said to be more conspicuous for his lack of self-confidence than his self-assertiveness and the villager too often will surprise one by his total lack of self respect. While the old *Ushas* were keenly conscious of their heritage of joy in this life—*anandam*, to them was one of the chief characteristics of the soul—it is sad to find the dreariness of the life lived by the vast majority in our country. The continued starvation of the soul from childhood onward, the total lack of culture and the consequent absence of opportunities for higher enjoyment seem to deprive the soul of the capacity for enjoyment and to reduce it to the condition of an automaton, incapable of sustained emotional experience, irresponsive to the environment and bereft of that creativeness which distinguishes man from a lower state of existence. Life has sunk deep into the grooves of a mechanical routine which was purposive in the remote past, but altogether out of tune with the present environment. A return to the past is impossible. Nothing but an active adoption of a scheme of universal education, suited to the genius of the country, can restore the spiritual life of the people and awaken them from their age-long stupor.

In most countries in the world, the widening of the political franchise has invariably led to a rapid speeding up of primary education. Examination of the state of primary education in India does not lead to encouraging results in this respect. The primary school enrolment in Japan is 14.5 per cent of the whole population. Of every hundred children of school-going age in Japan, 3103 are attending school. In England and Wales the enrolment of children aged between 5 and 13 years in elementary and middle schools is 15 per cent of the whole population. Educational enrolment in the primary schools of India in

the year 1924 is said to be less than 3 per cent of the whole population.⁶ This means that in the matter of mass education, through schools,—let alone various other agencies which are at work in the advanced countries for the enlightenment of the people—India is at least five times as backward numerically speaking, as Japan or England.

It may be conceded that literacy in some parts of India was probably more advanced before the British rule. "Even in the first decade of the nineteenth century, after a hundred years or more of rapid decadence and decline, darkest India showed a fairly illumined chart of literacy, witness the census of 1815, witness also Munro's minute on indigenous education and Elphinstone's on the Dakshini grant of the Peshwas. Even in that *fin de siècle*, not less than 30 per cent of the boys were at school.⁷ Assuming 26 per cent of the population to be of school-going age,⁸ i.e., from 5 to 15 years of age, this would show 7.8 per cent of school enrolment compared to less than 3 per cent of the present times. But this subsequent decline is at least partly due to the fact that the country has been passing, till towards the end of the nineteenth century, through a transition which affected all the phases of national life. The method of education, the curriculum, the agency for imparting elementary instruction and its organisation have all undergone a radical change, a new scale of values of education and life has displaced the old ideas, the very outlook on life, social, economic, political and religious, has been transfigured. Adaptation to a new order of things involves dissipation of means and national energy and to a certain extent, the decline and delay in the process of mass education during the British period in certain parts of India, may be attributed to this cause. It has also to be remembered that a large number of those who attend primary schools in India lapse into illiteracy owing to unfavourable environment.

Whatever may have been the cause of the stagnation of elementary education in the past, the last six years offered an enlarged field and new opportunities for work in this direction. By the Reforms Act of 1919, Education is a transferred subject and the Ministers with the Councils are at liberty to initiate such measures as they consider urgent in the interests of mass education. It is open to them to raise money for this purpose by taxation if they consider it

necessary. In this connection, the following remarks by Prof. Rushbrook Williams will be read with pleasure by all.

"The proceedings of the local legislatures clearly reveal the keen interest aroused by educational problems among the Indian intelligentsia. Almost every province is displaying great activity, and it is a testimony to the clear vision of those who now direct instructional policy that in most places attention is being directed to a concerted attack upon illiteracy."

But with all this it must be confessed that the progress of primary education has not been rapid during the years education has been under popular control. The following comparative figures bearing on this problem for the years 1923-24 for the Central Provinces and two of the most advanced provinces are interesting.¹⁰—

Province	Enrolment in educational institutions of all kinds per 100 of the population of age between 5-15 years	
	1923	1924
Bombay	19.31	19.92
Madras	16.89	19.25
Central Provinces ..	8.92	9.15

It will appear from the above that the spread of literacy, even in the advanced provinces of India, has been slow during the last six years. At the rate of expansion attained by Madras as indicated above (this is the most rapid rate of the three), it will take India forty years to fall in a line with modern countries as regards literacy. In the two provinces in India where the popular representatives were in an absolute majority in the councils, viz., in Bengal and in C. P., there has been an actual set back in the progress of education during the last six years. In Bengal, the enrolment in the high schools fell from 236,479 (males) in 1919-20, to 211,208 (males) in 1923-24, while in C. P., the figures are as follows—

	1919-20 (males)	1923-24
Number in primary schools	240,641	231,577
Number in high schools	3896	3854

This is regrettable, especially in the Central Provinces, where elementary education compares unfavourably with most of the provinces. It is significant, however, to note that while the progress of primary education has not been what might be desired during the British period, the records of secondary and university education tell a different tale. During the year 1924-25, enrolment in secondary schools in India was not less than 6 per cent of the whole population. "This", says Prof. Rushbrook Williams,

"is a proportion far greater than the corresponding figures for England and Wales." Again the percentage of matriculates undergoing university education is much higher in India than in England. The overcrowding in the universities in India tends to lower the standard of university education.

The keen appreciation of secondary and university education among the middle classes in India has been due to the utilitarian value of such education. Till now such education has bought wealth and social position through the practice of the learned professions and through government service. The time is however fast approaching. It has already arrived in some of the provinces—when higher education cannot fulfil the expectations of material advancement to any large extent. It is therefore essential that the popular view of the monetary value of higher education should be replaced by a conviction of its cultural advantages as affording a sound general training for life. It is also highly desirable that the field for vocational education should be widened both to provide for counter attraction against the rush for university education and the learned professions as well as to prevent a widespread discontent with education by the creation of fresh fields of employment.

The popularity of secondary and university education in India would seem to show that educational activities have hitherto benefited only one section of the population—the middle classes. While the middle classes in the country have been modernised in some respects by contact with western thoughts and western institutions, the masses of our people have remained in abysmal ignorance. The reformed Councils have thus a clear and a solemn duty towards the illiterate section of the population. The vast majority of the Coun-

cillors are drawn from the middle classes. As representatives of a section of the people who have so far thoroughly benefited by the system of education in vogue our Councillors owe it to themselves to see that the benefits of elementary education are brought to the homes of the silent and illiterate poor who toil patiently and honestly to contribute perhaps the largest quota of the public revenues. To quicken the expansion of primary education by the courageous adoption of a system of compulsion to resuscitate village life by the liberal infusion of a judicious blending of traditional ideals and the new light to broad base the political activities of Indian national life on the secure foundation of the awakened consciousness of a literate electorate—this is the sacred task of the custodians of popular liberties to our Councils. If they rise equal to the ood of the times the future of India is bright and assured.

INDIAN ART IN PRAGUE

By SIGRID L. KUBA

THAT is not directly in Prague. As if it would not dare, it appeared modestly in the "Russian Circle," being thus a guest of our guests.

On the walls were fourteen medium-sized gouch paintings, and loosely strewn on tables were many reproductions of works of the same craftsmen. There were drawings

so varied that one could hardly give limits to the cunningly combined colours and shades now sharp, almost *ecelant*, now dumb. They represent always a fancy, dream or meditation, or a fairy tale. "The Song of the Rain," "The Vanishing Day," "Krisboe and Arjuna."

Mrs Adur gladly gave any information and the interested listeners added their thoughts and comments. Our Sculptor Bilek sees in these paintings not only a synthesis of an ancient Asiatic culture but feels also a sort of relationship with the slow orthodox East. He even connects it through Russia with the Balkans and he deplors that the cult of Byrill and Methodius came so soon to an end, for otherwise this grand line might have reached even as far as Bohemia. The Byzantologist Professor Okuniev remarks that the faces in the pictures show more the Iran than the Moogolian type, although the latter type traditionally is more valued.

We had that on the old works the names of the masters do not appear, as such a signature in ancient Hindu thought was regarded as misplaced vanity. Thus this art having grown ancient, reaches a kind of monumentality, irrespective of size as every anonymous art does, becoming in that way a collective art, like national songs, Gothic architecture, etc. The pictures of the living masters already show names. We meet here one

of the foremost Nandalal Bose. On one of the compositions in a quiet harmony we notice the name of Tagore and we learn that the artist is a relative of the renowned Indian poet.

The flames and decorative effect connect the pictures with Japan and China and the watch-word "Away from realism" leads them sometimes even to an inverse perspective. Here and there one can recognize Western influence (compare "The Vanishing Day" and Böcklin's "The Silence in the Woods").

The greatest interest and enthusiasm were roused by the rich and splendid compositions of the frescoes from the Ajanta caves, of which there were several reproductions. Very interesting also were the reproductions of 16th and 17th century miniature paintings with all their sharpness and clarity still so tender. It looks as though they had inspired Oscar Wilde's illustrator, Beardsley. We noticed two types, Mughal and Rajput.

It gave one the impression of listening to the tales of a Thousand and One Nights, when suddenly from the adjoining room resound the tunes of ancient Russian and Persian Songs. We then have too in Russian fashion and a grand daughter of Tolstoi, showing a remarkable resemblance to her great grand-father, sings with her inherited strength of temperament, the passionate airs of Moscovian gypsies.

ROSARY

By GEORGINA DONGLAS JOHNSON

I strung my beads of memories today
On bended knee I picked them one by one
From old forgotten grottoes where they lay,
Plunged lightly in the years long past and done.

I strung them on a shining, silver strand,
Upon my lip the nun-like mystery
Of wordless prayer, which none may understand
Who do not wear a phantom rosary

WEMBLEY, AS STUDIED BY A GERMAN SCHOLAR

By PROFESSOR DR. HERMANN M. FLASDIECK.

University of Goettingen

IF it were possible to summarise modern life in one word, that word would be "Speed". Reviewing Wembley, to many of my readers, may seem to be behind the times. The British Empire Exhibition was opened on St. George's Day, 1924, with splendid ceremonial. A long time has passed since the curtain has fallen upon the great festival (November 1, 1924). The Wembley of 1924 is come a memory, it is a subject for historical writers.

The newspaper press of Great Britain, in their panegyrics, define Wembley as "a land mark in the history of the Empire", "the beginning of a new epoch in the history of the Empire", etc. We must wait and see what will come of it. But there cannot be any doubt that Wembley places before the public a living picture of the history of the Empire and of its present structure, that it unfolds an adequate picture of its activities and potentialities, that it gives an intimate acquaintance and a most impressive revelation of the Empire, in short, that it is a complete microcosm of the Empire. Moreover, it cannot but prove an eye-opener to the peoples of the outside world, revealing to foreign visitors the reality of the Empire. Wembley is an event of paramount importance in international politics as well as in international economics, and that is the meaning of Wembley far beyond 1924-5.

In spite of its failure from an exclusively business point of view—expenses of establishment and management not being covered—Wembley has been reviewed with patriotic enthusiasm. Articles have been published in memory of Wembley which are typical of the English frame of mind. It has been ascertained that within 166 days—the attendance averaging about 100,000 a day—17,500,000 people came to see the Exhibition, and these numbers have been commented upon as exceeding the population of Australia, Canada, New Zealand and the

while Africa by more than 2,000,000. But the total attendance is only a "record" as far as exhibitions in England are concerned. It has been passed over in bashful silence that in round numbers 5,000,000 of them were school boys and school-girls under the care of their teachers, and, what is more, that it was estimated that between 25,000,000 and 30,000,000 people would visit it. It is just the same with other hard facts of statistics; it is passed over in silence that Wembley falls short of the numbers recorded for Chicago (1893: 21,500,000) and Paris (1889: 32,500,000, 1900: 39,000,000) or that Wembley does not mean a remarkable advance when compared with the first exhibition of 1851 (6,000,000). Instead of that, it is emphasised that the visitors came from all over the world and from the most distant parts, that they were members of some 40 nations, all nations of Europe and America being represented as well as nearly all nations of the Far East, and it is not left unsaid that 1 kings and 5 queens were among them.

"He thinks it's a dreadful place", interjected a member of his family, when, after paying his very first visit to the British Empire Exhibition, G. B. Shaw was surrounded by interviewer*. It is indeed, and the figures of the heavy costs involved, fantastic as they are to Central Europe—it is estimated that £12,000,000 has been expended upon it—give but a small idea of the magnitude of the effort crystallised in Wembley. It is a rather exacting task to do justice to the vast array of exhibits in palaces and pavilions, thronged with crowds. The exhibition is overdone, makes the boring impression of being much too higgledy-piggledy. One feels as if strolling through a great warehouse rather than a show-room. And too much of a good thing is good for nothing. The museums up and down the country have been plundered. e.g. the 818

* Compare *The Evening Standard*, Saturday, October 1, 1924, p. 7.

different specimens of wool in the Australia pavilion are lost by the Victoria and Albert Museum, and the carved Maori house at the side of the classic white New Zealand building was stored in the crypt of the same museum. Side by side at the stand of perfumes there is an elderly lady preaching theosophy and puffing literature. By the side of the Nobel explosives, manufacturing of cream tarts is demonstrated, and immediately afterwards you have to hear bath rooms!

Goods are dinned into your ears, so to speak, and you must be glad that there are no touts." In the palace of Engineering, 406 exhibiting firms, all of them aiming at placing before the public as much as possible, must be content with 278 stalls you may imagine with what results! Engines are treading on each other's heels, so to speak. Wherever you look, you get the same impression. The whole grounds are bespangled with advertising kiosks and bungalows of Goodwill Societies, etc.

Nevertheless there is one spot which affords a comprehensive general survey: the Empire stadium, 'the largest arena in the world,' which can house about 125,000 spectators. Situated on the southern eminence of the grounds, it is a most massive and impressive, though somewhat gloomy and prosy building, towering above all others. The stadium dominates the landscape. It was here that the 'Pageant of Empire' was presented, occupying three successive evenings from beginning to end a dramatic representation by 12,000 performers, bringing home to man and child a lesson in Imperial history and the meaning of the Empire, transforming into living reality episodes that up till then had been mere history book affairs, suggesting the thrilling deeds of modern heroism along with those of the older time, the whole winding up with an apotheosis of Empire. In a word, the Empire stadium is a spot where to take a bird's eye view of the exhibition as well as to catch something of its innermost meaning.

This is not the place where to describe exhibits in detail, nor is it worth while to produce an exhaustive description. There are two sets of pavilions of entirely different character. The larger half of the whole area is crammed—thanks to the lavish scale of the

display—with exhibits of *English* industry, of *English* agriculture, of *English* scholarship, of *English* arts, of *English* Government. But it may be mentioned by the way that they have the effrontery to exhibit stolen goods among the interesting models of famous passenger ships shown by the White Star Line (in the Palace of Engineering) there are those of the "Majestic," the world's largest liner (56,500 tons), formerly the "Bismarck" of the Hamburg America Line, and of the "Homeric" (34,600 tons), formerly the "Colombus" of the North German Lloyd.

The Palace of Engineering, the Palace of Industry and the Amusement Park constitute the bulk of the English half of the Exhibition. The "non-English" part of Wembley is a world by itself, a picturesque compilation of buildings of all sizes, a bewildering variety of styles. The peoples of the British nations all over the world, representatives of many races, can be met with here. From the four corners of the earth, the Empire has sent its treasure, its wonders, and its wealth, the endless variations of which can only be seen in a series of visits, and no "capitalist" would be rich enough to buy all the things offered for sale. Even the very attempt to describe them would be an encyclopaedia of the 'Imperium Britannicum.'

Meanwhile let us try to form an adequate idea of the whole! From a purely aesthetic point of view, it is true, you may say, it is a want of taste to pack within a comparatively small space—the whole of the area covering 216 acres—buildings of various styles, you may say, it is bad taste to put the white silhouette of India Pavilion against the background of London mist and drizzling rain. But you must bear in mind that these are insufficiencies as yet beyond the sphere of human strength. And you never will get rid of the impression that all Wembley is but a theatre, an image and a simile of far-off zones the intrinsic being of which cannot be transferred to the Thames. Nay, too many of the sacred things of foreign parts have been vulgarised and profaned at the all British fair,—though a very distinguished sort of fair. It must be abundantly clear to anybody who has seen the exhibition that there is some distinct purpose in it: the native and indigenous character of the far-off parts of the Empire is not allowed to come to daylight.

Let me give as an instance what must

* Cf. a number of articles devoted to the Pageant of Empire in the third special section of the *Times* July 29.

impress itself on all who ever have seen it the Indian pavilion with its court yards, its fretted tracery, and aspiring minarets reaching skyward. The architecture breathes of the East, it is designed on the basis of the Moghul architecture of Northern India in its 17th century prime, Dravidian and Saracenic features being harmonised into one consistent whole. But upon entering the courts, the visitor feels disappointed. There are elephant tusks, there is a section devoted to the wild life of the jungle, showed by the United Provinces of Agra and Oudh, it is true. But there is a strange contrast between the placid dignity of the outer court and the picture presented within. There is plenty of convincing and ocular proof of India's industrial life and her commercial resources, there is an effective representation of modern factories—but whoever went there in order to experience the soul of India, must turn his back on Wembley and seek elsewhere for his knowledge, nay, he is positively thankful that the mysteries of India could not be freighted across the ocean. It is in vain that he looks for documents of that spirituality which in remote antiquity thousands of years ago, procreated a full bloom culture and which perhaps, is just now mobilising for a new challenge. Wherever he bends his steps to Bengal or to Madras, to the Punjab or to the North West Frontier he is always shown the same thing—nothing but what is *English* in and about them. English plants English Government buildings English barracks and English naval bases—all of them manifestations of a culture which, as yet, has not produced evidence to support its pretence of posing in the role of superiority to India's culture of old.

The same statement holds good for Burma as well. Outside, it is the most picturesque of the many pavilions, "wrapped in the enchanted atmosphere of the East" but inside there is nothing but evidence of Burma's progress towards "modernisation" of her industry and her commerce.

Whatever may be their occupation English people return home from India after a few years, it is only a more or less flying visit they pay to her. The same holds good with regard to India's Pavilion at Wembley. India's true character is overshadowed by England. The English symphony rings out in buzzing and melodies, and only to and fro fine and delicate sounds of the Far East—the temple bells of Burma—are intermingled

Whoever has come to Wembley hoping to catch the soul of India or of Ceylon, or of Hongkong, has returned in utmost disappointment. He was shown nothing but England in their dependencies and colonies, and this picture, indeed, has been presented to him in hundreds of wearisome rehearsals, so that it *must* impress itself on him, so that he cannot shut his eyes nor pay no heed to the mighty impression. The British Empire could not be built up save by pioneers never losing themselves in foreign manners and customs never drawing in the sweet poisons of the tropics, never assimilating the un-earthly ideas of Buddha, but adhering staunchly to their inborn principles, being always the same, remaining Englishmen and thus by their steadfast and unswerving will, calling into existence another Britain out of and in the far off parts. This characteristic feature of Empire building is adequately demonstrated in Wembley. The visitor is shown England in her colonies and dependencies and that appears to be all the average Englishman knows of them therewith he pretends to have a real knowledge of the most secret folds of their hearts. In fact, he knows nothing of the inmost soul of those venerable cultures which are to be superficially inoculated with British made sham civilisation.

There are pavilions it is true, where England is generous and indulgent wherever she comes across primitive cultures which cannot mean any danger to her at all. The natives of New Zealand and the Negroes of the Gold Coast, they are allowed to exhibit their thatched huts their mysterious drums their wooden idols their canoes and their side-arms even to exhibit themselves and to display a picture of their life true to the nail—so much the more the English culture stands out in bold relief against theirs.

Wandering further afield in the Exhibition you run against a pavilion where the dominions and colonies do their utmost in order to produce an exhibition of their respective works of art. The Palace of Arts one fifth (!) of the total space being given over to the artists the painters and the sculptors, of India, Canada, Australia, New Zealand, South Africa and Burma. But if you expected to realise that in new countries art is an expression of new life, you have to correct erroneous ideas. All is based upon certain models and follows certain conventions. There is an alarming want of originality and individuality—so much

the more of conventionalism, and, *eg*, what is exhibited by Indian and Burmese painters is nothing but "trash" in comparison with the wonderful collections of the British Museum and the Victoria and Albert Museum.

And how is it with England herself? The galleries are arranged with remarkable skill, but if the visitor to London wants to study British art, he must turn his back on Wembley and seek elsewhere for his knowledge; he is disappointed by its triviality and inanity. No important and commanding individualities stand out, all has been petrified by tradition, nothing but lull and stand-still and stagnation. Catalogues say a good deal of the 'Ultramodernists,' of the 'Impressionists,' and the 'Post impressionists,' and the 'Cubists,' but judging from the samples Expressionism seems to have past by without a lasting impression, nor do Neo-classicism and Verism make themselves felt but very superficially. It is not the present day that has to tell something to the visitor, but it is the past as represented by the Retrospective Loan Collection and the Six Ages of English Furniture, a series of six apartments starting from the period of Hogarth.

The Palace of Arts in itself is by no means a favourite place for English visitors, and yet, there is one side-wing that houses the holy shrine of all English pilgrims to Wembley who are enthusiasts of arts. Queens are waiting throughout the day for admission to the special gallery given up to the Queen's Doll's House, "the most remarkable achievement of British Art and Craftsmanship" (Official Guide, p. 59), a miniature palace about $4\frac{1}{2}$ tons of weight, designed in the style of the last generation. Furniture, decoration, and architecture are designed on the scale of 1 inch to the foot, *o.g.* a four-inch gramophone, the records being rather smaller than a half penny. Nothing has been forgotten in this Royal residence, and round the huge plate-glass case flows a never ending stream of visitors. Nearly two thousand artists of every kind are said to have assisted Sir Edwin Lutyens in his work. In the Palace of Arts, however, it is out of place. Nothing is more typical and expressive of the *naivete* of the true-born Englishman, as regards his artistic taste. It is just the same with the other most popular exhibit, attracting the lion's share of attention in Wembley, the representation in butter of the Prince of Wales and his ranch in Canada. But you

cannot say you have been in Wembley unless you saw it.

In bad taste though they are, both of these exhibits give expression to the deep significance of the British Empire Exhibition in a form which is sure to appeal to the simple man in the street in the most direct way. They are not held by the bond of a written constitution, their only tie is their common loyalty to their King and the Royal Family. And thus it is easily accounted for why all visitors go to see the Queen's Doll's House and the Prince of Wales made of butter.

In fact it is not the Palace of Arts which demonstrates the inmost meaning of the Empire. The moral ties which link together the wide spread units of the Empire are elsewhere revealed to the foreigner, in a pavilion which is far off the Stadium but is far from being the least important. The British Government Building, a building of massive dignity, 6 concrete-cast lions in front, including the apartments set aside for the King and Queen and members of the Royal family. Here the Government exhibits whatever it has to show. Though it seems to have serious reason to complain of the attendance, it is most instructive and highly important. On the lower level of the 'Court of Honour' there is sunk a well containing a large scale contour map of the world, on the familiar Mercator projection, set in miniature liquid oceans, where tiny model ships are going up and down the Empire ways. Branching off from the court are the exhibition galleries where are modelled a series of British battles from Hastings to the period of the Great War. In the lower part of the Pavilion there is also the 'Admiralty Theatre' where stories of military campaigns are staged, the Raid on Zeebrugge proving an exceedingly popular spectacle, far more than the bombing of London by night shown by the Air Ministry.

In short, it is in the British Government Pavilion that the foreign visitor can realise and must realise the moral ties of the Empire. Neither the Palace of Arts nor the culture of the subjugated peoples as represented in their respective pavilions, are the main purport of Wembley. England's power is the culture of the British Empire just as Rome's power was the culture of the Roman Empire. "Power" is the leading idea of Wembley as a whole, and considered from this point of view, there is no doubt that it can hardly

fail to strike even the least complacent citizen with a deep patriotism and a moving pride of race, being, as it is, a true reflexion of how England has moulded the globe and how she is preparing to model it henceforth.

And what else are the inner meaning and the original purposes of Wembley?

Unwillingly we cast a backward glance at the first exhibition of 1851 the opening scene of which has been enthusiastically described by Thackeray, and more than once, exhibits of 1851 are put side by side with those of 1924 (e.g. model needle-making and a kitchen range, both of them in the Palace of Industry). 1851 symbolised England having successfully surmounted the dangers of 1815 as implied above all in the Irish and the Chartist problems. 1924 symbolizes England having successfully overcome the most threatening perils which the Empire up to this day has ever faced.

When declaring the Exhibition open the King said:

"I pray that by the blessing of God it may conduce to the unity and prosperity of all my peoples and to the peace and well-being of the world. (Cp. e.g. Wembley Guide—Daily News Ltd., p. 8)

The League of Nations Union, however, so profusely commented upon in the Anglo-Saxon countries, visitors really need trouble to find, it has a very very poor kiosk behind the most impressive British Government building. This contrast is it intentional?

"The peace and well-being at the world—well but as England conceives it. And how these complimentary words are interpreted, is best illustrated by the official souvenir.

"The design of the Gold Casket gives eloquent expression to the Spirit of Empire. The World resting on four British Lions is indicative of the importance the British Empire wields in the affairs of the World" (Official Guide, p. 36)

The task of naming the streets and avenues in the Exhibition grounds picked out with globe lanterns was done by Rudyard Kipling, "the Poet of Empire," and Kipling has specially written "the Song of the Bridge" which holds together the various events in the production of the Pageant of Empire.

From a purely political point of view, the purposes of the Exhibition as set out in the official literature were as follows—

"(1) To make the different races of the British Empire better known to each other, and (2)

to demonstrate to the people of Britain the almost limitless possibilities of the Dominions, Colonies, and Dependencies overseas."

First of all the purpose for which Wembley was started was to bring home to the Empire a deeper sense of the kinship of the peoples of the League of British Nations, and therewith to strengthen the sentimental ties of tradition and service that bind together the many and wide-spread units of the whole.

During last summer, larger numbers of visitors from the Dominions and Colonies overseas have been drawn to England than have ever before come to that island in any one year. From the four corners of the earth they have come with the big liners of the various shipping groups, they have come from the uttermost parts of the ocean, from the whole of the English speaking world. Wembley has produced an intimate exchange of ideas of opinions and of points of view which is likely to prove far more worth than the occasional and formal conferences of a few leaders. It has led to the renewing of old ties and the formation of new ones to the development of mutual friendship and knowledge. Representatives from the British countries of the old and the new worlds have come to mutual sympathies and mutual understanding.

But the main purpose as set out in the official publications was to bring home to the heart of the Empire what the Empire is and what it stands for. In fact, Wembley afforded a splendid opportunity of diffusing information concerning territories of which the average English public hitherto had little knowledge. To many millions of people the very names of the various colonies of the British Empire were altogether unknown. When stepping inside the doorway of many a pavilion they stood appalled at the measure of their ignorance. Many millions came by water and land to learn of things surpassing the knowledge of all but a few economic and political students, they all have lighted upon something of which they previously were not aware. Wembley may be supposed to have an educational influence of far reaching character even upon the most casual visitors. Hundreds of special trains in addition to an augmented

* Cp. e.g. *The Times* No. 43770 (September 30) p. XI, no. article by Lord Stevenson, Chairman of the Exhibition Board.

normal service have been run in order to transport millions of people from the English towns and the English country side to the pavilions pouring out the wonders of the far off parts and the wealth of distant lands. Many manufacturing firms brought their work people and office staffs by special excursion that they might obtain from their own experience a clearer view of the assets of the Empire as a whole. And they were taught a great object lesson of the latest achievements of Imperial history. Wembley has at least rubbed into them the actual knowledge that they *do have* a world embracing Empire that they truly have a great heritage. It has brought home to them a sense—however vague—of the responsibilities which citizenship of the British Empire involves. It has brought a fresh realisation of the great work yet to be done and of the problems which are still ahead. And if it has done this work of education that in itself is no small thing.

From an educational point of view Wembley has been an experiment on a large scale. Both old and young can make the grand tour of the Empire they indulge in passing by boats on the Lake from India to New Zealand to take breakfast in Australia to take tea in HongKong and to find a very pleasant haven of rest and dinner in the dining car on the train to the west of the pavilion of South Africa. Wherever you look there is machinery in motion and the wheels are going round.

Wembley has realised the value of the cinema as a recruiting agency. Nearly all the pavilions have their attendant cinema theatres at which for the purpose of propaganda programmes of special films are continually showing illustrating every aspect of life and industry in the Dominions and these free shows have been crowded each day.

Quite apart from the Imperial Scout Jambores which took place in the Stadium from August 1 to August 8 there were always serried ranks of small boys and girls under the care of their teachers. It is estimated that over 5 millions of school children came to see Wembley. For months before the Exhibition opened a Bulletin of Empire Study was issued reaching within a few weeks a circulation of about 150,000 a week which formed the basis of lessons on the Empire. There was a special scheme run by the Ministry of Education which provided

not only for reduced railway fares and admission but for recognition of the visit as an item of education. Special hostels were prepared at Park Royal and Dollis Hill in order that they might thoroughly study all the things which were often dealt with very tersely in their school books.

I content myself with these illustrations of the educational aspect of Wembley.

The success is still to be proved. For the moment it is of course an intangible thing and it remains to be seen whether the seed will bear the destined fruit. It cannot be overlooked that there seemed to be some slackening in allegiance to the Empire and that the imagination of the Empire was a little slow in catching fire for Wembley. But it seems not unreasonable to believe that the ties of sentiment that bind the peoples together have been strengthened again and that the imperial idea, in spite of all party intrigues has been stabilised once more.

It is for the future alone to give answer whether Wembley has created a more active interest of the ordinary citizen in matters of Imperial concern. The Empire needs active service. Wembley was started as a practical and a most instructive emigration agency. One of the main objects of the Pavilions of the Dominions is to demonstrate the advantages of overseas settlement and to further it as much as possible.

Britain—to the Empire! The emigration movement has, of course its bearing on the problem of British unemployment. The labour markets of Great Britain are already crowded and overstocked. Therefore it is argued that now is the time when the Mother Country has to quicken the interest in her rich domains as a home for her surplus population that England unable to find profitable employment for great numbers of her people should make greater efforts efficiently directed and controlled to settle some of the qualified unemployed in the wide empty spaces which are waiting for them at the same time consolidating the structure of the Empire.

Discussions of parties and statesmen have resulted in the Empire Settlement Act, which became law in May 1922. It is entitled

An Act to make better Provision for furthering British Settlement in His Majesty's

* Title of a poem by Alfred Noyes printed for the first time in the second special section (May 24) of the *Times* of London.

Oversea Dominions and provides far reaching schemes for assistance in respect of passages initial allowances, training and otherwise. For the encouragement of emigration the Act provides a sum of £3 000 000 a year for the next 13 years. In actual fact less than half a million pounds has been spent and progress is painfully slow.

All Dominions and Colonies are crying out for settlers. There is an embarrassment of riches—all they lack is population. Their white population needs re-inforcement. There is a present need for a more equitable redistribution of the Empire's white population. The empty spaces overseas must be peopled with British citizens of energetic and enterprising character. All of the Pavilions place before the visitor the opportunities open to emigrants and the hope which underdeveloped countries hold out to settlers from the old country. They try to awaken in them a desire of seeking a new life. Everywhere there are settlement bureaux complete with veritable pyramids of pamphlets setting forth the living conditions. "Living expenses are lower," rents and foods are cheaper, and last not least—the public finding the British rate of income-tax oppressive—light taxation. In short the discussion is running mainly on emigration as an expedient for ameliorating existing adverse conditions, thus appealing to the purse-instincts of the true-born English middle classes of Puritan descent.

The centre of the propaganda is met with in the Oversea Settlement Gallery of the British Government Pavilion including models and designs illustrating the progress and prospects of Empire settlement. Free hand books are available regarding the various dominions and experts are in attendance to give information and advice to enquirers. It is driven home to the visitors that there are to the square mile in the United Kingdom 482 persons in South Africa 32 in Canada 24 in Australia 18 in Southern Rhodesia less than 1.

Pictures show graphically the migration movement during the years from 1884 to 1913. From 1904-13 one third of the persons leaving the United Kingdom settled in the United States of America. In 1923 the total of skilled tradesmen in the metal and engineering trade leaving for the U.S. was nearly 500 in excess of the men who left for other parts of the Empire. Hence forth no emigrant ought to go to foreign

countries and be lost to the Empire. Forsake the foolish idea that British Dominions are foreign countries.

Owing to the climate a good lot of territories tropical or sub-tropical is quite unsuitable for permanent settlement by the inhabitants of Great Britain. Opportunities are almost entirely in the Dominions Canada Newfoundland Australia New Zealand South Africa and Rhodesia.

To judge from my personal experience Australia and New Zealand make especial appeal to the British settler displaying a most extensive propaganda by means of an infinity of leaflets. Though in Australia there were strong opponents to immigration mainly representatives of the Labour Party and trade unions the British and Australian Governments have come to an agreement that British settlers with a minimum capital of £300 may obtain prepared farms in Australia, the necessary further money for stock and equipment being advanced by the State Governments. Western Australia runs a big scheme for organised group or community settlement, being in operation for about 2 years but rather costly in its initial stages. It is hoped to settle 75 000 people within 3 years. Rhodesia sets forth the low rate of her income tax. Married persons whose income is less than £1 000 per annum pay no income-tax. The Dominion of Canada "the granary of the Empire" absorbs now a days the lion's share of British settlers. The Canadian National Railway Company and the Canadian Pacific Railway Company the twin pavilions of which flank the Dominion Pavilion have signed an agreement in accordance with the terms of the Empire Settlement Act for the settlement of families on farms of their own on the routes of their railways. New Brunswick and Ontario make a free grant of 100 to 200 acres of forest land on conditions of residence and cultivation to any settler over 18 years of age. In Canada there is a special Soldier Settlement Act, 1919 providing highly favourable terms for Imperial ex-servicemen. A most important branch of the Oversea Settlement Committee is the Society for the Oversea Settlement of British Women taking care of household workers hospital nurses home-helps etc. even advancing loans in specially approved cases to help with the passage money. At present domestic servants under 17 receive free passages to New Zealand while Canada

assists them by way of a loan up to the whole cost of transportation if necessary, all through the Dominions there is a clamour for efficient domestic help. A number of schemes have been arranged with various Philanthropic Societies, who are dealing with special classes of persons, *eg* the Catholic Federation, the Methodist Brotherhood, the S P C K, the Y M C A. Nor has the Salvation Army been laggard since in October, 1903, the Emigration Department came into existence. The Church Army is making plans for an extension of Church Army Overseas Settlement work in Australia. All of these private agencies aim at giving the necessary "human touch" to the machinery of emigration by arranging for reception and introduction, etc.

An infinity of leaflets and handbooks have been distributed among the visitors making appeal to the one or the other class of would be settlers, *eg*, single men, single women, adult emigrants with their families, widows with families, boys and girls—all of them are subjects of attention.

But the especial appeal is to the farmer who can make a much better start on a given capital in the Dominions than in Great Britain, while mechanics, labourers and factory hands, both skilful and unskilful, are warned against leaving in search of employment they are only occasionally in demand on special requisitions. The Dominions being in the main agricultural countries, openings for artisans or industrial workers of any kind are few. They all oppose strongly an influx which, quite apart from the dwelling shortage might disorganise the congested local labour market. They aim at counteracting the tendency of settlers to drift into the already overcrowded big towns. They are keen to fill the prairie and the bush, the virgin lands. Land which has lain dormant for years and years, is to be put under the plough. Those unexperienced in farm work may undergo a course of training often provided free in order to gain experience and knowledge of local conditions. *eg*, the 18.0 Memorial Settlers Association' (of South Africa) offers a free course to intending settlers with capital thus trying to carry on the work started by Cecil Rhodes.

There is a very great demand for young men able and willing to work upon the land. "Boy wanted" is the title of a leaflet suggestive of adventure and romance. It is realised that young trees are transplanted

more successfully than old. There are special organisations for promoting the emigrations of lads and boys, who can be employed and trained by selected farmers, the boys being under Government supervision, and ultimately are hoped to run their own farms and to become farmers on their own account.

In short, the immediate transplantation of settlers is emphasised as a matter of vital importance, which must take place if the Empire is to continue its achievements. And indeed it is a problem deeply affecting the existence of the British Empire, a problem with whose solution it stands or falls.

It is no easy matter to say whether Wembley has proved a migration agent or not. Many millions, it is true, have had actual contact with the other Britains beyond the seas and have taken away with them, to read at leisure, literature concerning them. Representatives, *o g*, of Australia and South Africa have made a great fuss about the many enquiries from would be settlers, about people who have either gone to the colonies since the Exhibition opened or who notified them of their intention of so doing. But on the whole English newspapers reviewing Wembley with exaggerated praise, are curiously silent as far as overseas settlement is concerned. It may be brought back to the reader's mind that life in the Dominions in no way means little work and high pay, that farm work is hard and means long hours, that wages are low at first, that life on isolated farms is loneliness, that only strong and sound people are fit to rough it. After all is said, we may doubt whether Wembley has prepared the way for the greater efficiency in the distribution of the population and therefore may be hailed as a success. Whatever the future holds in store, it is a starting point, rather than a winning post.

Empire settlement is impossible without Empire trade. As not being an expert, I shall not give a detailed account of the purely commercial aspect of Wembley, and commercial results will be more difficult to survey within the near future than political. Wembley was, in the words of the Prince of Wales, the "shop window of the Empire."

* It may be mentioned by the way that of course all not of British birth and parentage are excluded. Whether *eg* as regards Australia this limitation proves far-sighted from the European point of view, is another question which however does not interest British Imperialists.

The Economy Conference being held in 1923, Wembley was to be a second and an unofficial Conference of the British nations, all the more efficacious.

Lord Stevenson, Chairman of the Exhibition Board, has stated the commercial purposes as follows.

(1) "To find, in the development and utilisation of the raw materials of the Empire, new sources of Imperial wealth." (2) "To foster inter-Imperial trade and open fresh world markets for Dominion and home products."

In the first place, the immeasurable wealth of raw materials in the colonies is to be utilized, is to be turned into hard cash. The Dominions are clamouring as much for capital as for settlers. England, though endeavouring to develop the value of her colonies by means of her big finances, though, e.g., building up the whole of the Indian railway system with her money, has not yet done what she ought to, finance is an eternal beggar to most of the Dominions. It is estimated that there is now invested in Canadian industry \$ 350,000,000 of British as against three as much of American Capital. All of the Dominions make efforts towards the attraction of Capital for the development of the resources by showing the capacity for investment. They try to bring home to the financiers their potentialities as a field for investment as well as for speculative adventure, experts are at attendance to answer all enquiries. The latest of the British self-governing colonies, Rhodesia, which in addition to being a large producer of gold, is exporting more chrome ore than any country in the world, displays a splendid propaganda South Africa, the mines of which are producing sixty percent of the world's gold, impresses the visitor no less by the cool matter-of-fact character of her leaflets. New Zealand makes good use of the newspapers as far as possible. Ontario points out her mineral wealth, giving away cartloads of very well designed mineralogical maps. St. Helena, Ascension, Trisfan de Cunha (in the South African Pavilion), small as they are all of them are distributing large numbers of informative pamphlets, issued very often in co-operation with the respective shipping companies. Attracting capital by means of appealing to the tourists and sportsmen is another peculiar feature of some leaflets. Newfoundland, selected by the late Lord

Northcliffe as the site for the giant mills at Grand Falls which are to supply paper for the various Harmsworth publications, dwells on her place, as "the Norway of the New World." As far as my experience goes, Johannesburg and Port Elizabeth are foremost in advertising.

Of just the same importance and still more emphasised is the other point of commercial purposes "to foster inter-Imperial trade and open fresh world markets for Dominion and home products," as Lord Stevenson has it. That is the reason why you are told so many stories of railways, of ports and of shipping lines. Communications and transport are matters of the uttermost moment to the British nations. First of all *English* agriculture and *English* industry is to be promoted. Let me give a few examples of sections that make especial appeal to the visitor. There are the breeding of poultry and the output of eggs ["use British Eggs!"] there are British toys and British musical instruments, there are the industries of British Silk (Leek) and of British lace (Nottingham, Ayrshire), there is a display of British-made boots and shoes. The chemical section has involved an expenditure of £100,000. They had some reason to do so, indeed. In 1922 the imports to India of German dyeing stuff was 8 times as big as the amount brought from the United Kingdom. India on the whole appears to be the sore point of the commercial as well as the political system.*

Both the United States and Canada are felt as competitors in British industry with ever increasing returns of goods exchanged with India. The amount of American flu imported to India is enormously in excess of that brought from any other country in the world, including Great Britain.

The lathering of English industry is only one aspect of the question. Within the vast expanse of the British Empire practically all the raw materials required are to be found in sufficient quantities. Goods which England cannot supply are to be exchanged within the bounds of the component parts of the British Commonwealth. First of all it is England herself that is taught henceforth to order nothing but from within the

* Visitors of course are not shown anything of the struggles and the strife that are threatening to rend the land, neither of Nationalists nor of Swarajists, neither of Akali disturbances nor of Cawnpore Bolshevik conspiracy.

* The Times, no 43770 p XI.

† This statement is not quite correct *EL. M.R.*

Empire The frieze in the Oversen Settlement Gallery makes it clear that the population of the United Kingdom is largely dependent on outside sources, mainly foreign countries

Some figures may be quoted to demonstrate the imports coming from foreign countries. Of the total imports of sugar, about 75 p. c., came from outside the Empire, of foodstuffs in cans and bottles more than 80 p. c., of cotton more than 95 p. c., of tobacco 95 p. c., of bananas 88 p. c., of wood and timber 85 p. c., of citrus fruits 83 p. c., etc. Wembley is devoted to the extension of trade between the Mother Country and the various Dominions and colonies. Immense propaganda is made for Indian tea and Canadian apples. Australia is fighting to get into the British market and to drive out the 'best Danish' and the 'best Dutch'. There is an Australian vineyard in full bearing, etc.

In a word, Wembley is an effort to realise the idea of a self supporting Empire. 'The doctrine of a self contained Empire' is perhaps, above all, the great lesson of Wembley. It is the moral that may be drawn from the messages of the various Prime Ministers.*

The attainment of such objectives will not be one of the first fruits of the Exhibition, it must of necessity be spread over a period of years. The Empire is not at present self-sufficient. Only a fraction of the supplies of Great Britain come from within the Empire. In many of its territories, it is confronted with a most aggressive trade competitor the United States—represented by a particularly strong contingent of visitors—possess an overwhelming preponderance. A special advertising campaign had to be carried out in South America by bombarding with letters the important buyers. The increasing control by America of cane sugar supplies is proving the principal factor in the post war development of British industry. It is fighting hard against American trade-rivalry in the very territories of the Empire.

It is a commonplace to assert that international trade is a most delicate and complex organism. It looks rather questionable whether Wembley, the advertising propaganda of which in publications all over the world has been carried out on the most lavish scale, will be a success as regards the extension

of markets for all British goods. Visitors from abroad, it is true, have come to see the products put in the shop window. Representatives from the pavilions have made a great fuss about orders received and specific trade enquiries made by buyers from without the Empire, they are making confident comments concerning the future trade. It cannot be doubted that there have been many concrete examples of the actual trade during the exhibition. But it would be ill considered to measure the results by the actual business done. It is a question for the future to determine whether Wembley has been productive of lasting good in extending the markets for England and her colonies.

And the same holds good with regard to the development of inter-imperial trade in all its ramifications. For the moment, the Australian wines are gaining in prestige and popularity, for the moment there are remarkable returns relating to New Zealand butter. A strong committee has been appointed to organise a scheme which will bring together sellers and buyers of the Empire. But future success depends largely on tariff policy, the principles of which do not appear to be settled. In 1923, preferential tariffs have been promised, which are based on a protectionist system. And as yet, free trade is the idol worshipped by the largest numbers of the English people. On the other hand, the young industry of India clamours for effective protection against British competition. In Canada, the woollen manufacturers are demanding higher duties against British imports, and it is also claimed that the boot and shoe industry is seriously affected by British competition. The problem of an all British-customs Union seems to increase in difficulty instead of approaching solution.

To sum up I have tried to give a rough sketch of Wembley as well as a general review of the results achieved. British newspapers have defined it as "the beginning of a new epoch in the history of the Empire". At present it is impossible to assess the results with any degree of accuracy. For the time being it may be supposed that the Unity of the Empire has been strengthened and that reciprocal trade of its component parts has been stimulated. It will be sometime before one can gain some idea as to whether success will go far beyond. We must wait and see whether direct advantages have been derived from a most extensive propaganda of Empire settlement, whether the demand for investment

* The Times, No. 43633, p. A111.

of capital will be answered and finally, whether the all British commercial unity will be vigorous enough to open fresh markets of the world. The British Empire appears to have a future but it is a future that will

have to be won. At all events, Wembley has revealed to the world which are the schemes for the future. "He that hath an ear let him hear"

EARLY RECOLLECTIONS

BY NAGENDRA NATH GUPTA

II

A WILD BOYHOOD

IT should have been stated at the outset of the chronicles of my early impressions that life in the mofus is very different from town life and I recall my wild recklessness as a boy with considerable trepidation. Most of the mischief in which we revelled was innocent, but it was full of serious bodily danger to which we never gave a moment's thought. I was always the most daring and careless in our set. I was born at Motihari, the sadar station of the Champaran district near the Terai of Nepal and my father was again transferred to this station when I was about eight years of age. My mother died here after a few months. We lived in a house belonging to the Maharaja of Betiah and called the *chhaoni* (camp) of Betiah. In front of the house was a big *maidan*. In Motihari small ponies are used as pack animals in the same way as donkeys and bullocks are used elsewhere. Caravans of small traders used to bring these ponies to the *maidan* and the men removed the packs, turned the animals out to graze after hobbling them with a bit of rope tied round the forelegs and then marched off to the bazaar with the packs. The moment the men were out of sight I used to let out a war whoop and that was the signal for the ecstasy of joy ride. The only price for which was a number of falls from our circus horses. I rode bare back with the rope transferred from the feet to the mouth of the horse for reins and I fell off half a dozen times every day with no worse effects than a swelled limb when the frightened horse happened to place one of its unshod hooves over some part of my

body. These were my first lessons in riding and later on I became a fearless rider when I had ponies of my own. I carry honourable scars of the teeth of dogs and a monkey and of an operation under etherism when a piece of wood was extracted from my arm pit.

At Bhagalpur when I was some years older my constant companion in wild frolics was my cousin some years younger than myself. J. N. Gupta now a senior Bengal Civilian and Commissioner of the Presidency Division. There was a funny priest from the temple of Burhanath who always lauded us with a quaint blessing. *Ba jase MA pass 7 A pass*. We lost no time in obtaining these degrees by jumping down into *kankar* pits half full of loose red earth, the idea being that the deeper the pit the higher the degree to which we were entitled in the University of Pitsdeo. Later on when it came to the real thing my little cousin got the MA degree all right while I suppose I got the 7 A degree for I never obtained any other. I have no regrets however, for to this romping outdoor life I owe my health and my love of nature.

OUR PUNDIT

In my ninth or tenth year I joined one of the lower forms of the Government school at Chapra in the Saran district in Bihar. There was nothing to complain of as regards the teachers with whom I got on very well but the Pundit who took our class in Hindi was a more difficult proposition. He was a dominion of an approved type, corpulent, shabbily dressed and loud voiced. He was a

martinet without any idea of discipline. He used to scratch various parts of his body constantly and made extraordinary contortions and grimaces during the operation. I have no idea of his learning but I do not think it was very profound. He was certainly very much lacking in worldly wisdom and average commonsense. His son, a big, hulking lad several years older than the other boys and a promising replica of his father, was in our class and generally at the bottom of it. He was without doubt the dullard of the class, and did very badly in all examinations, but when it came to Hindi his father, who was the examiner, gave him the highest number of marks in the whole class with unvarying impartiality. When the Pandit entered the class room some of the mischievous boys in our class used to greet him with joined hands raised to the forehead and the words, "Panditji, pronoun" (for *pranama*), and the prompt reply was *benchopary* (बेचोपारी) stand up on the bench!" The

Pandit did not know the meaning of the word "pronoun," and he never inquired, but he was convinced that it was a disrespectful word. He was alliterative while scolding the boys. When he found any boy inattentive he used to say 'purrah pash' (पूर पश) read, you brute," though brutes have never been known to read a book. Some sly imp of mischief would ask, "Panditji what is

the *sandhi* (compound) of *gagan* (गगन) an earthen chatty, and *ubahan* (उबहन a rope)?" A rope is tied to a chatty for drawing water and that was the real *sandhi* but the Pandit, who never had any sense of humour, would blandly reply, 'It is quite a simple *sandhi*, *gagaryubahan* (गगरीबहन)!' When excessively annoyed with any boy he threatened to report him to the *benchopari* (headmaster) but he never did so for he was as timid as a rabbit and was more afraid of the headmaster than the boys themselves. When the Inspector of Schools who had the alarming habit of examining the teacher as well as the boys, came to inspect our school the Pandit disappeared and was not seen till after the Inspector had left. His explanation was perfectly natural for he laid the whole blame for his regrettable absence on nature!

A ROLAND FOR AN OLIVER

The Joint Magistrate of Chapra at this time was a young Civilian named Cook. He

was a short young man who had a high notion of himself and was said to be very offensive in his ways. One afternoon Mr. Cook was driving in his trap to Revilganj, a small town a few miles to the west of Chapra. There was a Mahomedan fakir sitting by the roadside, and because this man did not get up and salam the Magistrate Sahab Mr. Cook slashed him across the face with his whip as he drove past. The fakir remained sitting without any word of protest or complaint. He had in his hand one of those gnarled and twisted horns so frequently carried by men of his order. Mr. Cook returned after a couple of hours, and the fakir jumped up in front of the dogcart, yelling in an unearthly fashion and shouting curses and flourishing his formidable weapon. The horse shied violently and came to a dead stop, and before the syce could come to the help of his master the fakir struck Mr. Cook a violent blow in the mouth with the horn in his hand cutting open the magistrate's cheek and knocking out two of his front teeth. It was getting dark at the time and Mr. Cook's assailant coolly disappeared after avenging the unprovoked assault upon himself. Mr. Cook returned home bruised and bleeding, and had to keep to his room for several days. The police made a diligent search for the fakir, but the man was never found.

THE FATE OF THE MIGHTY

At Bhagalpur we had once for a guest an Inspector of Police from Bengal. He was a fine figure of a man, portly and broad-fronted, his broad face stamped with the high authority of the police. On the day of his arrival I had to entertain him as my father had to attend to his duties in court. Our guest recounted to me his exploits as a police officer and his smart captures of notorious thieves and daring dacoits until he loomed before my unsophisticated imagination as a veritable paladin of romance. The conversation then turned to the few sights of Bhagalpur and how Mr. Roy (that being the name of the guest) proposed to see them. I had two ponies to ride at that time: one was a white gelding, somewhat bigger than a galloway, sleek and well fed, the other was a little bay pony, purchased for a few rupees during a famine. Both were quiet animals. The only vice, if it can be called a vice, that the white horse had was that

he objected to a new rider by lowering his head and neighing shrilly, but he neither bucked nor reared and never tried to throw off his rider. I asked Mr Roy whether he would like to go out for a ride and whether he was accustomed to riding. He flared out at once at this question. A crack police officer like him not used to riding. He would like to see the horse that could unseat him. Was not much of his time spent in the saddle, and did he not break a fiery stallion which his brother officers were afraid to ride? That settled the question and in the afternoon when my father asked Mr Roy whether he would go out for a drive Mr Roy replied that he preferred to ride. Accordingly after my father had left in his carriage the two ponies were brought out and I mounted the "famous pony." I had my suspicions when I saw Mr Roy climbing on to the saddle with difficulty with the help of two eyes. Tragedy quickly followed. I was as lean as a jockey and a nimble lightweight and the horse had seldom known any other rider. He reared and outraged by the tremendous mass of avoirdupois on his back the horse expressed his indignation in the usual way, but he did not stir a foot and made no other movement. But the shrill neigh was enough for Mr Roy, whose eyes protruded with terror as if a lion had roared in front of him. He threw away the reins, his feet slipped from the stirrups and he fell slowly but heavily to the ground. I jumped off my pony and rushed to his assistance, but the moment I touched him he screamed out that all his bones were broken and he could not bear the touch of a finger. It required considerable persuasion and five or six men to lift and carry him to the sitting room where he was laid on a heap of cushions. I had to listen to his lamentations and to repeat my expressions of sympathy until my father arrived and was soon followed by the doctor. Mr Roy was moaning and groaning all the time that the doctor examined him. The doctor then came out of the room accompanied by my father and beckoned me to follow him. In the next room the doctor asked me, You were with Mr Roy. Did the horse throw him very heavily? I replied that Mr Roy had thrown himself for the horse had not moved a step and I had done nothing to unseat even an ordinary rider. The doctor and my father smiled and the doctor said 'The man is more frightened than hurt. There's nothing the matter with

him. At dinner time Mr Roy protested that he was so grievously hurt that he could not swallow a morsel of food, but he was persuaded to eat a little and ended by taking a fairly meal. In a few days he was moving about as usual and was profuse in his expressions of gratitude, but the subject of riding was taboo. Mr Roy was one of my early disappointments, for that burly policeman was a fraud if ever there was one and my lion proved to be the other animal that had donned the lion's skin.

THE INVASION FROM THE JUNGLE

In a previous paragraph I made a brief reference to the presence of wild animals in the town of Bhagalpur when the Ganges was in flood. Some details of this curious invasion from the jungle may be found of interest. The Ganges frequently shifts its bed but between 1874 and 1877 while we were at Bhagalpur the river ran just below the town to the north. One Mr Sandys, a retired civilian who at one time had been District and Sessions Judge of Bhagalpur, had settled at Bhagalpur and lived in a large house with an extensive compound just to the east of the Court houses. Mr Sandys owned another fairly big house close to his own. The house was lying vacant when we arrived at Bhagalpur and my father arranged with Mr Sandys to occupy it. It pairs were about to be taken in hand when one noon some cowherd boys, who were in the habit of playing in a room of the house discovered a large leopard, which had devoured a calf sleeping peacefully in a corner of the drawing room. The boys had the presence of mind to close the door softly from the outside and then they ran for their lives and reported their fearful discovery to some European officers living in the neighbourhood. Three of them took their rifles and shot the leopard from an opening in the wall. The result was that my father gave up the idea of taking the house which was never occupied as long as we lived at Bhagalpur.

On another occasion while we were playing in front of the Government school during the recess for luncheon we saw a wild boar a tucker, rushing up in our direction. We fled on the instant to the safety of the school rooms. The boar was pursued by the Superintendent of Police and some others on horseback and was ultimately shot.

ly roused by this time and began to examine the witness. What's your name? Seely. And then followed the astounding question. How do you spell your name Mr. Silly? The veil of oblivion over the rest of the story need not be lifted. Mr. Seely emerged from the court a very much chastened with a somewhat angry man.

MRS MALAPROP

At Arrah the Jailor was a European a man who had been in the army and his wife was an Englishwoman evidently from the lower classes. She was a newcomer to India and used to visit us sometimes either alone or with her husband. One day she brought her sister who had just come out from England with her and eagerly introduced her to our ladies *yuh hamana bhains ka*. She meant to say *bahin* which means sister but the word she actually used means a buffalo and what she said was. This is my buffalo. We had great fun after our visitors had left and the word *bhains* was bandied about a good deal.

No PUBLIC LIFE

Up to 1878 when I left Bihar for Calcutta there was not the faintest conception of public

life in Bihar. Wealthy people as a rule led a thoughtless gay life. The Rajas and Maharajas, and I saw several of them were generally possessed of less than average intelligence. One Maharaja in Behar once got into serious trouble because after entertaining a number of European officials at a banquet at which a Lieutenant Governor was present he remarked *Rat to Khub Kachar! ut bhai!* (last night there was a good deal of dovenring). These words were reported to the Collector and the Maharaja was severely rebuked and had to apologise for his levity. Lawyers are an intelligent and independent body of men and in large and important districts like Patna, Mozufferpur, Bhagalpur and Saran the leading lawyers were Bengalis. They had no other thoughts than those of earning and amassing money and enjoying themselves. The one exception was Guru Prasad Sen at Patna who edited the *Belar Herald* in addition to his large professional work as a lawyer and who joined the Indian National Congress as soon as it was established. There was no urge of a patriotic ambition anywhere no one seemed to feel that Indians were being kept out of their birthright no one apparently dreamed that he had any other duty beyond that of following his daily avocation in life.

THE BHILS OF GUJARAT

By MADHAV PRASAD N. MAJUMDAR

Narasari

THANKS to the kindness of the Bhil Seva Mandal working in the forest region of the Panch Mahal District I recently got an opportunity to get glimpses of the aboriginal tribe known as Bhil. According to the census figures of 1921 there are about 18 lacs of Bhils in India. They are not a compact population but are scattered over wild unospitable regions in Gujarat, Ahmednagar, Central India and Rajputana and even South Sind. Gujarat alone shelters about 5 lacs of Bhils all untouched by the rolling tides of civilization and unaffected by the passing waves and tempests of political, social and religious revolutions that swept over India

since the age of Rama. The whence and the wherefore of their arrival in India has been a matter for much anthropological speculation. Some have supposed the Bhils to be the Pygmies of Ctesias (400 B.C.), others have assigned them to the Kolarian Race and others still like Grierson and Max Muller have agreed in classing them as Mundas. (The Tribes and Castes of Bombay by R. E. F. F. Vol. I pp. 152-153). This much seems to be scarcely open to dispute that they are among the one crore and sixty lacs of Aborigines in India today direct descendants of the pre-aryan invaders or immigrants into India who have not been assimilated.

with their successors the Aryans who conquered, dispossessed and pushed them away to the hills and barren fells.

The five lacs or more of Bhils that live in Gujarat are to be found in two separate groups, one in Southern Gujarat (mainly in the Dang forests and the regions adjoining it) and the other—and larger—in the hilly regions of the Panch Mahal district in North-Eastern Gujarat and the Revakantha Agency territory adjoining it. The latter is an unwinning territory bristling with hills and hillocks and wavy uplands that rise over a thousand square miles or so like measles on the face of mother Earth. Huge rocky boulders are scattered over a large surface and they forcefully suggest some volcanic eruption at some period or other. Some of the rocks present a surface appearance of a mass of boiling liquid cooled down but yesterday and the sockets of the frozen froth and bubbles are curiously fresh and picturesque. Other parts of the territory are covered with dark forests of *Ahaljar*, *Babul* and *Am*; and other trees not unpopulated by tigers, wolves and similar dwellers of the forests. The climate is mildly cold in winter and in the monsoons the rain is not excessive (from 30 to 40 inches per annum) but the rocky soil does not easily absorb the water it gets and the resulting pools and rivulets make approach temporarily impossible.

The extreme primitiveness of the Bhils can be seen at the first glance. The Bhil does not live in congregations. Five or six or at most eight hovels are pitched up together almost always on some prominent rock or hillock and become individualised as a village or *Falia* as it is called. The prominent and elevated situation of such a *falia* enables it on the one hand to enjoy a wide range of prospect on all sides and meet an outside adversary at an advantage and on the other to escape the inconveniences which habitation in the low marshes and snaked vales would involve specially during the monsoons. Each average *falia* is populated by ten or twenty souls

and includes none but the Bhils. Neither carpenter nor blacksmith nor the retail vendor of corn, grocery and miscellanea is to be found in the *falia*. The Bhil does scarcely anything except existing and his needs are little greater than those of the cattle amidst whom he lives. His huts or hovels are made of bamboo, jungle wood, stone or suitable boulders that may be handy and never of bricks or mud walls and the roofs are more often than not made of grass and leaves and twigs thatched over the substructure. Crude tiles too are often used specially in the regions nearer the habitation of the advanced communities. Few huts are more than six feet at the eaves or cover an

A young Bhil Marksman

area of more than 15 to 25 feet square. The entrance is usually too low for the adult to walk straight in and doors are often left out as dispensable luxuries or perhaps as hindrances. Windows seem to be ruled out of Bhil constructions and if apertures admitting light are seen here and there they need not be supposed to be there by design. In strict justice the Bhil hut is all cracks and crevices and loopholes through which God's light and air freely sport about in gales and breezes and a widow would be worse than a surplusage. Each hut has invariably an extra construction attached to it at the entrance a sort of crude platform made of wood and bamboos about three feet in height and four feet by 4 feet in area. All the water pots in the Bhil family are stacked one upon

On a third occasion I had just returned home after a bath in the Ganges when I heard a fearful uproar in the Post office close by, and the servants told me that a wild pig had got into the closed yard behind the Post office. I at once loaded all the six chambers of my bolt revolver and ran to the Post office. Passing through the office I reached the yard, which was closed in by a mud wall with a rickety door at the rear. The Post master was a Eurasian and some of his sisters were staying with him. The young ladies were peeping through the venetians of the closed doors and were shrieking hysterically. A number of men were standing on the wall and were trying to hit the pig, which was scampering wildly round the yard looking for an exit, with anything they could lay their hands on. Some had crow-bars others had nothing more lethal than stones. I clambered on to the wall and whenever the pig, which was not yet a full-grown animal, passed in front of me I took a shot at him. I emptied my revolver and probably three or four bullets found a true billet. At this time some one pushed the door of the yard from the outside and the pig bolted through the opening. It ran a considerable distance along the bank of the Ganges pursued by a clamorous crowd and then dropped and was killed.

During the rains the Ganges is always in flood. At Bhagalpur the southern bank behind which the town stands is fairly high and so the flood extends entirely to the north, which is lowland covered with jungle. In this jungle are to be found herds of wild pigs, prowling leopards and the dreaded wild buffaloes locally known as *arna*, whose great horns are sometimes six feet from tip to tip. A tiger will rarely venture to attack an *arna* which is more dangerous than a tiger when wounded and tracked by an imprudent huntsman. Driven out from their haunts by the rising waters these animals swim straight for the other bank and sometimes stray into the town.

SIR RICHARD TEMPLE

In 1860 or thereabout there was a severe outbreak of famine in Bihar. Sir Richard Temple was at that time Lieutenant Governor of Bengal. Parts of the Bhagalpur district were severely affected and Sir Richard Temple promptly came to Bhagalpur for a personal

and local investigation. He arrived at Bhagalpur by the Government steamer *Rhotas*, which anchored in midstream in the Ganges quite close to our house. The local officials and some Rajas and wealthy landowners in resplendent clothes waiting at the ghat in two separate groups. Sir Richard Temple with two or three other persons got into a boat and rowed ashore. There was a good deal of excited curiosity among the Rajas about the identity of the Lat Saheb. Sir Richard Temple was very carelessly dressed and was pulling an oar, while his Private Secretary—I think it was Mr. Buckland—, fruitlessly dressed in a frock coat and a tall, silk hat, was holding the tiller. I had seen likenesses of Sir Richard Temple and spotted him at once, but the Rajas would not believe me. "How can the Lat Saheb pull an oar," they said, "and how can he wear such clothes?" They decided that the more correctly dressed and more dignifiedly occupied personage was the ruler of Bengal, Bihar and Orissa. When the Lat Saheb was not at the helm of the State he was at the helm of his boat. When the party landed and Sir Richard Temple stepped forward, and was respectfully greeted by the Commissioner and the Collector, the astonishment of the Rajas knew no bounds. Just at this moment a wild-looking and unkempt individual standing in the crowd rushed forward with uplifted hands and crying, "Insaf, Lat Saheb, insaf!" (Justice, Lat Saheb, justice) was about to fall at Sir Richard Temple's feet when the Private Secretary quickly interposed his umbrella in front of the Lieutenant Governor and others caught hold of the man. The Commissioner shouted, "Police! police!" and the police at once came up and removed the man. There were no anarchists in India at that time and bombs were unknown but the memory of the assassinations of Sir Henry Norman and Lord Mayo was quite fresh, and the excited and baggard appearance of the man justified the alarm that was felt. I was looking keenly at Sir Richard Temple and I admired his coolness, for he stood unmoved and did not fall back a single step when the man rushed up to him. It was this courage that saved him from what might have proved a fatal fall down the Khud at Dargiling when his horse became restive and went over to his death while Sir Richard Temple with admirable presence of mind leaped lightly from the saddle on to the road. The man,

who had ventured to approach him so unceremoniously believed—a delusion that others have shared with him—that he might obtain justice by a personal petition to the ruler of the land.

Sir Richard Temple was a phenomenally ugly individual. His complexion was so sunburnt that it was almost dark copper coloured; he had a thick bulbous nose, prominent jaws while his mustachios as Protap Chandra Majumdar once wrote, curled up like the horns of a Kathiawar bull. Sir Richard Temple was afterwards appointed Governor of Bombay but he resigned that appointment after some time to become a Member of Parliament. In the House of Commons he used to fall asleep sometimes and *Punch* published a cartoon describing him as the Sleeping Beauty. Sir Richard Temple was a man of extraordinary and tireless energy and he was a terror to the district officer, who were usually ease-loving people in those days and found it impossible to emulate the energetic activity of the Lieutenant Governor. Mr Barlow the Commissioner of Bhagalpur was an indolent man while Mr Taylor the Collector used to smoke a gorgeous hookah of crystal in his chamber in the office. Sir Richard Temple would frequently remain on horseback for hours together and he never knew fatigue. I remember one morning Sir Richard Temple was to inspect the Central Jail at Bhagalpur and some other institutions accompanied by the Commissioner. When Mr Barlow came up barrying and panting to the steamer he found that Sir Richard had already left and the Commissioner had to follow him as best he could.

DURGAGATI BANERJI

Durgagati Banerji was Personal Assistant to the Commissioner of Patna and a great friend of my father. He was one of the ablest men of his time in the Provincial Executive service and was the *de facto* Commissioner of the Patna Division for the Commissioner of the Patna Division whenever he happened to be left everything to him. Durgagati Banerji was black as ebony, with a noble forehead and bright, clear eyes and the nickname given to him was *Kala*. Commissioner I may note in passing that the Indian Members of the Governor General's Executive Council are called "Kala Council" by the rickshawalas and others in Simla. There was a story that a Collector once

sent for Durgagati Banerji under the usual formula of sending him his salams. Durgagati replied by sending his salams to the Collector. The latter in high dudgeon complained personally to the Commissioner but to his great chagrin the Commissioner took the part of his Assistant and explained that Durgagati was not an ordinary Deputy Magistrate neither was he a subordinate of the Collector. When Sir (then Mr) Stewart Bayley was appointed Commissioner of Patna he heard of the immense power and influence wielded by his Personal Assistant and with a view to curtail the desired Durgagati to place all papers before him Durgagati promptly followed his instructions. Mr Stewart Bayley in spite of all his industry, saw that the work began to get into arrears while the heap of files on his table went on steadily growing higher. At length he was compelled to call Durgagati Banerji to his help and the arrears were cleared off in no time. Later on Durgagati Banerji was appointed the first Indian Collector of Calcutta.

THE RETORT COURTEOUS ?

Sarat Chandra Mukerji was an able lawyer and afterwards became a District Judge. While at a mofussil station he had once before him the District Engineer a European as a witness. His name was Mr Seely. Thinking that under all circumstances a European is equal if not superior to an Indian he coolly walked up to the dais on which the Munsif was sitting and sat down on a chair. Mr Mukerji did not know the man and was much surprised but still he politely asked him his business. The reply given in an offensive and superior tone was that the visitor was no less a personage than the District Engineer and he was there as a witness. The Munsif required from his Peshkar and the Pleaders and after verifying Mr Seely's statement asked him to step into the witness box. Mr Seely angrily enquired why he could not be examined where he was sitting. No, replied the Munsif sharply. Your place is the witness box and you had no business to come up to the bench. If you do not go into the witness-box at once I shall proceed against you for contempt of court. Covered by the words and the attitude of the Munsif Mr Seely went into the witness box and proceeded to take the usual oath. The Munsif was thorough

another on this platform and are never kept inside. Another typical equipment outside a Bhil hut consists of large, cylindrical bamboo baskets plastered with cowdung and stuck fast into the earth or the props of huts. They are used for storing corn—maize—in very much the same way in which the large earthen jars or casks or similar articles are used for corresponding purposes throughout India. About the little huts may also be seen a plough or a spade and a bamboo tube or funnel through which to sow the seeds. The inside of the hut is usually empty but for a few dirty rags, some smoky earthenware pots and, may be, the jumble wares that the children may

sist in a little rag to serve as a 'langoti' or loin cloth, and another just enough to wrap round the circumference of the bead leaving the whole of the crown uncovered. The trunk, the arms and the legs seldom find a covering. The women are less naked and try to put on a petticoat, a bodice and a sort of *salla*, i.e., a coarse cloth with some colour design in red and blue, worn in lieu of the more aristocratic 'sari'. The youngsters of both sexes, right up to adolescence and even after, do not usually have even that scanty apparel. Of ornaments, the male has nil. He seems to consider the bow and arrow as a part of his ceremonial dress, and even on peaceful occasions would prefer to be seen with the

weapon than otherwise. The women have a few trinkets made of 'Kathir,' a white metallic dross formed of some amalgam of tin. The dull jingle of its wristlets and anklets is all that the Bhil woman gets to delight her female vanity. The weight and number of the ornaments vary with the taste and condition of the individual. Both the male and female love to be tattooed and their necks, forearms, legs and convenient limbs are variegated with permanent designs, usually outlines of the prime geometrical figures or of the shape of some leaf, flower or animal.

Inmates of the Jesawada Ashram playing Ras

The appearance of the Bhil as he is, fully indicates the whole circumstance of his existence. The skin is usually scorched and tanned fast black, both in the case of the male and the female. As the Bhil seldom bathes and is always exposed to the inclemencies of climate and to the dust, dirt and mud about him, he carries a swarthy presentment from head to foot. The adult male does not keep a beard. But otherwise he fights shy of cleanliness. Even the water that he drinks is not pure or fresh. He prefers dirty water to pure, and if he has to drink at a stream, would even go out of his way to avoid the clearer side and make sure of a muddier draught. In constitution he is lean and lank and worse than half starved. Ethnologically and by mixture of blood, he does not now differ much from the Aryan in physical traits,

Je awada Ashras and his inmates
A Settlement of Bhil Seva Mandal

Bhils at Home
Their humble Abode forms a Cottage

though his nose tends to be rather less developed bearing out the phrenologist's dictum that small noses and little intellects go together. The Bhils are so lean almost famished that in the case of most one can practically

count the ribs to trace the contour of the whole anatomical mechanism. A buxom fellow with ponderous limbs or muscles perhaps does not exist in the whole race. And this is not to be wondered

at if we remember the low economic condition in which the tribe drags on a miserable existence. When a race either human or of the lower animals is faced with continuous subnutrition it does not die out entirely but gradually becomes shrunken, shrivelled, dull and inert and this is what has actually happened with the Bhils. The only corn that the Bhils get to eat is maize and their only condiment is salt. The maize is coarse and starchy, not particularly advantageous as a food. Eggs, game birds and poultry may at times vary the fare but on the whole their pauperism keeps them in such utter destitution as few ordinary *Bhadra log* would be ready to believe. Very often they

bad in fertility and with proper care might yield better crops. Cereals other than maize might be cultivated. But the Bhil refuses to think even a day ahead. If he has one immediate meal in store, he is neither anxious nor on the look out for the needs of the morrow. To make things worse, he has a food pride in the possession of unwieldy herds of cattle, even of worthless cattle that have no economic or other value.

Every Bhil family keeps from 20 to 50 heads of cows, bullocks and buffaloes, all starved and dwarfed and shrivelled as the men themselves. As the Bhil himself cultivates next to nothing and wild nature yields hardly better, there is little for the cattle to eat. It is always

Mirakhadi Ashram
One of Mr. Bhaskar's Settlements

sed at a price) or propitiate his gods and demons. The astute Sahukar has his nets ever wide open for him and proffers the loan of the small sum required always against some valuable security. Once a loan is advanced the poor Bhil is doomed perhaps for life. A month, two months, three and presto! by the magic of the user's arithmetic the interest alone runs ahead of the original principal. The Bhil naturally tries to pay back his debt by instalments but often the Sahukar is careful enough to credit none of the instalments paid to him either in cash or kind. Once a debtor the Bhil is always a debtor.

On the other hand the Bhil is often a confirmed drunkard. Sometimes he buys his drink from the licensed liquor vendor and the liquor vendor is either a regular Sahukar himself or follows the Sahukar's notorious ways of exploitation along his own lines. Besides the Bhil often prefers to distil his own liquor from Mahuda flowers. Such illicit distillation is carried on at places which command a wide prospect and render surprise attack by the Excise official next to impossible. And if the self distilling Bhil is arrested by the treachery of some cousin or jealous neighbour and is invited for stay in one of His Majesty's jails he seldom regrets the arrangement. The fellows that have come out of the jails openly boast of their readiness to return there for the simple reason that, as criminals in jails, they get a more human standard of food and shelter than they can find as free men in their native forests.

THE PSYCHOLOGICAL SIDE

On the psychological side the Bhils are dull and unimaginative. They seem to be reluctant or incapable of speaking five continuous sentences with anything like coherence or logical sequence. To a great extent their wild life and underfeeding through millennia seem to have powerfully reacted to keep them mentally stunted. All possible forces of a glorified civilization have conspired to keep them in that state. Except in so far as they might be conveniently squeezed the upper classes have practised nothing but disdain and terrorism towards them. Petty officials of Government and the Indian States concerned are perhaps the worst offenders in this respect. The presiding genius of His Majesty's government are not known to have

disturbed themselves overmuch in the interests of the Bhils and the Indian States at least the smaller ones have shamelessly followed a policy of exploitation and perhaps of atrocities. The result is that the Bhils stand in extreme dread of the civilized community and even run off like jungle animals at the approach of strangers. They afford a living study in the psychology of repression as seen to influence a whole tribe. Their appetites and instincts have been stunted by their low economic condition. The social traits have been stunted by their ever painful experiences with the surrounding communities. The emotional tendencies have been utterly distorted into fantastic modes thanks mainly

Superintendent and inmates of the Mirakhedi Ashram

to the criminal apathy and egoism of the Aryan religions. The Census reports classify them as Animists and in the sense that Animism is a convenient term to denote all that residuum of belief which is not known as Hinduism, Islam, Christianity or any other recognised religion (Census of India Report Vol. XVII, page 113). They worship rocks, trees and other similar objects as being the embodiments of ultra-human spirits. Demonology has a large place in their faith. The spirits which they worship—or rather want very much to propitiate—are

mostly evil spirits whose wrath must be averted or bought off at any price. There seems to be a whole galaxy of such spirits presided over by the greatest of them all (Mha Bhero Maha Bhairav) who populate the Bhil imagination. The Bhil priests known as Badwas serve as intermediaries in communing with the Evil Ones. They undertake to perform ceremonies and sacrifices to propitiate the spirits concerned in cases of sickness, theft, scarcity and the like unusual or undesirable events of life. Among the Hindu Pantheon Rama and Hanuman alone to the exclusion of all others are the greatest favourites. The Bhils seem quite proud of the two images of Hanuman can be seen installed in the most secluded interior or a fact which irresistibly drives us to associate the tribe with races that fought by the side of Rama.

The Bhil is singularly bereft of legend or folklore. Owing to the dulness of his imagination the absence of historical traditions and associations and above all his constitutional inability to think or express cogently even in ordinary conversation he does not possess the charm of myths and fairy tales which lend a hue of picturesqueness to many other primitive races. The few stories or legends that he just manages to hush out are about Rama or Hanuman or Valmiki. Valmiki of course was a Bhil and as such is tenderly revered as an ancestral hero. The tribe does

body crudely and inconsistently the usual ideas and superstitions on death, sin, virtue, hell, heaven, immortality and transmigration. Others are appropriate to tribal festivals, Bacchanalian dances and similar occasions.

Typical Bhil Males

Bhil Agriculturists with their Ploughs on Field

possess a few songs. Some of them have probably come floating across the centuries though others are indisputably of a modern or even recent origin. Some of them are of a religious or devotional character and em-

No song or music with an epic twang such as may awaken heroic impulses, fire martial enthusiasm or challenge the Fates seems to be extant in the tribe. Even in the case of the devotional and other songs the tone of delivery is tortuously slow and plaintive, laden with vague sighs and suppressed yearnings.

In the matter of literacy or rather of illiteracy of the tribes I cannot do better than quote Mr. A. V. Thakkar of the Servants of India Society who says that

They are steeped in ignorance and poverty and do not know their own rights and privileges much less their collective and national responsibilities. They rarely if ever come in contact with urban people rarely care to trade with them and like to remain in their primitive habitat. They have not learnt the art of agriculture, all developed as it is in this country, nor have they learnt brick-making nor stone-quarrying much less do they know the art of trading or reading or writing. The Bombay Census figures of literacy show that the number of literate males among the forest tribe of Kathians is only 3 per 1000 and of Bhils only 1.

as against 23 of Bhangis and 65 of Dheds Thus in the art of letters they are seven times more depressed than the most depressed Bhangis and 16 times more than the weaving Dheds. In a state in South Central India, wholly populated by aboriginal tribes, the literacy among Bhils was only one per 13 000 or next to zero' (Article in the *Bombay Chronicle*)

One can only point out that yet a darker picture exists in Rajputana where out of a total population of 480, 679 'Animists', not one blessed soul could be classed as 'literate' (vide Census of India Report, 1921, Vol XLIV, part 1)

We need not wonder, therefore when we find that the Bhil can hardly count ten or work out the results of 2 plus 3. It is entirely to the interest of the Sabkar the officials and the Indian States affected to

perpetuate this dense ignorance. So long as this combine of vested interests can help it, the Bhil shall grovel in the same piggish intellect till the crack of doom. Even the less interested sections of society have not bothered themselves about the fate of the tribe. Neither Hindu nor Mahomedan religionists have ever stirred a muscle in its interests, and the lay public has been equally apathetic. The servants of the Cross have, in recent years begun exploring this vast field for missionary work and are trying to lift up these wild beings to the level of the human species. The noble band of volunteers of the Bhil Seva Mandal under the capable guidance of Mr A V Thakkar have lately started tackling this problem in all its aspects.

THE STATE OF HUNGARY

By G. E. R. GEDYE,

Late Correspondent of the Times for Central Europe

THE "Kingless Kingdom" of Hungary, where elections have been decreed for December, generally is recognised to be an unfortunate country. If the interests of a people are to be identified with those of its rulers, this judgment would have to be revised. No regime in Europe has been more successful in turning national misfortune into personal profit and persuading the world to accept it at its own valuation than has that which dominates the lands of St. Stephen's Crown. The population is indeed unfortunate, but for other reasons than those generally accepted.

Hungary is usually presented to the world as a land of peace-loving hard working peasants, crushed by the Treaty of Trianon yet harbouring no revengeful thoughts. It is a country which has been martyred by Bolshevism, say, its official propagandists, yet which is now wisely ruled and happy in its parliamentary institutions—a country which, if it cannot lay claim to the happiness conferred by lack of history, enjoys the repose implied by its absence from the columns of the foreign Press. Its only desire, apparently, is to be left alone by its neighbours

and eventually to return to the monarchy which it abandoned under pressure in 1920.

It is a cleverly drawn picture but not one which is recognisable by students and friends of the Hungarian people. They see Hungary as a nation in shackles in part forged, in part riveted by its present rulers. It appears to them as a country artificially maintained in a state of almost feudal mediaevalism in the interests of an oligarchy, its Press muzzled, its people forbidden freedom of speech and opinion—a country in which this oligarchy spends large sums in artificially nourishing dreams of revenge on its neighbours and in secret preparations for their realisation. Far from appearing as the guardians of Western liberties against the East, as the Magyar rulers love to pose, they seem to impartial observers to be holding in Eastern bondage an unfortunate subject population which alone of Central European peoples fails to participate in the new liberties acquired by its neighbours.

I do not wish for one moment to minimise the injustice done to Hungary by the

vindictive Treaty of Trianon Desirable as it was that her non Magyar subjects should be freed from compulsory alliance to the Thousand Year Kingdom which in a thousand years had failed to assimilate them, it was not right or expedient that on all debatable points, their wishes should have been made law. The boundaries of Hungary were drawn up with little regard to her national claims or to her economic needs. It may be doubted, however whether the bulk of the Magyar population thus placed under alien rule has suffered more than those left to the tender mercies of the Magyar oligarchy at home.

In Czechoslovakia, Rumania and Yugoslavia, if he has been oppressed in the matter of language and education the Magyar peasant has shared in the distribution of land which followed the break up of unwieldy *latifundia*. In Hungary there has been nothing but a mockery of land reform: the adult peasant labourer on the land of his lord from sunrise until sunset for the sum of tenpence per day his wife and children for expence or severpence. Yet the Esterhazy family owns more than three quarters of a million acres of land of which Count Paul Esterhazy alone owns 300,000 acres. More than eight-and-a-half million acres—33 per cent of all the arable land in Hungary is owned by only 1130 landowners. If you visit any Hungarian landowner keep your hands thrust deep into your pockets unless you wish to have them kissed by the first cringing peasant who realises that you are a guest of his lord. Before every motor car on the rough tracks that do duty for roads in Hungary the peasant stands with bowed head hat in hand. That is not yet the depths. An Englishman who had occasion to motor a good deal with a member of the Hungarian aristocracy told a friend of mine that he always knew when they had entered the family estates because instead of standing hatless the peasants regularly flung themselves flat in the road and kissed the wheel tracks of the car as it passed.

Count Michael Karolyi the well meaning but unsuccessful President of the short lived Hungarian Republic, is always spoken of by the present rulers as The Traitor—and justly for did he not try to institute land reform and thus betray what its rulers understand by "Hungary" the interests of the oligarchy? Since Bolshevism ousted him and gave place

in its turn to the White Terror, every precaution has been taken to fasten the yoke more firmly on the neck of the peasant. Though school attendance has decreased and school hours have been reduced the number of teachers has been nearly doubled, the additional personnel having for its main task the teaching of nationalism in their free time, the smaller boys learn the elements of soldiering in "Pathfinder" organisations, from the ages of 14 to 21, by the Law of 1923 youths are forced to join the "Levente" and to attend its drills. This organisation is supervised by officers of the old army, and is simply a militia disguised as a gymnastic association. Thus is the prohibition of military training set at naught. Where formerly a gendarmierie post of six men sufficed for six to ten villages there is now one such post in every village. No wonder that 60 per cent of the national and municipal revenues of Hungary are spent on Government servants.

Liberty fares little better in the cities, where misery invisible to casual visitors who admire the flamboyant beauty of the wealthy quarters—is so extreme that in Budapest alone there were recently 16 suicides in one day. In the courts, prosecutions for speaking against the Regent, Admiral Horthy are numerous, and savage sentences are inflicted. Perhaps the most useful weapon for stifling public opinion is the law making it an offence to say or write anything which might damage the name of the country abroad. It can be imagined, perhaps, to what an extent this is stretched to cover any utterance disagreeable to the ruling classes. The Press is under special disabilities, the sale of any paper on the streets can be prohibited by a simple departmental order. In the same way, a paper can be suppressed for any length of time, there is no trial in the courts and no remedy.

To glance at three outstanding examples of the work of the law courts in the past twelve months may be instructive. Last year, Edmund Beniczky a former Home Secretary asserted that the regent, Admiral Horthy, had been privy to the White Terrorist plot to murder Somogyi a socialist editor, he stated that as Home Secretary, he himself had cognisance of the orders given by the Regent to prevent the punishment of the murderers. Finally he declared that Count Bethlen also knew of these matters and that his—Beniczky's

statements were absolutely true. He was sentenced to three years' penal servitude after a trial which took place for the most part *in camera*, but was released after a few months. Count Bethlen made no statement on the matter.

Last winter, after strong pressure had been exercised by the French Prince Louis Wundischgrätz, M. Nadassy, Count Bethlen's all-powerful Police Minister and other Hungarian aristocrats were put on trial for the forgery of franc notes. They declared that they had acted from patriotic motives in the interests of Hungary (read "the oligarchy"). Count Bethlen testified at the trial to Prince Wundischgrätz, saying, "I know him as a gentleman and I know him to be incapable of having acted from sordid motives. Before the Parliamentary Committee of Enquiry, Count Bethlen admitted that he had learned of the proposed forgeries as early as 1921 and had given instructions that they were to be stopped. The sentences imposed on the forgers were amazingly light and have just been reduced.

This summer Rakosi and Weinberger, two Communist leaders and their associates were put on trial. These two men had held office under the Communist regime in Hungary and had returned from Russia to try to organise a new Hungarian Communist Party. Nothing worse than this was proved against them; they were sentenced to eight years' penal servitude apiece, doubling the sentences imposed on the franc forgery ringleaders. During the trial prison doctors proved that the prisoners had been brutally beaten by the police to extract confessions; the judge brushed aside the admitted evidence as unimportant, saying to the defence in effect, "Well, all right, they were beaten. What of it? Get on with your case. This torture of prisoners is in fact an accepted thing in Hungary. As to the past horrors of the White Terror, these do not bear description. The White Terror murderers are not punished though they are all known and one of the worst of them, Ivan Hejjas, who had nearly 200 persons including his own brother in law done to death in the wood of Orgovány is standing as a candidate at these elections.

How is it that liberal opinion abroad knows so little of the real Hungary? Soon after the advent of the present regime Count Bethlen received the sage advice: "Get the City and Wall Street behind you and the British and American Press will be bound

to follow." Every demand of international finance was complied with and foreign capital attracted to the country. The direction of Press propaganda in Great Britain and America was placed in skilful British hands. Every endeavour was made to propagate the legend of "Count Bethlen Hungary's strong man" and to suggest that if he were upset only Bolshevism would follow and invested capital would be lost. Hence papers were told, it would be dangerous to publish anything unfavourable to his regime. The Hungarians saw to it that any British or American journalist coming to Budapest was carefully "coursed" with lavish hospitality, apparently spontaneous, was dispensed on a regular system and the visitor shown just what it was desirable for him to see. Some visitors have even found very useful financial tips being tendered them. Resident Hungarian Correspondents of British papers if they were not already connected with the Hungarian Foreign Office, could always be dealt with by the methods applicable to all other Hungarian subjects. Determined and skilful attempts were made by British agents of the Hungarian Government to discredit with their papers in London and New York all persons writing on Hungary who were not resident in Budapest and therefore largely immune from the combination of flattery and subtle threats employed there. Such persons said these agents should only be getting their information from Hungarian *émigrés* and were untrustworthy. Every article and every message even the briefest, unfavourable to Hungary was challenged openly or privately. The news agencies were supplied with abundant news free of charge direct from Budapest by the Hungarian Foreign Office. These are some of the methods by which Hungary has been—and is still being—made safe for autocracy.

What of the future? Count Bethlen has rushed through Parliament a House of Magnates Act setting up an Upper Chamber consolidating the power of oligarchy, and conferring special privileges on the Hapsburg Archdukes in defiance of the Hapsburg Dethronement Act of 1920. With the open ballot in 218 out of 240 constituencies where the peasant has to declare on the hustings before the magistrate the gendarmes and his feudal lord whether he is for or against the Government the latter is sure of another obedient majority. Whether or no Count Bethlen's motive in suddenly ordering

an election for no apparent reason is to try to restore the Monarchy the people of Hungary will have no chance of voicing their will at these farcical elections. How long they will remain mule and helpless under the heel of the dictator it is impossible to say. Intolerable oppression provokes in time desperate and terrible remedies. Many efforts are made by newspapers and by individual journalists to get the truth known about Hungary but the interest in that country is not great. This lightens the task of the

propagandists which is negative rather than positive and directed mainly to keeping unfavourable news out of print. Liberal thinkers should bear in mind that all moral support afforded to "Hungary" as at present constituted and every penny invested in the country merely strengthen the grip of the oligarchy on the people. International finance should remember that in backing "Hungary" — it is backing a medieval tyranny in a progressive Europe. That may be an investment, but is more a speculation.

Vienna Nov 17 1926

THE ART OF MR C F. WINZOR

By MANINDRABHUSHAN GUPTA

Anda College Colombo

ALTHOUGH Mr C F Winzor has been in Ceylon for the last six years as the chief inspector of art in the local schools his art is scarcely known in India

Though Mr Winzor is an Englishman there is more of a Frenchman in him for his long stay in Paris and his admiration for the literature art and culture of France has

The rainy Day in Jaffna—by C F Winzor

The Watch Girl at Tanjore—by C F Winzor

made him almost a Frenchman. He and his art should in my opinion be known to the Indian artists and art connoisseurs and I venture to think that they will find them interesting. If an Exhibition could be arranged in Calcutta it would offer a fine opportunity for a real appreciation of his work by the Calcutta public. His pictures have been exhibited in the famous art Exhibitions of Europe but it is very strange that here in Ceylon he is known only as the inspector of art and beyond that he hardly gets any recognition and appreciation as an artist. His works which have been much appreciated in Europe have been under-estimated at the Exhibition held by the art society of Colombo. Once a French artist wrote to me from Paris that a Western artist like Mr Winzor is hardly seen in the East. European artists generally whom we see at the head of Indian art

schools are at best schoolmasters who are attached there as ornaments. Mr Winzor is not an artist of that type.

He was in Paris for 14 years and in Italy for two years. During this period he studied art and visited the important art galleries.

He has exhibited several times at the famous Venice International Autumn Salon and in Paris. He has had several one man shows in London at Carfax Gallery. Many of his pictures are in private collections in the continent in England and in America. There are a few also in Ceylon. Exhibitions were arranged in Edinburgh and in London at Chelsea Book Club for his Lithographs alone which were highly appreciated there. A set of his lithographs have been kept in the British Museum. Subjects of many of his Lithographs are based on Hindoo Mythology in which Mr Winzor

is highly interested. He has also done illustrations for many books of the Poetry Bookshop. A book of poems by Flecker has been illustrated with his original Lithographs. "Book on Chinese Drama" by Mr Johnston the tutor of the Emperor of China, is illustrated with reproductions in colour of six paintings by Mr Winzor.

A Kandian Chief—by C F Winzor

Mr Winzor belongs to the modern European school which has left off the beaten track of realism and imitation. The important thing to be noticed in his work is his vigorous drawing and the simplicity of form which is the quality of all ancient art. In all his work there is a touch of individuality.

The quality of an artist can be well-known from his ordinary sketches for such a work is uninfluenced by an external motive. In a sketch the artist can give full vent to the skill of his hand, which is often handicapped in a finished product of the artist. A picture will be a good one when it can retain some elements of the sketch, which show the work of the hand. The tendency of the sketch should be to create rhythm of form and the harmony of movement.

This natural aptitude of the hand referred to above is some times called Calligraphy or the art of writing. This quality, peculiar to Central Asiatic art is observed in all the famous works of art. One finds ample evidence of it in Ajanta and Sigirra.

Mr Winzor has acquired the Calligraphic

The Study of a Tamil—by C F Winzor

quality to a great extent. There is an oriental touch in his work. When he starts painting in oil he at once begins with drawing with the brush. So his work is spontaneous and retains the elements of the sketch. His composition and distribution of colour have a decorative effect, which perhaps is the conspicuous element in the works of the modern French artists.

Mr Winzor is an admirer of Pissarro

Chavanne, Maurice Denis, Cragin, Van Gogh the famous artists of France. There is perhaps some influence of those masters in his work

A few photographs of his works are given here, but their real value cannot be judged from these, as they are without colour and indistinct.

A THEISTIC INTERPRETATION OF SANKHYA PHILOSOPHY

II.

INTERNAL POSITIVE EVIDENCES

By PROF ABHAY KUMAR MAJUMDAR

WE have shown before that in the aphorisms 96 and 99 of the Sankhya Pravachana Sūtram the existence of Isvara is admitted. But there are other aphorisms also which are more clear and emphatic in that respect. Consider the aphorisms 56 and 57 in chapter III. The former should be read with two preceding aphorisms in order that its true meaning may be clearly understood. They are: It is not through the absorption into the cause that the end is accomplished because just as in the case of one who has dived there is a rising again and "Though Prakriti is not an effect or not directed by another to act yet, the rising again takes place through her being subordinate. Now a question arises: To what is Prakriti subordinate? Bīṣṇa explains it thus: "Through her being under the rule of the object of Purusa. Under the influence of the object of Purusa in the form of the manifestation of the discrimination (between Prakriti and Purusa) one absorbed into Prakriti is raised up again by her. Such is the meaning. Paravasyat' as purusarthatvat' i.e. through her being under the rule of the object of Purusa this is quite an unnatural meaning. The word paravasyat' is derived from the word paravasya which means under the influence of another so that paravasya should mean *subjection to another*. Aniruddha gives exactly this meaning for he means by paravasyat' paratantratvat' i.e. on account of subjection to another and by parah' he means atma' i.e. the Self or Soul. Now the question is: who is that Self? The answer is given in the next aphorism. He is the all knower and all doer." The word sa i.e. he evidently means Isvara, for he only can be all knower and all doer. But Bīṣṇa gives a different interpretation. He observes: "For he who was in the previous creation absorbed into the Cause (i.e. Prakriti) becomes in another creation the Advi or Original Purusa bearing the character of Isvara or the Lord all knowing and all doing because by reason of his absorption into Prakriti it is but fitting that he alone should reach the status of Prakriti. Thus according to Bīṣṇa sa i.e. he, refers to Purusa not to Isvara at all. But by his this interpretation he has committed some serious mistakes. The Purusas, who are absorbed into

Prakriti during the *pralaya* are those who have not as yet been released not those who have been already released and only the *unreleased* Purusas rise in the following creation and act according to their previous instincts. Now the question is: how can those unreleased purusas who are still under the bondage and have not as yet attained self knowledge can become the all knowing and all doing Isvara? Moreover it should be noticed that sa has a singular number and therefore indicates a *single* Purusa. Now the question is: which one of those numerous Purusas becomes all knowing and all doing Isvara? Either all of them or none must be so. Again Bīṣṇa himself admits in his explanation of the next aphorism that it is universally admitted in the Sūtri and the Smṛiti that there is proof of an eternal Isvara by means of proximity. The aphorism runs thus: The existence of such an Isvara is proved or admitted. The word *adrisa* here connects it with the preceding aphorism and means such is all knowing and all doing. But Bīṣṇa's interpretation of it makes these two aphorisms quite unconnected with each other because if sa refers to purusa sarvavit, i.e. all knowing and sarvakarta, i.e. all doing should qualify him and cannot qualify Isvara, i.e. Lord in the second aphorism. In that case the word *adrisa* will have no meaning or will have quite an unnatural meaning. These considerations lead us to the conclusion that the word sa refers to Isvara.

Aniruddha also gives exactly the same interpretation to the aphorism 56. He says: Of what form one may ask is the Supreme Self? To this the author replies: He is all knower and all doer—such atma i.e. self consciousness arises through its being reflected in Prakriti. He gives this interpretation to the aphorism 57 namely: Let the agency (of the Supreme Self) be just real (instead of being reflectional) what need one may ask of the supposition of (its being a) reflectional? It follows therefore that the very Isvara that is conceived in the Nyaya Darśana exists. In regard to this the author says: If (you mean to say) that the self as conceived by us is the Isvara let it be so. But there is no evidence in favour of the existence of an Isvara as conceived in the Nyaya

Darsana. And this has been declared in the aphorism (Book 192) "Because Isvara is not a subject of proof" and also in the aphorism (Book II 1) "Of Prakriti the agency or the becoming the procreatrix is either for the release of the released (or for her own sake)." Here Anuruddha clearly admits that the self spoken of in the preceding aphorism (ie aph 56) and as conceived by him, ie conceived as becoming all knowing and all doing through its being reflected in Prakriti is the *Isvara* and what he denies is the existence of that *Isvara* as conceived by the Nyaya Darsana ie as conceived to be *really* not reflectively all knowing and all doing. Consider herewith also the aphorism 116 chap V to wit During trance (or absolute absorption) profound sleep and release (Purusa rests in) the condition of being of the form of Brahman (Isvara). Here especially mark the word *Brahmarupata* what does it really mean? Anuruddha comments on it thus: The condition of having a similar form with Brahman on account of non perception of external objects anywhere but not the condition of being of the very form of Brahman. Vedant in Mahadeva gives it this interpretation the condition of being of the form of Brahman ie the not feeling of pain. Bijnana explains it thus Brahmarupata is the resting by being full of its own svarupa or intrinsic form by reason of the disappearance through the dissolution of the modification of Buddhi (intelligence) of the limitations caused by them as its upadhi or external investment. And he adds: And in our Shastra the word Brahman denotes conscious or intelligent existence in general which is all full and devoid of limitation impurity and the like caused by the upadhi or external investment but not as in the Brahma Mimamsa (Vedanta) merely a particular Purusa characterised by being the Lord. In this aphorism it is admitted at least by Anuruddha and Mahadeva that the author of the Sankhya recognises the existence of Brahman or Isvara, whose very form or a form similar to it the Purusa assumes in trance profound sleep and release wherein he is free from any external investment or embodiment which may impose limitations upon him. This also proves that the Purusa does not differ from Brahman or Isvara *essentially* but differs from him only when he takes an external investment or embodiment that is when he becomes *united* with Prakriti and her evolutes. If we consider these admissions carefully we can easily find that there is only one Absolute Purusa called Brahman or Isvara, who by uniting Himself with Prakriti assumes numberless different investments or embodiments and thereby differentiates Himself into infinite number of *ivas* or individual purusas. Bijnana's interpretation seems to be erroneous for if all the purusas attain *Brahmarupata* as interpreted by him in trance profound sleep and release what distinction remains between them? Do they not become *exactly alike* and thereby *one and the same thing*? How can they be exactly alike and yet remain many? Manyness implies distinction and without distinction there can be no manyness. So that Bijnana's own interpretation leads to the fact that all purusas are *ultimately one and the same* differentiations of one and the same Purusa there is only one Purusa, to wit, Brahman or Isvara who differentiates Himself into or appears in the

forms of innumerable purusas called *ivas*. Thus the last part of his interpretation is likewise erroneous.

Vedant in Mahadeva means by 'sa hi' the thing called Prakriti and that alone. This is still more absurd. He supposes that in the present aphorism the author discredits the view that there must exist some intelligent Being as the superintendent of the Non intelligent Prakriti and that He must be all knowing and all doing. He sur her adds: "Because as it belongs to Prakriti to undergo transformation it is quite possible for her to transform as the modification of knowledge. Such is the idea." But it is difficult to see how such a supposition arises at all. We have found that in the immediately preceding aphorism to wit the aphorism 65 the question arises To whom the Prakriti is subordinate? and that the answer is given in the present aphorism this is the view of both Anuruddha and Bijnana. So that Mahadeva's supposition is quite unreasonable and irrelevant, because it makes the present and the preceding aphorisms quite unconnected with each other. Another difficulty arises. How can Prakriti which is non intelligent, be all knowing? Mahadeva's explanation is curious. He tells us that as Prakriti alone is capable of transformation she can transform herself into being intelligent and therefore all knowing. But he evidently forgets that Prakriti can transform herself only *consistently* with her essential nature and that nature being *unintelligent* she cannot transform herself in such a way as to be *intelligent* because it will thus violate the law of transformation or evolution. It may of course be asked: How does then arise the evolvee Mahat or Buddhi ie Consciousness or Intelligence which is the first evolute of Prakriti? If Prakriti herself is non intelligent how does she give rise to Consciousness or Intelligence? The reply is it is a well known teaching of the Sankhya that evolution of Prakriti takes place by virtue of her union with the Conscious and intelligent Purusa and that the Consciousness or Intelligence of Prakriti is *apparent* being due to the reflection of *his* consciousness or intelligence upon her just as the redness of a crystal vase is due to the reflexion of the redness of a flower. Thus Prakriti's consciousness or intelligence is *borrowed* and *apparent*. By her essential nature she is unconscious and unintelligent. (This is only the popular interpretation of the Sankhya view but we shall prove in the sequel that it has a deeper meaning.) But it may still be contended that after her becoming conscious and intelligent she may also become *all knower*. But that is impossible for all knower means one who knows everything and Prakriti as an all knower must know that before she became all knower she did not know anything—she was unconscious and unintelligent—that is to say *before she was intelligent* which is absurd and self contradictory. For this reason we must reject Mahadeva's interpretation and hold that 'sa' refers to the Supreme Self or Isvara as is said by Anuruddha and not to Prakriti.

We may therefore conclude that the Self to whom Prakriti is subordinate and under whose influence she rises up to act or create is none but the all knowing and all doing Isvara. Now a difficulty may arise. The Sankhya in agreement

with the *Śruti* upholds that *Isvara* is inactive. How then can He be *all-doing*? The reply is as *Prakṛiti* acts under His influence and guidance. He may at least *indirectly* be called all-acting or all-doing or the *ultimate source* of all agency or activity just as a king to quote a simile from the *Sāṅkhya* itself is called a fighter although he does not *actually* fight but his soldiers do so under his order and guidance. This is the common answer but I shall prove in the sequel that *Isvara* is the *real doer* and *Prakṛiti* is His *instrument* only.

Let us now turn to a more authentic treatise on the *Sāṅkhya* Philosophy I mean the *Sāṅkhya* *hankā*. Is there any positive evidence in it with regard to the existence of *Isvara*? I think there is. In two significant verses it is positively declared that there is one Absolute *Puruṣa*, i.e. the Supreme Self as there is one Absolute *Prakṛiti*. Examine these two verses. The manifested is caused non-eternal limited changeable multi-form dependent attributive conjunct and subordinate the Unmanifested is the reverse—10 The Manifested has true constituents and is indiscreetly objective generic (i.e. enjoyable by all souls) irrational and productive. So also is *Prakṛiti*. Soul is the reverse in these respects as in those—11 Mark the last sentence i.e. the Soul is the reverse in these respects as in those. This means that *Puruṣa* or Soul possesses attributes which are opposite to those possessed by the Manifested and therefore are these *Puruṣa* is uncaused eternal all-pervading unchanging one independent indissoluble uncombined self-governed destitute of the three constitutive factors—discriminative, subjective, specific, or individual rational and unproductive. In this list we should mark one attribute of *Puruṣa*, namely *one* Soul or *Puruṣa* is said here *to be one*—this is a very significant word which has been the cause of much dispute among the annals. Therefore upon its true interpretation entirely depends the solution of the problem whether Soul is one or many. *Gauṛapada* says the Manifested is multi-form the Unmanifested is *single* so is *Puruṣa* also *single*. *Vachaspati* gives a different interpretation. "Let it be that *Puruṣa*, like *Prakṛiti* is uncaused eternal etc., he like the manifested is also *many*. If so why do you say that *Puruṣa* is opposite to the Manifested? For this it is said (that *Puruṣa* is) like the manifested *also*. Here *cha* means *and*." This interpretation of *Vachaspati* arises as he says from the verse 18 which declared the multitudinousness of *Puruṣa*. The *Sāṅkhya* *Chandrika* confirms the interpretation. Prof. Wilson seems to side with *Vachaspati* and observes. The general position that the properties of Soul are the reverse of those of the products of nature requires however some modification in one instance. A discrete principle is said to be multitudinous, many *aneka* consequently Soul should be single *eka* and it is so according to the *Sāṅkhya* *Bhāṣya*. On the other hand, the *Sāṅkhya* *Tattva* *kaṇḍa* makes Soul agree with discrete principles in being multitudinous.—The *Sāṅkhya* *Chandrika* confirms the interpretation. The phrase *tatha cha* implies that (Soul) is analogous to discrete principles in manifold enumeration. This is, in fact, the *Sāṅkhya* doctrine as subsequently laid down by the text verse 18 and is conformable to the *Sūtra* of *Kapila*. Multitude of souls is proved by variety of condition that is the

virtuous are born again in heaven the wicked are regenerated in hell the fool wanders in error the wise man is set free. Either therefore *Gauṛapada* has made a mistake or by his *eka* is to be understood not that Soul in general is one only but that it is single or several in its different migrations or as Mr. Colebrook renders it (R. A. S. Trans. Vol. I p. 31) 'individual'. So in the *Sūtras* it is said that there may be various unions of one Soul according to difference of receptacle as the ethereal element may be confined in a variety of vessels. This singleness of Soul applies therefore to that particular Soul which is subjected to its own varied course of birth death bondage and liberation for as the commentator observes one Soul is born not another (in a regenerated body). The singleness of Soul therefore as asserted by *Gauṛapada*, is no doubt to be understood in this sense.

Vachaspati's interpretation seems to be strained and inconsistent with the tenor of the verses 10 & 11. If *tatha cha* means really like the manifested also it is very difficult to see why such likeness should be in respect of one attribute only to wit *onekatvam* and not in respect of other attributes as described in the verse 10. If the *Puruṣa* resembles the manifested in being many why he should not do so in being caused non-eternal, limited etc. *also*? *Vachaspati* does not explain this distinction. But yet it may be contended by others that the attributes of being caused etc., are not applicable to *Puruṣa*. *Puruṣa* cannot be conceived to be caused etc. for if he were caused etc. he would be one of the manifested and this would be manifestly inconsistent with the verse 3 where it is expressly said that *Puruṣa* is different from both *Prakṛiti* and the effects or the manifested. The reply to this contention is if *Puruṣa* is distinct from the manifested he is also distinct from *Prakṛiti* but yet he resembles the latter in being uncaused etc. why should he not then resemble the manifested in being caused etc.? The retort will of course be that two contradictory series of attributes cannot be possessed by one and the same thing. That is not true. One and the same thing may possess opposite qualities. Really there are no opposites but are different all things have their own places in the universe and when they are in their own places they are perfectly consistent with one another opposition and inconsistency arise when they are misplaced. So that apparently opposite things may be juxtaposed without contradiction by being placed in their own positions. Thus *Prakṛiti* which is admittedly one contains the condition of being many for otherwise, she could not be differentiated into many. If she were mere one—abstract one—bare or homogeneous identity coupled and confined absolutely within herself she could not go out of herself into the many. Consequently her *one-ness* includes the ground and condition of *many-ness*—she is *one-in-many*. Similar is the case with other attributes she is uncaused and caused eternal and non-eternal infinite and limited etc. at the same time. If she were merely uncaused eternal infinite etc. and did not contain the ground and condition of being caused non-eternal limited etc. nothing which is caused non-eternal limited etc. could come out of her—there could be no creation or revolution. But the author of the *Sāṅkhya* is intelligent enough to maintain that *Prakṛiti* is not such a bare

unity but she is a complex unity of various constitutive elements called *Sattva*, *Rajas* and *Tamah*. In fact Prakriti as the whole contains attributes peculiar to herself and so far differs from the manifested and also those attributes possessed by the manifested as her parts or evolutes and so far resembles them. This view is not inconsistent with the teachings of the Sankhya the Sankhya doctrine of *Causality* corroborates it thus in the verse 9 it is said "Effect subsists in the cause antecedently to its operation" for what exists not can by no operation of cause be brought into existence. Materials too are selected which are fit for the purpose everything is not by every means possible what is capable does that to which it is competent and the effect is of the same nature with the cause. In this verse particularly mark *karanabhata* i.e. (the effect has the same characteristics as the cause has)—(Ganapada) or from the fact that the effect has the same essential nature as the cause—(Vachaspati). Now if we apply this doctrine to Prakriti and her products how can we say that she is *merely* one uncaused eternal etc.? and that the products are *merely* any caused non eternal etc.? If the cause and the effect are of the same nature they must possess common characteristics though after the manifestation the effect assumes a new form and comes to possess also some other characteristics by virtue of which it differs from the cause. But this does not imply that those other characteristics are such that their ground and conditions are not in the cause for if they were not in the cause the effect would contain some characteristics the cause of which was not its cause, but *something else* that is to say its own cause was not its *adequate* cause and would require to be supplemented by some other cause. What would that other cause be in the case of the manifested? The Sankhya does not recognise any other cause than the Prakriti so that Prakriti must be recognised as the *only adequate cause* that is to say the cause which contains the ground and conditions of all the characteristics possessed by the manifested. This conclusively shows that Prakriti possesses two antagonistic sets of attributes—one set she possesses in her own essential capacity to wit, as the *whole* and another set in her another capacity to wit as the products or differentiations.

The above argument shows that a thing may possess contradictory attributes and in fact every thing in the world possesses contradictory attributes for instance everything is *one* thing possessing many attributes—everything is a *single whole* constituted by many parts of elements or in other words everything is *one* in many unity in variety. The same is exactly true of Purusa he is *one* in many uncaused; he is *caused* eternal; he is *non eternal* infinite in the finite etc. he is *one* Purusa differentiated into many purusas he is *uncaused* cause of all the *caused* effects he is *eternal*, appearing as and in all *non eternal* things and beings he is *infinite* including all *finite* things etc. If the Purusa were a *bare* or *abstract* one a bare undifferentiated identity—there could be no many purusas if he were merely *uncaused* containing no ground and conditions of the caused there could be nothing *caused* if he were *merely* eternal and *infinite* containing no ground and conditions of the *non eternal* and the

finite there could be nothing that is *non eternal* and *finite*. Or in other words, though Purusa is *essentially* one uncaused eternal infinite etc. yet he *appears* to be many caused non-eternal, finite etc. And there is an interpretation of *tadviparita tatha cha puman*, which confirms the above inference. It may mean that *Purusa* is *both opposite and analogous to them*. This interpretation seems to me *true and sound* I shall dilate upon this point in the sequel. The interpretation offered by Prof. Wilson and Dr. Colebrooke that Purusa is one in the sense that he remains single or individual throughout his numerous migrations is evidently absurd.

The whole difficulty seems to arise from the *apparent* impossibility of reconciling the verses 10 & 11 with the verse 18. The latter runs thus

Because birth death and the organs are severally allotted and because activity is not simultaneous, and also because the factors are found unequally the multiplicity of souls is established. This verse, it is evident, tries to prove the multiplicity of souls which is therefore, apparently inconsistent with the verses 10 & 11 where the unity or singleness of soul is asserted. From this *apparent* inconsistency arises the attempt to modify the meaning of the latter consistently with that of the former. But no attempt has been made to reconcile them without modifying the meaning of either. Are the verses really inconsistent? I do not think so. The truth is the verses 10 & 11 (we should always read these two together) speak of Purusa in his *absolute* character i.e. of the *Parama Purusa* or the *Absolute Soul* while the verse 18 speaks of purusas in their *relative* and *individual* character i.e. of *jivas* as associated with external investments or embodiments. Or in more familiar words the former speak of *Isvara* or the *Infinite Self* and the latter of human or individual souls. It may be objected that the Sankhya recognises only twenty five categories one of which is Purusa so that it speaks of only one kind of Purusa, not two and that one kind of Purusa must be that who is associated with the manifested i.e. the Consciousness or Intelligence self-consciousness *Manah* the ten organs of sense, etc. and is therefore *multitudinous*. This is certainly not true. We have already found that the Sankhya *Pravachana* Sutra speaks of two kinds of Purusa, the Infinite Purusa or *Isvara* and the finite and confined purusas or *Jivas*. Similar is the case with the Sankhya *Karika*. It is true that the latter does never even mention the word *Isvara* in any of its verses but it is perhaps because the word

Isvara bears different meanings and especially it is not used in the *Srutis* as equivalent to Brahman the truly Absolute Self or it may be because the Sankhya *Karika* does not recognise any essential distinction between the Absolute and the human Soul, the latter being nothing but the individualisation or differentiation of the former. But whatever might be the reasons it is certainly no sound argument that as the Sankhya *Karika* does not mention the word *Isvara* it does not recognise his existence at all. I am going to show that by the word Purusa or the Soul the Sankhya *Karika* means sometimes the Absolute and sometimes the Relative Soul sometimes the Brahman and sometimes the *Jivas*.

Examine the verse 18 a little more closely and we shall find that the reasons for which it declares

Purusa to be multitudinous, do not really prove him to be so. Birth, death, the organs, activities and the three *gunas* all belong to or are adjectives of Prakriti or more properly of her evolutes and none of them belongs to Purusa, inasmuch as, being essentially eternal and infinite, he cannot be born nor die, being all pervading he cannot have any organs of sense, being in active he cannot act, and being non composite he cannot have the *gunas*. Therefore what the different allotments of birth, death and the organs, the unsimultaneous character of activities and the inequality of the three *gunas* really establish is not the multiplicity of Purusa, but that of the *Upadhis* or external investments in and through which Prakriti manifests herself when conjoined with Purusa. We should be more explicit in this point because it is the most important one. The concrete man has two sides or aspects: he has a *rational* side and he has also a *non-rational* or *natural* side the latter including according to the Sankhya everything which is found in man except his Self or Soul or in the words of the Sankhya, he has a side which is represented by the *Purusa* and he has also a side which is represented by Prakriti or the shapes of the external investments, namely the Consciousness or Intelligence, the Self-consciousness, the Manah, the two organs of sense, the five subtle Elements and the five gross Elements. The concrete man is the synthesis or union of Purusa and Prakriti—of the Self and the Not-Self—of the Subject and the Object. In short the concrete man is a *subject-object*, Purusa or the Self or the Subject in him is infinite, unchangeable, eternal all pervading inactive (in the ordinary sense and beyond all attachment) but Prakriti or the Not-Self or the Object in him is actually finite, changeable, temporal, non pervasive, active and attached Birth, death, etc. are therefore, characteristics of the latter side of man while the former is above and beyond them all. Thus we find that the verse 18 does not mean to establish the multiplicity of Purusa, which is impossible but the multiplicity of the *upadhis* or investments in and through which Prakriti becomes associated and conjoined with Purusa giving thereby rise to multitudinous *jivas* or human beings. Furthermore, it is evident that the verse 18 indirectly establishes the *unity* or *oneness* of Purusa, and thus confirms what is affirmed in the verses 10 & 11 with regard to his oneness.

But it may still be asked. As the verse 18 clearly declares the multiplicity of Purusa how can it be reconciled with his unity or singleness? Or in other words *how can Purusa be one and many at the same time?* This is undoubtedly one of the most important problems of metaphysics. This raises the old problem of *the one and the many*. The instance in point is man himself man himself is one and many at the same time. He is the unity of Purusa and Prakriti—of the self and the not self, he is a subject object. In whatever way either by proximity or otherwise these two distinct and opposite realities are united in man it cannot be denied that he is a unity in variety—an *one many*. But only this will not solve the problem. We are to prove that there is one Absolute Purusa and that all other Purusas are nothing but His individualisations or differentiations. In this way

only we can solve the problem of the one and the many. What does the Sankhya say about it? Let us consider in the Sankhya Karika and also other treatises on the Sankhya, Purusa is defined in a *general way* although they assert that there are many Purusas that is the individual purusas are not *separately* defined but have a *general* definition. They are all infinite unchangeable all pervasive eternal rational etc. that is they all have exactly the same set of attributes. Thus they are all *exactly the same* but, yet they are distinct and many. How is that possible? That may be possible only on the supposition that there is *really one* Purusa and all other purusas are His individualisations or differentiations. Or in the words of the Sankhya every particular purusa is the Absolute Purusa in so far as He is associated and bound up with Prakriti in a particular way. This is the reason why the Sankhya calls every particular purusa infinite, eternal, all pervasive etc. No other solution is possible. For every Purusa is perfect, and yet, there are numerous Purusas—these two expressions are inconsistent, if we suppose them *absolutely different and independent*, inasmuch as they will then limit one another by virtue of their absolute differences and will thus destroy their own perfection. Many beings perfect in the same sense and in the same way and yet *absolutely different* is a self contradictory assertion.

If we now come to the Sankhya Sutram we find the same conclusion about this point. After establishing the multiplicity of the Souls see chap. I 145 and chap. VI 40) it says. From differences of upadhis or investments also arises the appearance of multiplicity of the one Self as of Akasa by reason of water pots, etc. Anuvadda and Bijnana suppose that this aphorism represents the view of the Vedantins which the author of the Sankhya means to refute. But there is no evidence to defend their views. Compare this aphorism with the aphorism. The teaching of the Sruiti about the going of Purusa is in respect of his external investment, as in the case of the Sky (ibid 51). Bijnana explains this aphorism in this way. There are of course Vedic declarations about going with reference to the Purusa. But these should be regarded as having been made certainly in accordance with the arguments and teachings of the Sruiti and Smriti about the universality or all pervading character of the Purusa and therefore only with reference to his connection with an external investment in the same way as motion may be attributed to the sky. Such is the meaning. On this point the evidence is as follows. As the sky enveloped within the water pot, seems to move while the water pot is carried (from place to place) (whereas in reality) the water pot is removed and not the sky so the *jiva*, the embodied self which is like the sky (in this respect)—*Brhama Bandu. Upanishad. 13*. Read this with the aphorism 59 of the chapter vi which runs thus. And in accordance with the Sruiti about its going though the self is all pervading there takes place in the course of time its connection with the place of Experience through conjunction of the Upadhi—just as in the case of the sky. Here Bijnana evidently admits that those aphorisms represent the views of the author of the Sankhya that the Soul is essentially one, eternal and all pervading but appears to limit

itself by embodiment and thereby appears to be distinct. Thus we find that the interpretation given to the aphorism 150 (chap I) by Bynana is evidently mistaken and inconsistent with his interpretation of the last two aphorisms. To avoid misunderstanding we should also read the aphs. 151-154 which are connected with the aph 150.

The aph. 151 runs thus 'The Upadhi or investment is different, but not the holder thereof.' What this really means is, just as the Akasa appears to be different on account of the differences of its *upadhi* for instance water pot etc. but really it remains identically the same so the Soul remains essentially the same though appears to be different by reason of his different embodiments. Anuruddha and Bynana interpret it in a different way consistently with their interpretation of the aph. 150. But we have shown that their interpretation of the aph 150 is erroneous therefore, their interpretation of the present one is also erroneous.

The aph 152 is 'Thus, there is really no imputation of contradictory attributes to the Soul which is present everywhere by its unity.' This aphorism is an answer to the objection that if the Soul be really one, how can it become multiple, and thereby can it have contradictory attributes, namely unity and variety at the same time? Anuruddha and Bynana have given to this aphorism a different interpretation but our remark on it will be the same as that of the preceding.

The aph 153 runs thus 'Being the property of another, i.e. Prakriti, it (the property of multiplicity) is only imposed upon the Soul but really it does not belong to the latter on account of its unity or oneness. Or in plain language the aphorism means to say that the attribute of multiplicity really belongs to Prakriti, but when she becomes conjoined and associated with Purusa who is essentially one the latter appears to be different and multitudinous. Or in the words of modern philosophy the One Absolute Soul appears to be differentiated into numerous souls. Anuruddha and Bynana give a different interpretation but it is as mistaken as their interpretations of the preceding aphorisms.

The aph 154 is this 'There is no contradiction (by the Sankhya theory of the multiplicity of Purusas) of the Vedic declarations of non-duality (of Purusa) because the reference (in these declarations) is to the *genus* (of Purusa)'. This aphorism raises a new problem and suggests a solution of the difficulty raised in connection with the inter-

pretation of the verses 10.11 and 18 of the Sankhya Karika, as mentioned before. Some suggest that by the unity of Purusa is meant the unity of the *genus* whereas by the plurality of Purusas is meant the plurality of the *species*. That is to say, when the Purusa is called one it is regarded as the *genus* and when the purusas are called many they are regarded as the *species* or more properly *individuals*. But we should guard ourselves against the confusion between two meanings of the word 'genus'. In Formal Logic, *genus* is an abstract notion representing only the common attributes possessed by a class of objects. Thus *genus* is not a concrete reality, but a group of attributes while the *individuals* are the concrete things or beings possessing those attributes. In this sense of *genus* and *individuals*, what are *real* and *concrete* are the *individual* purusas and the One Purusa is nothing but an *abstract* notion expressing the common attributes of the individual Purusas and has thus no existence as a *real concrete object*. This is certainly not the true meaning of the One Purusa, as we have shown before. The term 'genus' has another meaning. In metaphysics 'genus' is not an abstract notion but a *concrete reality* and the true reality of which the individual things are only differentiations, modes or moments. (Hegel and the Neo-Hegelians). In this sense of *genus* and *species* the One Absolute Purusa is the true concrete reality and all the individual Purusas are His individualisations or differentiations, and are, therefore as real as the former. This is the meaning of the terms 'genus' and 'species' with the author of the Sankhya Karika when he speaks of Purusa as both one and many at the same time. It must be noticed here that those, who contend that the notion of the unity of Purusa is an abstract genus-notion representing only the common attributes of the concrete individual Purusas, completely forget that according to the Sankhya there are no differentiating attributes by which the Purusas may be distinguished from one another, and we have proved already that the only so-called differentiating attributes to wit, birth, death, etc. are *not* the attributes of Purusas, but of the physical bodies or investments with which they are associated. So that in the absence of any differentiating attribute or attributes there cannot be *multitude* of purusas in short, there must be *one and only one* Purusa associated with numberless different investments and thereby differentiating Himself into multitude of purusas or *ivas*.

(To be continued.)

PRESENT-DAY TURKEY

By INDU M. DAS

THE rapid changes and the radical reforms imposed on Turkey one after another cause even the most liberally-minded people in Europe to doubt whether they would endure. They fear a reaction in a country where most of the people stumble in ignorance and illiteracy and where most

people's minds are engrossed in religious fanaticism and superstitions, a reaction is not very difficult to bring about. There may be a restoration of the Khalifa. One is reminded of the subsequent happenings of the French revolution. One cannot anticipate parallel happenings in Turkey but one is sure that if

the people are determined to have a popular government it will be rather difficult to establish the old regime again.

The antagonistic newspapers exaggerate the dangers of the Turkish republic and exult in narrating how Mustapha Kemal Pasha is growing more and more unpopular so that he does not even venture to show himself in Constantinople. There may be some slight truth in this statement. Kemal Pasha whoever he may be a hero or an adventurer is not after all a goody goody man. He has friends who side with him as well as enemies whose privileged interests he has smashed and who are seeking opportunities to strike him down. This is the common story of all great statesmen.

When I was travelling from Sofia to Constantinople I chanced to make friends with several Turkish youngmen who were coming from Vienna. They received their education abroad and it is needless to say that they were very liberally brought up. I had a talk with them and our conversation turned to the subject of the reforms in Turkey. They belonged to the party of Kemal Pasha. They wholeheartedly supported the reforms as indispensable for the growth of the country and declared that a reaction in favour of the Sultan would be impossible inasmuch as the republican government has been trying to be popular by making the people conscious of their material interests.

The incessant wars and reverses in the past have taught the people of Turkey the bitter lesson that their customary religion is not the be-all and end-all of life. To survive in the struggle for existence they must be at least equal if not superior in all points of strength to their European adversaries. It has therefore been possible without alienating the people to break with the ruling dynasty and abolish the Khalifat and establish the Turkish republic. These salutary steps have no doubt estranged the hearts of Indian Mahomedans, who sympathized with Turkey during its wars with Greece and who wanted to see the Khalifat strengthened. But Turkey had to choose between its welfare and the upkeep of the Khalifat, which had checked and retarded the progress of the country. It could not sacrifice its welfare to satisfy the religious whims of its foreign correligionists. A republican government cannot afford to let the members of the ruling dynasty remain in the country to foment secret intrigues in order to recover

its lost supremacy. It must look to its safety and though it was a hard blow to the religious Mahomedans in India, the Khalifa Mahomed Abdul Medjid Effendi and all the members of the dynasty who asserted gauched at the vitals of the country were banished altogether. It is with some bitterness that my Turkish friends spoke of the avarice, tyranny and debauchery of the late Sultan.

At present the Fez has been penalised. It has been considered as the symbol of loyalty to the Khalifa. But the abolition of the Fez my friends said is not politically so important as it is morally. The Fez is not an ugly thing but it is simply unbearable that people should still cling to a fashion introduced centuries ago in the blindness of their religious zeal. The fact bears testimony to the stagnation of men's minds unable to conceive new things. The dynamic mind would not suffer an everlasting and unchangeable system of things even in matters of dress.

Mustapha Kemal Pasha suggested the European hat in lieu of the prescribed Fez, and the people spontaneously adopted it. The fact is that Mustapha Kemal Pasha wants Turkey to grow up and be totally like an advanced European country not only in activities but in exterior appearance too. The tradition has been broken and the women have been relieved of their *borghas*. A casual look in the streets of Constantinople convinces one that the people are giving preference to European dress. The puffed up trousers, the many buttoned coats are very rare. The women have scarcely veils and the long dark robes that covered them from head to foot have totally disappeared. There is a prevalence of blouses and frocks and a predilection for the latest Parisian fashions. This tendency is contemptuously decried as the aping of European culture by many who fear that Turkey will ultimately lose its individuality and be a slave to European fashions. Whether Turkey is justified in copying European apparel or not is not a matter of discussion here. Anyhow these outward aping or whatever they are called reflect no credit on the inner culture or progress of the country. Nevertheless, the changes in dress and habits are quite asounding as they have been brought about in a very short time. It is a joyous sight no doubt to see the women move about freely and go out shopping themselves. Many women are em-

played in business houses as typists and sales girls. Undoubtedly it was a cruel affair to shut them up in the harems. The fashion of bobbed hair, I noticed, has not been so profusely introduced in Constantinople. Many of the young women have still long hair and instead of wearing hats, they wind very gracefully a piece of silken scarf of chequered colours on the head and knot it behind beneath their shingles. Still, there are open armed blouses, short frocks, skin colour stockings, high heeled shoes and a small leather bag in hand to carry powder and perfumes. The oriental bondage has been severed and it is very doubtful in case of a reaction whether they would let themselves be shut up again without a severe protestation.

In the interior of Turkey where the light of the new era has but dimly penetrated one meets frequently with the oriental costumes. The women are clad in perpetual flowing *ghagras* wrapped up in chequered scarfs and veiled with *borlas* as before. But the men have mostly taken up coats and trousers. The educated people are open to European modes, the women folk of the lower level are still being shut up. One of the observers has attributed their disregard for European culture to their resolute and obstinate character hardened by religious injunctions which no law can ever break, but I think, when the tide has been set in motion it will sweep away in time their obstinacy of character if any, and leave them as Europeanised as their fellows in Constantinople. Even in Adana and Mersine the tendency to imitate Europe is distinctly visible.

The republican government has forbidden religion to interfere in any way with the administrative functions. Turkey comprises not only the Mahomedans but also a great number of Christians and Jews. Turkey must consolidate its power and this can only be done by uniting all the people of diverse religions in one national cause. 'Turkey and Islam next' has been the motto.

In February, a new code of civil laws universally applicable to all the communities has been compiled and adopted, through which the state can administer impartial justice and look after the social and economic welfare of the country as an integral whole. If the laws governing a society of different religions derive their inspirations from one predominant religion they are likely to be despotic. On the other hand, if different

laws are promulgated for each of different religious communities, that is, if capitulations are made to the minor sects, the political and social unity of the nation is liable to break up. Already, the smaller communities, who had been considering themselves as foreigners and clamouring for capitulations, are being merged in the Turkish nation and the need of such communal representation, as is in vogue in India, is being smoothly dispensed with.

The Government has also put down the religious institutions called Madrasahs and Tekkies, which had been asylums of ignorance, fanaticism and obscurantism, and is establishing state primary and secondary schools for free mass education. Education is not widely spreading owing to the lack of sufficient number of teachers. So great care is being taken to train up teachers first. In villages where the peasants' children have to help in agricultural work, periodical schools have been set up which the children must attend two or three days in the week.

There has been recently a new movement by the literary people to do away with Turkish characters and adopt Roman characters for the Turkish language. The idea is very bold. Even in Europe there is not one uniform set of characters. The German language has Roman as well as Gothic characters and the Slavonic languages have partially different characters. The composing of the Arabic types for the purpose of printing is very troublesome. The Chinese, Japanese and even the Indian languages have characters which cannot be as smoothly and as quickly composed as Roman characters. The movement of latinising the Turkish script is being carried on vigorously and the minister of education in Turkey has appointed a committee of specialists, to examine the matter and give their opinion. Already the daily 'La Republique' is publishing Turkish texts in Latin characters. The decision of the specialists, if favourable, will create an absolutely new epoch in the history of mankind.

The condition of the public works in Constantinople is lamentable—the roads are neglected, there is dirt and dilapidation everywhere. Apart from the natural scenery of the Bosphorus and the Golden Horn which are really beautiful, Constantinople has nothing to glory in. The ancient mosques with impressive minarets and minars have an environment of squalid houses. The roads

have big holes full of filthy water in wet weather and the narrow lanes are abominable. The transference of the capital to Angora has left Constantinople quite neglected. Still it is a world's metropolis. This neglect has been due to the constant warfare that Turkey waged for a long time and the repairs and mendings are now costly affairs, which Turkey cannot afford at once owing to the lack of money.

Agriculture in its present state seems not very promising. Huge tracts of land are lying waste and desolate in European Turkey and Asia Minor. Peasants are not many and consequently there are fallow and weedy lands. The greater part of Asia Minor is absolutely barren, the rocks and hills are frightfully bare of trees. But about Smyrna, Konia, Adana and Mersine one can see luxuriant vegetation and crops. Government is also encouraging agriculture and extensive irrigation, and canals are being dug in Anatolia to water the lands.

After all that I saw and heard I can very safely state that the people of Turkey have been always active and have

ever been praised as hardy and excellent soldiers. It is only the folly of the ancient regime which brought disasters on them and carried them to the verge of inevitable wreckage. The people were taxed unnecessarily and no attempts were made to educate them. Madrasahs and Tekkies had been spreading ignorance and fanaticism and thereby weakening the morals of the people. They were guided on to the battle fields not for their own interest but to satisfy the avarice of a set of the voluptuous privileged. Turkey owes its deliverance from this horrible state of affairs to one single man—Mustapha Kemal Pasha, who is infusing a new spirit into the life of the people by organising the state on a solid economic base. Through his inspiration the people are intent on absorbing all that European culture has got to offer. And whilst Turkey carves its own destiny and makes for prosperity with bold strides, a wretched community of a wretched land looks on with suspicion and ignorantly sheds tears for the exiled dynasty of an unfortunate and obsolete Khalifa.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses etc. will not be noticed. The receipt of books received for review will not be acknowledged nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor M. R.]

Oxford University Press

It often happens that owing to lack of space or a necessity for making room for articles on events

that have suddenly cropped up it is impossible for a monthly magazine to do more than merely acknowledge books sent to it for review. This involves some injustice to those that deserve more than a mere mention. Such books of course are noticed elsewhere but readers of a magazine like to have their attention especially directed to what is of value in the publishing world. Some books are interesting for the moment. When once read they can be put away and never or at any rate very seldom referred to again. Others are of a more permanent value, and it occasionally serves a useful purpose to bring them down from their shelves and remind readers that there are such books in existence. The Branch of the Oxford University Press is an acquisition to Calcutta. It is continually issuing publications which besides being a pleasure to serious readers are useful to students of all classes. To lovers and students of literature the exhaustive work of Mr. Murry entitled Keats and Shakespeare is valuable. Tho.

pleasure of reading it is enhanced by its excellent get-up—the paper and print being exceptionally good. Mr Murry starts his task with the proposition that to know a work of literature is to know the soul of a man who created it, and who creates it in order that his soul should be known. To Mr Murry Keats is the natural approach to Shakespeare. Hence the title of the book and the form which it has assumed. He thinks that he is different from other critics in that he has tried to understand Keats as he was, and not to fit him to some pattern. He discovers that Keats was conscious of the strange relation between himself and Shakespeare, not to that inanimate Shakespeare which is the name given to a volume of printed words but to a real presence a living being, whom Keats believed that he intimately understood and who made demands upon Keats' loyalty from which in his moments of extreme agony he struggled in vain to escape. The whole poetic story of Keats is contained in the brief span of four years. Mr Murry's chapters are concerned with the gradual development of Keats. Copious extracts are made from his letters which might have been better marshalled but which give a very clear impression of Keats' state of mind. Beauty in all things was Keats' great poetic intuition and the revelation of the beauty the great human purpose to which he dedicated himself especially interesting are the chapter on the first Hyperion and the second Hyperion and on Keats' love. The book concludes with a chapter headed Keats' return to Shakespeare. Mr Murry points out that the famous Ode to Autumn is Shakespearean in its rich and opulent sincerity of mood. To its lovely and large periodic movement like the drawing of a deep full breath. There are a few notes at the end which deal with technical matters raised in the body of the book. That it is a comprehensive study must freely be acknowledged that Mr Murry has been carried away by his subject to such an extent that he is at times obscure, and at times too factitious for full appreciation from his readers is evident. He has made himself wholeheartedly one with his subject and is at times apt to forget that opinion are diverse and no one man can claim to be an infallible interpreter. Keats is a poet whose inspiration to Indians is never fading. He is the English poet who perhaps most of all influenced Rabindranath Tagore. There is something in Keats that must always appeal to the emotional side of the oriental mind. As the years go on his position amongst the poets is found to be higher and higher. Mr Murry's book has given much material for public contemplation in the study of Keats. He has helped to show some new aspects of his beauty. The obvious sincerity with which Mr Murry writes, has the effect of inducing one almost against one's will to agree with his point of view. It would of course be impossible to follow Mr Murry through all his theories. It is sufficient to give this indication that every lover and student of Keats will find in this book a wealth of information and extracts which make Mr Murry's contribution to the study of the poet of beauty a notable book.

Essays and Studies. Volumes A & B are collections of essays of members of the English Association which contain much of interest and information. Volume A which is collected by E. H. Chambers contains six essays the most interesting

of which are 'Reason and Enthusiasm in the Eighteenth Century' by Oliver Elton and 'Alan Ramsay and the Romantic Revival by W. Macaulay. The other essays with the exception of the life of Bishop Corbett by E. V. Crompton, are of a mere technical nature. One cannot however omit to notice Ethel Seaton's 'Marlowe's Map' which well repays careful study. Volume B which was collected by Oliver Elton of special interest in this series is the article by Miss Edith Bukhead of 'Sentiment and Sensibility in the eighteenth century novel'. Novelists have travelled far since the eighteenth century, so that it is not unprofitable occasionally to go back thereto and renew acquaintance with older novelists by means of such essays as these. This world's ideas of the text is a summary of vision literature of the great legend and in these days of spiritualism and spiritualists it is a useful study. 'The Words and the Play' by Alan Monkhouse is a discussion on how far the words of a play should be subordinated to its other features, the scenery and the action. Mr Clark's view that the figures and visions induced by great words can better be brought before the eye and so into the soul of the audience if the artist concentrates on that which appeals to the eye than if that which appeals to the brain, and that which appeals to the ear is making simultaneous confusion. Mr Monkhouse in his short essay controverts this point of view. The essay appears in a collection published in 1925 but it is still up-to-date. So also is Mr Basil Blackwell's 'The New Past'. As from the Oxford University Press so from Mr Basil Blackwell—(whose place in the Broad at Oxford is one of the attractions of the city)—one expects much, and is not disappointed. 'The New Past' is the outcome of a conference held at Aberystwyth University in 1924. The volume was published in 1925 and consists of a number of essays on the development of civilisation. They include such subjects as 'some origins of civilisation' by H. J. Rieu, 'The Biblical Record' by Alexander Nairne, 'The Problem of Political Unity' by Ramsay Muir, 'Britain's Place in Western Civilisation' by F. S. Marvin. It is a handy little volume and though published some time ago is full of helpful matter for students of the problems of to-day.

So far as English Literature is concerned, The Oxford University Press see to it that students have a plentiful supply thereof at a very moderate price. The volumes in the world's classic series are excellent compilations which the editors spare no pains to make accurate. Hazlitt's 'Lectures on English Poets' is one of these, and it enables any student of English Literature to get at a very reasonable price a book which will be useful to him in his studies. Boswell's life of Johnson has not as yet lost all its popularity, in fact, in some quarters it is as popular as ever. The publication of Boswell's note-book from which he eventually compiled the life gave the reading public an opportunity of seeing how careful Boswell was to record every matter he considered of importance and how faithfully he has transmitted from his note-book when writing the life. The note-book is published on one side of the page and portions by the first edition of the life on the other side. There is a reproduction of Boswell's handwriting at the beginning, this is a slim booklet and a very

acceptable one. Mr H W Garrod's edition of Coleridge is an excellent piece of work and will prove of much use to students besides being a welcome addition to a library. It consists of notes on Coleridge's life, essays by various writers on Coleridge—a careful selection from his poetry and prose, and a few notes. Soithey's *Uneducated Poets* will perhaps not be of so wide interest but it is pleasant to have an opportunity to stroll occasionally down the bypaths of English Literature and this volume supplies that opportunity. A frequent question asked by those who wish to know something of very modern poetry is—can you recommend a small anthology of modern verse—comprehensive and not too expensive. There are several somewhat bulky anthologies but of small ones perhaps booklets such as Treiler's *First and Second Books of Modern Poetry* and Mr J. C. Smith's *Book of Modern Verse* are among the best. One has nothing but praise for Mr Smith's selection. Published in 1935 every one of its sixty-three pages contained poems of value, and a large number of modern poets that are of matter are included. A young student could do no better than begin with this collection which will also appeal to those who have had somewhat wider opportunities of reading modern poetry because in a small space it contains much that they have appreciated.

KESHUB CHANDRA SEN AND THE SCHOOLS OF PRIESTS AND VOY PROTESTS *By Gour Prasad Maumdar* Pp 439 Price. Re 1

The author has invoked the spirit that once transformed the reformed Brahma Samaj into a Pandemonium. The spirit is still doing havoc in the Samaj. Deplorable.

BHANNUDAS *A translation from the Bhakti Jaya* By Justin E. Abbot. Printed by the South Indian Industries Co Ltd. Poona. Pp XIV+48+56

Bhannudas was a poet saint of Maharashtra and was the great grand father of Eknath.

Mahapati has written the story of Bhannudas in the 42nd and 43rd chapters of his *Bhakti Jaya*. Our author has given a readable translation of these two chapters. The Marathi text is given in Appendix I. There are five more appendices in which the author has given the Marathi texts of what was written by other writers.

The author is thinking of issuing a series containing the stories of the Marathi Saints. Bhannudas is the first book of the series and will be followed by the story of Eknath.

This is the only English book on Bhannudas and will we hope be read by those who take an interest in the subject.

MAHES CH. GHOSH.

"WALT WHITMAN" *By John Bailey* (English Men of Letters Series) Macmillan 5s

One does not know if the intention of the present editor of this series is to deal with

markedly contrasted authors in sequence but the contrast is at least evident in bringing out Meredith after Melville and Whitman after Swinburne. If one of the main points of interest in Swinburne is his mastery of form the most noteworthy feature in Whitman is his complete and deliberate neglect of form as most critics understand it and Mr Bailey has here a far more difficult task than what Mr Nicholson had with Swinburne or what he himself had in his earlier critical works—on Milton or Johnson.

The story of Whitman's life is soon told and does not take up even a quarter of the book the main portion of the work being on characteristics and comparisons. Whitman's Language and Metre and *A Walk Through Leaves of Grass*. In the beginning we notice that though Whitman's poems were written at different times and in different moods there was far less variety in them than in the works of most poets—there is nothing like the difference between *Love's Labour's Lost* and *Lear* between *Allegro* and *Sanctus* or between the *Lyrical Ballads* and the *Ecclesiastical Sonnets*. We may classify his work under various headings, but very few can be definitely consigned to one class. Or again we may say that all through his life he dealt with three subjects himself the average man and the universe but very soon we discover that the three subjects are one and the same. A comparison of Whitman with some of the greatest English poets is very instructive. Whitman outwardly resembles Milton in being one of the most political of poets and yet there is a vital difference for while Milton was an aristocratic republican after the fashion of Rome Whitman was an egalitarian democrat after the fashion of Rousseau the most passionate article of his creed being not so much liberty as equality. Whitman is however much more akin to Wordsworth for it was the latter who gave to poetry its freedom to call nothing common or unclean and when Whitman was dealing with the average man in poetry he was simply following the path marked out by Wordsworth.

This introduction of the common into poetry brings in the question of Whitman's language and metre. Whitman felt that poetry following the old conventions of language and metre has a tendency to become feeble and hence needs a plunge into an invigorating bath of prose. He had to make for his generation the periodical "return to Nature" and this he did by taking hold of muscular democratic virilities without wincing and putting them into verse. He felt that poetry can utilise all events and occurrences without any selection—that a poet can see things exactly as an ordinary man sees them and describe them exactly as such a man can. This is evidently a mistake for the result of such a process is not poetry but matter of fact, it is photography and not art. Again when Whitman supposed that the poet can use any language, he made another mistake for poetry has definitely to appeal to the imagination and emotions. When Whitman considers metre an outworn superstition of feudalism his position is defensible and it has been defended on the ground that "the history of English verse is the story of the exhaustion of the effects to be obtained from rhyme and metre and that rhyme and metre are dead or

dying devices. This however is inaccurate for the history of English verse merely shows the exhaustion of particular metres and the abandonment of one metre for another. Whitman's followers even in America, have now understood that rhyme and metre are forces of expression without which poetry may have to leave unexpressed the most secret and intimate part of what it has to say. In language Whitman's theory leads to anticlimaxes of ugliness—to ordinariness and meanness. It leads to neglect of grammar producing meaningless perversities and to the introduction of scraps of half understood foreign languages which are at best unnecessary and pointless. Then Whitman's theory about metre leads to prolonged verbosity by doing away with final restraint. It leads to rhetorical grandiloquence and a Poet losing himself in superfluous words. It is said that free verse is characterised by rhythm as opposed to metre but this is not sufficient for prose also has rhythm. The unit of free-verse Poetry is a sentence but can it introduce the element of expectation based on repetition which is so much the charm of metrical Poetry? Whitman attempts to do it by repeating the same phrase or word in a number of successive lines or by closing each section with the same line but this repetition is too little felt to create enough of the required expectation. So the conclusion seems irresistible that by his lawless and all embracing freedom as to subject, language and arrangement of language Whitman placed his poetic genius at a fatal disadvantage.

We have no space to go into Mr Bailey's detailed criticism of *Leaves of Grass*, its open air outlook its mysticism its handling of love and sex its response to the call of war. It is on the study of this book that our judgment of Whitman rests and in forming this judgment we have to steer midway between those who regarded Whitman with mere contempt and those who considered him rich above almost all his co-evals in the properties of poetry and it will not be difficult to agree with Mr Bailey's verdict. Whitman and his poetry were not all that he wished them to be and often thought they were. But it can hardly be denied that in them for the first time the native and original genius of the United States of America found authentic though no doubt not perfect, expression.

N K SIKHANTA

MERCANTILISM AND THE EAST INDIA TRADE. By P J Thomas M A B Litt (P S King & Son Ltd. 1926 8s 6d. net.)

"The object of this monograph" as the author tells us in the Preface "is to trace the beginnings of Protectionism in England. As is well known the gradual transformation of mercantilism into protectionism took place between 1700 and 1750. Mr Thomas' book opens with a general account of the mercantile system and of the controversy between the free-traders and the advocates of the balance of trade theory in the seventeenth century. Here the author presents in an eminently readable form the published accounts of previous writers and shows how the whole mercantile controversy of the period raged round the East India Trade.

The rapid increase in the use of Indian textiles in England is then described. From about the year 1650 "Indian cotton and silk goods came

into fashion in England. It is often said that the East India Company destroyed our textile industries on patriotic grounds. Mr Thomas shows that the Company's policy was shaped solely by its own pecuniary interest. Thus when the demand for Indian textiles increased during the latter half of the seventeenth century the Company did everything in its power to advance the industries of India. In this direction it was pushed on to lengths not justified by current views on patriotism. The Directors sent out patterns and models of piece-goods from England. They also sent to India some artificers to teach Indian artisans English modes of weaving and dyeing" (p 39). As the author tells us this mad enterprise of the Company did not influence the Indian artisans to any appreciable extent. It was the comparative cheapness and elegance of the Indian stuffs which enabled them to displace English woollen and silk goods from their home and foreign markets. This gave rise to the agitation for protecting British woollen and silk industries.

The controversy that raged round the question of restricting Indian imports led not only to the crystallisation of the protectionist phase of mercantilism but also gave rise to the opposite view of free trade. Mr Thomas reminds us that the controversy was not between England and the East Indies but between two powerful interests within England the English woollen and silk manufacturers were pitted against the English East India Company and the English calico printers.

The author is mainly concerned with this early clash between Protectionism and Free Trade which he describes with facts drawn from contemporary documents. He mentions the protectionist arguments of pamphleteers like Pollexfen and Cary and the free trade views of Child and Davenant and shows that they anticipated some of the modern arguments for free trade and protection.

These early protectionists demanded tariffs as a weapon to defend the national industries against unfair foreign competition. They were not all craving for treasure or raving for national aggrandisement. Writers like Davenant, though not convinced free traders, made a sensible appeal to an international specialisation in industries while the *Considerations on East India Trade* foreshadowed the modern theory of comparative costs (p 77). This is the most important chapter in a book which claims to be an integral chapter in the history of economic thought. We only wish that the author had given us a fuller and more systematic account of the different writers dealt with.

Mr Thomas closes his narrative with the final triumph of protectionism in England after the passing of the calico bill of 1720. The book is a useful and scholarly contribution to the history of mercantilism in England in the seventeenth century. The author has incidentally thrown also some light on the Indian cotton industry during the period.

J C SINGHA

ECONOMICS OF AGRICULTURAL PROGRESS (WITH REFERENCE TO CONDITIONS IN THE DECCAN) By B G Sapat M A. Published by the Author. Price Rs 28. Pp XVI+207.

The object of the book is in the author's own

words, to marshal some of those considerations which form the background and foundation of agricultural prosperity. He concludes by making a few suggestions and recommendations. They are as follows: (i) Improvement of *soil* and *cattle* (ii) *Better implements*, (iii) *Not only a large but also a levelled and embanked holding*, (iv) *seed and crop selection*, (v) *Better manures*, (vi) *practical utilization of the results of scientific research for effective protection against insects and pests*, (vii) *co-operative marketing*, (viii) *Development of subsidiary industries*; and (ix) *Reorganization of the many Governmental departments now helping agriculture and the creation of a Development Department for the whole Presidency (i.e. Madras)*. There are some statistical tables at the end of the book showing the increase or decrease of population, the size and extent of sub-division of holdings and the results and extent of irrigation. There is also a note about books.

H. S.

CREATIVE CRITICISM By J. E. Spingarn
Hamphrey Milford Oxford University Press Pp
133 6s.

In this book of four essays and an appendix the author has indicated what he calls the New Criticism by clearing its ground of all the dead lumber and weeds, all the old rules and the paraphernalia of academic pedantry. He reduces the task of the Aesthetic critic to this simple concern: "What has the poet tried to express and how he has expressed it?" In order to answer this question, the critic will have to become (if only for a moment of supreme power) at one with the creator. For, says he, "the identity of genius and taste is the final achievement of modern thought on the subject of art, in their most significant moments the creative and critical instincts are one and the same." In the appendix which is a note on this identity of genius and taste he says:

To say that the two faculties are in their essence one, is not, however, to say that criticism and creation are not without difference. It is merely to recognize the element of fundamental kinship. To the other three Essays he has reinforced the same theory in his discussion of the problems of "Dramatic Criticism," "Prose and Verse," and "Creative Consciousness." All these are very brilliantly written and so far as Aesthetic theories go, they will satisfy all artistic souls, carrying conviction and encouraging that attitude towards all works of art which has been always felt to be the only true attitude by men of taste and culture. But something more than a discussion of pure fundamentals is needed to make the theory good in practice for the author has achieved nothing beyond suggesting a new Orientation in the art of appreciation which, when it comes to concrete application, will fail of its purpose because the Aesthetic Critic can never be sure of his moments, and though his productions may still be in a sense, creative, his adventures among masterpieces may prove a misfortune to the masterpieces themselves.

M. M.

STUDIES IN INDIAN PAINTING By N. C. Mehta.
Published by Messrs D. B. Taraporevala, Sons &
Co., Bombay. Price Rs. 56

The art of book production is neglected and

immature in India. Everything is against the man who desires to bring out a volume faultless in printing, binding and general get-up. In spite of this handicap Mr N. C. Mehta's "Studies in Indian Painting" has turned out to be a masterpiece of the book producer's art. We have felt a rare pleasure and pride in handling this excellent volume and in feeling that it was "Made in India."

Illustrated with sixty-one superb reproductions of paintings belonging to different periods and schools and containing much valuable information on the subject matter of the book "Studies in Indian Painting" will be treasured by both students of art and by book lovers. We congratulate Messrs. D. B. Taraporevala, Sons & Co., on their success in bringing out such a volume. We also congratulate Mr N. C. Mehta, who is known to all of us as an able writer, collector and connoisseur in the field of Indian art, on his achievement as author of a really fine book. The book is priced at Rs. 56. We believe many will gladly pay even this high price for Mr Mehta's book. A. C.

BENGALI

HASIR LAKHAN (RITIKES OF LAKSHMIN) A book of
verses By Satish Chandra Chakravarti, B. L.
published by the author from 3 Jalunath Sen
Lane Duttas Street Calcutta 1 Pp VI + 61, price
5 as

This is a little collection of poems of a topical (social and political) interest partly in the standard (colloquial Bengali) and partly in the Colloquial of Barisal the author's native district. The author is a non-co-operationist pleader and his poems show, in addition to a great deal of shrewd observation, much practical power and a real command over verse. The general note of the poems is that of disillusionment in and frank criticism of our present-day social, political and religious notions and practices. The little poem on the *Poetry of Balindranath* (p. 19) is quite good, and is in a different appreciative vein.

Of special value are the poems in the Barisal dialect (pp. 37-61).

Here we have six not very short poems and these form as good a set of modern compositions in dialect in Bengali as we have ever seen. The value of these poems is very great for Bengali philology since specimens of genuine dialect are rare to procure. What enhances the value of these poems is the careful manner in which the author has sought to represent the pronunciation. He is interested in the phonetics of his local dialect, and he has devised some diacritical and other marks, and these he has taken pains to explain in his preface, which forms a valuable little note on the pronunciation of one typical dialect of East Bengal. The few people in Bengal and elsewhere who are engaged in these studies, or realise their value and take an interest in them, will assuredly feel grateful to Babu Satish Chandra Chakravarti for the thought and care he has put in for this part of his unpretentious little volume, and that in addition to the eminently readable quality of his poems. This book should have a wider publicity among Bengali readers.

S. K. C.

MARATHI

AYIMARAKA—A Marathi Translation of Bhasa's play of that name By Mr V D Deshpande, Dhule. Published by the author himself. Pages 126+112 Price Rs 14

There is no lack of friends willing to help the student class with suitable books. The book under notice is all that such books should be. A fairly exhaustive introduction by Mr Balacharya Khuperkar deals with all debatable points in connection with the age, personality and merit of Bhasa's works in general. One may not agree with all the opinions of the writer but that the information contained in the introduction is valuable cannot be doubted. We have no hesitation in recommending the book to the student world and to the general reading public of Maharashtra.

V G ARTE

SANSKRIT ENGLISH

A CONCISE SANSKRIT ENGLISH DICTIONARY By Mr V V Bhide. Publisher—The Chitrashala Press, Poona. Pages 1228 with a map of ancient India. Price Rs 4

Though the present volume cannot be compared with Prof Apte's Practical Sanskrit English dictionary published long long ago, this work also has its use for students in schools and colleges inasmuch as it supplies a real want of a concise and cheap Sanskrit Dictionary giving everything that a student requires to know in the study of classical Sanskrit Literature.

MALAYALAM

ABANDHAN PANCHANGOM A Prahasana By Alappuram P A Krishna Pillai. Sridhara Pauer Press, Trivandrum. Price 2 chakrams

This interesting Malayalam farce was written by Mr Pillai about five years ago to be first staged by the members of the Chittura Zimnal Grantha Sila, Trivandrum. This was printed only last year through the kind persuasion of many of his friends and was subsequently staged by some other societies in Travancore. It gives us no little pleasure to note that the author has succeeded in his attempt to effect the play most adaptable to the Malabar stage. We have no doubt that Mr Pillai's efforts to bring about a long wished for change in our stage will receive the due approbation from the enlightened public.

PATIKKA BANDHU Translated by M Kesaran Flayath, B V Book Dept of Trivandrum. Price Re. 1

We had the pleasure to notice in these columns hardly two years ago the Malayalam translation of Sita Devi's *Cope of Gold* by Srimati J K Valliari Amma, and it now gives us more pleasure to see on the table an excellent translation of her "Patha-Bandhu". KNIGHT ERRANT translated by Mr M Kesaran Flayath of the Sani Daru.

This young translator indeed deserves our

congratulation for the accuracy and faithfulness he has all through-out shown in translating this book from English. We welcome it.

F Anujan Achan

HINDI

SWADES SANGIT By Mr Muthuli Saran Gupta. Published by the Sahitya Sadan, Chirgaon, Jhansi. 1925 pp 136

The facile pen of Mr Gupta has given birth to this collection of small poems principally on Indian nationalism. With due respect to the reputation of Mr Gupta and other Hindi writers on this topic it must be said that none of their productions could attract the attention of the people in other provinces than their own. Yet Hindi is claimed to be the *Prasthabhasha* of India. A comparison with Bengali nationalistic literature will clear this point. Again a lyric is not a combination of a few lines in verse, and we are sorry to note that most of the modern Hindi lyrics lack the charm of music which is so essential for lyric poetry.

AVAGHA By Mr Muthuli Saran Gupta. Published by the Sahitya Sadan, Chirgaon, Jhansi. 1925 pp 132

The story of a previous birth of the Buddha in which he set himself to the task of village reconstruction is here dramatized by Mr Gupta from the Jataka sources. The play is in verse and has an underlying moral to convey.

AKA° TATTA BODH By Prof Sanjival M A LL-D. Published by Siddayati Arya Sangha, Meerut. 1926 Pp 112

A handbook on astronomy

VIAERTAN MAUKTIE By Sri Vijayvallabh Suri. The Atmananda Jain Tract Society, Ambala City. Pp 47

An address by the Suri who is the successor to the famous Vijaydharma Suri.

SITA SAMACHAR—Published by the Atmananda Jain Tract Society, Ambala City pp 72

The story of Sita is retold from the Jain source.

VASUDEVI SPIKRISHYA CHANDRA By Chaturvedi Dhanolaprasad Sirma. The Naval Kishore Press, Lucknow. 1926 pp 170

The life-story of Krishna is narrated. There is a coloured picture on the cover.

SAVITRI The late Sukumari Devi. Published by the Hindi Pustak Bhandar, Lahore. Sarai, 1942

The late authoress told the arresting story of the mythological heroine in a simple style.

MICHAEL MADHUSUDAN DUTT By Ramnath Lal-Suman. Published by the Hindi Pustak Bhandar, Lahore. Sarai. Pp 68

A life-sketch of the most vigorous poet of Bengal. RAMES BASU

GUJARATI

BAL VARTANALI By Mrs Hansa Mehta, BA
printed at the Kumar Printery Ahmedabad cloth
(illustrate) cover with illustrations Pp 72 Price
Rs 1 9 0 (1926)

The gifted and much travelled daughter of Sir Manubhai Mehta is the author of this book which contains twelve stories intended for delectation of little children. They are stories well known all over Gujarat, and they have been repeated or reiterated in this dainty little volume with first class printing and mechanical get up the object being to attract children in the first place to handle such books and they do so readily when their books are full of illustrations specially colored ones. This it is said is the reason why the price is so high. It is not possible for even middle class people to put into the hands of their little folk books worth much less than this amount. The book thus would defeat its own object unless liberally patronised by Government, Native States and Wealthy People who should purchase it in large numbers and distribute it as prizes. The stories are it need not be said well told.

SADRASHTRA YI RASADHAR PART IV By
Jhaverchand Meghani printed at the Saurashtra
Press Rinnour Payer Cover Pp 302+8 Price Rs
1 8 0 (1926)

This part is in every way worthy of its predecessors and narrates the romance and chivalry of old Kathiawad in the same feeling way. But for their being thus perpetuated in print there was every danger of these soul stirring splendid deeds of adventure being wiped out and forgotten. Mr Meghani cannot be thanked enough for striking out a new line in the literature of his province.

VARMANI VINDRA VARTAO By Jaykrishna
Nagardas Varma BA LLB B.L. SC. Bar at Law
printed at the Lohana Mitra Press Baroda Thick
coloured card board. Pp 200 Price Rs 2 0 0
(1925) (Illustrated)

Twelve short stories, written on the model obtaining in English Literature this is what the

author who is keenly interested in the uplift of women has provided in this collected reprint of his contributions to periodicals. They are very readable stories, and one who takes up the book does not like to leave it off till all he has finished it.

ANJALI By Keshav H Sheth printed at the
Khadayta Muwan Kala Mandir, Ahmedabad, Fine
Paper Cover Pp 24+230 Price Rs 1 4 0 (1926)

A batch of beautiful verses called by the poet poems which can be sung. The songs are not of the namby pamby order but real genuine stuff expressing various emotions. The inspiring verses on *Swadesh* and *Sansar* and *Sneha* Javeon songs *Ras* and prayers, furnish a very good instance of the poet's power of expression and their music at times carries away the reader and all this creditable work was done at a time when the poet was undergoing a keen "Struggle for life" (existence).

SMARAN MEKUR (THE MIRROR OF MEMORY) By
Vanshirao Bholnath Dwarka BA C S
(Retired) Printed at the Sahitya Press Bombay
Cloth Cover with illustrations Pp 312 Price
Rs 3 (1926)

The dozen of Gujarati *Litterateurs* has cast his eye backward into the days of his infancy and youth (he is 60 at present) and recalled into being the memories of men, women and musicians, poets and Pandits, reformers and orthodox individuals. He has set down in Chatty language the different incidents in the lives of some of the past prominent leaders of Gujarat and outside in politics, education, religious reform and other allied fields. It makes up a most delightful causerie in spite of the author adhering rigidly to his usual standard of setting out the truth, the whole truth and nothing but the truth, some of his candid observations and remarks have not proved palatable and his critics think that they could have been made less harshly or even omitted and still the interest of the narrative would not have suffered. The mirror promises yet to show many more faces and we eagerly await the time of its further flashing.

INDIA AT THE CONGRESS OF PHILOSOPHY.

By SUDHINDRA BOSE

Lecturer in Political Science State University of Iowa

I

DOCTOR Das Gupta, who came to America last autumn as a delegate to the sixth International Congress of Philosophy, may be said to have earned an enviable reputation as an able exponent of Hindu

philosophy. India may well be proud of Surendra Nath Des Gupta MA PhD Professor of Philosophy in the Presidency College of Calcutta. Without endorsing his particular philosophy I venture to say that he is one of the men of the hour. Much may be expected of him. He is young—not

yet forty But you who imagine that I holl over too easily, you who want to follow a master reasoner, step by step, read his *History of Indian Philosophy*, even through the last page of its third volume It is a pity that Das Gupta cannot function as a philosopher without paying the usual penalty of a college professorship

I am not addicted to philosophy and do not pretend to be a professional philosopher But having listened to Doctor Das Gupta before the Philosophical Club of the State University of Iowa, I was ready to give him the palm as one of those rare souls who can make philosophy human to the untrained lay audience To hear him discuss the elusive truth is partly to realize why Plato called philosophy that dear delight Das Gupta's knowledge of Eastern and Western systems of philosophy, coupled with a love for Indian thought and a gift for lucid exposition, made his discourses easily understandable even to Baptist and Methodist peasants, or suburban clergymen of America

In his lecture at Iowa on comparative Indian and European Philosophy, he stressed the difference that exists between the origin of the Indian philosophy and that of the European In India philosophy has grown from a desire of spiritual quest, the conceptional and argumentative parts of this philosophy came into being later by mutual conflicts.

'Philosophy started in the East with the spiritual desire of men', the speaker synthesized Indian wisdom, the craving from their hearts to find what was the greatest."

They felt it in their hearts they smelt it The greatest of all comforts did not please them They wanted to find the nature of immortality

Immortality is the inner spiritual craving of the soul Man is born to be immortal inasmuch as he craves something more permanent, more abiding more constant than his senses can give—something that uplifts him and makes him spiritual when he wants his inner nature to have an transcendence that will take him aloft, has discovered his immortality

"Man wins his salvation by his lone efforts. God does not give it to him. The real bondage of man is his bonded passions and desires if he cuts himself free from them he is master of himself"

In Europe, according to Doctor Das Gupta, philosophy has grown out of a scientific curiosity of getting at a rational scheme of the universe. It has never transcended that stage. The aim of Indian philosophy

on the other hand, has been the betterment of life's ideals and the spiritual realization

Unlike most philosophers who are dull, ponderous, dry as dust, and as luminous as London fog, Das Gupta is fresh, facile, and even brilliant. In the open forum discussion which followed his Iowa lecture, Das Gupta joyously liquidated his opponents with charming neatness and dispatch. I sat where I could watch every flicker of his eyelash He looked at his questioners with eager eyes, and apparently found good fun in arguing technical problems Nothing would upset his poise and calm There was strength, firmness, and also gentleness in his voice He smiled, nodded, looked happy, and smiled again In less than half an hour, he polished off all those who took issues with him The way he handled his subject showed that he knew his stuff. Neighbor Das Gupta has mental depth, and mastery of major philosophical problems. His style is simple, and without artifice It is, however, forceful and as convincing as the kick of a mule

I cannot here attempt to give even a resume of all his numerous talks in America His lecture program included visits to the Universities of Yale, Columbia, Michigan, Minnesota, Ohio, and several other institutions of higher learning His discourses ranged all the way from Indian philosophy and religion to literature, from the caste system to ideals of education He seemed to have a Catholic taste for every subject on Indian life, harring government, which shows, of course, that he was prudent It is a pleasure to note that his important addresses, such as those at the International Congress at Harvard and the Harris Foundation lectures at Northwestern University, will soon be published in one form or another They will doubtless be a treasure to the students of Indian thought.

II

It is worth relating a friendly but spirited discussion that took place at one of the sessions of the International Congress of Philosophy on a paper entitled, "An Empirical Study of Mysticism" by Professor Edwin D Starbuck of the State University of Iowa. The report of the discussion was especially interesting to me as indicative of

the Eastern and Western point of view Starbuck, who has achieved international reputation for his fruitful laboratory research in psychology* took a pot shot at the mystics, pagan or Christian. Mystic he maintained, tend towards the conventional religious notions. Those who profess religious immediacy are decidedly suggestible. Moreover the higher degree of suggestibility is an important factor in accounting for the professed religious experience. In proving his thesis Starbuck drew largely upon the results of his careful scientific investigations. More to the point was his observation that in most mental tests involving sustained effort and ingenuity the mystic group is at a disadvantage. Indeed in actual intelligence tests the non-mystics surpass the mystics by differences ranging from three to six times as large as the probable errors.

Das Gupta then got up and took a crack at the non-mystics. He said that the true mystics are not mere visionaries nor are they content with a mere dreamy vision of God. Often times they have been hard logicians and dialecticians who developed their religious consciousness by lifelong efforts after rectitude and moral perfection. Mere delusionists in religion are not mystics. Moreover a Buddha, a Sankara, a Jesus Christ could not be judged by laboratory tests.

It is only fair to state that the Starbuck experiments dealt only with the current Americans in America. They had no reference to the people of any other country either in the past or in the present. I do not know how Starbuck would explain the mystics of yore.

What he did find from his painstaking and exhaustive researches was that here in America non-mystics are thirty per cent more superior to the mystics. These non-mystics are more accurate, reliable and have better intellectual reactions. Starbuck also averred that the mystics for one thing are more suggestible and for another are better able to stand physical punishment such as for instance with electric shocks. I wonder if that will explain at least in part, why so many of the mystics are greedy for martyrdom.

It seems to me that philosophy must now come down from the thin air of abstract speculation and get down to fruitful solid earth. Men cannot live by fine spun rarefied philosophical platitudes. Philosophy, if it is to be of any earthly use in modern living, must develop modern appliances adopt scientific and refined methods of investigation.

In recording this lively little tilt between Das Gupta and Starbuck I am not trying to give a lefthanded compliment to either. They are both my friends. At least I hope so. The difference between Starbuck and Das Gupta it strikes me is the difference

Doctor S. N. Das Gupta

in the outlook between the East and the West.

III

Doctor Das Gupta had been in Europe more than once but this was his first visit to America. Some of his impressions of this country are rich and classy. Indeed even before he set his foot on American soil he began to form his impressions of the United States. He told me of an American he met on the ship.

Are you going to America? asked the Yankee passenger.

* See Character Education by Sudhindra Bose in *The Modern Review* May 1936 pp. 533-538.

"Yes"

"Gee" you will have a grand time. You are now going to see a real live country. Poor old England is a back number, but America—oh boy!—everything is just tip-top. We have the best food, best hotels, fast trains, fast autos, everything perfect. Do you know that we have as many automobiles in the city of Los Angeles alone as there are in the whole of the United Kingdom? Pooh! England is just a poor little dried-up run down island. That's all."

Das Gupta reported this conversation to an English military officer from the Kharbar Pass. "Oh!" replied John Bull with a painful smile. "Americans must talk like that. They are newly rich—a race of dollar chasers."

I am not so sure that an American worships money more than does an Englishman. Gilbert K. Chesterton remarked the other day that "an American never talks of money in the awestruck tone that an Englishman employs in referring to financial matters." There are not many Americans who chase a dollar with the cupidity that Europeans chase farthings, francs, lira, and crowns. Distinguished European men of letters, who come here in hordes, submit themselves to the discomforts of touring the American rural routes, lecturing for the almighty dollar. Americans, without a doubt, have great many faults, but they are sane enough to see no special merit in poverty. Naturally they like to make money. At the same time, they also spend freely and give freely.

The thing that irritated the Indian philosopher most about his trip to 'the land of the free' was its stupid immigration laws. Long before he could get his passport vised by the American Consul in Calcutta, he had to prove to the Consul's satisfaction that he was not going to stay in America for more than three months, that he was invited by two of the most important universities of America that he had the letters of invitation right with him, that he had a letter of introduction from the Director of Public Instruction in Bengal, and above all that his visit to America was not going to exceed three months, under any circumstances. Who knows if the professor of philosophy in the Calcutta Presidency College were to stay in the United States even a day over three months that grand and glorious Republic might go to the dogs?

The accursed Asiatics going to the holy land of America must be closely and rigidly watched. Before embarkation at Southampton, England, Das Gupta had to fill up a most complicated printed form, involving all kinds of embarrassing confessions about social, religious, and political views. Some of these questions were: Are you an anarchist? Are you a polygamist? How many wives do you now? Have you ever been divorced? Did you ever have any social diseases? Do you believe in law and justice and in constituted authority?

It is absolutely idiotic to suppose that anyone who is going to America for anarchical or immoral purposes would truthfully answer these questions, when he knows well enough that a truthful answer would exclude him from America forever. The desire of having only the virtuous men with lily-white souls coming to America may be laudable, but a confessional of this sort is hardly the way of securing godly people. "Is America so virtuous a country?" asked Das Gupta, "that she is afraid of having anyone with undesirable opinions enter her gates even for a short visit? Isn't America ridden with beastly Klu Klux Klan? Well, her daily record of crimes is the worst in the whole world. Why should she, the chosen home of blood-dripping lynchers, act like I-am holier than thou? It is really touching how solicitously the Yankees show concern for the morals of Asians."

No one can deny that the treatment of Asians by America has been anything but satisfactory. This is particularly true of the three thousand Indians now in this country. Last summer Senator Copeland introduced a bill declaring that Indians are "white persons" and should be treated on a par with Europeans. The bill was killed. A few days ago Senator Reed brought out another bill "validating" the citizenship of some sixty odd Indians who had been duly naturalized long ago. Among these expatriated Indians are engineers, educators, journalists, and students. All of them are educated. Not one but has made a mark for himself in his special line of endeavor. But the United States Congress failed to act even on the modest Reed bill. Sixty Indians, if allowed to retain American citizenship, might blot out the whole of one hundred and ten million American Citizens. Indians are

'untouchables' They must be forced out
The U. S. A. is God's Own Country!

New York may be the largest and most
stupendous city of the world but our
Indian visitor was not exactly taken by
it. "People call New York a wonderful
city he remarked "As a business centre and
as a well planned city it is certainly
marvellous. But, considering its huge traffic,
the streets are too narrow. The skyscrapers
show lack of cultivated taste and beauty.
On every hand there are signs of feverish
change. People are constantly pulling down
houses and building new ones. One might
as well suppose that Columbus had discovered
America only fifteen or twenty years ago
and that the colonists have not yet finished
building their houses. During the brief period
of my stay in New York I felt as if I was
imprisoned in a vast workshop and all the
dust of the place was choking my throat
and all the grinding noise of the machinery
was hammering my ear drums to pieces.
New York is a massive inartistic, and
uncoouth city."

American hotels impressed him favourably.
They seemed to him to be the last word on
efficient service. You have your bath rooms
filled with hot and cold water taps. There is
also a tap for running icewater for drinking.
As most of the large hotels are skyscrapers
they run express and local lifts the express
lifts stopping only at a few floors. Every
hotel has a rail road agency, a telegraph
office, and every room in a hotel has a tele-
phone. News stands, barbershop, restaurant,
drawing rooms, smoking rooms and a dozen
other conveniences provide for almost every
comfort that a guest may need in hotel life.
It sure is a luxurious levantine life. But living
in a hotel is so terribly expensive. I could
never conceive that life could be so expensive
in America. Of course it may seem other-
wise to the natives but for us strangers
Oh! the Jews said the better.

European travellers who have nothing but
little choo-choo baby trains in their native
country are immensely appreciative of the
comforts and luxuries of the American
railways. Compared with the great American
trains those in England for instance, seem
like tiny toy trains. I was therefore interested
to get the reaction of Das Gupta who has
knocked about a good deal both in India and
in Europe. Railway travelling in America,
he explained "is exceedingly comfortable.
Those who have not travelled to the United

States will not realize how much uncomfortable
Americans must feel when they travel
in Europe or in India. The large Pullman
cars and sleepers are especially fine. In each
of the corridor cars there are rows of nine
comfortable beds on both sides of the passage.
They are fitted up with soft mattresses,
pillows and handy racks. A little screen
around each berth secures complete privacy.
A compartment usually contains about twelve
beds and is invariably in charge of a Negro
porter. He makes the beds, wakes the
passengers at any station they want to get
out at any hour of the night, shines their
shoes, brushes their clothes, looks after their
parcels and acts in general as their private valet.
A passenger can sleep in a train with most
perfect unconcern as if he was sleeping in
his own bed in his own home. Excepting when
the trains start or stop there is not much of
a jolt such as one experiences in India or
in Europe.

The story goes here that when Mr.
Srinivas Bhastri came to America a few years
ago to attend the Washington Disarmament
Conference he fell in with a black Negro
porter. He took the top hat and an aside
and said "Look here brother, this is not
the place for us niggers to get in. If you
wear a turban you may be taken by the
average American as a Hindu snake charmer,
magician or a fortune teller. That will be
much better than being a damned nigger.
Throw away your hat, Bhastri. I was told
followed the advice and took to the turban.

Das Gupta was wise from the very start
to the complex of American prejudices. He
always wore a turban and earmuffs of
Indiao cut. The expected happened of course.
More than once he was taken to be a palmist.
He told me an interesting experience which
I am glad to pass along. On one occasion
chuckled Das Gupta, "I was accosted by an
American who told me he was in great diffi-
culty and asked my help. I was surprised,
for I had never seen a beggar in America,
but he explained himself by saying that his
wife had left him on account of a quarrel
over some money matter. The poor fellow
did not know where his wife was and was
pining away in grief for her. Even then I
could not guess what the man was driving
at, and was amazed that he should confide his
family troubles to a stranger on the street.
I was completely dumb founded. Finally he
asked me point blank if I could give his wife's
address. I then understood the whole thing.

the man had taken me for a fortune teller I handed him my card, and told him that I was a professor of philosophy and was quite innocent of the art of fortune-telling."

The love-sick man would not believe Das Gupta

"But", he insisted with almost tears in his eyes, 'are you not a full blooded Hindu?'

'Yes, what of that?'

'Well, then, why could you not tell me where my wife is? Name your fees and I will pay you in spot cash right now Come on'

It was in such a land that Professor Surendranath Das Gupta came with his message of Indian philosophy

IV

The Sixth International Congress was attended this year by two Indian delegates, S Radhakrishnan of Madras and S N Das Gupta of Calcutta. At the close of the Congress Professor Radhakrishnan delivered the Haskell lectures at the University of Chicago, and Professor Das Gupta the Harris lectures on the development of Indian mysticism at Northwestern University

Until recently India had no place in the inner council of the International Congress of Philosophy. The two Indian delegates, who came to America, have now been admitted into the permanent constitutional body of the Congress Council. It is hoped that in the next Congress in Oxford (1930) a larger place will be found on the program for Indian philosophy

I have never met Radhakrishnan and do not know anything about him personally. My agents, however, tell me that he is a gentleman and a scholar

Das Gupta was in America three weeks. He had among his audiences, governors, mayors, judges, captains of industry, leaders of education, and just plain windjammers of the Christian evangelical sects. What impression did he make in the United States?

American people let it be remembered, have very queer notions about Indian philosophy. All that they know of it is that everything according to the Hindus is false and only Brahma is real. Americans, as a rule, are not much interested in such a thought. In most histories of philosophy written by Americans one either finds no mention of Hindu philosophy or if mentioned at all, it

is frequently stated that the Hindu philosophy is a conglomeration of myths and dogmas shot through with poetry. *The History of Philosophy* by Professor Frank Thilly of Cornell University is a notable example of such a performance. With the exception of one or two Sanskritists, there is perhaps no one in America who knows anything of Indian philosophy that will stand the test of sound scholarship. Take it all in all, the ignorance of Indian philosophy in these United States is simply colossal. Can such a self-complacent country be seriously interested in mystical Eastern thought? One fly by night visitors may occasionally hear Americans say, "Oh, such a nice talk you gave!" but many years of experience on the American lecture platform have taught me to dismiss such flattery with scant ceremony.

I do not wish to say anything about the relative mental equipment of Indians and Americans for original or critical work. The better class of Indians it is obvious, is intellectually as well equipped as the better class of Americans. The big point, however, is that Americans regard the Indians as impractical and visionary, a subject nation passively acquiescing in degradation. Are the Americans entirely wrong? If we are to profit by our contact with America, it is about time we understood its mental outlook

Doctor Das Gupta in his address at St. Paul, Minnesota remarked that spiritualism is the great gift which India may make to America. He added that there are two kinds of spiritualism, objective and subjective. Subjective spiritualism, won by meditation and quietism, is lacking in the United States, but objective spiritualism which finds vivid visible expression in schools, colleges, hospitals, research laboratories, welfare institutions and all the vast number of things which make for the betterment of humanity, is in full practice here. Has not India a great deal to learn from the American objective spiritualism?

Let us not get lost in ethereal obscurities, in dreams of another world. We need have the passion for the actual, real and the immediate Truth, from the American view point is only "relative to human judgment and human needs." Life and mind are to be understood in biological rather than theological terms, if we are to control our environment and shape our destiny. For

"the problem of philosophy," said Professor Durant of Columbia University, "is not how we can come to know an external world, but how we can learn to control it and remake it." I repeat that it is time for us in India to turn the face of thought to action to practical results, towards the inescapable world of affairs. To paraphrase Dewey, take your seat in the moving affairs of men rather than shrinking into a lonely isolation of contemplation. We have work enough, Heaven knows, without trying to lose ourselves in misty obscurities.

Americans are frankly interested in ter-

restrial rather than ethereal career. They are pragmatic, efficient. With them the objective spirituality comes first. By and large, they decline to be a mystic and yield to what they fear to be fatality. Has Doctor Das Gupta succeeded in converting America to Hindu mysticism? I do not know. I am not in a position to say. He has been received everywhere with warmth and cordiality. He said what he believed. It was his faith. If he did not convert his audiences to Indian mysticism, 'other-worldism,' I am persuaded they were converted to Surendra Nath Das Gupta.

INDIAN PERIODICALS

Co-operation and Agriculture

The Bengal Co-operative Journal writes -

In the course of their tour the members of the Royal Commission on Agriculture in India had more than one opportunity of coming into actual touch with co-operative workers and institutions in the country. If the agricultural condition of India is to be properly and adequately improved and her people are to secure the benefits of this improvement this has to be effected principally by co-operative methods as has already been amply demonstrated in Western countries.

A notable feature of the proceedings of the Bombay Co-operative Conference was the speech that the Marquis of Linlithgow delivered before it. His lordship observed that two points occurred to him in regard to Co-operation in India. They had learnt by experience to measure the strength and vigour of the movement by the strength and vigour of the primary societies. The other was that the greatest enemy of the Co-operative Movement was the uninformed enthusiast. People thought that enthusiasm and zeal could take the place of careful study and exact knowledge. The paths of co-operation in other countries his lordship pointed out were littered with the bones of societies that had failed because initiators had failed to examine and thoroughly appreciate the fundamental requirements of the movement. He considered it however to be a good omen that he found in this country men who had devoted their lives to the careful study of the movement. At Dacca Lord Linlithgow laid particular emphasis on the real objective of the co-operative movement. He said that if the co-operative movement failed in its educative side it would fail in its first purpose. "Unless," his lordship added, "you succeed in making the members of Co-operative Societies better men, better cultivators and better citizens by reason of membership of co-operative

societies however much you may succeed in effecting their economic improvement you will fail in the first objective of co-operation. Mere numbers are not a measure of success in co-operation. Quality is the test, and the fortune of co-operation lies as much upon the broad outlook on life of those who are co-operators as it depends upon the economic position of the individual members or the improvement which membership of societies can effect in their economic position."

The Ratio of the Rupee

The same journal answers the question 'Should the ratio of the rupee be fixed at 1s 6d or 1s 4d', thus -

The question at what rate the rupee should be stabilized is indeed a most difficult one. It appears however that it would be better to stabilize the rupee at the old figure of 1s 4d instead of at 1s 6d proposed by the Commission.

It is more or less admitted that reversion to the rate of 1s 4d would be more beneficial to debtors, employers of labour and exporters who under the present economic structure represent the interests of agricultural producers than to creditors, wage-earners and importers who cater for the requirements of the consumers. In an agricultural country like India the former section of the community is much more important than the latter section although one may not be prepared to accept Sir Purnell's statement that the proportion of imported goods consumed by the masses of India is very small.

Ministers and Veterinary Problems

We read in the *Indian Veterinary Journal* —

With the birth of new Legislative Councils all over the country, new ministry in most of the presidencies has been formed. We eagerly look forward to them to advance the cause of Veterinary Science and the profession which did not receive the attention they ought to at the hands of their predecessors in office. Two periods of reformed councils have come and gone, but we as a profession are made to stay where we were six years ago, nay in a much sadder plight in some of the provinces!

The cause is not far to seek. The ministers think they have more important duties than attending to such trifles as diseases of animals—which by the way do not constitute any electorate and which by a Merciful Providence have been deprived of the power of speech to be of any nuisance to them—and that it is the fashion of the times to talk only of Agriculture and its immensity potentialities of Fisheries and Soap-making of Co-operation and Industries of Forests and Panchayats!

By all means let them attend to them, but we beg of them to forget not that there is such a thing as Veterinary Department and that cattle are dying in thousands every year for want of adequate Veterinary aid in India. The very main stay of Agriculture which they proclaim intend developing is the cattle-wealth of India. That is the property of the Indian ryot and it is that property that needs all the protection a Government can give. Safety of person and property is a very elementary guarantee of any civilised Government. It is such a guarantee we seek of at the hands of our ministers.

From the evidences so far given before the Royal Commission on Agriculture, one will notice that there is a consensus of opinion on the present inadequacy of Veterinary aid and the need for its immediate expansion. Nothing short of opening more hospitals, better arrangements for the supply of sera and more hands to attend to outbreaks of contagious diseases will satisfy the public.

The Cult of Agastya and the Origin of Indian Colonial Art

Mr O C Gangoly has contributed in the *Quarterly Journal of the Mythic Society* a very suggestive, informative and well illustrated long article on the above subject. Says he —

Of the many patriarchs and sages who have crossed the Vindhya to Arjanize the South the name and personality of one stands out in bold relief. It is of the great sage Agastya—the rishi born in a pitcher,—and hence known as Kalasya or Kumbha Yoni. We are not concerned whether he was a mere mythical name or a person in flesh and blood. He presents and stands for a concrete symbol of the adventurous spirit of the early Aryans—who have ever sought fresh fields and pastures new for the colonization and development of Aryan thought.

He was very æsthetic in his demands. He would not take for a spouse any but the most beautiful woman of his time—Lopamudra, a princess of Vidarbha who had vanquished all rivals in beauty competition. But he was not destined to live in the North for a long time, for the call of the South came as it must have come to many of his ancestors and predecessors and he set out on his memorable journey to the South never to return. And 'Agastya yatra' is now a synonym for the travel of one who goes forth but never returns. The loss of the North, as we shall see, was the gain of South. The part that Agastya took in reclaiming the primeval forests in Southern India and in making them fit for human habitation, is indicated in the Ramayana in several passages in no uncertain terms.

We can almost trace his footprints as he walked from place to place in his adventurous journey to the South for the stages of his travels are marked and punctuated as it were, by his little asramas (hermitage) which he set up at different places in Southern India—and are even now known as Agastyasrama.

But was the career of this adventurous missionary to be satisfied by a local dedication and a local worship? Vedaranyam on the seashore marked no doubt, the extreme limit of his exploits in Southern India. But was the Indian Ocean to retard the career of our intrepid Aryan adventurer? The dangers of the sea could not hold him back to the narrow limits of the Aryavarta. He boldly braved the dangers of the sea and by his psychical powers he overpowered the sea-gods. In the language of myth and poetry Agastya drank off the waters of this seas and earned a new appellation 'pita sagara' one who has drunk off the Ocean! And one born in the pitcher achieved the epithet of the Drinker of the Ocean.

Now let us follow the career of our sage across the seas. In the Indian continent he had a favourite hobby of building Shiva temples and of founding new branches of his family. In his activities in countries across the seas we find him busy in his favourite pastimes. He was a devout worshipper of Shiva 'Shivaradhanatparah' and it is by founding Shava shrines that he signalled his presence in a distant colony. But where do we find him figuring in his overseas activity? He is supposed to have sojourned to the distant land of Cambodia.

But have we finished our survey of the activities of our great missionary in building up the culture of Greater India? The legends in the 'puranas' offer another clue to his activities in other lands. According to the Vayupurana (48 ch.) our hero is supposed to have paid visits to the following islands in the Indian Ocean—Burma Dwipa (which may perhaps be Borneo) Kusha Dwipa, Varaha Dwipa, Sankhya Dwipa, which may be one or other of the Sunda islands—also to the Malaya Dwipa and to Java.

Anatomy in Indian Art

In the same journal Bhavachitra Lekhan Sirmani N Vyasa Ram observes —

A word needs to be said on the use of anatomy in Indian art. It is believed that Indian artists

did not study anatomy—in the sense in which the European student studies it. There is an argument advanced by some critics that the Indian artist could not study anatomy because of the horror he had for vivisection. This argument does not hold good when we see the image of Ganesha in Java seated on a throne of human skulls symbolising his descent from Siva, the lord of the cremation ground. These skulls are perfect representations which could not be the work of people who refused to study anatomy just because of the horror of vivisection.

On the contrary the cause is not in external feelings or sentiments but in the essential outlook upon life and art. The western artist having nothing higher to aim at sought for anatomy and proportion as the essentials of beauty. It was the Greek ideal which realized the perfect man in the proper display of muscular developments. But the Hindu ideal soared far higher than muscular beauty. Spiritual ascendency and brilliancy was real beauty in them. Neither Lady Macbeth nor Cleopatra would the Hindu look upon as types of beauty. They had a within that scrupled against no sin or filth and their external beauty but mocked that dark within. It is the beauty of character the beauty of self sacrifice that was worth the name. And this was not to be found either in muscular growth or proportion. The face was the unfailing mirror and in making that mirror reflect the soul of the object portrayed the artist had his whole scope. The body, its proportions and other features were only incidental. It was not worth the while of a genuine artist to waste his time on things that do not matter. Moreover to be able to copy perfectly is no great achievement for the artist that made a master piece out of every stroke of the brush. The eye that saw deeply into the far beyond which it was not given to many to perceive could not fail to see this silly difference in so called anatomy or proportion. Examples without number could be pointed out which display remarkable keenness of observation and accurate representation.

The Object of Co operative Banks

According to Henry W Wolf in the *Bombay Co-operative Quarterly*—

The object of co operative banks is not only to supply cheap and easy credit but also distinctly to promote thrift, for the gradual accumulation of capital. To the fulfilment of such object it is a great hindrance to have, in times of plethora of funds, to refuse the acceptance of deposits. Fbbs and tides of means of course occur in every form of co-operative banking as of other banking. In 1890, I found the co-operative banks of Germany at their wits end to decide how to deal with the prevailing superfluity of funds. Not only did many of them refuse deposits but some even refused instalments of shares. For this reason it is essential that co-operative banking institutions should have a reserve outlet not too narrowly hedged in for superfluous money allowed to them. But proper organisation in its own ranks will help a good bit, as opening a way in convenient distribution between bank and bank or between province

and province. The transactions so taken in hand want to be not as between local or provincial organisations dealing independently with one another but through a head institution just as on a battlefield it is the commander in chief who directs the movements of each corps. There need be no fear of transactions being in this way encumbered by excessive commissions. The trifling tax levied by commissions will be found to be made amply up for in other ways.

Son in law and Mother in law

Prof. Sarat Chandra Mitra writes in *Man in India*—

Though it is a far cry from the district of Chittagong in Eastern Bengal to North America, we find that the same curious taboo which prevails among the Hindus of Chittagong and which forbids the son in law to meet and touch his mother in law, a body also prevails among the Pueblo Indians of North America as will appear from the following account which has been published in the Calcutta daily newspaper *The Statesman* of Sunday the 23rd August 1925—
Pueblo farmers who live in settlements on the Rio Grande are North American Indians and judge by the account of them given by Miss London Smith who recently gave an exhibition of her pictures in London they are remarkable folk. They have at any rate one idea, which seems excellent. *For among them, a man after marriage is forbidden to meet his mother in law. If she happens to be in a building which he is about to enter, he is warned of the danger and the lady similarly is assisted by popular custom to keep out of her son in law's way.*

How has the similarity between the Chittagong Hindu and Pueblo Indian come about? Borrowing is out of the question as the two peoples are separated by vast oceans and extensive continents.

Now there remains for us the alternative of coming to the conclusion that the taboo which prohibits the son in law to meet and touch his mother in law a body was evolved among these two peoples independently of each other. It is now one of the accepted tenets of Cultural Anthropology that different groups of mankind started at a very early time from a general condition of lack of culture and owing to the unity of the human mind and the consequent similar response to cute and inner stimuli they have developed everywhere approximately along the same lines, making similar inventions and developing similar customs and beliefs.

Sr J G Frazer however explains the origin of this taboo by the ingenious theory that as the shadow of a person is a vital part of him it is extremely hazardous to touch his shadow for touching it is tantamount to actually touching his body itself. On this point he says—

"Hence the savage makes it a rule to shun the shadow of certain persons whom for various reasons he regards as sources of dangerous influence. Amongst the dangerous classes he commonly ranks mourners and women in general but *specially his mother in law*. An Australian native is said to have once nearly died of fright because the shadow of his mother

in law fell on his legs as he lay asleep under a tree. The awe and dread with which the untutored savage contemplates his mother-in-law are amongst the most familiar facts of anthropology. In the Yunn tribes of New South Wales the rule which forbade a man to hold any communication with his wife's mother was very strict. He might not look at her or even in her direction. It was a ground for divorce if his shadow happened to fall on his mother-in-law in that case he had to leave his wife, and she returned to her parents. In New Britain the native imagination fails to conceive the extent and nature of calamities which would result from a man's accidentally speaking to his wife's mother—suicide of one or both would probably be the only course open to them. The most solemn form of oath a New Briton can take is, 'Sir if I am not telling the truth I hope I may shake hands with my mother-in-law.'

"India's Economic Greatness"

According to J. E. Woolcott India's economic greatness would seem to consist mainly in her being a great market for British goods as the following statement of his in the *Mysore Economic Journal* would show—

A description of the greatest of the irrigation works now under construction in India the Lloyd (Sukkur) Barrage and Canals Project, contains the arresting statement that while the whole area of Egypt comprises 8,400,000 acres with an actual cultivation of 5,400,000 acres the Indian project will provide for an annual irrigation of 5,900,000 acres in a total commanded area of 8,132,000 acres. It is indeed impossible for anyone who has not actually visited India to visualize its enormous extent and its almost unlimited economic possibilities. And it is to be feared that in the visions of some ardent believers in the future of the British Empire India finds no place. Yet India to-day is the greatest market in the world for the manufactures of Great Britain. A country which in a single year absorbs British goods to the value of £30,000,000 is a factor of the greatest importance in the Empire's well-being. But in the many discussions that have arisen regarding the prospects of British commerce and the imperative need for developing markets for British manufactures how seldom it is that the importance of India finds the recognition it deserves. Nor is it adequately appreciated that to-day the purchases of British merchandise by the Indian peoples comprise more than half their total purchases from abroad.

Great Britain's proportionate share in this commerce has declined substantially since the period before the War. The pre-war average was 63 per cent. by 1914-20 the figures had fallen to 51 per cent. Meanwhile our competitors have not failed to realize the potentialities of the Indian markets. American manufacturers in particular are making strenuous efforts to increase their business with India, and the United States possess in that country a staff of government servants who vigilantly watch the interests of

the American trader and despatch constantly to Washington information which may help American merchants and manufacturers to extend their operations. It is certain then that the British exporter will in the future have to face keener opposition in the Indian market than perhaps he realizes to-day. Self-interest, apart from the higher considerations of the Empire therefore demand that there should be in this country a greater knowledge of India her peoples and her vast economic potentialities.

A Grievance of Telegraphists

The Telegraph Review observes—

It is deeply to be regretted that while the clerks in classes II, III and IV and the members of the inferior Establishment perform their quota of duties with as much sincerity and intelligence as can be desired for the maintenance of the standard of efficiency of the department, the utter need to relieve these men of their distressing circumstances have as yet been kept in the cold shed of neglect.

Solicitations, prayers and emphatic protests so long made on the above subjects seem to have fallen on deaf ears. It behoves them now to come forward and show us the royal road to secure the interest of vital consequence of those men under them who are the hardest hit of all and for whom measures are in pressing need from a very long time to keep them body and soul together.

It is also a wonder why the Local Service Telegraphists appointed prior to 1913 whose claims to House Rent Allowance at the same rate with the General Service Telegraphists have already been recognised, have not been allowed now the same privilege. We have also again and again pointed out that Local Service Telegraphists appointed from 1913 onwards have the same claim to House Rent as those appointed at an earlier date and we regret that their cases have not been taken into consideration yet.

There is moreover no reason why the cases of the other stations especially of those where the cost of living has been recognised to be quite high should not be considered along with those of Bombay and Calcutta and why every station should not get its share of revisions and allowances.

Indian Women's Economic Contribution

Miss S. V. Rao is right in her contention in the *Indian Review* that

The part that woman plays in the economic life of a community is often overlooked or underestimated for though as a member of society she is given her place as the guide and controller of the early lives of the greater part of the community and though she is looked upon as the one who socially and morally elevates or brings down the standard of life still she is not commonly given due credit for the part she plays in the active economic life of the State.

In connection with the importance of the woman in the economic life of India we can consider the part she plays in agriculture and in manufacture (both handicraft and mill) in the

professional and liberal arts and in various other occupations.

The farmers wife and his women relations are exceptionally active as productive members. They help in the sowing and reaping of crops in the threshing and the milking in the care of the fields and of the stock that belongs to the farm. The work of dairying is carried on very largely by them. They milk the cows and buffaloes, make curds and butter and ghee and themselves carry these products to the town to dispose of them for sale.

They do the work too of spinning and handloom weaving or whatever subsidiary industry is carried on during the slack season.

In the factory the percentage of women employed in the various Provinces is not large though of a total population (female) of working age about 40 out of 62 million women (10-40 years age) are employed in actual work in Bengal 118 per cent, of factory workers are women in Bombay 183 per cent in Madras 159 in the Punjab 107 and in the United Provinces 83 per cent.

Women work side by side with men in the mills and factories and their contribution to the product turned out is, though small, an accountable figure. As yet skilled work is not undertaken by them but for a matter of that, the skilled work that is being done by Indian men in factories in India is a late development, and until recent times, was not a great factor in the product turned out.

As craftsmen the people of India have had great reputation for skill of work and beauty of design. In this women played and still play an important part. The Decca muslin weavers were many of them skilled women the best hand embroidery workers are usually women among silk cocoon rearsers women seem to be especially skilled and when the work actually turned out by women workers is considered it will be found that their work is ordinarily not given the credit it deserves.

Interest in but not Practice of Religions

We live in queer times opines the *Light of the East*—

Travel through the East or travel through the West you will hardly find any man who is not acquainted with the tenets of several religions, but you will have to dig below the surface if you wish to discover so-called intellectuals that frankly and openly profess and practise any religion.

There is hardly an university in the world that does not boast of a well endowed chair of Comparative Religions from which a professor daily or weekly dispenses the latest information on every form of belief or unbelief and yet how many university professors and even university students truly observe the precepts of their own religion?

Again our reviews and newspapers are full of articles dealing with religious problems. They are careful to report all the discoveries that throw light upon the faith of modern pygmies or long mummified Egyptians. How rash their readers would be were they to conclude that our newspaper editors or contributors attend church every Sunday or the

mosque every Friday or offer daily sandhya to one or other of the Hindu gods.

Our intellectuals are interested in religions, but practise no religion. There are exceptions to this rule but those who make exception are generally scholars and not mere intellectuals, men who know everything, of something and not men who merely know something of everything. Nor are they the men whose names are daily mentioned in the Press they are too busy or too modest to let everyone know about their religious views. The impression created by reading modern literature is the one we have mentioned modern intellectuals discuss religions but observe none. What is the main reason of this seemingly contradictory attitude? Why are the moderns so curious to know about all the mythologies and theologies and yet so little anxious to turn their knowledge into some practical case?

Unless we are much mistaken the main reason is our silly modern vanity.

Seeing God in Men

The editor of *Prabuddha Bharata* relates the following incident—

It was in the beginning of 1884 that Sri Rama Krishna, while in a trance fell down and broke his arm. It took some time to cure. A profound spiritual fact lay behind the incident, which he revealed more than a year after to some of his intimate disciples. He said I am telling you a secret. Do you know why I love Puran Narendra and others so dearly? I had once a vision of Jagannatha, and as I went to embrace him I fell down and broke my arm. And it was revealed to me that now that I was born as a man, I must love the Lord in men. A few days after the incident he had said I now find that my spiritual outlook is undergoing a change. Long ago Vaishnavacharan told me that the highest spiritual wisdom was the vision of the Divine in men. I now really find that it is the Lord who is moving about in the form of men.

How Animals are slaughtered for Food

In the *Maha bodhi* Mr L. L. Sundara Ram gives an exposition of the horrors suffered by animals by quoting two graphic accounts by two writers one from Russia and the other from our own country.

Count Leo Tolstoy gave vent to his sincere emotions when he saw a ghastly series of incidents in an abattoir. The hearts of all readers of his pen pictures will be pricked and they will surely search their hearts whether there is any vestige of the humanitarian element to be found therein.

We have neither the heart nor the space for these accounts. They are horrible and sickening. Government legislation and supervision should be very drastic to secure the infliction of as little pain or suffering as practicable.

Man must be capable of using to profit and general beneficence the instinct of humanitarianism in all his dealings with the animal kingdom. If total abstinence from killing animal life is not possible at least clemency and quicker methods of despatching the brutes without causing them the least possible pain must be resorted to.

Khanderao Gaekwar's Love of Physical Culture

In an interesting article in *Vyayam* on Shrimant Khanderao Maharaj Gaekwar of Baroda, an account is given of how he encouraged the acquisition of physical strength, from which some extracts are given below.

The exercise taken from the wrestlers that were fed under his own direction was extra-ordinary indeed. The diet offered to them was very costly and amazingly wholesome. It consisted of two pounds of butter mixed with thin leaves of gold and silver. Besides sweetmeats various preparations of milk cream and the daily light food to boot were given to them. The exercise of these special wrestlers was also uncommon. It would startle the readers. It consisted of five thousand Dands (press up) and Bathaks and drawing water a thousand or two thousand times by the buckets of a bullock draw well and running ten miles daily. Such a tremendous exercise was taken by Ramju. A wrestler of the mighty type of Ramju possessed of huge extensive and solid limbs could hardly be met with. His weight—a very strange thing to believe—ten maunds i.e. 800 lbs. His elephant like body would require one separate elephant to sit on the occasion of procession. He would occupy fully the whole seat in the Howda thereon (which is ordinarily meant for four men). The Maharaja would daily exult in the sight of Ramju having a huge strong built frame with handsome features to boot. Being extremely pleased with his elephantine strength and his successive victories in wrestling he rewarded him with a huge gold club. Though the Maharaja was so fond of Ramju he would never tolerate his overweening superiority for a considerable time. He was not disappointed in preparing a new wrestler to humiliate him and to topple him down from his peerless position. He spent a great deal of money and took indefatigable pains in feeding another wrestler Buta. Buta was taller but less bulky than Ramju. His body was turned by uncommon exercise into as it were iron solidness. His legs would appear like strong big iron bolts. The Maharaja was not fortunate enough to run into raptures by witnessing the contest between these two famous wrestlers. After the sad demise of the Maharaja (On the reign of the next Maharaja) Buta no doubt had an occasion to wrestle with Ramju and he punned him to the ground headlong by employing on him Tang leg throw in which he was a specialist, amidst the acclamations of the people.

"Fireflies"

Under the Caption 'Fireflies,' *The Vistabharati Quarterly* publishes the many short poems of that name by Rabindranath Tagore which 'had their origin in China and Japan where thoughts were very often claimed from me [the poet] in my handwriting on fans and pieces of silk.' We quote half a dozen of them below.

My fancies are fireflies,—
Specks of living light
twinkling in the dark.

The voice of wayside pansies,
that do not attract the careless glance
murmurs in these desultory lines.

In the drowsy dark caves of the mind
dreams build their nest with fragments
dropped from day's caravan.

Spring scatters the petals of flowers
that are not for the fruits of the future,
but for the moment's whim.

Joy freed from the bond of earth's slumber
rushes into numberless leaves
and dances in the air for a day.

My words that are slight
may lightly dance upon times waves
when my works heavy with import
have gone down.

Dairying as a Village Industry

We read in the *Agricultural Journal of India* —

The view is occasionally expressed that much improvement in the milking capacity of Indian cows is needed before the dairy industry can be developed to meet the requirements of city consumers and before milk production can be made a profitable business. If the necessary milk is to be produced on large dairy farms as understood in other countries and as usually suggested for municipal dairy schemes I think this view is correct but in villages milk is produced so economically and at so low a cost that with good average cattle such as are available in the main cattle breeding tract of Northern India it is possible to stimulate a considerable scale of production provided a ready market is available. The business is one which is likely to prove very attractive to cultivators. The labour of attending to the cattle can be undertaken by their families and the regular return of cash which daily sales provide is a very strong inducement. This regular daily return throughout the year gives the villagers considerable security since milk production as a business is less likely to be immediately affected by the vagaries of the season than cereal crop production. The climate of India to a large extent lends itself to the production of useful heavy yielding

fodder crops and a heavy yield of fodder can be grown at low cost. If a ready market were provided for milk produced in villages where fodder crops can be readily grown, a means would be provided of converting fodder into a saleable and marketable commodity and consequently the area of cultivated fodder crops would rapidly extend to provide the necessary fodder to produce the supply of milk to meet the demand of the market.

The introduction of fodder crop cultivation into village agricultural practice does not necessarily mean that land will be diverted from food crop production for this purpose. The land lying immediately around villages is capable of giving very heavy yields of fodder and often at periods when they are otherwise lying out of cultivation and very small areas of such land are required to yield the necessary supply. At present the cultivator requires to grow fodder for his bullocks and usually such provision is made. There is no profit in growing fodder especially for purely breeding stock and consequently very little is set aside for this purpose. The development of collecting agencies to provide a market for village milk will make fodder growing for milking cows and breeding stock profitable and when this is the case the necessary amount will be forthcoming. Mixed farming has its virtues in countries more favoured with seasons suited to the requirements of agriculture than India. Its development in this country where season can be so unfavourable as to bring crop production except in irrigated tracts practically to a standstill and where agriculture draws its power for cultivation from cattle seems an absolute necessity. There seems no doubt that the provision of facilities for the proper transport of milk to enable a better market for milk to be put at the service of the village producer is the first step to the introduction of mixed farming practices and the consequent improvement in the condition of cattle husbandry.

Food Value of Milk

The *Oriental Watchman* tells its readers that milk is the most remarkable of Foods

Milk differs from every food substance known in the fact that it is a complete food. If in the case of adults it needs to be supplemented by other foodstuffs, cow's milk is for the young infant, when properly modified a perfect food. It contains in excellent proportions all the elements needed by the growing child. This is not true of any other substance known.

The fuel element is represented in milk by fat and sugar of milk. That fat is of a sort easily utilized by the body.

Why Milk Sours While Meat Putrefies

The sugar of milk is a special product exactly adapted to the needs of the body far superior to cane sugar and free from the unwholesome properties of the products of the sugar cane. It is found nowhere else in nature except in the milk of animals. Milk sugar is slowly digested and absorbed. This enables it to reach the lower intestine where it is converted into lactic acid and so prevents the putrefaction to which modern science has traced a great number of the maladies of both infants and adults.

It is due to the presence of lactose that milk sours while meat putrefies. Nearly ten years ago I placed in a jar of buttermilk a raw beefsteak to which no antiseptic of any sort had been added. The beefsteak is still intact thanks to the antiputrefactive properties of milk sugar and the acid forming bacteria it feeds. The reason for this antiputrefactive property of milk was discovered by Kendall of Harvard who a few years ago demonstrated that in the presence of sugar even highly active putrefactive organisms produce harmless acids instead of noxious toxins and ferments. This is certainly a most beneficent provision of Nature whereby the normal food of the young infant is kept in a wholesome state while undergoing the processes of digestion and absorption in the intestine.

Are Hindus Truly Religious ?

Asks The Widows' Cause —

Are Hindus truly religious in following old customs without investigating into their goodness. What is their Religion? It is "Protection of the Society." Do the Hindus probe into every custom and see if it is religious—that is if it is protecting the society. Do they care to set right all their customs reform such as require reformation and leave off as are injurious to the protection of the Society? If this may be the angle of vision the Hindu Society would live and lead.

We are afraid in face of this Vedic definition of Religion Hindus are irreligious. They are not reforming themselves through this test. We enquire, what is that religion worthy the name that does not protect the Society. That is irreligious. Let that Religion perish that aims at cutting down the number and potentiality of a nation.

Is the custom of enforced widowhood protecting the society? Is it beneficial to Society? It might have held good times back. To-day it is a fatal custom. And should Hindus still cling to it? And in clinging are they truly religious?

Swami Shraddhananda's Death a National Loss

St. Paul's College Magazine takes the view that Swami Shraddhananda's death is a national loss. In that view it writes —

The New Year in India seems to have begun with a bolt from the blue. Swami Shraddhananda has been shot dead. We grieve at the loss of our great sage. "Men are we and must grove when even the shade of that which once was great is passed away!" And yet we are not prepared to accept the view of some of our local contemporaries that the blood of this martyr has only been the seed of his church.

We would rather take this to be a national loss, sustained and grieved for by all Indians severed by no caste or creed. This is a most grievous loss to all Mahomedans for they contribute no mean part to the evolution of Indian nationalism. Grieve they must for everyone of them can voice forth the cry *Homo Sum*. And in the words of a Latin poet every one of them may say "I am a man."

and nothing that concerns man do I deem a matter of indifference to me.

If the departed hero is privileged to have a memorial for his deep love, entire devotion, and self-sacrifice to the cause of the down-trodden India, let him be given a high place in the gallery of her distinguished dead. Let a national memorial be raised that will stand testimony to a universal united effort for the uplift of the depressed classes.

Goodwill and Peace on Earth

The same magazine observes —

What strikes us most when we take stock of things and incidents of the previous year is that there is no appreciable measure of goodwill or peace on earth. Where can God will dwell when there is a most devastating clash between the pen the altar and the sword? How can China even bring tranquillity to her troubled soul when the White Supremacy eats into the very vitals of the Far East? Verily the present miseries in China are the fruits of an exploitation carried in excess.

Coming nearer home when we review the progress of the national development in India we shudder to see before us an array of symbols indicating factions and strifes communal and ministerial. Whither goest Thou Mother India?

Christian Colleges and the National Cause

E. O. Dewick contributes to the same magazine an article on the contribution of a Christian College to the national cause in India which is well worth reading. We have room for only one passage from it.

They can I believe help to blend the rightful elements in Nationalism—love of country self respect, desire for freedom—with that wider International outlook without which Nationalism brings upon itself the inevitable nemesis of selfishness whether individual or corporate. The Christian Colleges of India are not exclusively English or even British enterprises. In them will be found American and Dane, Spaniard and German as well as the various subdivisions of Britisher—Scott and Irish, Canadian, Australian, Welsh and from various angles these are bringing to the young men of India the outlook of a wider world which neither India nor any land can ignore without peril. To that wider world India is bound by ties of common human obligation to bring the riches that are her own heritage and for the development of which she rightly yearns for her own freedom.

Conflict of Loyalties

P. A. Wadia writes in the *National Christian Council Review* —

To any one who tries to look at the human world in its broad aspects today the most outstanding characteristic will appear to be a conflict of

loyalties and the more reflective the individual, the deeper and farther reaching will this conflict appear to be in the different social relations of life. In the field of politics there is the conflict between my loyalty to the State, to which I owe allegiance, and my loyalty to the larger human society which is increasingly becoming one through the advance of scientific knowledge and the exchange of goods. There is also within the State the conflict between loyalty to the community to which I more immediately belong and loyalty to the larger political grouping which I call the Indian people. In the economic sphere there is the cleavage between respect for the customary traditions that reconcile me to the sale of adulterated goods and the scruples which make me court ruin for myself and my family if so I can see a brother in the customer who turns his goods from me. In the social sphere there is the war between my loyalty to the rules of the caste or class to which I belong and loyalty to the more comprehensive social organism of which I am a member and my community of purpose with this larger organism may demand my co-operation in the bodily life which distinctly involves a violation of caste rules.

Turning to some of the more immediate problems of Indian public life shall we allow our communal prejudices to get the better of the common interests that link us all together—Englishmen and Indians, Hindus and Muslims, Brahmans and non-Brahmans—into a corporate life inspired by the one purpose of contributing by service to the welfare of the human race? That corporate life which we visualise as the Indian nation cannot enter on its heritage of freedom so long as the constituent members of that body are torn asunder by suspicion, by envy and hatred. And to descend still lower down in the sweep of our survey shall we allow our own personality the requirements of our pecuniary gain or even our refinement or our spiritual well-being to override the love which prevents us from regarding other human beings as instruments of our individual purposes? Sir William Ashley speaking at the Plymouth Church Congress in 1923 observed that the man or woman who looks upon his servants or upon the working classes or even wife or husband or child as tools is not a Christian. And yet how many of us have been brought up in that mode of thought crystallised in the social and economic institutions under which we are living and which mould our thoughts and ways of life?

"The Indian Fist at Nationalist China"

A Nationalist says in *The Volunteer*

The Chinese Student's Monthly of Michigan in one of its editorials under the caption of 'The British Watch dog' writes: 'No British atrocities in China were complete without India furnishing the beads and fangs. The red turban policemen are the horror of the pedestrians and the bullies of the coolies.' It is a sullen fact that the Indian army has been used by the British in crushing the independence of several States even within India. It is true that Indian soldiers have conquered India for the British. The hardy warriors hailing from Nepal and Punjab have been the master-arms of Britain today. It is mainly this power which enables Britain to hold the 330 millions of Indians

in subjugation and abject slavery and to enact Amrit-sara as easily as David Garrick might have murdered Duncan on a London stage.

We must protest against the strong muscles and sacred arms of India being used on foreign soil to force slavery on quiet and liberty loving folk. Indian arms are meant for killing the Rikshasis (demons) and protecting the Rishis (saints). They are not meant for shedding innocent blood. If the British guns want to raze a thousand Chinese homes and mow down men, women and children alike, let John Bull do it himself. We should have nothing to do with it.

Tribute to Bose and Tagore

We read in the *Hindu Missionary* —

There is not one Indian who has not rejoiced and felt proud on hearing of the splendid reception given to Sir Jagadish Chandra Bose at the various centres of Learning during his recent trip to Europe. After all the land of dreamers can produce the equals of men who are wide awake. As a result of the European tours of Rindranath Tagore and Bose Hinduism stands a better chance of being properly appreciated in the West.

Bose's Teaching and Untouchability

Then follows in the same journal an inaccurate statement of Bose's opinion on the resemblance between animals and plants though the object of such statement is good. Says the writer —

At the recent Science Congress Sir Jagadish demonstrated by various experiments that there is absolutely no difference between plants and animals except that the former are stationary while the latter can move about. Both possess sense organs and can experience pleasure and pain. Have we Hindus realised the full significance of this great discovery?

Two thousand years have rolled on and a few prophet has earned forward the principle of Ahimsa a step forward. He tells us that the plucking of a fruit or flower or the uprooting of a plant causes great pain to the tree. We are left wondering as to how we are to live if we are not to be cruel to plants and trees. Viewed in the light of the discoveries of Professor Bose the principle of Ahimsa declares the vegetarian to be as sinful as the flesh eater. We can no more boast of our superiority over the non-vegetarian.

Un if we find some new food which will entail no cruelty to the animal and plant world would it not be good if we turned our thoughts inwards introspectively? Is my neighbour who eats flesh really so bad that I should have no social intercourse with him and feel polluted by his mere touch? Am I not practising cruelty on the various plants when I uproot them for my food? Is not my cruelty greater because the plants remain mute and offer no resistance when I treat them so badly? Would it not be good if I frankly and

humbly confessed to my neighbour that after all I have sinned along with him? How can I then be polluted by the touch of another who does what I do?

India No Gainer from League Health Organisation

In a long and well documented article contributed to *Welfare* Ramananda Chatterjee shows that India has not so far derived any advantage from the Health Organisation of the League of Nations. He begins by saying —

It has been often asked in what way India can derive any advantage from the League of Nations. The main object of the League is to preserve peace between nation and nation. As India has not the power either to declare war or to make peace with any nation—these things are done for her by her Suzerain Great Britain there can be no occasion for the League's exercise of the peace-preserving power in the case of India. Nor can the League do anything to raise the political status and improve the political condition of India as these are among the internal affairs of the British Empire and India in which the League cannot interfere. And it is needless to add that the League cannot help India to become independent. On the contrary, if India tried to be independent the League would oppose such endeavour. For by Article X of the Covenant of the League its Members are bound to preserve the territorial integrity of all Member states and the British Empire is such a Member State.

As India cannot derive any benefit from the political activities of the League its advocates say that she can derive some advantage from its other activities. Let us then see what we have gained from its health activities.

He holds that

Until India becomes fully self ruling and so long as her medical and health services are controlled by British Government servants the Health Organisation of the League cannot do any appreciable good to our people.

Duty and the Joy of Life

In *Welfare* Professor Diwan Chand Sharma tells the reader —

There is a couplet beloved of orators and demagogues who figure so prominently in School and College debating societies that has, I think, done more harm to our youth than the vicious works of any perverted genius. Go where you may you will find this couplet exultingly quoted and approvingly listened to by youthful Burkes and budding Brahms. The couplet to which I have referred so scornfully and which I think should be placed on the index expurgatorius in all schools and colleges runs thus —

I slept and dreamt that life was beauty

I woke and found that life was duty

I find fault with this couplet not because it lacks the true ring of poetry and sounds like a jingle but because it embodies a pernicious half-truth. It seeks to emphasise the fact that we are here to perform our duty willily nully and not to taste the glories of existence. In fact a cursory perusal of this couplet shows to us that people who think that life is beauty are mistaken as beauty are mistaken as beauty and duty are at variance with each other. We live in this world, so to say, like sentinels at the cross roads and not like sight-seers in the garden of Allah. In this world we are never to enjoy any off-day never to know any respite from our work but we are to be here always at our post after donning our uniform and with the truncheon in our hand. Life to us is a series of monotonous duties and soul devastating labour and not something in which duty linked up with pleasure and toil is relieved by so no joy.

This view of life is therefore one which does not appeal to me. Nor should it appeal to anyone else, for it is so mechanical. As an antidote to this I would ask the readers of the *Welfare* to ponder over this sentence of Colonel Roosevelt. Says the Colonel. He is not fit to live who is not fit to die and he is not fit to die who shrinks from the joy of life or from the duty of life.

He concludes —

Thus games sports love of literature love of painting nature gardening anyone of these things may be practised as a hobby. One man may find relaxation in the study of poetry another take delight in football (football was the saving of the life of Prof. Jadu Nath Sarkar Vice-Chancellor of the Calcutta University) and a third man's happiness may consist in salmon fishing. But that man's life is very dry and uninteresting who has no hobby to occupy his leisure and cannot turn to something outside the sphere of his work for relaxation and repose. We, Indians neglect sadly the cultivation of hobbies and this is the reason why we do not see much joy in life.

Unemployment and Liberal and Vocational Education

Gopal Haldar thus concludes his article on unemployment in India in *Welfare* —

The prospects are gloomy but it will be gloomier still if we remain satisfied with merely condemning liberal education whatever may be its shortcomings. Vocational education leading to no vocation cannot be popular. Its necessity lies in supplying the wants the industries demand. Without the one the other is useless and helpless.

For the present it is better that while vocational education gets the encouragement it deserves this liberal education should continue and should rather get the increasing number of subscribers to it, though their lot is bound to be more and more alone can act as a great fertiliser in this exhausted soil — it alone can mould the social environment that is so fatal to any enterprise and inspire the social mind to shed off its apathy and isolation

its primitiveness and traditionalism and bring home to it the real significance of industrialism. It is here as avenues of Westernism that the argument in favour of liberal studies and cultural education and even for the quick extension of that can stand all criticism and suspicion.

Unemployment will increase, discontent must grow in volume, only the dangers from it have to be cautiously watched and avoided. Liberal education barren in its immediate results must filter through the choicest into the whole community — and then alone we can hope to revolutionize the conditions under which the country groans and evolve a better social political and economic system.

Islam and One National India

Professor S. Khuda Bukhsh has contributed to the *Calcutta Review* an article entitled 'Reflections of a Wayfarer' from which we make some extracts below.

Is the religion of Islam hido-bound impervious to light and love? Should it stand in the way of one National India? Islam's history is reassuring. Her literature holds out the brightest hope. Did not Islam accept Hellenism as the starting point of her culture? Did she not incorporate it — make it her very own? What is Islamic civilization but a blend of old civilizations which Islam had subdued and absorbed into her own new system? What are Islamic theology and dogmatics but the gift of the Arabian people — Christian converts to Islam. What is the theory of the Islamic state but the Persian theory transplanted to Islamic soil?

And does not Buddhism owe its origin mainly to the school of Indian Philosophy known as the Vedanta School? The external resemblances between the two systems — those of the Vedanta and the Arab and Persian mysticism — obtain a further confirmation by their remarkable internal similarities (Khuda Bukhsh *Islamic Civilisation*, pp 103-114). Islam as we know it to day is a mosaic work made up of many sources. Would that our co-religionists realized this truth! It has changed with the changing times. The realisation of this fact will be of incalculable importance to the future politics of Islam.

Nor must we forget that two Pandits enriched the literature of the Caliphate with the treasures of Hindu learning. But if history is helpful no less is literature in the understanding of this problem. Where in the literature of the world is there that spirit of liberalism and toleration such as we find in Islamic literature?

Islam has never stood in the way of unity and freedom. Does it stand in the way of unity and freedom of India? I emphatically think not. And yet why then is this ugly Hindu Mohammedan question — so distracting so disturbing so subversive of progress and friendship? Because in the past the uniting bond was the bond of culture. That bond has now been snapped destroyed and with the destruction of that bond the ties of unity good will concord have loosened and fallen. Politics has taken its place and what, after all is Indian Politics but a scramble for a few Government posts?

The false theory of a foreign people settled in a foreign land propounded by a half backed historian—not very long ago—is now rejected with scorn by all sane thinking Muslims.

This belief—historically untenable—is so ineradicably rooted in my co-religionists—that they cannot—so long as it continues cherish much less respond to the idea of unity political or social. It is a mischievous belief for it assumes that we are a foreign people wholly different from the Hindus

Malaria Control at Birnagar

The January number of the *Calcutta Medical Journal* contains a very elaborate and well illustrated article on malaria control at Birnagar. By perusing it, the inhabitants of other malaria stricken villages will be able to constitute and carry on the work of their own anti malarial societies with efficiency.

Anti malarial work at Birnagar was started by a Society called the Birnagar Pali Mandali in October 1913. Official reports confirm the fact that the scourge of malaria spread throughout Bengal in an epidemic form from this once populous and

beautiful town of Birnagar (Ula) which is 50½ miles above Calcutta by rail. The anti malarial operations under taken at this place ought therefore to arouse the deepest interest in view of its notorious association with the history of the malarial epidemic in Bengal. A Charitable Dispensary was established at Birnagar in 1861 and a Municipality was created there in 1869. But neither of these institutions was able to check the ravages caused by malaria, and so the once prosperous town of Birnagar rapidly sank into the status of a village abounding in dilapidated homesteads, ruins and jungles presenting all the features of a rural area.

Mr Krishnaschkar Bose concludes his very instructive report with the observation that

Quinine measures seem to be more immediately effective than anti mosquito campaign. But it would be a mistake to drop the anti mosquito campaign and concentrate attention on quininisation alone. A thorough anti mosquito measure is bound to be effective and in our fight against malaria we cannot leave any weapon unused. Anti mosquito measures can only be thorough when the Municipality enforces its laws and byelaws and compels the owners of tanks and lands and householders to adopt the requisite sanitary measures. It would be a pity if the Municipal Commissioners do not wake up to the importance of this at the present stage of our work. Any neglect in this direction may nullify in a great measure all the work done by the Pali Mandali.

FOREIGN PERIODICALS

Postal Rates in India

Sir Geoffrey R. Clarke a former Director general of Posts and Telegraphs in India says in the *Asiatic Review*—

In 1922 the initial rates were doubled to 1 anna per ounce for a letter and ½ anna for a postcard. These rates compare very favourably with those in Great Britain and are, in my opinion fully justified. Distances in India are six times as great as in this country, we do not get the same volume of mail to handle and much correspondence has to travel many miles by runners lines over which any appreciable increase in weight involves the employment of an additional runner at each stage.

In any comparison between India and Great Britain the far greater wealth and cost of living in Great Britain and the higher salaries paid to British postal employees should be taken into consideration. If that were done it would be seen that the people of India have to pay heavier postage than Britishers.

The following observations of Sir G. R. Clarke are however unexceptionable.

It is generally accepted that the Post Office in any country should just pay its way but I do not consider it any great disaster if it fails to do so. Cheap postage is such an inestimable advantage to the life of a country both on its social and business side that the actual loss in maintaining the service may be more than counterbalanced by the general gain to the community.

It has been found by experience that high postage seriously interferes with the distribution of business and trade circulars and it is possible that in this way the gain of a million pounds say to postal revenue may mean the loss of ten million pounds worth of trade orders. This may be a gross exaggeration but it is an argument for cheap postage quite irrespective of its results in the Department itself.

Indianization in the Post-Office

Sir G. R. Clarke's opinion on Indianisation in the Post-Office is worth quoting. Says he—

There is, as you are aware, a persistent and natural demand in India to indianize the services. In the Post Office indianization began many years ago and there has never been any distinction of race in the matter of promotion to the higher appointments. In fact, most of these are at present held by Indians and very efficient and trustworthy officers they have proved. I think it is purely due to this elimination of race distinction both in the matter of appointment and pay that the Department has been able to work so smoothly in troubled times.

Prohibition in America

We read in the *Review of Religions*

Mr. Irving Fisher, Professor of Economics, Yale University, says — Prohibition has accomplished much good hygienically, economically and socially. There is a decrease, he says, in the first offenders from 24 per 10,000 of the population in 1914 to 6 per 10,000 in 1925. Amongst Students he says, It is not debatable that there has been a very substantial reduction in arrests for drunkenness. The cases of profanity dealt with in New York City have fallen from 4,300 in 1919 to 1,600 in 1924.

Charles C. Clarke, Professor of Romance Languages who is not a prohibitionist says — I will admit, however, that the effect of prohibition at Yale has been good. I know whereof I speak for I have been a Member of the Committee of Discipline from a time dating back many years before prohibition. I do not pretend that the students are prohibitionists or are not drinking but the change has been simply revolutionary. In other days our Committee was continually busy with cases involving intoxication and the disorders arising from it. Now we have practically no business of the kind to transact.

A Chinese Story

Chuang Tzu writes in *Message of the East* —

In Lu there was a Wang Tai (Taoist saint) who had lost both his feet while his disciples who followed and went about with him were as numerous as those of Chungni (Confucius). Chang Chi asked Chung ni about him saying, 'Though Wang Tai is a cripple, the disciples who follow him about divide Lu equally with you, Master. When he stands, he does not teach them; when he sits, he does not discourse to them. But they go to him empty and come back full. Is there indeed such a thing as instruction without words? and while the body is imperfect, may the mind be complete? What sort of man is he?'

Chung ni replied, 'This master is a sage. I have only been too late in going to him. I will make him my teacher and how much more should those do to who are not equal to me. Why should only the State of Lu follow him? I will lead on all under heaven with me to do so.' Chang Chi rejoined, 'He is a man who has lost

his feet, and yet he is known as the venerable Wang. He must be very different from ordinary men. What is the peculiar way in which he employs his mind?' The reply was, 'Death and life are great considerations but they could work no change in him. Though heaven and earth were to be overturned and fall they would occasion him no loss. His judgment is fixed regarding that in which there is no element of falsehood, and while other things change, he changes not. The transformations of things are to him the developments prescribed for them and he keeps fast hold of the Author of them.'

The Teaching of Literature

M. U. Moore asserts in the *Island Review* of Cervello 'with a fair degree of confidence, that literature cannot be taught at all.'

Literature was written not to be studied but to be enjoyed. What passes for the teaching of literature is the *history of literature* which is quite another thing and as a recent writer remarks, 'about as irrelevant to its appreciation as knowledge of the origin of our breakfast sausage would be to our enjoyment of it.' The teaching, in fact, resolves itself into a mere chatter about sources and origins, entirely worthless from an educational point of view. What we should notice in this connection is that we are here confronted with a feature of academic teaching viz a *subordination of substance for life to form*. This can be seen even more clearly by another instance. Anybody who has any knowledge of literary text books for students of the present-day will recognize that the work itself which is the subject matter occupies but an insignificant part of the text book. A play of Shakespeare, edited by some academic light, consists of its lengthy introductions, going into minute details of origin and the date when it was written and concluding with voluminous notes of a pedantic character, glossary of terms and so on. Here is a complete subordination of substance to form, a mere encumbering of the mind with futile facts which it is to be hoped, are forgotten as soon as learnt. And the result of this concentration on the part of academic lecturers on this mechanism of literature. This taking of the machine to pieces as it were and seeing how it works not only causes a fictitious interest in the machinery but usurps the rightful interest in literature as such. Take a thing of beauty to pieces and you destroy the beauty. dissect a genius and the genius escapes you.

Britain and League Mandates Commission

The *Living Age* writes —

The British Foreign Office has seen fit to address a letter to the Secretary General of the League of Nations politely protesting against the care with which the Permanent Mandates Commission is inquiring into the government of the colonies and countries entrusted to the administration of the Powers. The Commission's questionnaire is very exhaustive, comprising as it does over two hundred

and thirty questions extending to every detail of government and administration. The *New Statesman* deplores Mr Chamberlain's action because it makes the British Government appear as a leader in a habit against the Commission, a body of unquestioned integrity and ability whose authority must be maintained if the mandate system is to have the confidence of the world. It argues that if Great Britain is doing its duty fairly to the inhabitants of the countries placed in its care, there is nothing to fear and that as a trustee it cannot set up as sole judge of what is necessary or unnecessary in respect of the rights of its *cestui que trust*. The mandated territories are not colonies.

British policy, a fact which, however, does not make it any the less desirable

A Japanese Medical Researcher

A distinguished English surgeon gave in a private letter to a scientific friend in Tokyo an account of a professional visit to some of the leading medical centres of America which was published in the *Japan Advertiser*. The following extract from the letter relates to a Japanese Medical researcher—

I spent an afternoon with Noguchi. He is a tiger for work and in one way impressed me more than any of them. He showed me the spirillum of yellow fever alive in culture and the similar spirillum in the sap of the plant milkweed. He may be coming to Egypt this winter to study trachoma, leishmaniasis and kala-azar. He has his research workers all over the world. He determines the cause of obscure South American diseases in his laboratory in New York. Blood and other specimens are sent to him by collectors and he does his work in the quiet atmosphere of his laboratory.

Have we any such researchers? Noguchi should have come to Assam and Bengal to study kala-azar.

China and Great Britain

The *New Republic* (January 5) thinks,

In regard to China Great Britain has at last seen the handwriting on the wall. Having failed to win the support of Japan and the United States for a policy of using force she has now decided to try conciliation. The official memorandum made public on Christmas Day practically promises to recognize the Canton government if it continues to succeed. Great Britain now approves the levying of the so-called "Whang-tsun surtaxes" by China—a decision which is reasonable since the Cantonese are levying whatever taxes they please and no one can stop them. The British also declare that they have wanted to adopt this attitude ever since last May but refrained from doing so in order to continue the unanimity of the great powers. That the *Faith* should be the letter in a movement of pacification is turning the tables with a vengeance. It is a characteristic example of opportunist

The Mandates and Self righteous Britain

The *New Republic* observes—

The weakest point in the machinery of the League of Nations is the mandate system. Originally it was established to accord with the new respectability which the advent of the League was supposed to bring into the relationship between the great powers and the backward peoples, but its practical workings have differed little from the older form of colonial holdings. The case of the Syrian mandate, held by France is the most notorious illustration of this. The efforts of the Syrians to bring their case before the world were thwarted by the policy of permitting complaints from the subject people to come to the League's attention only through the mandatory power—which is about like the army rule that a private can only complain of injustice by a lieutenant through asking the lieutenant himself to speak to the captain about it. The injustice of this has at last become so apparent that the Mandates Commission has itself proposed that in future representative of the inhabitants of the mandated territory should be allowed to appear in person and state their grievances.

To this suggestion on the reply of the British government has just been published. It rejects the suggestion in terms of coldest disapproval. It regards the existing machinery as entirely adequate.

The view of His Majesty's government it adds is that there are the gravest objections to the grant of any form of audience by an advisory Commission of the League to petitioners who are either themselves inhabitants of a territory administered by his Majesty's government under mandate or are petitioning on behalf of inhabitants of such territories. It has never been deemed necessary to grant audiences to petitioners either for the purpose of considering their petitions or for the purpose of elucidating the matters with which any petition deals. It would appear that in any case in which after examination of a written petition the mandates commission finds itself unable to make a definite recommendation to the Council its proper course would be to request the mandatory power concerned to furnish or to obtain from the petitioners such further information as it requires. In other words let the League and France do and out from the Syrians whether she has been acting with unexampled cruelty and injustice in their country and if so, report to that effect. We submit that this policy is unworthy of the British government, or any honest government. It is a continuation of the damned nigger theory of dealing with the inhabitants of the mandated territory, and the longer it is continued, the more troublesome it will be.

Importance of Date of Emancipation

British politicians in their selfishness think that it is of no importance to fix a date

on which India is to have responsible self government, ignoring the fact that a vague promise made to unborn generations is no promise at all—the promise must be fulfilled within the life time of the foremost political workers of India. It is in this belief that the New Republic suggests with reference to the Philippines —

Let the United States agree to give the Islands their independence at a fixed date some years in the future provided that at a plebiscite held not many years before that time the inhabitants signify their desire that this be done. Then let them have an increasing degree of autonomy from year to year in the meantime and let the final economic arrangement with the United States, whatever it may be come into effect gradually over a long period.

Relations between Orientals and Occidentals

Haridas T Mazumdar Chairman Oriental Students Conference, writes in the *Philippine American Herald*

Is our society I mean our world society so organized as to ensure peace and plenty to every individual and to every nation? Is every nation organized for peace or for war? What is the basis of our international relations? By international relations I do not mean the sorry mess of the European situation international relations cover a wider and broader field than that. By international relations I have in mind particularly the relations between the two culture groups the Orient and the Occident. Can we either as Orientals or as Occidentals be proud of the relations that exist between ourselves? Do you of the Occident know our culture sufficiently to condemn it as your inferior? Do we of the Orient know your culture sufficiently to adjudge you as the pariahs risen to power because of the perversity of the Iron Age? Citizens of the Occident, let me impress upon you the significance of our problem it is not merely that markets and money and investments are at stake—our stakes are of vastly greater import. Much as we resent and suffer from your political domination from your economic imperialism from your white man's burthen we feel that the greater issue lies in our mutual misunderstanding of each others cultural values. Such is the opinion of the Orient and it is this that we tried to thresh out at our Conference.

Women Workers for Peace

Many of greatest workers for international peace in America are women. Recently problems of peace were discussed there by women's organisations at a conference

on the cause and cure of war, about which we read in the *Woman Citizen*

'Believing as I do' said Mrs Catt firmly that compulsory arbitration treaties are the real solution of the war problem—"and the pedal note of the second Conference on the Cause and Cure of War was struck to hold throughout five morning afternoons and evenings of lecture discussion and debate

It was nearly two years ago that a committee composed of the presidents of nine of the Great national women's organizations called the first Conference. That time the subjects were literally causes and cures analyzed dissected discussed from every angle. Out of that Conference came certain findings which during the past two years have acted as a basis for study programs summer conferences and individual lectures on various phases of international relations. Whenever a missionary society picked a barrel whenever a woman's club devoted an afternoon to foreign affairs wherever an American Association of University Women chapter discussed the international scholarship it was aiding right there was apt to be heard an echo from the hard study of the conference.

So that the six hundred delegates who met this year in the gilded Hall of nations during the snowy sloppy week of December fifth had back of them the most authoritative information about why peoples went to war and how conflict could be avoided. They also had two years in which they had digested that information. They had tried it out on other people tested its validity in this case and that. Problems of peace had been in their minds and their minds had sloughed off prejudice and gained limberness.

The result was an added ease in discussion a clarity of background and an increased willingness to listen to very controversial discussion. The Conference devoted half its time to economic and historic consideration of such fundamental causes and cures as the need for security trade rivalries, general arbitration and progressive disarmament. Then they went on to the more prickly discussion of our present foreign relations with other countries.

Opium More Dangerous than Alcohol

Sir Richard M Dane asserts in the *Journal of the East India Association* —

The abuse of opium is of course, a serious evil, but the abuse of alcohol is also a serious evil. The two habits are comparable. Opium appears to have a special attraction for some races and alcohol for others. The abuse of alcohol is a more serious evil for the individual and for the persons with whom he is brought in contact, but opium even when used in moderation, has an enervating tendency and is therefore, for a nation a more dangerous thing.

Italy Under Mussolini

The bulletin of the Association International des Travailleurs publishes a letter from a correspondent about Italy which begins thus —

The conditions in Italy remind one of the worst days of popery Bourbonnism or feudalism. The attempt to kill the Duke put into execution by a youth of Bologna has given handle to a regime of terror unparalleled in history. The great courage of Mussolini so much advertised is a direct lie. It is not true that, immediately after the shot was fired, he gave order to stop the automobile and keep quiet. On the contrary he became pale like a corpse and ordered increased speed and did not even turn once backwards to look. When he came to the station, he was still shivering and could not control his excitedness. This was told to me a few days later by a Fascist of note. He told me also that the would be assassin Zamboni was condemned to be shot by his friends and fellow conspirators. I cannot vouch for the truth of this latter statement. Young Zamboni was a child of Fascism and his brother made the march to Rome. It must be concluded therefore, that he was commanded by the renegade Fascists to carry out the assassination. In any case everyone in Italy wants an explanation and many thousand suppositions are suggested in the Fascist camp itself. It is not, therefore, easy to sift all these and truth is as rare in Italy as freedom. All opposition papers have not only been suspended but forbidden. The Fascist papers themselves can only publish what the Duce wants.

It is said that the Italian nation is agreed with the Fascist politics. Who can deny it? Whoever dares to express another opinion is immediately prosecuted and is doomed to certain conviction. That itself would be luck! For whoever is surprised when he expresses a few words of murmur in a public place or on the streets runs the risk of being lynched. Not even in the confidential circle of one's relatives can one express his opinions freely. In every house there are some spies who are lurking upon every suspected family. The door keepers of houses must observe and report the suspected families. They must watch their comports and denounce them to the police.

Church Attendance in England

Professor J Takakusu writes in the *Young East*—

During ten years which I spent in Europe in my student days I rarely missed attending church services on Sunday. To speak the truth at first I went to the church rather reluctantly because I had no other way of spending Sunday than doing so. By degrees, however I began to take interest in church activities and went even a long way to hear sermons by eminent preachers. I visited Europe four times after I had finished my studies and returned home, but every time I went there I never failed to visit the church on Sunday and to observe with a critical eye how matters were

going on therein. From these experiences I can say that within the past twenty or thirty years Europe has gone through a great even a sweeping change in the domain of thought.

When more than thirty years ago I first visited England as a student Christianity appeared to be in the heyday of prosperity. No boarding house would tolerate a student who would stay at home and continue his studies on Sunday. He was therefore obliged to quit his books on that day and go out for a walk. Neither sports nor any other amusements were available, and as he could scarcely walk all day he was obliged to go to the church. It was in such circumstances that I attended church services every Sunday. In those days every church was filled to capacity and the sentiment of the people at large towards the church was exceedingly reverential. I also found missionary zeal to be very intense the popular sympathy for heathens being of such depth that many earnest young men and women went out as missionaries to pagan countries and money was always liberally given for their support. After the Russo Japanese War from which Japan emerged victorious some great change was observed in the sentiment of the English Christians towards the Japanese. Before that war they had made it one of their cherished objects to convert the whole of the Japanese people to Christianity in fifty years as a Bishop of Tokyo once spoke at Oxford. After the war however opinion appeared among them that it was waste of both labour and money to try to propagate Christianity among the Japanese who already possessed Buddhism of advanced form as their religion, and that missionary efforts should be concentrated to irreligious and uncivilised regions such as Africa. In fact a certain denomination discontinued sending missionaries to Japan. Nevertheless the religious sentiment of the English people and of other European peoples for that matter was still very strong.

All this has been upset by the Great War. On my last visit to England, I was amazed to find church attendance so poor that it appeared to have dwindled to one-tenth of that of the pre-war days. Last I might fall into error in my judgment. I visited a goodly number of churches and those of different denominations. Not only that, I inspected conditions prevailing in churches and chapels in cities as well as in the country. It was the same everywhere.

Publication of Abhidharmakosha Vyakhya in Russia

The same magazine is responsible for the announcement that

The copy of Abhidharmakosha Vyakhya by Yatomitra, which was collated by Dr Unrai Wogihara with years painstaking efforts will shortly be published in the capital of Soviet Russia. The revised copy was sent to Dr Sergei Oldenbourg at the beginning of the World War to be published in the Bibliotheca Buddhica series of the Russian Academy, but nothing as to its fate has been heard since the outbreak of the great revolution by the Soviet faction. To our pleasant surprise, however it has been reported recently in Professor

Sizervatskoi of the University of Leningrad that the valuable Buddhist manuscript has been kept in perfect condition inspite of the great revolution which wrought havoc throughout the country, and will be published early this year

The World's Population

Some figures relating to the world's population were given by Sir Charles Close in his presidential address to the Royal Geographical Society. The following are quoted from them as published in the *London Inquirer*

The population of the globe, estimated at about 1,859 millions in 1924, was increasing at the rate of about 20 millions a year so that in 1927 it would be about 1,907 millions. Omitting the frozen and desert places the present density of population for the whole world was 34 per square mile or 146 per square kilometre. The densities of the countries differed greatly. England and Wales having 261 persons per square kilometre, Belgium 245 Italy 130 Germany 127 France 71, Scotland 63 Irish Free State 46 Spain 42 Russia 24 and Norway 8. The density of the population of England at once leapt to the eye

Alcohol and Opium in India

Dr Sudhindra Bose writes in the *Scholastic* (Pittsburgh, Penn U S A)

Before its contact with Europe, India was one of the most temperate countries of the world. Drinking was considered a social vice a religious crime. In comparatively modern times drinking of spirituous liquor has been introduced in India along with other gifts of Western civilization. Today the British Government in India is in the liquor business it is the saloon keeper of the nation. The liquor traffic is one of the most deeply entrenched foreign interests but the will of the nation has declared itself in no unmistakable terms. Judging by the innumerable local and provincial referenda India is undoubtedly for hundred per cent prohibition. And could India be free of the British control today it is no exaggeration to say that India would go dry tomorrow.

Closely connected with the temperance question is the opium traffic, which has become a great national peril. The medical authorities of America say that for all scientific and medicinal purposes of the whole world we need only three and a half tons of opium a year. India alone produces a thousand tons of the drug annually enough to poison the whole human race a dozen times. In India, the opium traffic is established by law. It is the monopoly of the government. Just as the little boys and girls in the United States can go to a shop and buy all the candy they desire much in the same way the little boys and girls in India can go to an opium den and buy unlimited "dope." There are seven thousand government

licensed opium dens operating in India, open daily the year round.

The various anti narcotic societies in India are ever active in their crusade against the drug. They point to the fact that Japan has already banished opium from its possession Korea and Formosa. They demand that India should be allowed to suppress opium as a means of social well being. As a result of these campaigns, there has been of late marked diminution of the opium evil in certain areas.

Foreigners in China

The New Republic Comments on the Chinese situation as follows

The situation in China is daily growing more dangerous. At any moment it is possible that foreigners may be killed in the course of riots, and hostilities started the outcome of which it is impossible to predict. The British concession at Hankow has been seized and there and at other points the feeling against foreigners is running high. Five American destroyers have been sent to Shanghai and other naval forces are in readiness to protect the lives of foreigners. The use of military and naval strength in this way has plenty of precedents and it is not surprising that it should be resorted to. At the same time we agree with Mr Grover Clark editor and the publisher of the Peking leader who warns that it is more likely to bring about danger to foreigners than to prevent it. The Cantonese government, Mr Clark pointed out in a recent interview in the New York Times is seeking by every possible means to avoid any harm to foreigners knowing what the probable results will be. But the presence of armed forces is itself an incitement to the mob to resort to violence. It plays into the hands of the radicals and seems to justify the propaganda of Soviet Russia regarding the sinister purposes of the power. Mr Clark who as an observer of Chinese affairs is second to none in experience and ability believes it is of the greatest importance that the United States should immediately make an unequivocal gesture of friendliness toward the Chinese people. He believes this should be done regardless of any action of the other power and that if it is postponed even a few weeks it may be too late. Mr Stephen Porter Chairman of the Foreign Affairs Committee of the House of Representatives has introduced a resolution which would do much in this direction. It calls for the United States to undertake immediate treaty revision regardless of the action of the other powers. It ought to pass, and at once.

Britains Aftermath of War

We take the following from the *Literary Digest*

What this has been may be partially appreciated from a survey of the activities of the Joint Council of the Order of St. John of Jerusalem in England and the British Red Cross Society, which

has just issued its sixth annual report. Says *The Lancet* (London) in a review of this document

"The purely after war activities of the Council as set forth in the report, are many and extend to all ranks of the Services, but perhaps the most important of them are those undertaken by the Auxiliary Hospitals for Officers Department which seeks to relieve ex-officers suffering from sickness or disablement attributable to, or aggravated by their service in the war. More than 17,000 of such cases have been helped during the last six years and it is melancholy to have a record that the majority of them have been tuberculosis cases. The Department puts them into hospitals at Brighton assists them to go to Switzerland or the Riviera, helps them with the cost of the treatment while their cases are being officially investigated, and does not pass over unnoticed those whose applications have been rejected by the Appeal Tribunal. There are, unhappily still many ex-officers who require surgical, medical or convalescent treatment for disabilities for which the Ministry of Pensions

could not accept liability but are unable to pay operation and nursing home fees. Here the hospital steps in with its inestimable boons and removes much bodily suffering and mental anxiety. As regards mere extent however the activities of the Emergency Help Committee stand at the head of all these works of mercy. Last year 17,030 cases were helped and half a million dollars a year is being spent, mainly in grants of a first amount for some specific purpose calculated to confer permanent benefit. Very often the money is eventually refunded and many men their physical handicaps notwithstanding have thus been enabled to become self-supporting. In addition to all this money is found for materials and training for beds of occupations for drives and entertainments and for Christmas gifts. The report makes a splendid record of public service most of it performed voluntarily by helpers whose patience and sympathy provide the human touch that lights up so many lives upon which the shadow of war has fallen never entirely to be removed.

MANAGEMENT OF WOMEN'S EDUCATION IN BENGAL

By RENUKA ROY D.Sc. (ECON. LONDON)

RECENTLY a proposal has been set afoot by some of our pioneer women educationists to move Government for the creation of a separate board for women's secondary and intermediate education consisting mainly of women and a small number of able men in the nature of experts. This board is to set up a separate school final in accordance with the proposals of the Saddler Commission report. The Saddler Commission has shown us, that there is a great waste of time due to the low standard of the present school leaving examination of the Calcutta University. Timers at this stage of education even more precious in the case of girls than boys and the reason is that only a few girls go in for higher education the great majority getting married at the completion of their school life. If their school final is on a higher level they would at least be ensured of a better and more complete education before leaving school. The board would also be useful in introducing new subjects for girls, such as domestic science and social hygiene. Its advocates want the board to have the recognition of the University and its co-operation in its creation but they maintain that the board must be created even

if University help is not forthcoming. The usefulness of such a board is unquestionable. It would give women a much greater power in the administration of girls' education. But it is essential that this board though a separate entity should have connection with the University. This could be secured by a few of the members of the board being members of the University Senate or *vice versa*. As a matter of fact, the University which contains so many of our most intellectual men should be brought to realise the necessity of co-operating with educated Indian women and of rendering them every aid in the formation of this women's board.

In matters educational centralisation is necessary in order to obtain co-ordination of policy but there is need for a good deal of regional devolution for its actual administration.

This devolution could be effected by the formation of District Women's Councils which would be supervised by the Central Board of women's education. These district councils would be concerned with both primary and secondary as well as the zenana education of women in the districts. At present they would have to consist of quite a number of

men and only a few women. The number of women would gradually increase as the social conditions in the districts improved. The wives of officials and other educated women in the districts should be induced upon to manage the boards and to train up interested resident ladies to take up the work. This is most important to preserve continuity in action. Although men would have to form the majority on these district councils under present circumstances yet these councils would form a training ground for women in the districts and would also be under the control and influence of a Central Board where women would predominate. Herein lies their superiority over local bodies such as municipalities which would have to consist wholly of men for a much longer time to come as a long period will elapse before women are either able or willing to join them.

The Inspector of schools would be an ex officio member of the central board and the District Inspector if appointed would be ex officio member of the district councils and could play a large part in making the councils a success. However the whole power should not be vested in their hands. Ultimate control should be kept in the hands of independent men and women who have not to be accountable to Government for their action as Inspectorships naturally would be. Initiative and new ideas can only be introduced by those who are free from the trammels of officialdom.

Of course the time will come for these district councils to be established after the Central Board is brought nearer materialisation. Recently the Government have urged upon the University the necessity of forming a separate board for secondary and intermedi-

ate education for both boys and girls. If such a board is formed and women are given their due importance then educated women would have no quarrel with the project. But it is most deplorable that the Government proposals to the University include only one woman on this board. All things considered it would be best for women to have a separate board but it must work in co-operation with the University if it is to be a success. The formation of this board would by no means make it unnecessary for women to establish their claims to fellowship on the body of the University. Higher education will be controlled there and it is essential for us to have a hand in the guidance of the higher education of Indian women.

Surely with the urgent need for the spread of women's education and an even greater need to improve the type of education given, we should count on the help of all fair minded and liberal men. But we must not forget that it is on women that ultimate responsibility lies. It is for them not only to insist on their rights but make use of them. If we do not understand the very essence of citizenship and are not prepared to do our utmost in furthering the cause of women's education all the help and all the sympathy that we obtain from our menfolk would be of no avail whatsoever. It is a women's problem and it is for women to solve it. We who owe our freedom and education to a handful of enthusiastic reformers and are the inheritors of all the pioneers have done owe it to them and to our less fortunate sisters to do all in our power to improve the condition of the vast majority of our country women.

MARCH OF ANTI ASIANISM AND THE PAN ASIAN UNION

A special cable to the *New York Times* gives the following significant news item:

Panama Oct. 23.—President Charr has approved the migration law which he had vetoed and returned to the National Assembly suggesting amendments not all of which were included in the revised law finally passed.

The law prohibits absolutely the immigration of

Chinese, Japanese, Turks, Syrians, East Indians, Dravidians and Negroes of the West Indies and Guiana whose original language is not Spanish.

This qualification makes possible the exception of Latin Americans of negro blood. The law excludes except employees of the Panama Canal the executives of whatever race in accordance with the existing treaty agreements with the United States.

It is estimated that 5,000 West Indian negroes-

100) Chinese and a few hundred Japanese and other excluded races are now resident in Panama."

The above news-item is the clearest and most significant proof of the spread of anti-Asianism among the nations of the world, particularly among the nations which are directly or indirectly co-operating with Great Britain and her dominions and the United States of America, in their anti-Asian immigration and world policies.

Panama is a very insignificant nation, when compared with Japan, China, Turkey or India, yet Panama deliberately enacts a humiliating and discriminatory law against the nationals of the Asian states. Those who are familiar with the actual status of Panama internationally will agree with us that although Panama is regarded as an independent nation, but in actuality from the very day of its creation it has been nothing but a dependency of the United States of America. When Columbia refused to concede to the demands of the United States, regarding the concessions, necessary for the building of the Panama Canal a Revolution broke out in the province of Panama, which was then a part of Columbia. It is a notorious fact, that the United States was so intensely interested in the revolution and its success that the Washington Government, under the direction of the great American Theodore Roosevelt, recognized the independence of Panama within less than forty eight hours. Of course, the Panama Government gladly acceded to the demands (granting of a concession) of the United States which in return promised to guarantee Panama's independence.

It does not take great intelligence to divine that Panama's anti-Asiatic Immigration policy is the echo of the wishes of the United States of America. The United States used the Chinese and Japanese labourers whom the people of the country invited then to help them in building their railroads. But Asiatics are excluded from the great Republic. The Panama Canal was also dug by the Asiatics and the Negroes, so far as the hard work was concerned, and now they are not wanted. The far-reaching significance of Panama's policy of anti-Asianism becomes evident to us, when we consider that there are influential American statesmen who think that all members of the Pan-American union should adopt a common policy of 'American solidarity' by co-operating and adopting a similar international policy for the American continents, such as exclusion of the Asiatics from the American continents.

It is notorious that the American Government is in accord with the Canadian authorities regarding the virtual exclusion of the Chinese, Japanese and Hindus. The American Government does not like the idea of the Japanese, Hindus or Chinese immigrating into Mexico. It is now known that one of the things Japan had to agree to, before the famous Gentlemen's Agreement between the United States and Japan was signed, (which has been recently repudiated by the United States Government), was that the Japanese Government would voluntarily restrict Japanese Immigration to Mexico. Even today absolutely false stories are being spread occasionally in American papers to the effect that the Japanese are plotting to secure a naval base or coaling station in Mexico, which might be used against the United States. Since the acquisition of the Philippines by the United States the Chinese are excluded from that Asian country and the nationals of other Asian states are neither very welcome by the Americans, who control the destiny of the nation. The position of the Asiatic people in Cuba is similar to that of the Philippine Islands. It is very evident that Haiti, Nicaragua and other Central American states will possibly follow the foot steps of Canada, Panama and the United States of America in discriminating against the Asiatics.

The Asiatics are excluded from a large portion of the African continent which is dominated by the British Empire. The continent of Australia, to uphold the doctrine of 'White Australia', excludes the Asiatics. Canada, the United States of America and other countries like Panama are determinedly opposed to Asiatic Immigration. Discriminations against the Asiatics in certain parts of Asia are also now in force. These facts establish precedents for further movements for the spread of anti-Asian legislations in other countries. It is known to all who read foreign news carefully that Japanese efforts to colonize in Brazil and other South American countries have been adversely criticised in the American press, as undermining the spirit of the Monroe Doctrine. It is not too much to foretell that, unless something extraordinary happens with the increase of Anglo-American financial influence in South American countries, anti-Asian legislations will make further headway.

The anti-Asian Legislation of the Panama Republic is not in itself a very serious

thing When we take the whole question into consideration we find it to be but an expression of a very dangerous symptom of discrimination against more than nine hundred millions of people who are by no means a negligible factor in world politics and world peace. *Enactment of discriminatory Immigration laws against the Asiatics definitely affects the property rights commercial rights and equal opportunity for the nationals of the Asiatic countries* If the Asiatic peoples begin to adopt measures reciprocating against the discriminatory legislations affecting personal commercial and property rights of various western countries, it would not be a source of spreading good will among nations There are indications that some of the Asian states are going to exact retaliatory measures The following Associated Press despatch from Tokio October 29th published in the *New York Times* throws some light on the possible development —

The Cabinet voted today to make enforcement of Japan's alien land law effective on Nov 10 Under this law all aliens who are subjects of countries granting similar privileges to Japanese can own land in Japan Modification of the law by imperial decree made it possible to discriminate against citizens of States or political subdivisions of a nation because of the fact that such States or subdivisions might deny Japanese the right to own land.

The problem that is facing Young Asia is to find a way out by which Asians will not be discriminated against in any part of the world The only programme that may lead to the solution of the difficulty existing now is the enforcement of an international understanding which will call for *absolute Racial Equality* All Asia can co-operate on this programme as Dr Wellington Koo as the Chinese Representative at the Versailles Peace Conference co-operated with Baron Makino of Japan who asked for the inclusion of the creed of Racial Equality in the Covenant of the League of Nations Baron Makino's proposition for Racial Equality was as follows —

The equality of nations being a basic principle of the League of Nations the High Contracting Parties agree to accord as soon as possible to all alien nationals of States members of the League equal and just treatment in every respect, making no distinction either in law or in fact on account of their race or nationality

Because of the opposition of the Anglo-American statesmen, particularly Hughes of Australia and Woodrow Wilson and Lloyd George Baron Makino's proposal failed However he added —

I feel it my duty to declare clearly on this occasion that the Japanese Government and people feel poignant regret at the failure of the Commission to approve of their just demand for laying down a principle aiming at the adjustment of this long standing grievance the demand that is based upon a deep-rooted national conviction They will continue in their insistence for the adoption of this principle by the League in future.

Japan Turkey Persia Siam and other countries have got rid of the unequal treaties granting extra territorial jurisdiction for various nations and China is trying to recover her full sovereignty in her internal matters But the greater problem that is facing all Asia is to secure Racial Equality for the peoples of Asia all over the world All Asia must act in concert to prevent any and all discriminatory legislations against the Asian peoples in any part of the world *Asian Independence and Racial Equality and World Peace should be the guiding principles for the Pan Asian Union* The first meeting of the Pan Asian Union was held in 1926 in Nagasaki Japan It is expected that the next Pan Asian Congress will be held in Peking during this year Let us hope that India will be not only adequately represented there but the Indian statesmen and educators will arrange so that the 1928 session of Pan Asian Congress be held in Calcutta when Asian scholars from various lands will gather to discuss problems of mutual interest and to devise means for closer co-operation among Asian peoples to protect their birth rights as human beings

Baby Cart That Folds up Carried As Handbag

Weighing only fourteen pounds a collapsible cart for the baby is folded up in the form of a handbag for carrying. Saving of storage space and ease in going up and down stairs are among the

In the uplands of New Guinea, the climate is cold while the plains burn in torrid heat. The butterflies fly very high and no species can be caught only by fixing a dead specimen on a leaf in the sun with wings outspread. The insects fly down to it just as parrots do to a wounded mate. Acetylene flares are hooked on branches in the mountain country to lure other butterflies after dark and they are also attracted by great bonfires made in the

tops. It is a moth and butterfly station where these insects are caught for the leading museums. At night a powerful electric light attracts them and soon they literally envelop the platform in a flitting cloud tinged with every color of the rainbow.

At an altitude of 9,900 feet, an English collector and naturalist H. S. Landor saw a vast number of splendid butterflies, one of which followed him for some days attracted by the scent of some toilet soap.

Gold miners and ore prospectors vary the monotony of digging by exploring the woods around their claims on the hunt for gorgeous butterflies. Wood cutters and balata bleeders roaming hundreds of miles in the vast forests of Guiana to tap the juice of the balata gum collect butterflies for museums, private collectors and jewelers.

The uses of the butterfly wings in art and industry will surprise many. The skilful jeweler can incorporate the lovely wings into rings and necklets and in dainty brushes, mirrors and combs. A few months ago an English artist exhibited a picture of Catherine of Aragon looking through a cathedral window. All the colors of the rainbow illumine this window which is about five feet square and is composed of 1,800 tropical butterfly wings.

Regions Where Used

Africa is a land of secrets and one that has engaged the thought of explorers for many years is the possibility that in some of the remote wilds, huge beasts long extinct in other parts of the world are still in existence. Most of these suppositions are based on the tales of natives who declare that they have seen animals of enormous size and strange shapes in the jungles and lowlands bordering the Congo river. Under the leadership of Lieut. Col. H. K. Kenn a British expedition plans a trip through the wildest sections of the Belgian Congo in search of monsters that may have survived in these fastnesses.

Artists Turn to Ironwork To Express Ideas

Handwrought ironwork including chimneys, pots, weather vanes, iron screens and lanterns are being produced by members of the American art colony in Paris who have given up painting and the sculptor's chisel for forge and anvil. Their work has attracted so much attention that recently a number of American artists deserted the annual salon and organized a purely American exhibition. Some of the work, such as the combination of wolfhound

wooden totem poles chiefly although house posts, dugout canoes and many other objects of daily use form subjects for carvings. The most striking hints of artistic efforts of the natives are on the tall columns of cedar wood which are really memorials erected in honor of the male relative whose property the builder had inherited. These totem poles, some giantlike in height, generally occupy the place of honor at the center of the gable end of the owner's house.

Among the Tlingit and certain other of the coast tribes the totem pole has a hollowed cavity in the rear in which are placed the cremated remains of the one in whose honor the memorial was erected. Nearly all the poles standing at the present time have such cavities. Among the Tlingit the name for totem pole is the word meaning "coffin" its use and significance would make it, according to our notions, the equivalent for tombstone or memorial column.

Dr Krieger found that the totem pole which once stood proudly before the house of a family or clan and showed by its carvings the lineage and personal achievements of the residents is fast succumbing to decay and ill use. Since the coming of white men the Indians have lost their pride in tradition. One native cut down some finely carved poles to make a sidewalk. On the west coast of Prince of Wales island is the village of Kowkan with fifty good totems intact, but this is far from the course of white men's travels and is uninhabited. Tongass village also has some unique totems. Three of these have the carved emblem declared by natives to represent Captain Cook the first white man seen by their ancestors. One pole has a very fair likeness of Abraham Lincoln carved among its bears and eagles and ravens. The natives think probably that the chief who made it had seen a white man an event worthy of preservation in native history and had acquired a picture of Lincoln which he copied on his totem. It is also possible that the carver sought to record the purchase of Alaska by the United States since one earlier totem had been found with what was probably a portrait of the Czar of Russia.

Any unusual experience in the life of the individual may be incorporated in the carvings on the totem pole. Ooe has the carved figure of a ship under full sail. Dr Krieger said. This pole belonged to a woman who was the first of her village to see such a vessel and the white men who landed at Sitka. A curved figure on another pole represents the experience of an Indian at Tongass village who once acted as a host to a former secretary of the interior on his visit to Alaska. The secretary was asked to sit on a pile of fine furs in the Indian's house. At the close of the interview he was told that he was forgetting his furs. It is the custom of our people, said the Indian, that what a visitor sits upon is his.

When the totem pole was erected later by his nephew the former secretary of the interior was represented on it dressed in a frock coat, silk hat and checked trousers.

"Totem pole art," Dr Krieger says, is largely a representation of animals. These usually refer to the role played by certain animals as actors in native myths. The curved beak of the hawk is invariably represented as touching the month on the underside while the thunder bird which wears a cloud hat, has a larger beak. The raven has a long straight beak while that of the eagle is short and curved. Birds even when they take human form are to be recognized by a beak added to an otherwise human face. The beaver usually is biting a stick which it holds between its paws. Certain mythical water monsters may take on a variety of forms. Animal representations have erect ears placed above the eyes, but are otherwise hard to distinguish from human figures.

"The most important thing in the life of the Indian is his crest or totem. Representations of this animal crest are placed on every conceivable object of daily use, they are even tattooed on his arms and body and are painted on his face. The inheritance of a proper kind of crest determines an individual's chances of success and standing in his community.

THE PRESENT STATE OF PRIMARY EDUCATION IN BENGAL

SOME SUGGESTIONS TO BRING IT WITHIN THE REACH OF EVERY CHILD

By LADY ABALA BOSCH

IN the present stage of world's progress widespread primary education has come to be regarded as an essential condition for a nation's efficient existence. In the judicious exercise of franchise, in an intelligent struggle for economic advancement and in the multifarious pursuits for intellectual and aesthetic enjoyment primary education among the masses of the people is supposed

to have a chastening and uplifting influence. The range of women's activity in these fields is more or less circumscribed in all countries but in the special spheres of work which has been assigned to women in India by the tradition and customs of different societies, a systematic course of primary education has proved by its results to be of inestimable benefit. It has enabled women to run

quality that it seldom produces a distinctive type of women who can serve as an example of education. On the other hand, until this state of things is improved the angle of vision of society will not materially change and education will not find more favour than now. This appears now to be moving in a circle but a way out of this may perhaps be found in an organisation for continued education after the primary education in the schools is to all intents and purposes finished. The custom of early marriage puts a limit to the number of years that becomes available for school education. But after the girls have left the school and have settled down as married women some of them are eager to continue their education in a leisurely way of course, if opportunities suited to the conditions of life they are leading are given to them. Zenana education—out of the primary but of post primary type correspondence school a widespread library movement are some of the forms in which such opportunities may be offered. The success of adult education movement in other countries shows that if a problem be seriously taken up solutions are not difficult to find.

What I wish to emphasise is that if by these means we can attract even a small percentage of those who had primary education thereby enabling them to attain to a higher degree of enlightenment the example will not be lost upon the public and the cause of education will receive a great impetus. This will perhaps be thought of as a round about way but I have no doubt about its efficacy.

In some very backward localities, offer of scholarship in small amounts may be made not only to induce the girls to join the school but to make the parents feel that school going is economically advantageous. In villages a rupee or two per month is not inconsiderable and may be a decisive factor in favour of education.

As an example I may mention that in the early days of women's education in Bengal the cause was promoted by Non Official District Associations who made a syllabus of books for different standards and held annual examinations on which

they offered prizes of books and money. Mothers in law at that time who were dead against education and whose sole word of ridicule was to ask if the was going to earn were astonished when these daughters-in law got Rs 3 or Rs 5 a month after passing one of these examinations and thus it is that East Bengal where such organisations exist is educationally more advanced than West Bengal. In all the schools started by *Aari Shiksha Samity* in East Bengal the teachers are women. We have great difficulty in establishing schools in West Bengal villages on account of lack of women teachers and the work is done by Pundits.

We have continued demand from East Bengal for opening schools and many of the widows in our *Aari Shiksha Samity* widow home are women sent by the East Bengal village schools to be trained as teachers. It may be mentioned here for those who are not acquainted with the early movement of women's education that when the Bethune School was first established the girls were not only educated free, but were fetched in Buses free of charge and received gold ornaments as prizes for only learning the three Rs. That was about 50 years ago. The present advance of high education among women in Bengal owes its start from such pioneer work initiated half a century ago.

So in order to spread primary education in the villages we shall have in the beginning in addition to the methods mentioned above which will have a real permanent value try to attract the pupils by encouraging them with small prizes.

From the point of view of the pupils any step calculated to lessen the rigors and dryness of schooling will help in popularising the education.

Finally I venture to lay great stress on the point that primary education should be left to the initiative of non official organisations national in character, subject of course to Government supervision. Official organisation must necessarily be rigid inelastic and unable to adjust itself to varying circumstances.

* A paper read before the Bengal Women's Education Conference

BINDU'S SON

By SARAT CHANDRA CHATTERJEE

3

JUST as two offsprings may cling to and grow up round their common mother, these two mothers passed the next six years, centering their life and love on this one child which was jointly theirs. Amulya was now grown up, he was a student in the second class of the local Ehtsare School. There was a tutor appointed to coach him at home. When he left that day after the

mornings work Amulya went out to play. It was Sunday and there was no school.

Annapurna entered the room and asked, "Tell me Chhotoboo what should I do?"

Bindu had emptied the Almarah on the floor and was selecting clothes for Amulya out of the pile. He was going with his uncle to keep an invitation at the house of a rich client. Bindu answered without looking up "About what did?"

She was not in an excellent mood Annapurna was dazzled by the variety of the clothes displayed and did not notice the expression on Bindu's face. She remained silent for a while then digressed and asked: Do all these clothes belong to Amulya?

Bindu said: Yes.

Annapurna commented: You do waste money! You must have spent more money on each one of these than would be required to clothe a poor man's son the whole year round.

Bindu was displeased. But she answered in an easy tone: Quite so. But there is always a little difference between the rich and the poor, and it is no good mourning over that fact.

Annapurna pressed the point: Very good, let him be rich, but you always overdo things.

Bindu looked up. She said: Why don't you say what you have come to say? I have no time now.

When is it that you have abundant time about you? So saying Annapurna went away in anger.

Bhairab had been to fetch Amulya. He returned after an hour with him.

Bindu asked: Where had you been so long?

Amulya remained silent.

Bhairab gave her the necessary information. He was playing Daada goli* with the peasant boys in that quarter.

Bindu considered this game to be dangerous. She had therefore forbidden Amulya to play it. She asked: Haven't I asked you not to play Daada goli?

Amulya went blue in the face with fear and stammered: "I was standing there, they made me."

"Madn you play by force! All right you are going in the invitation now, you will be attended" to later on. She began to dress him.

Amulya had been given the holy thread† about a couple of months before this. He objected to don a brocade cap on his clean

shaven crown. But Bindu would not yield, she clapped it on his head by force. Amulya stood crying with the brocade cap on his shaven head. Madhab asked as he entered the room: How much more delay will you make?

The next moment his eyes fell on Amulya and he laughed out: Charming! He cried: As if Krishnacandra (the god Krishna) has been crowned King of Matbora. (where Krishna passed his childhood).

Amulya flung the cap to one corner in shame and threw himself face downward on the bed.

Bindu got very much annoyed. She said: The poor child is crying, as if that isn't enough so you.

Madhab said gravely: Don't cry, Amulya, get up and come along. If people call anybody mad it will be me.

The same justification had been made once previously and Bindu had resented it strongly. This probing of the old wound drove her furious. She cried: "I do every thing like an insane person do I?" She jumped up, got hold of a palm leaf fan and bit Amulya several times with it. Then she began to tear off his costly velvet garments one by one.

Madhab went out timidly and informed Annapurna. She is possessed, go and see.

Annapurna entered the room and found Amulya completely undressed and in the process of being clothed in an ordinary garment. He was silent and blanched with fear.

Annapurna said: But it was quite nice why did you undress him?

Bindu left Amulya, put the end of her Sari round her neck* and said with folded palms: I prostrate myself before you. Bala Ginni, do go away from before me, your mediocrity will merely cause him to be thrashed all the more.

Annapurna stood speechless.

Bindu caught Amulya by one ear, dragged him to a corner of the room and made him stand there. Then she cried: Serve you right for being a wicked boy. You must be punished accordingly. Remain locked up here the whole day. Did I come out, I shall shut the door. She put up the chain fastener from outside.

It was nearly one in the afternoon. Annapurna could stand it no longer and

* A game similar to the English game of Tip-Cat.

† The ceremony of giving the holy thread to Brahmin boys comes off when they attain the age of ten or thereabouts. Having gone through this ceremony the boys are considered twice-born or *Dvija*. On the physical side the ceremony involves the piercing of the ear lobes and the shaving of the head.

* Gesture of humiliation.

asked, "But Chhotohon, are you really going to starve him the whole day? Is the whole house going to starve with him?"

Bindu answered, "Just as the whole house likes."

Annapurna said, "This is unfair, Chhotabou. He is the only child in the household. If he goes without his meal, let alone ourselves how could even the servants find heart to swallow food?"

Bindu insisted, "Well, I don't know that."

Annapurna saw that argument would yield no good. She entreated, "I am requesting you, do listen to your elder sister? Pardon him this once. Moreover if he falls ill, it will be you who will suffer."

The lateness of the hour had already softened Bindu. She called Kadam and ordered, "Go and fetch him out. But let me tell you Didi if in future any of you meddle with my affairs it won't lead to any good."

The trouble ended there for the time being.

Since his younger brother made good at the bar Jadab had given up his job and was attending to their own property. He had also doubled the two thousand that Bindu had brought as dowry by judicious lending. With a portion of that money and depending on Madhab's income, he had commenced the year before to construct a house about half a mile away from their present dwelling. It had been finished about ten days ago. It had also been decided that they would shift over to the new house on an auspicious day after the Durga Puja festival. So one day while having his meal Jadab said to Chhotabou (Bindu) "Your house is finished little mother, now you should go and inspect it one day and see if anything has been left unfinished."

It was Bindu's habit to stand behind the door every day while her Bhasur (husband's elder brother) was having his meal. She would neglect all else to do this, for she revered her Bhasur like a God—everybody else did the same. She answered "No nothing has been left over."

Jadab smiled and said "Giving the judgment without a hearing! Well, that's very good. There is, however, another matter. It is my desire to invite all our relations, then to go over to the other house and propitiate

the family god by offerings. What do you say mother?"

Bindu answered in an undertone "Let me ask Didi, it will be as she decides."

Jadab said, "Yes, do. But you are the Lakshmi (goddess of fortune) in this house. Things must be done according to your wishes."

Annapurna was sitting at a little distance. She smiled and said, "Only if your Lakshmi had been a little more peace-loving."

Jadab disagreed. "Peaceful what is peaceful? My mother is the goddess Jagatdhatri, she can scatter boons as well as wield the Khanda* if necessary, and that is what I want. Since my mother came we have had no sorrows in our home."

Annapurna said "That is quite true. Even the memory of the days before her arrival is dreadful!"

Bindu felt very shy over this new development and said "No, no, please invite everybody. Our new house is large enough to hold all of them. They can even stay on for a few months if they like."

Jadab answered "Let it be so mother. I shall arrange to bring them over tomorrow."

4

Their cousin Elokeshi, the daughter of their father's sister, was not very well off. Jadab used to help her with money frequently. She had been corresponding with these people for sometime to arrange to lodge her son Narendra with them for his studies, now she suddenly came over with her son from Uttarpara. Her husband Priyanath, who was engaged there in some work the nature of which was unknown to everybody, followed her in a day or two. Naren† was about sixteen or seventeen years of age. He used to dress himself in dhoties with fairly wide borders and was in the habit of combing his hair nine or ten times in the course of the day. The way he parted and dressed his hair was indeed something of a sight. This evening they were all seated on the Verandah bordering the kitchen and Elokeshi was entertaining all and sundry with thrilling tales of her son's physical charms and intellectual attainments.

Bindu asked, "In what class are you now, Naren?"

* The system of Purdah does not allow younger brothers' wives to come out freely before the elder brothers of their husbands.

† The sacrificial sword
† Abrev. form of Narendra.

Naren answered, 'Fourth Class Royal Reader, Grammar, Geography, Arithmetic, a lot of other things, Decimal, this, that—things you will not understand, Mamima' *

Elokeshi looked proudly once at her gallant son's face then, said to Bindu 'Not one book or a few, Chhotabau! A mountain of books! Do bring all your books out of the box dear, and show them to your aunts'

Naren condescended and said, "All right, I shall show them the books."

Bindu commented, 'It will yet be some time before he passes his examination.'

Elokeshi cried, "It wouldn't have been, there would have been no delay. He would have got through not one but four examinations by now. Only that Mukh Pora (burnt-face) teacher stands in the way. May he be cursed! I don't know why he is so venomous over my darling. He simply wouldn't promote him! He wouldn't. Through sheer heart burning he keeps him year after year in the same class."

Bindu was astonished "But, really, such things don't happen!" she exclaimed.

Elokeshi said, "Why not? They are happening! All those teachers have come together to earn bribes, but I am poor, where could I find money to bribe them?"

Bindu kept quiet. Annapurna felt really sorry and said "People should not harass any one like this. It is not good. But we have no such things here. Our Amulya gets prizes every year, we don't have to bribe anybody."

At this stage Amulya came in slowly and going up to his Chhotoma (Bindu) sat on her lap. He whispered into her ear "Tomorrow is Sunday Chhotoma do ask Master Mashaya \$ to go away!"

Bindu smiled and said to Elokeshi "This boy you know Thakurji,** is one for gossip. He would not hudge now that he has found us talking—Kadam, tell Master Mashaya that he could go Amulya would not have any lessons to day."

Naren was surprised. He said, "How

funny, Amulya, you are such a big boy, you still sit on women's laps!"

Bindu laughed and said, "Not only that. At night he still—"

Amulya covered her mouth with his hand and entreated, "Don't, Chhotoma, please don't tell them!"

Bindu did not but Annapurna gave out his secret. She said, "He still sleeps with his Chhotoma."

Bindu added, "Not merely sleep, he clings to me the whole night like a bat would to the branch of a tree."

Amulya hid his face in the folds of Bindu's Sari in shame.

Naren cried, "Shame, shamo! What a funny thing you are! Do you read English?"

Annapurna said, 'Of course, he reads English at school.'

Naren doubted that and said, "Indeed Does he really read English? All right let him spell 'Engine.' He could over do that."

Elokeshi came to the rescue and said, "Oh, those are difficult words, you cannot expect a child to spell such words."

Annapurna exhorted the boy, "Spell it. Why don't you spell it?"

But Amulya would not uncover his face.

Bindu hugged him tight to her breast and said, "But if all of you join in making him shy, how could he spell?"

Then she turned to Elokeshi, and observed, 'He will pass his examination next year and get a scholarship of twenty rupees. His teacher has said so.'

Though true the statement was received with laughter by everybody.

Elokeshi said, as if in answer to Bindu, "My Narendra is not only good in his studies, he acts so well in theatricals that the audience can hardly resist tears. That part you did of Sita, do let your aunts hear you do that, dear!"

Narendra at once knelt down, folded his palms in an attitude of entreaty and began in a high nasal falsetto, 'King of my life, on what inapprecious a moment did thy hand maiden—'

Bindu cried, "Stop, stop, don't make such a row, Bera Thakur is upstairs, he may hear you."

Naren was startled into silence.

Annapurna had been completely melted by the little she had seen and heard. She argued 'Well let him hear, what does it

* Maternal uncle's wife.

† Term of abuse meaning a shameless scoundrel. Also associates one so called with the Hanuman monkey which has a black face on a brown body.

\$ Mr Teacher Mashaya is added to a name as signifying respect e.g. Pandit Mashaya, Gura Mashaya, Naib Mashaya etc.

** Husband's sister

matter if he heard things dealing with the gods?"

Bindu was displeased. She said, "Well then listen to the godly things, I am going away."

Naren was accommodating. He said, "All right, I shall do the part of Savitri then."

Bindu said, "No."

Her tone brought Annapurna to her senses. She knew that things had already gone far enough and were not likely to stop there. Elakeshi was a new arrival, she could not get into the full meaning of the situation. She, therefore, said, "Never mind. Stop it now. We shall have it too some after-oooo when the men will be out. And music! He is not a beginner in music either. Sing that fearful song of Damayanti. Some time dear, your aunts would not let you go once they hear it."

Naren asked, "Shall I sing it now?"

Annapurna hurriedly said, "No, no, leave all that alone for the present."

Naren said, "All right, I shall teach that song to Amulya. I can also play. It is very difficult to play on the bayan and tabla. ** correctly. Give me that brass pot, I shall show you how to play the tre kete-tak.††"

Bindu made a sign to Amulya asking him to get up. She said, "Go to your room Amulya, and do your lessons." Amulya was listening entranced. He did not want to leave the place. He whispered, "Stay a little longer Chhotoma."

Bindu did not say anything. She picked him up and went to her room. Annapurna understood why she went away like that. It was because she feared that Amulya would be spoiled by the company of this vulgarly brought-up boy that Bindu left. Annapurna was afraid that after Naren's performance, Bindu would hardly care to

* Sita, the queen of Ram, is considered to have been an incarnation of the goddess Lakshmi and Ramachandra, an incarnation of the god Vishnu.

† Savitri is a mythological character to whom we find the manifestations of perfect womanly virtue. She brought her husband Satyawati who had died back to life by the force of her virtue and persuasiveness as shown in her arguments with Yama, the god of death.

‡ Damayanti is another mythological character depicting womanly loyalty and single-minded devotion to the husband.

** Dholak like instruments played in accompaniment with songs, which add greatly to the rhythmic and sonorous value of a song.

†† A formula for the bayan tabla player.

have him stay on in the house. She felt upset over this and said to Naren, "Don't do your acting and all that before your Chotomam dear. She has a bad temper and does not care for such things."

Elakeshi was surprised. She asked, "She does not care for such things. Is that why she left like that?"

Annapurna said, "May be. Another thing, dear, you should attend to your studies, have your meals at regular hours and try in every way to make your mother happier. Don't mix much with Amulya. He is much younger than you are."

Elakeshi did not like this. She said in a level tone, "That is quite true. He is the son of a poor man and he should live like one of his position. But when you have raised the point Barabou, let me ask you, is your Amulya such a bab after all and is my Naren overburdened with age? A difference of one or two years does not call for such words. And has he never seen any rich men's sons before he came here? They have many who are sons of Rajas in their theatrical club."

Annapurna was put into a false position. She said, "No, no, Thakurji, I never meant that, what I said was—"

"What more could you say Barabou? We may be fools, but not fool enough to miss your point. It was only because Dada asked me to send Naren here for his studies that we came over. Not that we were starving over there."

Annapurna was dying with shame. She said, "God witness Thakurji, I never meant anything like what you have understood. I only asked your son to try to make his mother happier and—"

Elakeshi said, "All right, it is so, it is so. Naren, go and stay in the outer rooms, don't try to mix with the rich man's son." So saying she pushed up her son and went away.

Annapurna entered Bindu's room like a miniature cyclone and cried in a tea-choked voice, "Must we give up all our relations for you? What a way to leave the presence of a guest!"

Bindu answered quite easily, "Why should you give up your relations? Stick to them as fast as you like and live happily ever after. Only I am going away with my son."

"And where will you go, may I know?"

* Dada—her brother. Here Jadab

Bindu replied Oh I shall leave my address behind when I go Don't worry about that.

Annapurna said Yes, I know that. Would you lose a chance to make things such as would prevent us from showing our face in public? I am simply tortured and harassed to death by this bou! (Wife of any member of a family) She was going out after this when she saw Madhab coming in and was whipped into fury afresh by his sight. She cried No no Thakurpo (husband's younger brother) you go away with Chhatohou and live separately or send that

bou away! I will not live with her I tell you frankly She swept out of the room

Madhab asked his wife in surprise What's up now?

Bindu said I don't know You have got your orders from Bara Ginni send us away

Madhab did not say anything more He picked up the day's paper from the table and went out into the quiet of the outer rooms*

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact clearly erroneous views misrepresentation etc. in the original contributions and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject this section is not meant for the airing of such differences of opinion. As owing to the kindness of our numerous contributors we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words—Editors The Modern Review]

Raison D'être of the League of Nations

Please permit me to make two observations on an article, entitled Raison d'être of the League of Nations published in the last issue of your Review.

I. It is inaccurate in naming the disputants over the sovereignty of Aaland Islands. The quarrel was not between Norway and Finland, but between Finland and Sweden.

II. The writer takes pains to exhaust the list of the League's failures but of its successes he gives only two (viz Bulgarian frontier and Aaland Islands) and says that these are all the chief ones. He leaves out, in spite of its uniqueness, the case of Albania, the solitary occasion on which the League has vindicated the territorial integrity of a state.

There had been a scheme among interested powers to partition this country but it failed to execute through the exertions of the League.

Pro Radhakrishnan on Civilisation

With reference to the reprint of a report of my address on Civilisation at New York City reprinted from the *Hindustani Student* in the February number of the Modern Review (p. 247) may I state that the report is inaccurate and that I do not hold the opinions attributed to me, about Jesus Christ, for whom I, as a Hindu, have profound reverence.

S RADHAKRISHNAN

BEETHOVEN CENTENARY

(1827—1927)

By DR. KALIDAS NAG MA D LITT (Paris)

LUDWIG van Beethoven passed away at a quarter to six P.M. on the 26th of March, 1827 during a thunderstorm and was buried at the Wabinger Friedhof outside Vienna. He was born at Bonn on the 16th of December 1770 and was therefore barely 57 when he bade adieu to this world which he used as a sonorous lyre in order to evoke the sublimest songs of Joy and Sorrow and the richest harmonies of Love and Death winning the proud title Beethoven the *Shakespeare of Music*.

Beethoven at the age of 16. His earliest Portrait in silhouette by Neesen of Bonn.

What a rare privilege to be reminded of this fact by the greatest living interpreter of Beethoven and one of his Doubles in the world of novels—by Mon. Romain Rolland the Beethoven of modern romance who through his immortal Jean Christophe has given us the epic improvisation on the deep

and mystic life of Beethoven unknown to his official biographers. Mon. Rolland writes

Beethoven's Home in Bonn, Germany

ROMAIN ROLLAND ON BEETHOVEN FESTIVAL

On the 26th of March 1927 a hundred years will be completed since the death in Vienna of the Hero of music—Beethoven. The whole world would unite in celebrating the event. In all the countries we hear about the announcement of the solemn commemoration and even the enemy governments would unite in participating in the ceremony.

Thus having impressed upon us the universal character of the interest in Beethoven's life Mon. Rolland communicates to his Indian friends a few facts and some literary fragments. These curious and precious

documents would explain how the master spirits of the last century, of Goethe and Beethoven Schopenhauer and Tolstoy, felt a sort of family attraction towards India. We are profoundly thankful to Mon Rolland for hunting up these valuable documents from the Beethoven archive and we publish the texts together with the prefatory note of Mon Rolland

INDIA AND BEETHOVEN

"I feel that India should associate herself in that international celebration by publishing a few words of appreciation in her important papers and reviews. It may be interesting to remember that Beethoven submitted to the attraction of Indian thought. Here are a few documents which might be of some service. These are the actual copies made by me of the manuscripts of Beethoven. These passages were copied by Beethoven in his own hands: these are translations (published or unpublished) of some Indian poems adapted to the European spirit. The exact sources of these texts have not yet been traced except fragment III which is supposed to have been borrowed from the 4th or 5th act of *Sakuntala* in the translation of Forster. The fragment No II the Hymn seems also to be the version of a Sanskrit hymn translated into English by H. Th. Colebrooke.

I send you herewith a few items of biographical information also

HOW BEETHOVEN CAME TO KNOW INDIA

In 1808 the famous Austrian Orientalist Hammer Purgstall returned to Vienna from Asia. Thanks to his friendship with Count Ryewusky he founded a periodical with a view to make oriental literature better known to Europe. This was named *Fundgruben des Orient* and its first number appeared on the 6th of January 1809.

"Beethoven was then in Vienna and was in the plenitude of his genius and glory. He had produced during those years the *Symphony in Ut minor* and the *Pastoral*. He entered into relation with the Austrian Orientalist. Two letters luckily preserved show that Hammer Purgstall admired Beethoven and communicated some unknown treasures in manuscript to Beethoven who thanked him profusely.

But there was something more Hammer had written for Beethoven an operatic poem of Indian inspiration which Beethoven styled

as *heyrliches* 'magnificent' and the great musician was very happy to talk on the subject with the orientalist and to learn something about Indian music. But he fell ill and the project was deferred. Other circumstances also intervened blocking the execution of the project later on. Only we find amongst the papers of Hammer, a *Memmons Drellang*

Beethoven at the age of 42. Bust by Franz Klein of Vienna, 1812

nachgeklungen in Dewajani einem indischen Schaferspiel—an Indian Pastoral based on the Dewajani story—which was no doubt the poem meant for Beethoven.

But Beethoven seemed then to have been more attracted by the religious thoughts of India than by her poetry and we find in his letters and his notes (1809-1816) traces of assiduous studies and translations of Hammer. The fragments enclosed here with are a few of the specimens conserved.

It is important to note this awakening of curiosity in and the passionate attraction of European Genius for the thoughts of

Asia. This was to be manifested a few years after, in 1819, by the publication of the poetic masterpiece of Goethe, *Westöstlicher Diwan*, which captivated Beethoven. The same process is found translated in the formation of the soul of Schopenhauer.

"I send these fragments of Beethoven to you in original German. Their value is not so much in what they express as in the orientation which they prove to have taken place in the genius of Beethoven in maturity, towards the thoughts of Asia."

"These facts are known to the German musicologists who are specialists in the study of Beethoven. But the larger public know nothing about them and I hope that Indians would be very glad to know them."

Beethoven's chamber. The instruments are those actually used by the Master.

HISTORICAL IMPORTANCE OF THE FRAGMENTS

These fragments have an additional significance to students of Indology in as much as they are landmarks in the history of the rapprochement of the spirit of the Orient and the Occident, long before the formal enfranchisement of oriental studies in the academic circles of Europe. We cannot forget that if Beethoven was anticipated by Sir William Jones (the translator of Sakuntala), Wilkins (the translator of Bhagavad Gita) and Colebrooke (the pioneer in the study of the Vedas and Indian philosophy), yet Beethoven was the precursor of Burnouf and Bopp, of Goethe and Schopenhauer so far as the discovery of Indian genius was concerned.

TRANSLATIONS FROM THE ORIGINAL MANUSCRIPT FRAGMENTS OF BEETHOVEN (1815)

I. ADAPTATIONS FROM THE UPANISHADS

God is Spirit (no matter), and therefore, he is beyond all conceptual definition, as he is invisible, therefore he cannot have any shape. But from all that we know of his works we can conclude that he is eternal, all powerful, all knowing and omnipresent. He alone is the powerful being who is free from all appetites and desires. There is no one greater than he, the Brahma—his spirit is self-contemplating. The all powerful one is present in every part of Space. His all knowingness is the result of his self meditation and his ideas include those of all others. Of all his many-sided qualities the greatest is his all knowingness, for him there exists no threefold states of being; he is independent of them all.

O God, thou art the true, the eternally holy, unchangeable light of all ages and spaces. In no wisdom knows of thousands and more than thousands of laws, but all thy acts are in perfect freedom and redound to thy glory. Thou art above all things that we honour; we all praise thee and pray to thee. Thou alone art the truly blessed (Bhagavan). Thou art the truth in all laws, the incarnation of all wisdom. Thine all permeating presence in the universe upholds all things. Sun, Ether,—Brahma.

II. Hymn

Spirit of spirit! Thou hast permeated every Space and endless Time and rising above all limitations of the rebellious thoughts by mastering them hast brought Beauty and Order. Thou wert before the Heavens (world). Thou wert alone, even before the spheres above and below began to revolve, before the earth began to swim in the heavenly ether, till through thy inscrutable Love, everything which was not, sprang into existence, and sang thankful praise to thee! What impelled thee to exercise thy powers? O Goodness without limit, what shining light guided thy strength? Wisdom without measure! what created wisdom in the beginning? Oh lead my spirit, raise it out of its abyssal depth so that through thy strength carried beyond it can, without fear, soar upwards in fiery

rhythm For Thou alone knowest how to inspire

III

Out of God has emanated everything pure and unsullied If I am ever blinded by passion to evil ways then I can return again after many penances and purifications to the sublime and pure source—to thee O God! and to thine Art. No egotism inspires thee here—and it is so at all times The trees are bent down by the exuberance of its fruits the clouds lower themselves when filled with beneficial rain and the benefactors of mankind do not boast of their riches

If under the beautiful eye lashes the welling tears lurk resist with fixed determination their first effort to break through On your wanderings over the earth when the way goes sometimes up and sometimes down and the right path is seldom recognisable the trace of your footsteps will not always be uniform but righteousness will always lead you along the straight paths

IV

ADAPTATION FROM GEETA

Blessed is he who has suppressed all passions and then with courage fulfils all the duties of life untroubled about success Let the motive of your action be in the deed and not in the result. Be not amongst those whose incentive to action is the hope of reward. Do not allow your life to pass in inactivity Be active fulfil your duty banish all thoughts of the consequence and of the result—which may be good or evil for such serenity is the criterion of spiritual values Seek then to find in Wisdom alone a refuge for unhappy and miserable are they who attain success in material things For the truly wise do not trouble themselves over the good or the evil in this world Strive always therefore to keep in use your Reason for that discipline is a rare art in life

V

Enveloped in the shadows of eternal loneliness, in the impenetrable darkness of the groves inscrutable unapproachable immeasurable infinitely extended is He His breath was there even before spirits were breathed into His eyes looked into his creation just as mortal eyes (to compare an infinita with a finite object) gaze into a clear mirror

Beethoven

LETTERS FROM THE EDITOR

VI

FROM London as my head quarters as it were I went to see Cambridge one day and Oxford the next. I could spend only a few hours each at these far famed University towns. Starting on both days from the metropolis early after breakfast, I returned in the evening. I visited both the Universities during a long vacation and hence I had no opportunity to observe their life and activities. That was a great disadvantage but it could not be helped. My original plan was to pay a second and longer visit to Great Britain in November (1926) but it was not to be.

I went to Cambridge first. It derives its importance almost entirely from the University and Colleges situated there. Cambridge railway station is not at all impressive and does not fill the visitor's mind with any hope of seeing things worthy of a visit. But in this case the actuality happens to be far better than the promise. When approaching Oxford the traveller is beckoned from afar by the glitter of spires. In the case of Cambridge it is not distance that lends enchantment to the view but rather a close acquaintance with it. The lure of Oxford also is intimate and its charms grow on one with closer acquaintance.

The river Cam on the banks of which Queens, Kings, Clare, Trinity Hall, Trinity and St. Johns are situated is not a broad river with a large volume of waters rolling majestically on. It is a very small river. But its clear waters moving slowly on small boats floating on their surface, some occupied others not, the green sward running down to the waters edge with the overhanging branches of the willow almost touching the waters and the many bridges crossing the stream leave a very pleasant and abiding impression on the visitor's mind.

Before beginning his round of the Colleges the visitor may well decide to follow the American motto. Go on till you're stopped. He need not fear to cross the portals of the Colleges. When in doubt one should ask the porter of the College who is generally to be found at the gate for guidance and direction.

I will not describe any College in detail nor even mention all the Colleges but will make brief references to some of them.

Of the Colleges Peterhouse sometimes irreverently called Pothouse is the earliest foundation. Some of its primitive thirteenth century buildings still remain. It is the only College in Cambridge to possess a deer park—though a small one.

Nearby is the churchyard of St. Mary the Less which was perhaps the inspiration of Gray's *Elegy Written in a Country Churchyard*. For it was as a fellow commoner of Peterhouse that Gray resided in chambers overlooking that churchyard. The story is still current of a prank played on the poet by some mischievous undergraduates. He it seems, had a great dread of the College being set fire to. Outside the window of his bedroom there may still be seen the iron rail to which in case of fire the poet could attach the rope ladder which he always kept in readiness. One dark night some students raised a false alarm of fire and so lured the frightened bard to descend his ladder—into a tub of cold water! The poet's migration to Pembroke College is traditionally ascribed to his annoyance at this prank, and in that College just across the street so Dr. Stokes relates in *The Cambridge Scene* "he was awaked one night to find the opposite rooms actually in flames."

Pembroke known as Pema, is now one of the largest Colleges in Cambridge. At the time of my visit it was undergoing some repairs. I passed through some of the rooms in which the students reside. Pembroke is rich in literary and historical associations. Spenser the poet of the *Raeve Queene* and Gray were in residence there. William Pitt was one of its students. The martyr Dr. Nicholas Ridley was one of its members.

The University Printing Press known as the Pitt Press stands opposite to Pembroke. It looks like a church and looking at it I thought it was really one. That being so, in merrier and less sophisticated days it was not uncommon on the first Sunday

with the hursting of the tornado, the curtain of darkness is torn asunder, the night is chased out of heaven and by the sheer impact of the will the radiant day emerges in all serenity

'What conquest of Bonaparte, what effulgence of the sun of Austerlitz may aspire to rival this glory, this superhuman effort, this victory, the most brilliant ever achieved by human spirit. A poor diseased lonely unfortunate creature—Suffering made Man—to whom the world had refused joy, creating Joy by his own will in order to give it to the world' Truly Beethoven has created joy out of his misery, as he himself says in a few proud words which summarise his life and which should be the motto of all heroic souls—

'To Joy through Suffering!'
'Durch Leiden Freude!'

The profound truth underlying every word, every phrase of Mon Rolland, would be realised by those who have the privilege to listen even once to that Homeric composition of the musical world the Ninth Symphony which Beethoven created out of the depth of his soul, which was the battle ground of Joy and Sorrow

Hymn to Joy

From the year 1793 when he was a young man of 23 only, he dreamed of singing for once a supreme hymn to Joy which would be the crowning piece of all his works. All his life he hesitated about the exact form of the hymn and about the place which he would assign to it. Finally in the year 1823, at the fag end of his life, he took up the sublime Ode to Joy by his great contemporary Schiller, and wrote a musical superstructure which would ever remain as a marvel and a despair of musical art. Beethoven was a pioneer in introducing the chorus at the end of the symphony and in the choral hymn to Joy at the end of the Ninth Symphony we feel—as I felt in the course of one the great symphony-concerts of Germany—that the human soul in its sublime despair to express itself through man made instruments, suddenly cries out directly to God, the Master Musician, through the human voice. Beethoven's hymn to Joy has all the grandeur and the directness of the Vedic hymns which also culminated in the supreme philosophy of Joy—*Anandam*

आनन्दोऽयं यद्विमानि भूतानि जायन्ते

PILGRIMAGE OF PAIN.

"This unique realisation of Joy and through Joy, of Immortality was not the prize of easy philosophising but of awful suffering of tireless endurance and deathless Faith. This would be proved by Beethoven himself. Hence we conclude this fragmentary tribute to the great Hero of music, by offering to our readers the Testament of Beethoven which requires no commentary. From this unique document we feel how his whole life was as he intuitively felt it to be, nothing but a pilgrimage of Pain. This was written in Heiligenstadt, Vienna, as early as 1802 when Beethoven was barely 32

THE TESTAMENT OF BEETHOVEN

For my brothers Charles and John Beethoven

Oh men who look upon me and consider me as a hateful mad misanthrope how unjust you are to my poor self! You do not know the secret reason of my appearing to be so. My heart and my spirit were inclined from my infancy to all the sentiments of Goodness, nay more, I was always disposed to do good things, noble things. But just consider how frightful was my condition ever since I was a child of six years,—diseased, made worse through the treatment of thoughtless doctors, cheated from year to year with the hope of recovery and finally flung at the prospect of a prolonged malady, the cure of which would require years if it was not actually incurable.

Born with a temperament enthusiastic and active, enjoying the distractions and amenities of Society, I was forced at an early age to get myself separated from all and to pass a solitary life. Even if I could rise above these things, how cruelly was I hurt by the sad experience of my infirmity renewed from day to day. It was not possible for me to say 'Speak louder, shout, for I am deaf!' Oh how could it be possible for me to reveal my weakness in that organ which should have been in my case more perfect than in that of others, a sense which I used to possess in the state of almost perfection, a perfection which few of my vocation ever possessed! Oh I simply could not speak about it.

"Pardon me then if you have seen me to avoid you, for you know how I wished to mix in your company. My misfortune

is doubly painful to me because I ought to have been a stranger to it. How it stands in the way of my finding consolation in the company of men in delicate conversations in the reciprocal outpourings of souls! Alone quite alone! I never rise going out into the world except when I am driven by necessity. I must live like a proscribed soul! If I approach human society I am torn by a devouring anguish through fear of being detected of people noticing my condition.

"That is why I am spending five months in the country. My learned doctor has advised me to spare my ears as much as possible! He solemnly overrules my own humble aspirations! How many times tempted by my weakness for human company I have allowed myself to be captivated! But what a humiliation! Here are so many near me hearing the flutes from a distance and I nothing or that they can hear the shepherd singing and that I nothing always nothing! These experiences are sufficient to fling me to absolute despair and it is a wonder that I did not cut short my life myself. It was Art alone that held me back. Oh it seemed impossible for me to quit this world before having accomplished all that I felt myself to be charged with. That is why I allowed the prolongation of this miserable life—miserable indeed with a body so irritable that the least change flings me into a state of worst confusion. *Patience!* so people advise me. I should choose Patience as my guide from now. I shall have patience. I hope. My resolution to resist should be strong till the time comes for inexorable Fate to cut the thread of my life. It may or may not be good but I am ready. To be forced to be a philosopher at the age of 28—not an easy affair! It is more cruel in the case of an Artist than in that of any other men.

"My God you see from high into the depth of my heart you understand, you know that love of mankind and the desire to do good are in my soul. Oh fellow mortals! if you read some day this document remember how you have been unjust to me, and may the unfortunate find consolation in discovering another unfortunate hero like him who in spite of all the obstacles of nature had done all that lay in his power to be admitted to the rank of the Elect of the Artists.

"You my brothers Charles and John remember as soon as I am dead and if Irof

Schmidt lives still please request him in my name that he should describe the case and join to the history of my malady this letter which you had herewith so that after my death the world may get reconciled with me as much as possible. At the same time I admit you both as the inheritors of my humble fortune—if one can call it so. Divide the same amount yourselves loyally try to live in agreement and to help one another. The wrongs that you have done to me which you know have been pardoned by me long ago. Brother Charles to you I address my special thanks for the attachment which you have shown lately. I pray and I bless you so that you may have a life a little freer from anxiety and a little happier than mine. Join one thing above all upon your children—*Virtue*. It is she that gives happiness not wealth. I speak from experience. It is virtue which sustained me in my misery. It is to her and to my Art that I am grateful for not having terminated my life by suicide. Adieu! Love one another. I thank all my friends and particularly Prince Liechowsky and Prof Schmidt. I hope that the instruments of the prince might be kept in the homes of either of you but may it not raise any quarrel between you. If you think it better sell the instruments if it serves your purpose better. How happy should I be if I can be of any service to you in my tomb.

"Even as I am I shall fly to Death with joy. If death comes before I had the chance of developing my artistic faculties in spite of my cruel fate if she comes thus too early for me and I wish to retard—but even then I shall be content. Would not Death deliver me from this state of endless suffering! Come whenever you wish O Death! I shall face you bravely. Adieu and don't forget me in death. I deserve to be remembered by you for I have remembered you in my life to make you happy. Be happy!

LUDWIG VAN BEETHOVEN

"P S

"For my brothers Charles and John To be read and executed after my death

HEILIGENSTADT
10th October, 1802

Thus I take leave of you—certainly in sorrow. Yes! the fond hope of being

THE SOUL OF BEETHOVEN

The fragments of Indian religious texts which were found amongst the manuscripts of Beethoven are partly translations and partly adaptations of the sublime philosophies of the *Upanishads* and of the *Bhagavad Gita* containing the quintessence of Hindu spiritual realisations. We are not sure if Beethoven himself or his orientalist friend was responsible for the final selection of these profound texts. Most probably it was Beethoven who sifted the various translations made by his friend and copied out with his own hands those utterances of Indian sages which responded to his spiritual strivings. For we find in the text not only selection of the original Indian thought-melodies but the very improvisations on them by some master spirit who is like Beethoven deeply religious and hence a cousin-german of the Indian seers who were also musicians from the very beginning—who called their scripture *Rik*, songs and *Chandas* rhythms and who were responsible for the apotheosis of the musical sound *Sabda Brahma*. So we may not be far from the truth if we surmise that the rhapsodic commentaries or apostrophisings which follow the Indian aphorisms are Beethoven's own and as such they have a rare value.

Every biographer of Beethoven asserts that the art and life of Beethoven are surcharged with religious inspiration.

"A more deeply religious mind never existed. In every trial his thoughts flew upwards and his notebooks are full of most passionate ejaculations. God was to him the most solemn and intimate Reality whom he saw and welcomed through all aspects of Nature and in every mood of Joy and Sorrow" (Sir George Grove).

"Sacrifice sacrifice always the inanities the fooleries of life to Art! God above all—Gott über alles!"

These were his perennial cries and his greatest interpreter Mon Romain Rolland has also proved it in his *Vie de Beethoven*.

ROMAIN ROLLAND ON BEETHOVEN

All his life may be compared to a day of terrific storm. At the beginning a lumpy youthful morning—only here and there a gust of weariness. But in the immobile atmosphere one scents a secret menace a heavy presentment. Suddenly we find the

passing of the gigantic shadows the tragic rumblings the terrible and growling silences—the furious rush of storm in the *Heroic* and in the *Symphony of Ut Minor*. However, the transparent purity of the air is not as yet blotted out. Joy is still joy and Sorrow nurses always the child of Hope. But after 1810 the equilibrium of the soul is upset.

"A strange light seemed to emerge from his works henceforward. From the clearest of his musical thoughts one can see a misty something slowly coming up the mists dissipate gather again and seem to darken out

With his eyes open he looked inward

hearts with their capricious and melancholic uneasiness often the musical idea seems to be lost altogether it comes out of the haze once or twice and then seems to have been swamped it jumps out by fits and starts only at the end of the composition. Even the gaiety of Beethoven of this epoch assumed a severe and savage colouring. In all his sentiments we scent some fever, some poison. In a letter of 2nd May 1810 to his friend Wegeler we read the piercing lines "Oh! so beautiful is Life but mine is poisoned for ever!" The storm clouds gather as the night descends and suddenly the heavy clouds dark like the night surcharged with lightning and hursting with tempest—the beginning of the Ninth Symphony. Suddenly

with the bursting of the tornado the curtain of darkness is torn asunder the night is chased out of heaven and by the sheer impact of the will the radiant day emerges in all serenity

What conquest of Bonaparte what effulgence of the sun of Austerlitz may aspire to rival this glory this superhuman effort this victory the most brilliant ever achieved by human spirit. A poor diseased lonely unfortunate creature—Suffering made Man—to whom the world had refused joy creating Joy by his own will in order to give it to the world. Truly Beethoven has created joy out of his misery as he himself says in a few proud words which summarise his life and which should be the motto of all heroic souls—

To Joy through Suffering
Durch Leiden Freude

The profound truth underlying every word, every phrase of *Mon Roland* would be realised by those who have the privilege to listen even once to that Homeric composition of the musical world the Ninth Symphony which Beethoven created out of the depth of his soul which was the battle ground of Joy and Sorrow

Hymn to Joy

From the year 1793 when he was a young man of 23 only he dreamed of singing for once a supreme hymn to Joy which would be the crowning piece of all his works. All his life he hesitated about the exact form of the hymn and about the place which he would assign to it. Finally in the year 1803 at the age end of his life he took up the sublime Ode to Joy by his great contemporary Schiller and wrote a musical superstructure which would ever remain as a marvel and a despair of musical art. Beethoven was a pioneer in introducing the chorus at the end of the symphony and in the choral hymn to Joy at the end of the Ninth Symphony we feel—as I felt in the course of one of the great symphony concerts of Germany—that the human soul in its sublime despair to express itself through man made instruments suddenly cries out directly to God the Master Musician through the human voice. Beethoven's hymn to Joy has all the grandeur and the directness of the Vedic hymns which also culminated in the supreme philosophy of Joy—*Anandam*

आनन्दस्य न खलिविमानि भूतानि आनन्द

PILGRIMAGE OF PAIN

This unique realisation of Joy and through Joy of Immortality was not the prize of easy philosophising but of awful suffering of tireless endurance and deathless Faith. This would be proved by Beethoven himself. Hence we conclude this fragmentary tribute to the great Hero of music by offering to our readers the Testament of Beethoven which requires no commentary. From this unique document we feel how his whole life was as he intuitively felt it to be nothing but a pilgrimage of Pain. This was written in Heiligenstadt Vienna, as early as 1802 when Beethoven was barely 32.

THE TESTAMENT OF BEETHOVEN

For my brothers Charles and John Beethoven

Oh men who look upon me and consider me as a hateful mad misanthrope how un-just you are to my poor self! You do not know the secret reason of my appearing to be so. My heart and my spirit were inclined from my infancy to all the sentiments of Goodness nay more I was always disposed to do good things noble things. But just consider how frightful was my condition ever since I was a child of six years—diseased made worse through the treatment of thoughtless doctors cheated from year to year with the hope of recovery and finally flung at the prospect of a prolonged malady the cure of which would require years if it was not actually incurable.

Born with a temperament enthusiastic and active enjoying the distractions and amenities of Society I was forced at an early age to get myself separated from all and to pass a solitary life. Even if I could rise above these things how cruelly was I hurt by the sad experience of my infirmity renewed from day to day. It was not possible for me to say

Speak louder shout for I am deaf! Oh how could it be possible for me to reveal my weakness in that organ which should have been in my case more perfect than in that of others, a sense which I used to possess in the state of almost perfection a perfection which few of my vocation ever possessed! Oh I simply could not speak about it.

Pardon me then if you have seen me to avoid you for you know how I wished to mix in your company. My misfortune

is doubly painful to me because I ought to have been a stranger to it. How it stands in the way of my finding consolation in the company of men, in delicate conversations, in the reciprocal outpourings of souls! Alone quite alone! I never risk going out into the world except when I am driven by necessity. I must live like a proscribed soul! If I approach human society I am torn by a devouring anguish through fear of being detected, of people noticing my condition.

"That is why I am spending five months in the country. My learned doctor has advised me to spare my ears as much as possible! He solemnly overrules my own humble aspirations! How many times tempted by my weakness for human company I have allowed myself to be captivated! But what a humiliation! Here are so many near me hearing the flute from a distance and I nothing, or that they can hear the shepherd singing and that I nothing always nothing! These experiences are sufficient to fling me to absolute despair and it is a wonder that I did not cut short my life myself. It was Art alone that held me back. Oh it seemed impossible for me to quit this world before having accomplished all that I felt myself to be charged with. That is why I allowed the prolongation of this miserable life—miserable indeed, with a body so irritable that the least change flings me into a state of worst confusion. *Patience!* so people advise me. I should choose *Patience* as my guide from now. I shall have patience I hope. My resolution to resist should be strong till the time comes for inexorable Fate to cut the thread of my life. It may or may not be good but I am ready. To be forced to be a philosopher at the age of 28—not an easy affair! It is more cruel in the case of an Artist than in that of any other men.

"My God you see from high into the depth of my heart, you understand, you know that love of mankind and the desire to do good are in my soul. Oh fellow mortals! if you read some day this document remember how you have been unjust to me, and may the unfortunate find consolation in discovering another unfortunate here like him who inspired of all the obstacles of nature had done all that lay in his power to be admitted to the rank of the Elect, of the Artists.

"You my brothers Charles and John, remember as soon as I am dead and if Prof.

Schmidt lives still, please request him in my name that he should describe the case and join to the history of my malady this letter which you find herewith, so that after my death the world may get reconciled with me as much as possible. At the same time I admit you both as the inheritors of my humble fortune—if one can call it so. Divide the same amongst yourselves loyally, try to live in agreement and to help one another. The wrongs that you have done to me which you know have been pardoned by me long ago. Brother Charles, to you I address my special thanks for the attachment which you have shown lately. I pray and I bless you so that you may have a life a little freer from anxiety and a little happier than mine. Enjoin one thing above all upon your children—*Virtue*. It is she that gives happiness not wealth. I speak from experience. It is virtue which sustained me in my misery. It is to her and to my Art that I am grateful for not having terminated my life by suicide. Adieu! Love one another. I thank all my friends and particularly Prince Lichnowsky and Prof. Schmidt. I hope that the instruments of the prince might be kept in the homes of either of you but may it not raise any quarrel between you? If you think it better sell the instruments if it serves your purpose better. How happy should I be if I can be of any service to you in my tomb.

"Even as I am I shall fly to Death with joy. If death comes before I had the chance of developing my artistic faculties in spite of my cruel fate if she comes thus too early for me and I wish to retard—but even then I shall be content. Would not Death deliver me from this state of endless suffering? Come whenever you wish. O Death! I shall face you bravely. Adieu, and don't forget me in death. I deserve to be remembered by you for I have remembered you in my life to make you happy. Be happy!"

"Thus I take leave of you—certainly in sorrow. Yes! the fond hope of—
g

cured at least partially must now abandon me completely. Like the leaves of Autumn that drop and dry up, my hopes also have withered. I go out almost as I came in. The high courage which often sustained me in the bright days of my life has vanished. Oh Providence! make me live a day a

single day of Joy. It is for such a long long period that I have been a stranger to the profound resonance of real Joy. When Oh when my God! may I feel Joy again in the temple of Nature and Humanity! Never? No—that would be too cruel! 'B,

Suffering made-Man

Wollen wir man kann
Freiheit über alles heben
Wahrheit nie auch sogar am
Throne nicht verleugnen

To do good to the utmost of power
To love Freedom above everything
And even for a throne
Never to betray Truth!

Beethoven

LETTERS FROM THE EDITOR

VI

FROM London as my head quarters as it were I went to see Cambridge one day and Oxford the next. I could spend only a few hours each at these far famed University towns. Starting on both days from the metropolis early after breakfast I returned in the evening. I visited both the Universities during a long vacation and hence I had no opportunity to observe their life and activities. That was a great disadvantage but it could not be helped. My original plan was to pay a second and longer visit to Great Britain in November (1926) but it was not to be.

I went to Cambridge first. It derives its importance almost entirely from the University and Colleges situated there. Cambridge railway station is not at all impressive and does not fill the visitor's mind with any hope of seeing things worthy of a visit. But in this case the actuality happens to be far better than the promise. When approaching Oxford the traveller is beckoned from afar by the glitter of spires. In the case of Cambridge it is not distance that lends enchantment to the view but rather a close acquaintance with it. The lure of Oxford also is intimate and its charms grow on one with closer acquaintance.

The river Cam on the banks of which Queen's, Kings, Clare, Trinity Hall, Trinity and St. John's are situated is not a broad river with a large volume of waters rolling majestically on it. It is a very small river. But its clear waters moving slowly on small boats floating on their surface some occupied others not the green sward running down to the waters edge with the overhanging branches of the willow almost touching the waters and the many bridges crossing the stream leave a very pleasant and abiding impression on the visitor's mind.

Before beginning his round of the Colleges the visitor may well decide to follow the American motto "Go on till you're stopped." He need not fear to cross the portals of the Colleges. When in doubt, one should ask the porter of the College who is generally to be found at the gate for guidance and direction.

I will not describe any College in detail nor even mention all the Colleges but will make brief references to some of them.

Of the Colleges Peterhouse sometimes irreverently called Pothouse is the earliest foundation. Some of its primitive thirteenth century buildings still remain. It is the only College in Cambridge to possess a deer park—though a small one.

Nearby is the churchyard of St. Mary the Less which was perhaps the inspiration of Gray's *Elegy Written in a Country Churchyard*. For it was as a fellow commoner of Peterhouse that Gray resided in chambers overlooking that churchyard. The story is still current of a prank played on the poet by some mischievous undergraduates. He seems to have had a great dread of the College being set fire to. Outside the window of his bedroom there may still be seen the iron rail to which in case of fire the poet could attach the rope ladder which he always kept in readiness. One dark night some students raised a false alarm of fire and so lured the frightened bard to descend his ladder—into a tub of cold water. The poet's migration to Pembroke College is traditionally ascribed to his annoyance at this prank and in that College just across the street so Dr. Stokes relates in *The Cambridge Scene* he was awakened one night to find the opposite rooms actually in flames.

Pembroke known as Pema is now one of the largest Colleges in Cambridge. At the time of my visit it was undergoing some repairs. I passed through some of the rooms in which the students reside. Pembroke is rich in literary and historical associations. Spenser the poet of the *Faerie Queene* and Gray were in residence there. William Pitt was one of its students. The martyr Dr. Nicholas Ridley was one of its members.

The University Printing Press known as the Pitt Press, stands opposite to Pembroke. It looks like a church and looking at it I thought it was really one. That being so, in merrier and less sophisticated days it was not uncommon on the first Sunday

degree I wanted to see the rooms in which he lived. So enquiry was made at the porters whether they remembered a young man Chatterjee by name. The porter was out at home at the time of my visit. After a few seconds pause the old dame (the porter's wife) said: "Yes" and began to describe my son's appearance in order to be sure that her memory was not at fault. The description was correct. She proceeded to ask whether he played hockey. I said: "Yes." Then the question was put to me: "Did he belong to the Crocodile Group?" That was perhaps the name of some athletic set. I laughed at the fantastic name chosen and said: "I don't know." The identification was however now practically complete, and I was told Chatterjee occupied rooms number 1 and 2 staircase F. So I walked into those rooms and also saw the four rooms assigned to one of the tutors. These college porters, and it seems their wives also have wonderful memories. When at Geneva I was narrating the above incident to Pandit Jawahar Lal Nehru who is a Trinity man he said: "Catus is a comparatively small college. But even at Trinity which is a very big one, having hundreds of students the porter asks the names of the students only once when they are admitted—it is bad form to ask again and these are correctly remembered ever afterwards."

Trinity has a great Gate and a great Court. The spaciousness of the court causes not a little astonishment. There is a beautiful fountain almost in the centre of the court of which on two sides are alike and none of the angles at which they meet are right angles. Sir Isaac Newton, Lord Macaulay and Thackeray were students of this college. Here I saw the statues of Newton, Macaulay, Byron, Bacon and Teonyson. The statue of Byron by Thorvaldsen was declined by St. Paul's and Westminster Abbey and at last found its resting place in the poet's own college. Can it be proved that *all* the men whose statues or other memorials are kept in Westminster Abbey were quite saintly and led more correct lives than Lord Byron? There is also a portrait of Tennyson by G. F. Watts. These statues and paintings have an ennobling and stimulating influence on successive generations of undergraduates.

After Trinity I strolled along the pleasant and extensive grounds of St. John's. Wordsworth was an undergraduate of this college. I crossed the Cam by the high covered

bridge called 'The Bridge of Sighs' after the famous bridge of that name which links the Doge's palace to the prison in Venice. The name alone appears to be the only point of resemblance between the two bridges.

As I have said before I had no time to see Gilton. But I should mention one noteworthy fact about it. It owes its origin to no one wealthy donor but to the movement for the higher education of women during the eighteen sixties. Funds have been gradually raised from the public, until now the college is well equipped with Hall, Chapel, Library, Lecture rooms, Laboratories and a swimming bath while the grounds alone cover 33 acres.

Christ's College the college of Milton contains a portrait of the poet. I saw there also a portrait of Darwin. It is curious to note that the great scientist came to Christ's with the original intention of going into the church! This college has a special interest for Indians as the late Mr. A. M. Bose (India's first Cambridge wrangler and a high one too) and Sir J. C. Bose took their degrees from here.

I took a walk through the parklike grounds on the side of the Cam opposite to that occupied by some of the colleges and appreciated their stately character and the absence of all bustle and noise. Of course during Terms they cannot be so quiet.

I must not forget to mention my visit to the far famed Cavendish Laboratory. One of the spots I could bring to mind some far more imposing laboratory buildings which I had seen in India, whose scientific achievement is either nil or quite insignificant. While not at all underestimating the value of proper equipment I could not but resist here the thought that it is the *mind* which works in a laboratory which matters most. Intellect we have here in India but it has to be freed and encouraged and given opportunities, though some few intellectuals among us have overcome obstacles and made their own opportunities. When I had just finished having my look at the rooms and apparatus at the Cavendish Laboratory there was a heavy downpour of rain which lasted for 10 or 15 minutes. It was the only heavy downpour that I saw during the whole of my stay in Europe.

I lunched at a restaurant in Cambridge and found the service and food good. I visited the Cambridge Union and after washing my face and hands, had a drink of

cool water, and took rest for some
in its library

Unlike Cambridge Oxford has a place in history apart from the life of the University. But I will not dwell on its history. I will only mention the fact that during the Civil War it was the Royalist headquarters.

Just as in the case of Cambridge so in that of Oxford I shall have something to say on some of the Colleges and some other institutions, but not according to any fixed plan. Intending visitors will receive little help from this letter of mine if they want to economise time and also want to see all that is most worthy of seeing. They had better follow some guide book.

When approaching Oxford from London by rail one catches an alluring glimpse of turrets, domes and spires. The exit from the station however is far from alluring.

Christ Church is a magnificent college founded by Cardinal Wolsey and having one of the most magnificent college Halls in Great Britain. Its Library is also remarkable and contains some 80,000 volumes together with a fine collection of coins. It is rather curious that among the special features of this college is the extremely massive Kitchen. That it took precedence of other buildings was the source of a good deal of badinage at Wolsey's expense. Of Magdalen College also the Kitchen is a special feature. There are numerous fine portraits on the walls of the Hall of this College many being by famous artists. Owing to the overcrowding of the walls portraiture is now occupying the windows on which there are portraits of Wolsey, More and Erasmus. On the north wall by the west entrance to the Cathedral is a Roll of Honour as a war memorial. There are such rolls of honor elsewhere too in college chapels. It has seemed to me that such memorials of the great world war are an incongruity in places of worship—may they desecrate them. It is sometimes recorded no doubt that those whose names are there died fighting for God, King and Country. But I do not believe that anybody fought for God, not that God requires anybody to shed blood for Him.

Of the Colleges at Cambridge and Oxford each may claim to have produced a number of notabilities—some more some less. Christ Church claims to have produced 5 archbishops of Canterbury, 9 archbishops of York, 5 bishops of London, 8 bishops of

Durham, 4 bishops of Winchester, 10 prime ministers and 8 Governor Generals of India.

When I saw Magdalen College I strolled along Addison's Walk named after Addison, who was a demy or half fellow of that college. It is on the left bank of the Cherwell. Its solitude adds to the charm of its avenue of trees.

New College is not at all new as it was founded under Royal Charter in 1379 and opened in April, 1386. Oxford and Cambridge colleges have generally a monastic appearance. Walking along the cloisters of New College I felt as if I were in a mediaeval monastery. When the old colleges in these universities are repaired or restored the work is so done as to leave intact the ancient appearance of the buildings.

Manchester College differs other from Oxford Colleges in many respects. It was originally founded in 1456 at Manchester as the Manchester Academy and dedicated to Truth, Liberty and Religion. It was then removed to York in 1803 brought back to Manchester in 1840 and removed to London in 1853. Finally it was removed to Oxford in 1859, and formally opened in 1893 by that great philosopher and theologian, Donor James Martineau. It is a free Theological College open to all denominations, no doctrinal subscription being required either from teachers or students. The British and Foreign Unitarian Association has for some years past, been providing a Brahmo Samaj student with a scholarship to enable him to pursue theological studies here. Several such students have been trained here. The College contains a statue of Dr. Martineau.

Ruskin College, is a working man's college giving opportunity for study similar to those afforded by other Colleges.

Of Colleges for women Lady Margaret Hall is a strictly Church College and Somerville College (originally Somerville Hall) is undenominational. In other respects the two institutions are like each other. Among other institutions for women are St. Hugh's College and St. Hilda's Hall. As my younger daughter in law was educated at St. Hilda's I was naturally interested in it. That being so I asked the chauffeur of the taxi to drive to that College. Arriving there I found the gate closed with a notice stuck to it "Closed to visitors for the vacation. But having come so far to see the College, the Indian student who was with me urged that we should ring for admission. So the

button was pressed, and in a minute a maid came and opened the gate. But she told us immediately that it being vacation time, we could not be shown round. But when it was explained to her that I had come specially to see my daughter in law's College and her maiden name was mentioned, the maid smiled and agreed to show us all that we wanted to see. So we saw the Library, the Hall, the rooms where the students resided, and also the garden. I bought a picture postcard and posted it the same day at Oxford to my daughter in law. In the beautiful garden I found a gardener weeding some flower beds. Finding a very small stream with limp waters bordering the garden I asked him its name. "It is the Cherwell, Sir," said he. The prospect from the college was quite charming.

I do not find it practicable to say something about each of the bigger Oxford Colleges even, for which I hope to be excused by the colleagues of all the colleges which I have not mentioned. Of Balliol men in particular I beg pardon, as it is related that one such, on being asked to what college he belonged said, "Is there any other than Balliol?"

The far famed Clarendon Press I saw from the outside, it being closed at the time of my visit. It was built with money raised by the sale of *The History of the Great Rebellion* by Edward Hyde, Earl of Clarendon, the copyright of which, rendered perpetual by Act of Parliament, was bestowed by his son on the University.

The Sheldonian Theatre is not a theatre in the ordinary sense. It is a building in which is held Commemoration which means the annual ceremony which commemorates the opening of the theatre. It is at Commemoration that all Honorary Degrees are conferred. When I visited the building I recollected that the most recent Indian recipient of an honorary Oxford degree was Dr Sir Niranjan Sircar, ex Vice Chancellor of Calcutta University. There is a book kept in the building in which visitors write their names, the date of their visit, and the place they come from. I also did so. The old English woman who was the caretaker complimented me by observing that my countrymen always put down these items in the proper columns! In appreciation of her great compliment, I observed that as we had to learn English almost from infancy, we became equal to

the difficult task of perceiving which column was meant for which item. She also accepted a tip in return for her above mentioned recognition of the scholarly attainments of Indian visitors! Outside the Sheldonian Theatre runs a railing decorated at intervals with stone busts, now so weather-worn that the sages they represent cannot be identified. Elsewhere, too, in Oxford I found some sculptures similarly weatherworn, due perhaps to the nature of the stone used. As regards the Sheldonian Theatre railing busts, I have also heard that once upon a time some mischievous undergraduates had smeared their faces overnight with some highly adhesive paint, in trying to remove which the busts had become still further disfigured.

It is best to mention the Bodleian Library and the Radcliffe Camera together, as the latter is the reading room of the former. The Camera is a tower like building, from the gallery at the base of whose dome a magnificent view of the towers and spires of Oxford and of the country round about can be obtained. The array of tall thick volumes which constitute the catalogue of the Bodleian is quite imposing. It is one of the libraries in Great Britain and Ireland which are entitled according to the Copyright Act to a copy of every new work published in those countries, not being an unaltered reprint. The treasures of this library are numerous. The picture gallery contains busts and portraits of sundry celebrities, interesting relics and so on. In a glass case I saw the manuscript of that book 'of Shelley's on the necessity of atheism' for writing which in his teens he was expelled from Oxford, as also some other small things belonging to him. The whirling of time brings on strange revenges. The University which expelled the boy now treasures these belongings of his as precious relics!

In Oxford Thursday, not Saturday, is the early closing day, on which shops close at 1 p.m. On ordinary days most of the shops close at 6 p.m.

As in Cambridge, so in Oxford, I went into a restaurant for lunch and had some vegetarian dishes. Not being accustomed to the European style of cooking, I did not quite appreciate most of the dishes during my two voyages and in the countries of Europe to which I paid short visits. But as regards attention, cleanliness, and freshness,

of the meals served the Oxford restaurant was quite as good as any other.

I am not qualified to dwell on the respective special characteristics of Cambridge and Oxford, nor to decide which is the better university, taking everything into consideration. The old world atmosphere of these universities appealed to my mind. At the same time I found that they were well-equipped or modern scientific and other studies. They also afford facilities for many games and for keeping in touch with public life and affairs. The college chapels, with their beautiful interiors, the splendid stained glass windows, and the "dim religious light" within are very favourable for quiet contemplation and devotional exercises.

At the time of my visit to England Sir J. C. Bose was spending some days at Great Missenden, a village in Buckinghamshire. I went to see him and Lady Bose one day. The village being situated at some distance from the Railway station, Lady Bose very kindly came to the station, thinking perhaps that I might otherwise have some difficulty in discovering their whereabouts. The great scientist was then engaged in writing a new book. He and Lady Bose resided in a house which formed part of a Garden School for girls which was then closed for the vacation. I found the village scenery quite delightful. I enjoyed a walk through a pine wood in the morning, Lady Bose showing Sir J. C. Bose and myself the way. I had intended to return to London the same day, but as I was asked to stay for a day I as an old student of the great professor, felt bound to obey. One of the women teachers of the school explained to us the method and system of education followed in the school and showed us some of the painting and literary work done by the girls as well as the geological and other scientific collections made by them. The girls' work, all done by them without their teachers' help was quite remarkable. Professor Bose also showed and explained to me his new instrument

When the teacher of the school was showing us the pupils' work, one of the pupils came to the door on horse back from her neighbouring village home. On seeing her approaching the teacher rose, exclaiming, 'O Mary!' But for this exclamation, I could not have perceived at once that the rider was a girl. For she wore what seemed to me like male riding costume and rode like a man with her two legs on the two sides of the saddle. Her hair, too, was cut short. On nearer view, of course, and probably helped by the name Mary, I found something in her looks which would not be found in a boy of the same age. The sanitary arrangements in this school in a small village are as up-to-date as in town houses in England. The day of my return to London being a Sunday, no bus or other conveyance was available in that small village by which I could go to the railway station. I did not also know the way to the station. So Sir J. C. Bose and Lady Bose very kindly walked with me to that place in the hot sun for about three quarters of an hour. This they did of their own accord, it being impossible for me to make any such request. As soon as I had reached the gate of the station, a train to London left it. I was, however, told by the station master that I should have another in 21 minutes, which I did. In the compartment of the train in which I was there were at first two young Englishmen, subsequently a number of little schoolboys entered. While in it some papers happened to fall from my hands on the floor of my carriage. Immediately one of the young men picked it up and gave it to me, for which I thanked him. I mention this trifling incident, because in India few Englishmen or Anglo-Indians, however young or old, would think of being obliging to an unknown Indian, or, for that matter, to the best known Indian. I have heard that Indian students in some British Universities and other Indians elsewhere in Great Britain do not always receive just and polite treatment. That is quite probable.

INDIANS ABROAD

THE SOUTH AFRICAN SETTLEMENT

AFTER days of suspense and suspicion, the terms of the settlement of the Indian question in South Africa as decided upon at the Round Table Conference at Capetown between the Government of the Union of South Africa and the Government of India Deputation have at last been published. The main points of the terms of compromise include 1. Abandonment of the homelisting Class Areas Bill. 2. A scheme of 'assisted emigration', 3. Entry of wives and minor children, 4. Fixing western standard of life for the Indian community, and 5. Appointment of an Agent in South Africa by the Government of India to look after Indian interests.

The Rt. Hon. ble Srinivasa Sastri is reported to have said at Capetown at the City Hall under the auspices of the Cape British Council, held after the Conference, that

"The Deputation had now every hope that, as a result of the Round Table Conference with the Union Government, a basis of perfect understanding had been reached of which if they of the Deputation might not see the full fruition many there who would be blessed with the length of days would see it. They left with hopes practically fulfilled and with expectations raised still more."

Mr C F Andrews was also no less optimistic. He summed up the results of the Conference as follows

"Firstly India's dignity is now unstintingly recognised. Secondly her social status is upheld. Thirdly a friendly atmosphere is now regarded as normal. anti Asiatic outbursts discredited and Fourthly a determination has been reached to settle everything in future by Conference and not force. These all appear essential gains whatever else has been agreed upon in camera besides."

And he has now given his whole-hearted support to the compromise, which he describes to be "honourable to both parties."

We are not yet informed what the Rt. Hon. Sastri would say now when the actual points of the Compromise have been published but the South African Indians cables Mr Andrews, "do not seem to be elated with the agreement." Thus the *Natal Mercury* gauged the situation correctly when it declared just after the closing of the deliberations of the Conference that it was mysteriously disappointing.

"We receive no indication wherein the perfect basis of understanding lies. Natal which is peculiarly interested has a right to know how matters stand. Here mystery won't do. Every one is left in suspense. Mr Sastri's position is bound to cause serious apprehension. Does he imply that some form of Indian franchise has been agreed upon?"

Whether the Rt. Hon. Mr. Sastri implied anything like this it is difficult to say, but it is sufficiently clear that no such provision has been agreed upon in the Compromise, nor is there any express or implied understanding equivalent to the 'determination to settle everything in the future by Conference and not by force'.

Mahatma Gandhi has characterised the Compromise as 'honourable' to both the parties, but he does not fail to say that

it is not the best that could be conceived but it is the best that was possible. A perusal of the settlement warrants satisfaction but like all Compromises this one is not without its danger points. Dropping of the Class Areas Bill is balanced by Repatriation re-emerging as re-emigration. If the name is more dignified it is also more dangerous. Repatriation could only be to India. Re-emigration can be to any country. This assisted emigration to other countries I hold to be dangerous for there is no knowing what may happen to poor ignorant men going to an unknown land where they would be utter strangers. Such countries as would take them would only be either Fiji or British Guiana. Neither has a good name in India. It is decidedly a disadvantage to have been a party to assisted emigration to any other part of the world. It is a good point that whereas before the settlement repatriates lost their domicile, the re-emigrants now retain it and lose it only if they absent themselves so long as to warrant the inference that there is no intention to return to South Africa. How many assisted emigrants can hope to refund the assistance money they might have received or how many can hope to return with their families is a different question. The non forfeiture clause is clearly designed not so much to guarantee a substantial right as not to hurt national self-respect.

There are also other points in the Compromise 'brought with grave danger'. One to which Mahatma directs attention is the following

The Union Government is to take special steps under the Public Health Act for an investigation into sanitary and housing conditions in and around Durban which will include the question of introduction of sale of municipal lands subject to restrictive conditions. I don't know what is aimed at in this paragraph but my suspecting mind (and my sleep) is based upon previous bitter

experience of interpretations warranted and unwarranted that a strong party places upon agreements with a weak party to the latter's advantage) ever conjures up all kinds of frightful consequences arising from this proposed committee and limitation. Already the Durban Corporation has been invested with powers which it has utilised for the suppression of its Indian citizens. So far as I know a committee can bring to light nothing that is not known to Corporation or Government. Appointment of advisory committee of Indians may be a simple padding. The Health Committee may bring in a hysterical report as a previous committee to my knowledge, has done and limitation may be put upon the purchase of municipal lands by Indians which may cramp the Indian community residing in Durban. Nor do I like the paragraph which seems to imply that Provincial Governments are at liberty to take any action they might against Indian settlers without reference to the Central Government."

But he thinks the Compromise to be acceptable in spite of the dangers referred to not so much for what has been actually achieved as for the almost sudden transformation of atmosphere in South Africa from one of remorseless hostility towards Indians to that of a generous toleration and from complete social ostracism to that of admission of Indians to social functions. Regarding the appointment of an Indian Commissioner in South Africa, Mahatma Gandhi insists on the Commissioner being an Indian and suggests that the Rt. Hon. ble Srinivasa Sastry is the fittest person available at the present moment.

Quite naturally Indian public opinion is divided over this important question.

Mrs. Sarojini Naidu, President of the South African Indian Congress characterises the agreement as a memorable and indeed a marvellous performance but cannot disguise from herself

the liveliest apprehension in regard to the scheme that tends to encourage migration to other parts of the Empire and in the unfettered liberty of executive action afforded to the Provincial Governments in their dealings with the Indian community without reference to any central authority.

Sir Sivaswamy Aiyar the accredited liberal leader of Madras asks the following pertinent questions in connection with the Mahan Habibullah agreement

(1) What is exactly intended to be denoted by Western standard of life? (2) In the case of Indians domiciled in the Union who desire to conform to the Western standard of life but are not provided with means or have not been equipped with education necessary to enable them to attain such conformity what does the Union Government propose to do? Are they to be trained and equipped by the Union Government

or is pressure to be exercised upon them and if so in what shape for the purpose of compelling or inducing them to emigrate? (3) Will Indians be allowed to compete with Whites in the market for labour both skilled and unskilled? Will Indians be admitted into Trade Unions along with Whites? (4) In the case of Indians who possess the necessary education, means and desire to conform to the Western standard of life will they be subjected to restrictions in regard to occupations and residential areas or will they enjoy the same freedom as the Whites? (5) Is there any chance of trade licensing laws being so revised that racial considerations shall be allowed directly or indirectly to influence a decision? (6) Will Indians domiciled in the Union and possessed of the necessary qualifications for conforming to Western standards of life be allowed to acquire landed property in towns and elsewhere free of restrictions? (7) Is there any likelihood of political and municipal franchise being conferred on Indians domiciled in the Union in cases where they do not now possess any such franchise?

The Indian Government have hurriedly ratified the compromise document without consulting the legislatures and the people and Mrs. Naidu rightly complains that the

Indian Government committed a serious indiscretion in ratifying a document of such grave importance and significance without the previous counsel or consent of the Central Legislature.

The Council of State at the instance of Sir Dinshaw Wacha however have come to the rescue of the Government of India by indirectly approving the procedure of the Government.

But while the British Press is rejoicing over the agreement as a notable triumph of imperial statesmanship and Indian publicists are dreaming of a bright future a storm is brewing in South Africa. The following Press messages from Mr. Andrews speak for themselves

CAPETOWN FEB. 23

An anti Asiatic attack has now begun against the Mahan settlement from Natal politicians but up to the present there has been no public demonstration.

Everything points towards a quiet acceptance after much grumbling. One Provincial Councillor publishes the following sentiment. The whole thing is a wash out. Dr. Mahan has been beaten.

DURBAN FEB. 24

A PARLIAMENTARY correspondent at Capetown telegraphs to the effect that the Transvaal Nationalists are following Mr. Tielman Roos (Minister of Justice) in a bitter objection to the Indian agreement declaring that Dr. F. S. Mahan has been outwitted. They have threatened to attack Dr. Mahan politically by joining hands with the Natal members.

Despite the support accorded by the Press Dr. Mahan is likely to have a hard time for what is regarded as a weak concession.

The storm is brewing everywhere slowly against the settlement.

Will the storm of opposition subside or sweep off everything before it?

EAST AFRICA

While a 'compromise' has been sought to be effected in South Africa, the seeds of evil are still being sown in East Africa. A communication from Mombasa to the "Indians Abroad" states

"The Economic Commission Report that was published in 1919 was the most damaging document which without a shadow of fear emitted pure and undiluted venom against the Indian settlement and Indian emigration on the so-called Economic reasons. It endeavoured its level best to put a permanent check on the Asiatic hordes supposed to be marching to these shores. The white man's supremacy is disturbed in the way even of waking up of the Natives of the soil who are demoralised because there exists the intermediary the Indian race. The report has entirely ignored the fact that it was the Indian traders and the Indian craftsmen that were responsible with their constructive genius for building up the colony of East Africa as it is today. And yet the rising tide of colour seems to have no ebbing."

Of pledges broken and promises unfulfilled there are instances innumerable to cite. The same communication states

The white paper of 1923 deprived the Indian Community of the right of common franchise of immigration and the right of buying in the Highlands throwing only some crumbs in the form of non-segregation in residential areas. But the Government of the colony dominated by the will of the white settlers have thrown this written pledge overboard and have proposed to sell residential plots on Mombasa island to Europeans only thus debarring the Indian Community to buy or to reside in the buildings erected thereon. The site chosen for the Indian Hospital at Nairobi has been abandoned under the threat of European Citizens' petition. The Local Government Commission is collecting materials probably to prove that Indians do not deserve to have municipal franchise owing to their insanitary ways of daily life. Thus the various forces bred up by the white race have been working hard to sap the very foundation of the Indian life in East Africa.

Nor is this all. The scourge of the white supremacy is noticeable in every walk of life.

"The land and the labour policy of this Government is daily becoming uniformly consistent with a view that the Native will not be spared of his limbs as he is not spared of his land. Compulsion in labour open or secret, there is to be for South Africa's note of warning in the question of imported labour is predominantly listened to. And because the Indian intervenes in the onerous burden of the white man of uplifting the native, the white race has found it necessary to whip secret scorpions upon the peaceful and settled Indian community. Here is the latest stunt."

COLONIAL INDIANS

Mr J A Luckoo, K.C., Bar at Law, writes an article on 'The East Indians in British Guiana.'

There is a great tendency among our brethren to imitate Europeans in their ways of life. It must be confessed that Eurocratism has certain attractions which are quite irresistible to the uneducated. The higher strata of Indian society in this colony have shown a tendency to follow them on these lines. It need hardly be said that the education which they receive strongly predisposes them to such a defection from Hindu tradition.

The fault is not entirely his. The Colonial Indian who thus merges himself in the vast ocean of inferior classes is more often than otherwise a victim of circumstances. His condition is the direct result of the unsolved difficulties in the question of Indian education in which alone lies the remedy for these conditions.

Is there any chance of the difficulties in the question of Indian Education being solved for the betterment of colonial Indians in the near future?

INDIAN EDUCATION

The problem of Indian Education in the Colonies calls for immediate solution but constant appeal and agitation have failed to rouse the colonial authorities to action. In East Africa the Editor of the *Tanganyika Opinion* interviewed the Director of Education who promised to make a move in the direction provided the Indian Community was ready to contribute its quota, to which a satisfactory response was not very late in coming. But the Government has not yet done anything, writes the *African Comrade*.

"To perform its own part, that is to finance Indian Education during the last six years of its establishment in the Country. Any one who is conversant with facts can say without hesitation, that it has done nothing practically so far, not a single Indian School has been in receipt of a red cent."

True the Government has been showing a sympathetic attitude for the last few months by interesting itself in the matter. But that is a lip sympathy only.

"If the Government wishes that the above belief should disappear it must take a right course. That course is immediate commencement of work of the proposed building with the sum of £3000 that is still lying unused. The sincerity of the Indian Community is evident from its readiness to hand the Government what has been collected up till now and from its determination to continue collecting further contributions. If the Government is serious and desires to prove its sincerity not only by lip-sympathy but by doing something practically then it must pursue the above suggested course."

KENYA AND BRITISH LABOUR PARTY

In the course of an article entitled *Empire Makers or Profit Makers?* published recently in the *New Leader* a well known Labour weekly Mr H. Snell M P says

In regard to Kenya the British Labour movement can truthfully assert that its hands are clean that it has never ceased to demand for the humblest black native living in the British Empire decent, just and generous treatment, and that even if we were in the position of South Africa the great eternal principle of justice would not be altered. Discussing labour problems in South Africa the writer makes the following remarkable suggestion

The remedy would appear to be in the hands of South Africa herself. Let the white employer refrain from taking a mean advantage over these backward unorganised and defenceless people by paying them a wage on which men of his own blood cannot live, and the end of the immediate problem will be in sight. The factories of South Africa are stuffed with law paid native labour simply because it is cheap. The white employer cares little or nothing for the needs of his own race. He is a profit-maker, not an Empire-maker, and by his avarice he produces both racial hatred and political insecurity. If the black man when called upon to do a white man's job were paid as he should be white men's price for it, the white boy would get his chance in life and the most troublesome racial difficulty in South Africa would be solved.

INDIANS IN PANAMA.

We reproduce the following extract from the *Indians Overseas* supplement to the *Indian Social Reformer*

Mahatma Gandhi refers in a recent issue of *Young India* to the Immigration Restrictions Act passed by the Legislative Assembly of the Republic of Panama. There are only about 30 Sindhi

Indian merchants of fancy goods settled there and it cannot be said for a moment that their presence there is a menace to the Republic. The Act applies with retrospective effect to them and only those who can show a continuous residence of 10 years can be exempted from the operation of the Act, which condition Mahatma Gandhi points out, not even a few can fulfil. The matter seems to be now before the Colonial Office and on its decision rests the fate of our countrymen already in the Republic as well as of those who may emigrate there to earn their honest livelihood.

INDIANS IN AUSTRALIA

From the same journal we gather that by Acts which have recently been passed by the Commonwealth Parliament British Indians in Australia

have been admitted to the benefits of invalid and old age pensions and maternity allowances. The old age pension is payable to men above 60 years of age or above 60 years if they are permanently incapacitated for work and to women above 60 years provided such persons are of good character and have resided continuously in Australia for at least 20 years. The invalid pension is obtainable by persons who being above 18 years of age and not in receipt of an old age pension have whilst in Australia, become permanently incapacitated for work by reason of an accident or by reason of being an invalid or blind provided they have resided continuously in Australia for at least five years. The maternity allowance, which has been extended to Asiatic mothers in Australia who are British subjects amounts to £20 and is given to a woman for every child to which she gives birth in Australia provided the child is born alive and the woman is an inhabitant of the Commonwealth or intends to settle therein. The improved position of Indians in Australia is in no small measure due to the impression created by the Right Hon Srinivasa Sastry during his tour in Australia.

NOTES

The South African Settlement

There is no doubt that Mahatma Gandhi, Mr C F Andrews, Mr Srinivasa Sastry and Mrs. Sarojini Naidu know more about the South African situation than ourselves. So that when one or more of such persons say that the South African settlement is the best that could be had in the circumstances, we cannot but accept any such opinion as indisputable. Nevertheless it may be permissible for us to give expression to some

thoughts suggested by the terms of the settlement.

We are not convinced that hostility to the presence of the Indians in South Africa has disappeared. The mailed fist is still there. The only change that has taken place is that the Boers and the Britishers in South Africa have learnt to greater perfection the diplomatic art of wearing the velvet glove to conceal the mailed fist.

It is clear that the Indians are still considered either a nuisance or a menace.

otherwise there would not be, as there is, any provision for "assisted re-emigration." The Boers and the Britishers must have agreed to part with some of their money to assist the re-emigration of Indians, in order to get rid of this nuisance or menace.

The Indians being thus expressly or by implication declared to be unwelcome aliens, we cannot consider the settlement "honorable" to us. The predominant partner evidently considers the Indians racially inferior.

After a visit to South Africa, Bishop Fisher stated more than once in the clearest possible language that the hostility of the European settlers in South Africa to the Indians settled there was due to the fact that the Indians were more intelligent, more sober, more thrifty and more honest than the South African whites. As the Bishop is an American, a Christian and a white man, there is no reason why he should be prejudiced against his white co-religionists in South Africa. His estimate of the intellectual and moral worth of the Indians there may, therefore, be considered correct. On that assumption one may be allowed to hold that the Indians in South Africa are not inferior in morals and intelligence to their white neighbours. Therefore, when it is proposed to elevate the Indians to the Western standard, it cannot have any reference to the morals or intelligence of the Indians. The reference is probably to their style and cost of living, the sanitary or insanitary condition of their dwellings, the amount of literary or other knowledge they possess, etc. But if the Indians be given equal opportunities with the whites to follow all professions and vocations and equal facilities for education, they can easily earn sufficient money and acquire sufficient knowledge to live in comfort in healthy homes. But under present conditions, their earnings cannot equal those of the whites, nor have they got equal educational facilities. For these reasons the proposed elevation to Western standards is misleading. An unmerited slur on oriental civilisation is also implied in it.

But supposing the Indians are an inferior people, when they have been made as "superior" as the whites, will they be given equal political and other rights with the whites? The settlement is silent on this point.

The success or failure of the experiment of raising the standard of the Indians depends principally on what facilities the South African

Government may provide for the purpose. Considering its attitude and that of the nationalist Boers, it cannot be expected that the facilities would be provided on a generous or even on a barely adequate scale. The experiment, therefore, seems bound to fail. What will then happen?

League of Nations Bound to Maintain Status Quo

The Articles of the Covenant of the League of Nations nowhere say that the League will undertake to liberate subject peoples or raise their political status. What is stated in Article 10 of the Covenant practically amounts to a determination on the part of the League to maintain the *status quo*. It runs as follows:

The Members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League. In case of any such aggression or in case of any threat or danger of such aggression the Council shall advise upon the means by which this obligation shall be fulfilled.

As India does not possess any independence, the League's burden of preserving the independence of its members has been reduced to some extent. But as it is bound to preserve the territorial integrity of all member States, and as India is part of the territories of the British Empire, the League can do nothing to free India from the British yoke. In the case of other countries also, it is bound to preserve the *status quo*. Let us see what the *status quo* really means.

The area of the continents is shown below	
Continents.	Area in square miles.
Asia	163,0000
Africa	11090000
North America	7620000
South America	6860000
Europe	3670000
Australia	3010000

Except for a small strip of land round about Constantinople the whole of Europe is inhabited and ruled by peoples speaking European languages. Australia is mainly inhabited and entirely ruled by people of European extraction, speaking some European language. Similar is the case with North America and South America, the difference in the case of South America and that of in some parts of North America being that there the

people who speak European languages mainly are following of mixed European descent. In Asia the following countries may be considered independent —

Countries	Area in Square miles
Japan	236000
China	4300000
Persia	630000
Afghanistan	246000
Siam	200000
Nepal	54000

Total 5666000

Deducting the total area of these countries from that of Asia, we find that 10704000 square miles of Asiatic territory are in some sort of subjection or other to European peoples. That means that the major portion of Asia is in an enslaved condition.

Coming to Africa one finds that only the following countries may be considered free, that is, not ruled by people of non-African descent, though Egypt is not completely free —

Countries	Area in square miles
Abyssinia	350000
Egypt	363181
Liberia	40000

Total 753181

Deducting the total area of these countries from the area of Africa we find that the greater portion of Africa, comprising 10336819 square miles, is under the dominion of peoples of European descent speaking European languages.

It is clear from this survey that at present almost the whole of the habitable surface of the earth is ruled by peoples of pure or mixed European descent speaking European languages. In North and South America and in Australia these peoples have no political opponents in subjection worth speaking of, seeking to be free, because the aborigines inhabiting these vast regions have been almost totally exterminated. This reminds us of the story told of a notorious duellist who being convicted of murder, was ordered to be executed. He was visited in prison by a priest, who exhorted him to make his peace with God by forgiving his enemies. Thereupon the man said, 'I have no enemies.' The priest was astonished, and exclaimed, 'You are such a notorious duellist, and yet you have no enemies!' 'Sire' replied the prisoner, 'I have

killed all of them.' That the ruling peoples of North and South America and Australia have now no political opponents seeking to be free is the result of a similar process.

It is rather unfortunate that in Asia and Africa, which are by far the biggest continents, the indigenous inhabitants continue to exist and multiply. What is equally or more inconvenient, they want to be relieved of the white man's yoke. But Article 10 of the Covenant of the League of Nations declares in effect that they must not aspire to be free.

That is what the preservation of the *status quo* amounts to.

Verily the late world war was fought for democracy and freedom of the world!

Romain Rolland on Beethoven

Our readers will be glad to learn that an article on Beethoven by Mon Romain Rolland will appear in the next issue of this Review. It arrived too late, on the 28th of February, for publication in the present issue.

Switzerland's Interest in Indian Anthropology

In the last issue of the MODERN REVIEW an account was given of the visit of Professor Wehrli of the University of Zurich to collect ethnographical objects from India. Another Swiss anthropologist, Dr P. Wirz of the University of Basle, is now on tour in India. For many years Dr Wirz has been carrying on researches in the Melanesian islands. His work entitled "Die Melanesier von Hollandisch Süd-Nieu Guinea" (Bands I and II, Hamburg 1922) on the primitive tribes of Dutch Southern New Guinea, has for the first time revealed facts of utmost importance relating to the material and social institutions of these interesting peoples. Besides discovering many new factors, Dr Wirz's enquiries have thrown a great deal of light on the composite culture of the Melanesian people, specially with reference to their relationship with Indonesia and Southern Asia. Dr Wirz's Indian visit is mainly in connection with this latter object and he is at present in the Naga Hills trying to trace the source of some of the important culture traits of the inhabitants of Southern New Guinea.

When is India going to show a little of the interest that Switzerland is taking in the institutions of her own people?

Bengal Women's Educational Conference

For the first time in the history of Bengal a representative gathering of women from all parts of the province met in the hall of the Y. W. C. A. to discuss the steps that should be taken to spread and improve education among all sections of our women. The conference lasted from the 16th to the 19th of February with a daily average attendance of about 300 women. On the first day, the morning session was presided over by Her Highness the Maharani of Mynurbhanj and the subject of Primary Education was taken up. Lady Bose, who opened the discussion with an excellent paper (published in this issue of the Modern Review, made some important suggestions as to how the rudiments of knowledge could be brought within easy reach of every girl in Bengal. Miss A. L. Baker, who has many years' experience of teaching in Calcutta, gave an account of the existing facilities for primary education among girls in and around this city and suggested that the first steps towards compulsory free primary education of girls could be taken of by establishing a board of sympathetic and understanding men and women and arranging voluntary teaching work by girl students during their holidays. Later on local schools might be started staffed by local educated persons as far as possible, from funds raised by subscriptions from private individuals and public bodies, and if necessary special taxation for educational purposes should be resorted to.

The scope of the curriculum in the primary schools was discussed by Miss Shome and Miss Hossain of the Sakhawati Memorial Girls' School. In the afternoon session Mrs P. K. Ray presided and the subject discussed was the representation of women in administrative and educational bodies. In her paper Mrs Kumudini Basu showed the present unsatisfactory condition of educational bodies from the woman's point of view and suggested that a much larger number of qualified women should be included in these bodies, as without them the requirements for women could never be fully apprehended and sympathetically considered

by men, however honest their intention might be.

On the second day the discussion was on secondary education for girls. Miss G. M. Wright, Principal of the Bethune College, presided over the morning session. In a very able paper Mrs P. K. Ray said that to improve the present unsatisfactory condition of girl's education in High Schools the existing curricula must be changed and that the Government should be asked to create a Special Secondary Board for girls composed of qualified men and women with at least 8 schools under its management to start with. The subject next discussed was the Home and its relation to the School and the University. In the interesting discussion on this subject Mrs P. Chaudhuri, Mrs. Latika Basu and Begum Sakina Munwayyidzada (the first Moslem lady who took her Master's degree from the Calcutta University) took part. Mrs Latika Basu suggested that one way of establishing a closer contact between home and school or college would be by teaching Domestic Science, Hygiene, Child Psychology and Citizenship along with other subjects. A great deal could also be done in this line by women's organisations through social gatherings, lectures to purdah women etc. Begum Sakina Munwayyidzada spoke of the evil effects of the Pardah system and said that in its present form it was not sanctioned by Islam. She urged that Moslem women themselves should initiate a campaign against it, for until it was removed no progress could be made with the education of Moslem women.

The afternoon session was presided over by Mrs. Sarala Devi and the question of the training of women teachers was taken up. In a very interesting paper Miss R. Ghose showed the inadequacy of the existing arrangements for the training of women teachers and suggested that a separate college for women should be started by the Government. Miss Hiranmayi Sen, discussing the causes of dissatisfaction in the teaching profession, pointed out that unless more leisure and better remuneration could be given it would be difficult to make the teaching profession more attractive for women. In her opinion facilities for sports and games and better social intercourse are urgently required if the dull monotonous life of women teachers is to be changed.

On the third day University education among women was discussed. In the

morning session the chair was taken by Mrs P Chaudhuri and two very important papers were read by Mrs Rajkumari Das and Miss Theodora Wright on the essentials of academic study. Mrs Das showed that owing to the inadequate provisions in the existing girls' Colleges the choice of subjects was very limited for girls and she suggested that more science subjects should be included. A great deal of the defects of the present educational system could be remedied if Arts and Crafts schools for girls were opened.

Miss Wright also spoke of the inadequacy of the existing college curriculum for girls and suggested that more attention should be paid to utilitarian subjects and in her opinion Geography and the study of the Human Race should most certainly be taken up by College girls. In the discussion that followed Miss G M Wright, Mrs B M Sen and Mrs P Chaudhuri took part and the questions of raising the standard and of the medium of instruction were discussed.

The Conference next considered the subject of teaching Religion in schools and colleges and two papers were read by Miss Helen Rowlands and Mrs Sarala Devi. The latter rightly pointed out that the teaching of religion should not be merely academic but rather the idea of social service should be fostered. Mrs P Chaudhuri gave a timely warning against mechanical religious teaching and suggested that the spirit and not the dogma of religion should be taught.

In the afternoon session the president was Miss Stella Kramrisch. The subjects discussed were physical training and medical inspection in schools and Art and Handiwork in Schools. In the absence of (Mrs) Dr B C Ghose Dr Stapleton urged the introduction of systematic medical inspection in the girls' schools as the present physical condition of girls is very unsatisfactory. Like the imparting of knowledge the responsibility to look after the health of the students equally rests with the school authorities. Miss Carlwell and Dr Miss Bose took part in this discussion and a scheme to provide adequate facilities for sports including swimming baths in schools and colleges was adopted.

The Conference then discussed the subject of arts and handicrafts in girls' schools. Mrs Percy Brown urged the introduction of training in music, Indian embroidery etc. Miss Hanley, Mrs Taylor and Dr Kramrisch spoke on the importance of art and artistic

outlook in everyday life in decorating and arranging the house and furniture and making one's own dress, etc.

The last day was occupied in giving a resume of the previous days' proceedings in Bengali after which the conference came to a close. Much of the success of the conference was due to the initiative and active part taken by Mrs Lindsay (the organiser of the Conference), who, as Mrs P K. Ray put it, very cleverly and tactfully pulled the wires from behind, as well as the enthusiasm and earnestness shown by the large number of college women taking part in it and the interest shown by such prominent persons as Lady Bose, Mrs Sarala Devi, Mrs P K. Ray, Mrs P Chaudhuri, Mrs. Rajkumari Das, Miss Wright, etc.

Among the most important resolutions adopted in the conference are the following—

- (1) The establishment of a special training college for women by the Government.
- (2) The necessity for a higher standard in the medium of instruction in the schools.
- (3) Recognition of physical culture as an essential part in the girl's education and that Government be urged to establish a centre of physical culture for women.
- (4) The traditional arts and crafts of India should be encouraged and systematic teaching of drawing should be introduced in every school.

The Case of the Detenus

On Wednesday February 23 1927, Mr Bijay Kumar Chatterjee moved the following resolution in the Bengal Legislative Council—

The Council recommends to the Government—

- (a) To take immediately necessary steps to release all persons belonging to Bengal who have been placed under personal restraint under the Bengal Regulation III of 1818 and
- (b) to release all persons detained under the Bengal Criminal Law Amendment Act 1925.

It need hardly be stated that what Mr. Chatterjee moved in the Council was supported by public opinion all over the country and was merely a demand for the barest of legal justice. What Mr Chatterjee said in support of his resolution fully bore out his sincerity of purpose in moving the same. It was a striking condemnation of the British political attitude towards a powerless people whose well being and progress they declare to the world to be their special

and God given trust. He said in the course of his speech,

"The cases of S₁ Subhas Chandra and Jitanlal Chatterjee and Purna Chandra Das among others and the incidents of the Insam Jail are enough to stagger humanity. I am almost tempted to put the words of Warren Hastings in the mouth of these rulers, when he said 'Slaves I found them and as slaves I have treated them'."

I cannot conclude my speech without giving a note of warning to the Government. I do so because I own a duty towards the Crown. The Government cannot defy the laws of justice and morality for all time to come. It can defy the Indians, it can defy humanity, it can defy morality for some time only. But a time will surely come when it will have to pay for its past sins.

"Do not disobey the tenets of morality because the strength of the Government lies in the happiness of the people. Be the protector be not the destroyer, as a kingdom cannot be permanent if based on injustice. The weak cannot be trampled under foot with impunity, because the strength of the weak is that of God himself."

Statements at once so true and so weak. We have slid down to such a pitiable state of impotent serfdom that the only way left to us to obtain justice from our masters is to quote ethical principles and seek the aid of Providence!

Mr. Moberly's Declaration

The Hon Mr A. N. Moberly followed up Mr B. K. Chatterjee's speech with a lengthy statement in which he put the cart before the horse with such eloquent subtlety that one almost began to believe that his extravagant conclusions were logical and axiomatic which needed no well founded data to put life and usefulness into them. The Government he represented were standing charged with having imprisoned numerous innocent people without trial and on mere suspicion, and Mr Moberly said

"The Government have always made it clear and I repeat to-day that their sole object in keeping any man under restraint is to prevent terrorist outrages and that they are prepared to release them the moment they are satisfied that their release would not defeat this object."

But we are not at all satisfied as to the alleged complicity of the victims of the Government's suspicion in what Mr Moberly calls terrorist outrages.

Let there be an open trial of these innocent prisoners and let Mr Moberly display his eloquence in the open Court of Law as public prosecutor (if he is qualified to act in that capacity) instead of wasting it in the Council Chamber, for even if the Bengal

Legislative Council believed (which fortunately they do not) in the guilt of the detenus, we should still consider them as innocent so long as they are not openly tried and convicted. The familiar argument of terrorist intimidation of witnesses (if they exist) is too feeble to deserve serious consideration. The Government have never in their life hesitated to use witnesses against either political or non political criminals and, although intimidation is a constant factor in all trials which concern desperate people, few witnesses have ever suffered actually as a result of having given evidence against criminals. The case of Rai Bhupendranath Chatterjee, who was murdered in jail by some convicts does not prove any contention that it is necessary for the safety of witnesses to imprison persons without trial nor does it prove the existence of a widespread conspiracy. Police officers are very often rough and insulting in their dealings with convicts and even accused persons. It is not therefore improbable for convicts to murder an officer purely from motives of personal revenge. We do not say that Rai Bhupendranath Chatterjee ever kicked, abused or spat on prisoners in jail far from it. He was murdered may be because he knew too much. What we want to point out is that his murder may prove of all sorts of things but it proves nothing against the detenus nor that there is a widespread conspiracy in Bengal. We ask Mr Moberly, "It was no doubt a ghastly business, but what about it?" If some British soldiers in India commit some ghastly murders (as has been the case occasionally), should we therefore imprison without trial the President of the European Association and some European Clive Street merchants to protect the lives and honour of old women in cantonment stations? Relevancy is a great virtue, but it is not practised by Government officials.

Santi Lal Chakravarti was not an informer, says Mr Moberly. Yet he cites the murder of the same Santi Lal Chakravarti as proving the danger of bringing out witnesses against the terrorists in the open court. "He was murdered," says the Hon Mr A. N. Moberly, because he was suspected of having made a statement to the police. How does Mr Moberly know? What grounds has he to say that Santi Lal Chakravarti was suspected of treachery by his terrorist friends (if he had any, for does not Mr Moberly say that Santi Lal was acquitted

after trial in connection with the Mirzapore street bomb outrage"? It must need great powers of thought reading (of unknown men) to make such a statement. It would have been the truth to say that the motive of Santi Lal's murder has not been discovered. It is a peg on which Mr Moberly surely cannot hang his pet theories of widespread terrorism and universal rising and what not. We are on the threshold of a bloody social upheaval, according to the Bengal Government. How is it that the country has felt no premonition of this and only Government officials are growing restless over thoughts (dreams)? of it?

Agents Provocateurs

There is an idea prevalent in Bengal that the so called terrorists are only neurotic youths who have been excited into collecting ancient weapons and stray bottles of acid and writing bloodcurdling letters to similarly disposed friends, by *agents provocateurs* employed by police officials, who thus attempt to provide themselves with a *raison d'être*. Nobody has probably been mad enough to suggest that these *agents provocateurs* are directly employed by the Government, for such things can be expected only of interested police officers who in one way or another would like high officials to believe that but for them the country would be plunged into anarchy. So that Mr Moberly's answer to those who believed the police in Bengal to be guilty of employing *agents provocateurs* has missed its mark. If there are *agents provocateurs* in Bengal they are not known to Mr Moberly nor to most officials. If they are receiving Government money they are doing so indirectly, not as *agents provocateurs* but probably as ordinary spies or in some other capacity

Startling Documents

Mr Moberly has also shown us how the terrorists think and feel and why they desire a revolutionary rising in Bengal. He gives us an extract from a letter written by a terrorist to a fellow terrorist in whose house it was discovered by the police. The portion quoted by the Hon Mr Moberly runs as follows

Non-co-operation will not produce any good result now a days. The present condition of the country is not fit for that movement. The era that

is coming is an era of bloodshed. That era is most terrible and you are the heroes of that age. Perhaps you can remain idle at the present moment, but a time will come when no one will be able to remain inactive. Therefore I say prepare yourselves for that time. The day is near at hand. Acquire strength in your body, rid your mind of fear and awake the inner force within you. If freedom is ever achieved in India, it will come through bloodshed alone. India can never be independent without bloodshed. Why India alone? All dependent nations and countries have become independent through the path of blood. Terror must be instilled into the minds of the people they will have to be shown that the Bengalis know how to die for their country and to shed their blood for it. When this fact can be driven into the bones of the people then the country will blaze up in flames, such flames as none can extinguish."

This is exactly how one terrorist can be expected to write to another, but in its finish lies the weakness of the letter. It sounds too much like the composition of a literary terrorist writing specially for the press and not much like an extract from a letter. Can Mr Moberly guarantee it to be a genuine extract from a genuine letter written by a genuine terrorist? It is also very surprising that such a letter should be left undestroyed by the terrorists for the police to discover.

An alleged statement made by a person arrested under the C L A Act, contains the following

People have got no history of a general rising or guerrilla warfare in India and so we thought of taking part in this. We know that Government would post military oppress the innocent and hang many men and eventually crush the movement, but still we ventured to bring it upon the country as the people would get some precedent to take part in this in future. Men become more bold by failures and oppressions and we wanted to create an atmosphere when people would be killed by hundreds. We wanted to see the blood of our countrymen flowing by torrents."

"Men become more bold by failures", such nonsense can hardly be uttered even by a demented Sub Inspector of police! Mr Moberly wants us to believe that there are such fools among educated Bengalis as would say things like the above, and he would at the same time have us endorse his view that intellectual men of the stamp of Subbas Chandra Bose are the leaders of terrorist opinion in Bengal! His document conclusively proves that either there is no terrorist movement in Bengal or that the movement is restricted to the comparatively ill educated and unenlightened. Then where is the occasion

to imprison without trial the flower of Bengal's intelligentsia ?

The Duty Of The Press

The leaders of public opinion and the Press were not denied a fair share of his valuable advice by Mr Moberly. He said—

What I do urge is that the leaders of public opinion and the Press should unreservedly condemn the methods of terrorism, the cult of the revolver and the bomb murder and dacoity even though the object be political. I do not ask that the patriotism and enthusiasm of these men should be bottled. But I do ask those whose convictions will permit them to do so to stress the fact that in employing methods of terrorism these men are misguided and are misapplying their talents that far from advancing the cause of their country they are retarding it.

Give advice when there is a demand for it, is a good motto for those who are constantly obsessed by the thought of other people neglecting their duty. Since the dawn of the nationalist movement in India the leaders and the Press have always advocated non violence and exhorted the people to follow the path of peace. If some people are driven desperate by the empty promises of the British and by the continued restrictions put upon their elementary rights and liberties it is probably Mr Moberly's idea that the leaders and the Press should be to blame for it. Why does he not ask the Government to appoint an international and impartial Commission to enquire into and report on the causes of the present discontent and proceed to divide the honours of being at the root of the trouble among the Press, the Leaders and the Government after he has gone through the findings of the Commission ?

Very Near the Mark

Mr Moberly in the course of his speech said —

I know that there are some who believe that the pronouncement of constitutional advance which was made in 1917 was extorted by the success of the former terrorist conspiracy. This is abundantly clear from the writings of the old revolutionaries. Such persons may believe that no further advance will be secured except by similar methods. But I do not think that they can complain if Government take measures to counter the methods which they advocate. All Governments are bound to accept and meet the challenge of violent coercion.

Instead of exhorting the Government to accept and meet the challenge he should have advised them to prove that such belief was unfounded by granting further political boons without waiting for Indians to press the point, violently or otherwise.

Italy under Mussolini and other European Countries

An esteemed and distinguished European correspondent writes —

In the last October issue of the *Modern Review* we find the remark to the effect that the tyranny of Mussolini is not very different from the tyranny prevailing at present in France in England or in Germany.

But at the very height of the war which suspended constitutional liberty a Professor of the University of W. Fooster could sustain publicly in Germany his ideas against war without being harassed by the Imperial powers of Germany and without even being deprived of his title and his professorial functions. During the very climax of the war fever E. D. Morel, Bertrand Russell and several members of the British Parliament founded in England the *Union of Democratic Control* grouping 800,000 adherents against the war and the Government policy and defending publicly the *conscientious objectors* they suffered no doubt in that political warfare a few months of prison but came out of it honoured and triumphant. E. D. Morel defeated in election the chief English imperialist minister Churchill.

When war raged with the utmost fury then Mon Romain Rolland while being insulted and calumniated by the press and by public opinion in France was never for a single moment threatened by the French Government. When M. Rolland re-entered Paris he came there as a free man and if he had to suffer from individual intolerance he had personally speaking nothing to complain of against the State.

In Italy of to day Deputy Matteotti a pure hearted hero who during the war was a conscientious objector denounced bravely in the Italian Parliament the lawlessness and the crimes of the Mussolini regime and for that he was assassinated after having been mutilated. These political assassinations are counted by hundreds. The opponents of the government, men and women are battered and their houses are ransacked. The Labour banks and the Labour universities are burnt.

down the government servants the professors the intellectuals etc. are held by oath to Fascism, for that mad tyranny is not content with mere submission and defeat it demands even the adhesion of conscience a thing which no species of European tyranny excepting the mediæval Roman Church dared to exact. Those who think otherwise have no other alternative but to lie in public or to face complete ruin nay even more, Death! From here I listen to the distressing cries of hundreds of the unfortunate who can neither come out of Italy nor live in Italy for all the means of living have been taken away from them. The non-fascist villagers are deported *en masse* to another end of the country and their houses and property are given to the fascists. The history of Molinella by Salvemini bears this out. Hundreds of Italians escape at the risk of their very lives. The South of France Paris London are filled with these Italian *émigrés*. The leaders of Italian socialism and the rare class of liberal officials who could escape like Nitti Turati Modigliani etc. have struggled to fight the evil till the last they became voluntary exiles when all other means of fight was refused them. At the present hour (January 1927) there is not a single Italian Journal which is not in the hands of the Government. No other opinion but the Government one could be expressed. Hence the voice of *Free Italy* cannot possibly make itself heard except in foreign lands through the Italian journals founded in Paris in Toulouse and in England and Germany. Never has such a monstrous yoke been imposed on a nation of Europe.

Evidently such a regime would not have been possible in any other country of the Occident (possibly with the exception of Spain where we should see if there are conscientious objectors more heroic.) Italy is a country which came very late into political life. Her nationhood dates only from 1879 the political unity there is hardly realised and civic education remains completely to be done in the future the people are not yet interested in their liberties and their parliamentary rights. It took centuries for England to teach her citizens the use of their civic rights. France came into the field later than England and has probably just begun to appreciate them. Both England and France specially the former have strong organisations to fight against any despotism that would try to

get established and these organisations can appeal quickly to the enlightened public. Nothing similar to these exist in Italy and the country is given up to the baods of the Fascist bands by the shameful betrayal of the King who through fear of being dethroned has joined the fascists and placed the army in their hands. Here the minority of liberals and the poor labourers find themselves divided, disarmed, strangled without even the means of making their voice heard for the entire Press is gagged.

Where in the rest of Europe is the condition of things approaching that described above?

I came to know later on that the *Modern Review* has published also an article on Matteotti and thus it has made another bell than that of Fascism heard however feebly, through its page.

I would expect a journal when it enters the dangerous ground of political controversy to publish the articles in the form of a *Free Tribune* where the opposing parties would be able to make themselves heard simultaneously in the same issue if possible so that the impartiality of the journal would be maintained.

Our Comment and Criticism section is meant to enable all our readers to show the other side of the medal. For lack of the necessary up to date documents and other sources of accurate and adequate information we are not always able to present both sides of a question simultaneously in the same issue.

It may be mentioned here incidentally that the note entitled *Mussolini A Genius and Patriot* in the *Modern Review* for December 1926 pp 694-5 was sent by a contributor whose initials were omitted through the inadvertence of the printer, the necessary correction being made on page 128 of the January number.

The Work of the Calcutta Improvement Trust.

The paper read before the Indian Section of the Royal Society of Arts by Mr C H. Bonpas C S I on the work of the Calcutta Improvement Trust, in so far as it relates to the work actually carried out by the Trust, is an admirable one, but the things that it

leaves unaid or lightly touched upon are the more important from the point of view of the ratepayers of Calcutta. The first point that strikes one in the paper is the initial arrangement by which the representatives of the ratepayers of Calcutta shall always be in a minority in the Board though even at the outset the contribution of the ratepayers was nearly half.

1. In the last fourteen years the income of the Trust has nearly doubled having increased from 20 lakhs to 39 lakhs.

2. The direct burden of the cost on the Calcutta ratepayer which was estimated at eight lakhs, now amounts to 20 lakhs which is in excess of the total original demand.

3. The percentage of the cost proposed to be borne direct by the Calcutta ratepayer has risen from 12½ p.c. to 58½ p.c. where as the rate trade now bears 31½ p.c. in place of the 40 p.c. proposed, the terminal tax only 6½ in place of 10 p.c. and the provincial government 12 p.c. in place of 7½ p.c.

4. The present annual income of the Trust fourteen years after its inception is 39 lakhs, the increase being 19½ lakhs in 14 years on an expected income of 20 lakhs. If the rate of increase in future be the same and there does not seem to be any reason why it should not be the net capital sum available for expenditure should be nearer 30 crores than the estimated 7 crores.

If the above facts are kept in mind and then the work of the Trust reviewed in the light of the schemes and estimates prepared previously one cannot help feeling some uneasiness when the Trust pleads want of finance as the cause of not pushing on with the improvement works already sanctioned.

As stated by Mr Bompas the estimated sum available for net capital expenditure was seven crores and MacKenzie & Shroobert's estimate of expenditure based on an inspection of every property included and a separate estimate of its value was 7½ crores gross and 3½ crores net on land plus 64 lakhs on engineering works for improvements in the city area and 1½ crores for engineering works in the suburbs where land it was estimated would not cost any thing the Trust being able to amply recoup all costs through sale of surplus lands.

We now find that the capital expenditure has already exceeded nine crores gross whereas the major portion of the work set out

in the report still remains untouched. The only reasons given by Mr Bompas for this state of things are the high rate of interest at which four loans amounting to about 2 crores of rupees were floated during the years 1900 to 1921 the high cost of engineering materials during the same period, and the boom followed by a slump in land values. Considering the unexpected and abnormal increase in the income of the Trust, the first two out of the three stated above may safely be ignored. With regard to the third the people are under the impression that it was the wrong policy of the Trust in trying to create a corner in land and force up values that have brought about this state of things prevailing at present and we should have very much liked to have more light on that aspect of the case.

Mr Bompas seems to have been guilty of playing with words when he stated that no official representations were ever made to the Trust. The absence of official representations was only due to their futility the Government being the ultimate arbiter the general feeling was that they would always uphold the Trust and keep up their prestige. Numerous representations which might not have strictly complied with the terms of the Act and were not thus strictly official were however made by the Corporation. But as they also found their way ultimately into the waste paper basket even the Corporation ceased after a time to make these representations. Mr Bompas has himself recognised that Calcutta opinion was not opposed to the improvements but to the drastic powers given to the Trust and when the people found that all their representations and objections were cries in the wilderness they naturally ceased to make the unnecessary and unnecessary efforts.

Mr Bompas like many a better man every penny of whose savings and the rest of whose maintenance has come out of the Indian taxpayers pockets could not resist the temptation of having a dig at the Indians. He has been associated with in his work here but this is a phenomenon we are now so used to that we hardly need to take any notice of it.

It appears to us that the policy of the Trust is actuated by too much caution and very great timidity and the ratepayers of Calcutta are not getting value for their money. It is fourteen years since the Trust commenced operations and it is really astonishing to think that Burrabazar, the

greatest plague spot in Calcutta, still remains absolutely untouched. It is no wonder that Mr Bompas pays such a high tribute to the resignation, cheerfulness, good sense and good temper of the citizens. Other people sometimes call them by other names like apathy and helplessness but that is merely a matter of opinion.

We were disappointed to find that though the Trust for the Corporation the Housing and Transport Committee and practically each and every public institution in Calcutta has urged upon the authorities the greater need of facilities of quick transport the Trust has so far done practically nothing beyond providing a few wide roads. It was in 1860 or thereabouts that the question of a railway with a central station in the city was first discussed and nearly seventy years later we are still discussing it. Heaven only knows when we shall get any further.

In conclusion we would like to say that as far as we can judge from available sources of information at the time of the British occupation, India was behind no other country in the world in point of civilization, prosperity or material development. After hundred fifty years of British occupation we are possibly 300 years behind the advanced countries of the world. Progress now a days is so rapid that our only fear is that by the time we have finished our improvements other progressive cities might have gone on so much further that comparatively speaking we might be further behind them than we have ever been before.

L. M. S.

The Mahabharata

The world of Orientalists is familiar with the mission given in 1918 by Shrimant Balasaheb Pant Pratinidhi, Chief of Aundh to the Bhandarkar Oriental Research Institute to prepare a critical edition of the text of the Mahabharata. The work was inaugurated in April 1919 by the Viceroy of Sanskrit research in India the late Sir Ramkrishna Gopal Bhandarkar who alas! lived to see only the tentative edition of the Virataparvan prepared under the scheme by Mr N. B. Utgikar. The Secretary of the newly constituted Mahabharata Editorial Board reporting further progress of the work now announces that a fascicule containing the Parvanukramam and the

Parvanukramam the first two Adhyayas of the Adiparvan will be published very shortly.

The Board we understand has spared no pains to give to this edition the strictest scientific form and character. The constituted text is based on a comparison of fifty manuscripts collected from different parts of India and written in the various Indian scripts. The critical apparatus includes collations from the important Kasbair version as also from a rare Marathi manuscript from the Kathmandu Library of Nepal material lying buried in Indian libraries, hitherto totally unutilised. The editor has further made profitable use of the valuable commentaries of four scholars Daxabodha, Arjunamitra Ratnagarbha and Nilakantha. The constituted text has been prepared by the General Editor Dr V. S. Sukthankar, in collaboration with the Editorial Board comprising the following scholars Prof. Vanjanath K. Raykar, Mr Vishvanath P. Vaidya Bar at law Rev. Dr R. Zimmermann S. J., Prof. Dr V. G. Paranjpe and Mr N. B. Utgikar. The fascicule which will be accompanied by a coloured illustration prepared under the direction of the Chief of Aundh is being printed at the Niruaya Sagar Press Bombay.

We do not doubt that this issue will fully justify the high expectations raised by the reputation of the scholars now in charge of the monumental work of editing critically the Great Epic of India.

Calcutta University Convocation

The usual annual convocation of the Calcutta University was held this year on the 19th February. The most important item on the convocation programme has always been the addresses delivered by the Chancellor and the Vice-Chancellor. The Chancellor being the head of the Government his address is always accepted as embodying the official views on University and allied matters. The Vice-Chancellor's address stands for the opinions of those non official persons who in co-operation with the Government, carry on the work of higher education in Bengal. It is in the Vice-Chancellor's address that we look every year for a resumé of the University affairs of the previous year. This year also the Vice-Chancellor Mr Jadunath Sarkar gives us in his convocation address a list of

outstanding events connected with the University, before he proceeds to have a heart to heart talk with the new graduates regarding their future life and ideals.

Mr Jadunath Sarkar begins his address with the usual expression of gratitude and paying of compliments to the Chancellor and then goes on to recount the important items of the year's University history. He tells us that during the year under review the University passed a School Code formulated for the guidance of all non Government Schools. This it is expected will bring order and uniformity in an organisation set up to educate the children of a people numbering 45 millions. The Senate has also approved of a Scheme for creating a Board of Secondary Education which will relieve the University of the heavy burden of School Supervision and enable it to pay undivided attention to higher education only.

Next we are told that during the year under review the University adopted finally the principle of using the vernaculars as the medium of school teaching and examination. The University has also made during the year a definite stand against the gradual decline in the standard of examination and the consequent lowering of the intellectual equipment of college students. In both the above items we find much to congratulate the Senators of the University of Calcutta. The Vice Chancellor also tells us that during the year some much needed changes have been effected in medical teaching leading to better instruction a higher standard of examinations and a more comprehensive course of studies.

Among other items of information the Vice-Chancellor gives us a running summary of the financial help received by the University from the Government during the last few years. An average annual grant of 4 09 000 during the last five years, a special annual grant of Rs 1 29 000 to non government Colleges for building laboratories and libraries a grant of Rs two lakhs to finish the third storey of the Asutosh Building a lakh and a half yearly for the last two years to several non government colleges for meeting their maintenance charges and the expenditure incurred in connection with carrying on post graduate teaching for the University in the Presidency College are mentioned by the Vice Chancellor as Governmental grants to the University. He does not appear to be satisfied with these grants only, for he says

I am confident that the Post graduate department of this university can afford to be judged by its work and when the five yearly term of the present grant is over we shall be able to make out a strong case for an increase in its amount.

In another place Mr Sarkar compliments Lord Lytton the Chancellor for having kept his promise (in a generous and full measure) to help the University financially. His hopes of inducing Government to increase the grants in future perhaps does not rhyme perfectly with his entire satisfaction with whatever Lord Lytton has done for the University but this may probably be explained by the fact that the Vice Chancellor did not expect anything more from Lord Lytton and did not think it courteous and in good form to express dissatisfaction with the work of a departing Chancellor who has risen above the traditions of his Government in affording a fair amount of financial help to the University. The Vice Chancellor next turned to the intellectual affairs of the University. He pointed out how the scholars connected with the University were progressively making a name in the world of learning. He eulogised Dr Sumit Kumar Chatterjee Dr Niranjan Prasad Chakravarti and Dr Prabodh Chandra Bagchi for their achievements in the field of linguistics and archaeology.

Turning to the conditions of service endured by the teachers of the University Mr Sarkar emphasised the necessity for improving the same in regard to security of tenure. Another great need was that of Providing the professors readers and lecturers with adequate housing near the University area for at present most of them live too far away from the University area to help the Students in more ways than by delivering the necessary number of lectures at their appointed hours.

The University Science College is at present split up into two parts the Biology department being situated several miles away from the main institution. Mr Sarkar said that the Biology department should be located nearer the main Science College. The advantage of this is obvious. Moreover by effecting such an improvement this department will benefit largely by the help of Sir J C Bose who has offered to help it if it is located near the main Science College which is next door to Sir J C Bose's Institute.

The Secret of Nation Building

Mr Jadunath Sarkar's Convocation address contains some very thoughtful words. We reproduce some of them below for the benefit of the would be Nation Builder and Reformer.

To the pure scholar the legacy of his University is a scientifically trained intellect, methodical habits of work, a quenchless thirst for truth. To the specialist it is technical skill in his special branch of work. The professional man will expect from it the necessary mental equipment for practising his profession. Others will look for a general liberal culture as the result of their University days. But there is one thing of supreme value to man in his relations with other men and the material world which a good University can teach more thoroughly and more universally than any other agency. It is community of life and thought.

Leaving out the spiritual side of our nature as purely personal and private we are bound to admit that there is a very large basis for agreement among civilized men in most matters of their material existence in their method of investigating truth in their ethical code and even in their outlook upon life. Behind the external differences of race and creed, caste and climate there is a broad unity among men in all things that really matter—in the essentials of life and thought. Science has demonstrated the existence of this common element. History proves that no people can form a nation, no nation can become great unless it realises the supreme value of this community of life and thought and establishes it among its citizens by transcending the barriers of caste and creed, the privileges of birth and communal peculiarities—unless a fair field and no favour is accepted as the national policy and all are made equal in the eye of law, equal in political status, equal in the opportunities of life, equal in social standing. A nation that has acquired and widely diffused among all its members this community of life and thought becomes almost independent of personality and the accidents of birth and death among its leaders. Its fortunes do not depend upon one king or general but like the ancient Senate of Rome its governing council is a vast assembly of kings.

The belief that a certain caste is the eldest son of the Creator or that a particular race is the chosen seed of the Lord or that a particular country is destined by Providence to lord it over all others,—is opposed to scientific truth contrary to the teaching of history and fatal to the world's peace and progress.

Nor has such a narrow communal pride such nursing of racial peculiarities promoted the real good of the favoured creed or race. On the other hand every people that has attained to a commonness in all that really matters in human relations and human thought and established the same rules and rules for all—widesely allowing diversity and individual freedom in minor matters and private life, has succeeded in assimilating diverse tribes and races, created homogeneous nations and even founded world empires. Such were the ten tribes that nestled on the slopes of the seven hilled city. Such are the happy islanders

whose laurels have boasted 'Saxon and Norman and Dane are we'.

This ever-expanding community of life and thought has been the secret of origin the vital force the binding cement of the world empires of ancient Rome and modern Britain. On the other hand the races that have clung to the lines of communal cleavage magnified the differences in the externals of life and thought and ignored the unity possible in the essentials may have produced a few great poets, holy saints or master craftsmen but they have contributed nothing of enduring value to the ever-growing civilization of the world. To such races we can say,

Lo! all your pomp of yesterday
Is one with Nineveh and Tyre!

Associating with such a people is like travelling with a coddled darling of his mother who can live only on certain special dishes cooked in a special manner by the ladies of his family. If we emphasise the external differences between man and man, creed and creed if we constantly harp on the special genius of our race, the ancient heritage of our country and our unique position as a peculiar people with a peculiar mission on earth then we shall only miss the substance for the shadow.

It is the duty of a University to impress this secret of national progress upon all who come under its influence, to convince them of its supreme importance and to send them forth into the world to preach and practise it.

Let us strive honestly, manfully, ceaselessly to acquire this community of life and thought with the wide ever moving civilized world. Let us give up nursing our provincial or sectarian pride and prejudice and then and then only will an Indian nation be possible. Then and then only will an Indian nation be capable of rising to a sublimer height where national differences and prejudices sink away in shame and give place to a recognition of the supreme claims of the broadest humanity, the common brotherhood of all men in a loving equal family of nations. This universalism this world embracing humanity has been taught by the most ancient philosophers of our land and by our latest master singer whose message has had a healing balm on the heart of war stricken Europe. Let our University make this community of life and thought the intellectual property and the rule of conduct of every one of her sons if we wish to see a new dawn of peace and hope in our land.

The Vice-Chancellor's Friendliness to Government

Anybody who takes the trouble to go through Mr Jadunath Sarkar's Convocation address will see that Mr Sarkar is not one who is constitutionally a thirst for the blood of British officials. He does not believe in the superiority or chosenness of the British race but does not, at the same time find it repugnant to work in co-operation with these Britishers who are at present masters

of Indian's destiny In his Convocation address he shows a good deal of friendliness to the Government and this has been explained by his critics in the press to mean that Mr Sarkar is a hired slave of the Government or something equally bad. We would strongly oppose any attempts by the Government to officialise the University for we do not believe that any good can come of such an arrangement, rather it will ruin the future of higher education in Bengal. It is of the greatest importance that the University should be *democratically* managed by its own members and we do hope the constitution of the University will be suitably changed for the fullest realisation of this ideal. Mr Jadunath Sarkar will undoubtedly take the lead in effecting any such change. As for the friendship shown by him to the Government in his Convocation address we are not convinced that it can be accepted as a receipt confirming the sale of Mr Sarkar's soul to the British Government. On the other hand demonstration of exuberant friendship has always been a feature of convocation addresses and as such may be accepted as merely conventional and formal. A few quotations from some previous convocation addresses delivered by the late Sir Asutosh Mukherjee who was a "Tiger" for freedom would show how in their convocation addresses even the most advertised defenders of academic liberties poured out honey to the British lords of India. In the heat of the Swadeshi days Sir Ashtosh once used the words quoted below.

We have the gracious announcement by His Excellency the Chancellor about the foundation of a University Professorship which has been received by all with feelings of intense satisfaction and which will make the administration of His Excellency gratefully remembered for ever as the era of effective and substantial support by the State to the cause of the highest education of Indian youths [Convocation Addresses 1908 See Convocation Addresses vol IV p 1102]

In 1912 Sir Asutosh Mukherjee said —

I rejoice in the thought that I am justified in claiming our learned Chancellor as a sympathiser with the new aspirations, and to make on this point a statement final and crowning as it were, it is to me a source of the most intense satisfaction and pride that the special need of the Indian which I am now endeavouring to set forth has been clearly discerned and emphatically stated by no less an authority than our wise and gracious King Emperor himself. For in his ever memorable reply to the Address presented by our University—a reply which we have resolved to engrave on marble in letters of gold—etc., etc. [Convocation Addresses, Vol IV 1227]

In recent times (1921) Sir Asutosh said in connection with conferring an honorary degree on the Prince of Wales

What then can be more eminently befitting than that he (the Prince of Wales) should prove to be one of the greatest of ambassadors that have ever served the British people—the founders of commonwealths—the pioneers of progress—the stubborn defenders of liberty?

It is indeed by a wise dispensation of Providence that the destinies of India have been united to those of a Western nation so progressive and enlightened as Great Britain. This has rendered it possible for us to maintain and develop our highly cherished national culture. We look for comradeship to the nation which has been a lesson to oppressors an example to the oppressed and a Sanctuary for the rights of mankind—that comradeship which is the key to all well-being and happiness in the democratic life of the British Empire to-day comradeship between nation and nation between race and race between people of all ranks in all walks of life [Convocation Addresses Vol V pp 413 441]

Such words as the above abound in nearly all the convocation addresses delivered by a long line of Vice Chancellors who have built up the present University and Mr Jadunath Sarkar's address does not differ in spirit from any delivered by any previous Vice Chancellor. Rather, it is less honeyed compared to what we have quoted above.

Mr Sarkar's Oversight

He has forgotten to mention the names of people who have died during the year after serving the University for a long time. Such a one we remember in Rai Bahadur A. C. Bose, to whom the University seldom had a sincerer and more devoted servant.

All the credit that Mr Sarkar has given to Lord Lytton may also not go to him fully. There have been other outstanding persons who should have been named who helped to make the Government see reason.

Among the scholars named by Mr Sarkar we do not find the names of some notable figures in the field of science. The scientists of the University have been rather neglected in the Vice-Chancellor's address.

Arrival in India of British Secretary of State for Air

Lord Irwin gravely uttered the following sentences in the Council Chamber at Delhi,

A recent event of outstanding interest has been the arrival in India of the Secretary of State for Air in the first of the great air liners sent out to this country by the Imperial Airways Company. In so far as India is concerned this development of aviation marks the introduction into the country of a new form of civil transport. India is a country of vast distances and it has hitherto been reckoned that the increased speed of air transport coupled with the facilities which it offers for surmounting geographical obstacles will be a potent factor in shortening the communication of India with other countries and also in linking up her own widespread provinces thus drawing them more closely together as members of a single nation.

Every word in the above extract is true and yet there can be no greater insult and menace to India than the introduction of aviation in it without previously making the least effort to train Indians in civil and military aviation. Aviation would be the strongest link in the chain of India's slavery, if the exclusion of her children from learning and practising it were continued. They are not naturally incapable. Indra Lal Ray fought in the air force gallantly and died in the world war. Chaitan Pratap Singh has done good work as a flight captain in Afghanistan. Given the training and the opportunity, Indians can shine in aviation as they have done in other fields.

How would Lord Irwin have liked the arrival of a German air pilot in Britain if Britishers had been prevented in their own country from learning or undertaking aviation?

in India comprises 16 squadrons organised in 8 wings of 2 squadrons each, the Aircraft Depot and Aircraft Ports are directly under Royal Air Force Headquarters India. Its establishment is 28 officers and 1,757 British and 139 Indian of other ranks.

Thus there is not one Indian officer in the British Indian Air Service and it is the deliberate policy of the Government to keep Indians out of Artillery, Tank and Air force, whereas we find that in all Asiatic States, including Siam and Afghanistan, not to speak of Japan, China, Turkey and Persia, that nationals are becoming proficient in aerial navigation. Afghanistan is employing Russian experts to train Afghan aviators, in Persia French and German experts are establishing air stations, and in Turkey the Government has decided to establish a special school for training aviators and a factory to build air ships. The people of India are not inferior to those of any other land, what India lacks is a national Government and a far sighted programme for national regeneration.

Our people should not rest contented with merely blaming the British Government. They should organise private national efficiency. India should send capable engineers to Italy, France, Germany and other countries to master the science and art of aeronautics.

WASTAGE OF INDIA'S MAN POWER

BY RAJANI KANTA DAS M.A., M.Sc. Ph.D

I INTRODUCTION

THE greatest assets of a nation are its human resources, upon the conservation and utilisation of which depend both its progress and prosperity. Man power is that part of the human resources which is directly or indirectly concerned with the creation of social values such as those which are ethical, religious, aesthetic and economic. Sometimes the term is used to include only those persons who are engaged in the creation of economic values or national wealth. In the latter sense man power is synonymous with labor. That labor is the directing factor in the productive process is too evident to require any discussion. Equally important is man power in various social and political activities. The development of the physical and mental energies of the people and the transformation of these energies into creative forces is the supreme end of society.

2 VOLUME OF MAN POWER

Of the world's area of 542 million square miles India occupies 18 million square miles or 3.3 per cent of the total. A still larger proportion of the whole of mankind is constituted by her population which with the exception of China represents the largest human resources of the world. Of the world's estimated population of 1800 millions in 1921 India possessed 310 millions or 17 per cent.

The period of life between the ages of 15 and 60 may be regarded as the most active in the creation of social values and all persons of this period may be said to represent a nation's man power. From this view point, the volume of India's man power in 1921 amounted to 178 million persons or

56 per cent. of the total consisting of 92 million men and 86 million women as shown in the table below —

INDIA'S MAN POWER IN 1921

Classes		Persons of all ages	Persons between 15 & 60
		in millions	No in millions per cent age
Men	164	92	56
Women	150	86	56
Total	319	178	56

Owing to the vastness of her human resources India has also the largest volume of man power in the world with the exception of China. But in proportion to the total human resources the man power in India is only fair as compared with other countries, under as shown below. It will be seen that the proportional man power in the ten countries consideration varies from 12 per cent. in the United States to 51 per cent. in European Russia, as against 56 per cent. in India which stands ninth in the list.

Proportion of Man power in Various Countries (in millions) *

Country	Year	Total population	persons 15 & 60		Total	Percentage of total population
			Men	Women		
France	1911	39	11.9	12.0	24.1	61
England & Wales	1911	36	10.6	11.2	22.1	61
U.S.A.	1910	106	33.7	31.3	64	60
Belgium	1910	7.1	2.2	2.2	4.4	60
Spain	1910	21	4	5.9	11.3	59
Germany	1910	64	17.7	20.2	37.0	58
Japan	1910	66	16.1	15.6	31.7	56
Italy	1911	35	9.2	10	19.2	55
India	1921	319	92	86	178	56
Russia	1910	90	19.1	27.1	46.0	51

* Adapted from 1924 pp. 194-95. Annuaire de Statistique France, 1924.

3 WORKERS AND DEPENDANTS

Of the 319 millions of India's population, occupational statistics are available for 316 millions of which 46 per cent. are workers and 54 per cent. dependants. Assuming that the remaining 3 millions have the same proportion of workers and dependants, the number of dependants would amount to 172 millions and of workers to 146 millions, the latter consisting of 100 million men and 46 million women (*Census of India, 1921, Report, I 284 85*).

In comparison with other countries, the proportion of workers to dependants does not seem to be unfavourable to India, as shown in the table below. It will be seen that the proportion of workers to dependants in the nine countries under consideration varies from 55 per cent. in France to 41 per cent. in the United States as against 46 in India, which stood fourth in the list.

Proportion of Workers to Dependants in the Chief Countries *

Country	Year	Total population (in millions)	Workers		Dependant	
			No. in millions	Per centage	No. in millions	Per centage
France	1911	39	21	55	18	45
Austria	1910	23	15	53	13	47
Italy	1911	34	16	47	18	53
India	1921	319	146	46	172	54
England & Wales	1911	36	16	46	20	54
Germany	1907	63	28	45	34	55
Belgium	1910	7	3	43	4	57
Hungary	1910	21	9	43	12	57
U.S.A.	1920	106	42	40	64	60

It must be remembered that owing to the lack of compulsory primary education, a large number of children aged one were eligible for factory work, when the census was taken and children aged twelve and helping in field work were included among active workers in the industrial census (*Census of India, 1921, Report I 240*). If these children are excluded from the class of workers as in the case of other countries the proportional number of workers would be much lower.

The figures for workers are, however, too low. Even the number of the persons aged between 15 and 50 which is regarded by the industrial census to be roughly the

working age period in India (*Census of India 1921, Report, I 241*), would amount to 156 millions or about 49 per cent. of the total, that is, 10 millions more than the figures given to the industrial census. But the working period lasts beyond the age of 50 or even 55, the last age being the maximum for government officials in India. There is no doubt that most of the officials can work and often do work efficiently beyond that age. So that the period between the ages of 15 and 60 assumed for man power is general and also be safely taken for active work in gainful occupations. According to this view, the number of active workers in India would amount to 178 millions.

The division of the population into workers and dependants is, however, more or less arbitrary. The dependants consist of such classes of the people as the following — (1) the disabled and infirm, (2) the old and retired, (3) infants and children, and (4) household workers. Although the first three classes may be classed as dependants, household workers are as active in the production of social values as any other class engaged in so called gainful occupations.

The number of the active male workers would accordingly amount to 92 millions and of the active female workers to 86 millions, instead of 100 millions and 46 millions respectively, as given in the industrial census. Among the 86 million women workers are included 46 million workers in gainful occupations and 40 million workers in households. It must be remembered that most of the gainful workers are also household workers and women begin household work much earlier than 15. These changes in the numbers of workers and dependants would make very little difference in estimating the proportion of wastage.

4 THE DISABLED AND INFIRM

In every country, there is a class of people who are defective or disabled or have been made senile or infirm through old age. These are the persons who are truly dependants and deserve sympathetic and charitable treatment by society. Some of the advanced nations have established various forms of social insurance for their care, but in India such persons still depend upon their relatives or on private charity.

Persons who have reached the age of 70 or more might roughly be classed as

*Adapted. *Annuaire Statistique France, 1921* pp. 192-93

infirm persons. The number of such persons in India amounted to 5 millions or 17 per cent. of the total in 1921 (*Census of India, 1921, Report 1128*). In comparison with other countries, the number of infirm persons is the smallest in India, as shown in the table below. It will be seen that the percentage of infirm persons in the seven countries under consideration varies from 49 in France to 24 in Germany, as against 17 in India.

Persons aged 70 and over in various Countries *

Country	Year	Total population in millions	Persons aged 70 and over	Number in millions	percent- age of total
France	1911	39	19	49	
Italy	1911	35	13	37	
England & Wales	1911	36	10	30	
Austria	1910	29	8	30	
Hungary	1910	21	6	29	
Germany	1910	61	16	28	
India	1921	319	50	17	

The reason why India has the smallest number of infirm persons is that her rate of mortality is the highest. To this must also be added the defectives, whose number amounted to 8 million in 1921 including the insane, deaf, mute, blind and lepers (*Statistical Abstract for British India 1926 p. 33*). This appears to be an under estimate.

5. PREMATURE DEATHS

One of the most important causes of the loss of India's man power is premature death. The average longevity of men in India is 24.8 years and of women 24.7 years or an unweighted average of 24.75 years for both men and women. This mean age has been practically maintained in India with very slight variations during the past 40 years as shown by the statistics of longevity given below. It will be seen that the average longevity for both men and women was 24.85 years in 1881 and fell to 24.75 years in 1921. The variations are so slight that the average longevity may be said to have remained practically the same.

Average Longevity in India from 1881 to 1921. *

Year	Men	Women	Total unweighted average	Variation Index No
1881	24.5	25.2	24.85	100
1891	24.4	24.9	24.65	99.2
1901	24.7	25.1	24.90	100.2
1911	24.7	24.7	24.70	99.4
1921	24.8	24.7	24.75	99.6

Compared with other countries the longevity of mean life is the shortest in India as shown in the table below. It will be seen that the mean life in the nine countries under consideration varies from 55.6 years in Norway to 44.3 years in Japan as against 24.7 years in India. Taking the average longevity of all other countries which is 50 years as base the index of India's longevity is only 45.

Average Longevity in Various Countries †

Country	Year	Average longevity	Index No
Norway	1915	55.0	111
South Africa	1910	53.6	111
Holland	1915	55.1	110
England and Wales	1910	51.5	103
United States	1910	50.0	100
France	1910	48.5	97
Germany	1910	47.4	96
Italy	1910	47.0	94
Japan	1910	44.3	88
India	1921	24.7	45

It is thus seen that in order to keep up her social population India has to spend 122 percent more energy than the average of other countries under consideration. The real loss to the country is however still higher. If the first fourteen years of childhood forming the debit side of life are subtracted the man power period becomes only about 11 years in India as against 36 years in other countries. It might be pointed out here that the low mean life in India also cuts down the old age period as compared with other countries. This consideration would however make so little difference in calculations that it might be neglected. It is thus seen that the average active period of India's manhood or womanhood is only 31 percent as compared with that in other countries. But the actual loss is still greater. Since the usefulness of a person to society increases with his growth

* Adapted. *Annuaire Statistique, France 1924* p. 102

† *Census of India 1921 Report 1128*
 † *Annuaire Statistique France 1924* p. 205

in knowledge and experience he becomes more valuable in the later periods than in the former. The average man or woman in India does not get the chance of acquiring this higher social usefulness.

6 USELESS MOTHERHOOD

The propagation of race is a natural phenomenon. But the number of women who take part in the propagation of children varies in time and place. The progress of hygiene and medicine has decreased the death rate in almost all advanced countries within the last half a century or more and at the same time there has been a gradual diminution in the birth rate as shown in the table below. It will be seen that in the course of fifty years the average birth and death rates in eight European countries fell from the quinquennial averages of 3.72 and 2.97 percent for the years 1871-75 respectively to 2.53 and 1.67 percent in 1921. The birth and death rates in India varied from the averages of 3.58 and 2.74 per cent for 1880-90 respectively to 3.00 per cent in 1921.

Variations in Birth and death Rates in Various Countries 1870-75 to 1921 *

Country	Births per 100		Deaths per 100	
	Inhabitants 1871-75	1921	Inhabitants 1871-75	1921
England and Wales	3.50	2.24	2.20	1.21
Germany	3.89	2.61	2.82	1.48
Austria	3.93	2.28	3.26	1.71
Hungary	4.28	2.29	4.54	1.93
Belgium	3.26	2.19	2.34	1.35
France	2.85	2.07	2.50	1.77
Spain	3.65†	3.00	3.09†	2.15
Italy	3.69	3.14	3.05	1.75
Average	3.72	2.73	2.97	1.67
India	3.58§	3.22	2.4§	3.06

Now in the ideal condition of society fecundity should be adaptive i.e. regulated according to social needs. Most of the countries scarcely need any increase in population unless for purposes other than social welfare and such an ideal condition has been more or less achieved by France. The population of India is already too large to need any augmentation at least for the next half a century. Her birth rate could

be adapted to her death rate with a small margin for safety. If her death rate could be brought down from 3.06 percent to 1.67 percent, which is the average death rate of the countries under consideration her birth rate could also be reduced from 3.22 per cent to 1.67 per cent that is her birth rate could be decreased by 51 per cent. In other words 49 per cent of the women annually undergoing motherhood in India could be saved from unnecessary gestation and lactation and the consequent troubles.

At the birth rate of 3.22 per cent the number of mothers in India would amount to 10.2 millions in 1921 out of which about 5 million women could thus be saved from unnecessary motherhood. It must be remembered that the largest number of the infants born every year die before they reach childhood or youth anyway. The extent of loss to a mother through the loss of her child can not be determined in material terms. But if the gestation lactation rearing and devitalising cause a mother to lose at least six months of her time the loss to India through 5 million unnecessary or unsuccessful mothers would amount to the productive and creative energy of 25 million women a year.

7 THE OLD AND RETIRED

There is another class of so called dependant persons who have retired from active participation in gainful occupations, but who are still useful members of society. All persons between the ages of 60 and 70 might roughly represent this class. There were 114 million such persons or 3.6 per cent of the total in India in 1921 (*Census of India 1921, Report 1128 Adapted*). As compared with other countries the proportion of old and retired persons in India is the smallest in the world as shown in the table below. It will be seen that the proportion of the old and retired persons in the nine countries under consideration varies from 7.7 per cent in France to 4.3 per cent in the United States as against 3.6 per cent in India. The small proportion of such persons in the United States is due to the fact that a large number of her population are immigrants, who went there in the prime of their life but in India it is due to premature death.

* Adapted Annuaire Statistique France, 1922 pp. 190-90. Austria Germany Hungary France and Italy as newly constituted.

† For 1866-70 § For 1882-90

Proportion of Old and Retired Persons in Various Countries

Country	Year	Percentage of total
France	1911	77
Italy	1911	65
Japan	1913	57
Hungary	1910	53
Austria	1910	53
England and Wales	1911	51
Germany	1910	57
United States	1920	43
India	1921	36

Owing to education and experience in different branches of social activities, this class of people is a source of great benefit to every country. But India is deprived of their experience for two reasons—First owing to the lack of facilities for education and training either as children or as adults they fail to acquire in the active period of their life the same socially beneficial experience as in other countries. Second there scarcely exists any organisation for utilising their experience for social purposes. Although a few of them are engaged in different kinds of social work the experience of the majority of them is lost to the country.

8 INFANTS AND CHILDREN

Children are the most important of the human resources of a country. Because of their helpless condition, society owes them both duty and sympathy. Moreover as they are the prospective members of society the conservation and development of their physical strength and mental energy are of paramount importance to a nation.

In 1921, the number of children under the age of 15 amounted to 124 millions or 39 per cent of the total population of India. In comparison with other countries, India has the largest proportion of children, as shown in the table below. It will be seen that the proportion of children under 15 varied from 20.3 per cent. in France to 35.4 per cent. in Japan, as against 39 per cent. in India.

Proportion of Children in Various Countries.*

Country	Year	Total population in millions	Persons under 15 years of age in millions	Percentage of total
France	1911	9	10	25.1

(*) *Handbuch der Staatswissenschaften Altertums und Bevölkerung* p. 260, Census of India, 1921 Report, I.

* Computed. *Annuaire Statistique France* 1924 pp. 194-55.

Belgium	1910	74	122	297
England and Wales	1911	36	11	305
United States	1910	92	294	319
Italy	1911	346	117	336
Germany	1920	604	172	340
Spain	1910	191	67	350
Japan	1920	559	198	354
India	1921	318.9	124.0	390

Of these 124 million children, 40 millions or 126 per cent. of the total population were under the age of 5.47 millions or 14.8 per cent. were between 5 and 10, and 37 millions or 116 per cent. were between 10 and 15 as shown below—

Classification by age of Children in India 1921 *

Ages	Number in millions	Percentage of total population
0-5	40	12.6
5-10	47	14.8
10-15	37	11.6
Total	124	39

By far the major part of the physical strength of the children, especially of the infants remain undeveloped or is lost to the country. What the infants need are sufficient nutrition and proper care. But the supply of milk has become notoriously insufficient in agricultural India as compared with industrial England or Germany. Moreover, the extreme poverty of the majority of the people, from one-third to two-thirds of whom are estimated to be on the verge of starvation, scarcely gives any opportunity for proper nutrition to the infants. To this must be added the ignorance of proper sanitation. It is no wonder that infant mortality is the highest in India, as shown in the table below. It will be seen that while the infant mortality varies from 7.5 per 100 children born alive in England and Wales to 16.6 in Japan it reaches as high as 19.4 in India.

Infant Mortality in Various Countries.

Country	Year	Per 100 Children born living
England and Wales	1924	7.5
France	1924	8.5
Belgium	1922	10.7
Germany	1924	10.8
Spain	1923	14.5
Italy	1918	16.1
Japan	1922	16.6
India	1921	19.4

* Census of India, 1921 Report, I 128.

† Adapted. *Annuaire Statistique France* 1924, p. 204. Census of India, 1921 Report, I 131.

It has been estimated that over two million children die in India every year in their infancy, in addition to a large number of the still born. The number of children who die before reaching youth is considerable. Ten million children die between the ages of 10 and 15. But the number of those who suffer from ill nutrition and bad sanitation is much larger than those who succumb. They are left as life-long victims either to succumb soon after or to carry on their life process in broken health and spirit to the detriment of the wealth and welfare of the country.

Equally important is the loss arising from the lack of conservation and development of the mental faculty of India's vast childhood. The period of childhood is more or less indefinite but it might be said to extend from 5 to 14 inclusive, as has been assumed in this study. Now, in almost all civilised countries, there exists free and compulsory primary education for children, although the period of such education differs in different countries. Under her present political and economic conditions if it is assumed that the period between 5 and 10 should form the period of compulsory primary education in India, the number of children eligible for primary education would amount to 47 millions, of whom only 6 millions were receiving primary education in 1921, and 41 million children remained without any provision for education.

In comparison with other countries the number of children in primary schools in proportion to those of school going age is the smallest in India, as shown in the table below. It will be seen that in five countries for which statistics are available, the number of children attending primary schools as compared with those of school going age varies from 92 per cent in Denmark to 76 per cent in Sweden, as against 12 per cent in India.

Number of School age children in Primary Schools in Certain Countries.

Country	Year	School age children number in thousands	Children in Primary schools Number in thousands	Percentage of total
England & Wales	1920	5931	5199	87
Scotland	1920	760	681	87
Denmark	1921	400	414	92
Sweden	1921	920	708	76
Austria	1910	4819	4044	83
India	1921	47 000	6000	12

* *Annuaire Statistique France, 1922, p. 213*

The number of children in primary schools as compared with those of the school age is large also in other countries, although accurate statistics for them are not available. Some rough idea may, however, be had from the number of children in primary schools as compared with those under 15 years of age as shown below. It must be remembered that the period of age for primary education differs in different countries. It will be seen that the number of children in primary schools as compared with those under 15, was 35 per cent in Germany, 47 per cent in France, 43 per cent in Japan and only 5 per cent in India.

Country	Year	Children under 15 in millions	Children in primary schools in millions	Percentage of total
Germany	1920	17	9	53
France	1910	119	56	47
Japan	1921	128	86	43
India	1921	124	60	5

In comparison with other countries like the United States where compulsory education extends up to the age of 14 or more, there should be added to the 47 million children in India another 37 million children between 10 and 15 of whom only 16 millions were receiving secondary education in 1921. It is thus seen that out of 84 million children between 5 and 15, only 76 millions received primary and secondary education, and the mental faculty of the remaining 764 million children remained undeveloped and was more or less lost to the country.

But the period of general and technical education extends much further than the age of fourteen in most of the countries, and in this respect also, the number of students in India is insignificant. The total number of students in all institutions in India amounted to 83 millions or 342 per cent of the total population in 1921 (*Indian Year book, 1923 p. 451*). When it is considered that there is no system of adult education in India, the lack of facilities for education and training becomes still more apparent.

9 INSUFFICIENT WORK

The lack of sufficient work for the people is a common complaint in India. The

* *Compt. Rend. Annuaire Statistique France, 1924 p. 135-136*

work done by the average cultivator in the Punjab does not represent more than 150 days' work in the year (*Census of India, 1921 Report, I 245*) The present writer's investigation in the United Provinces and Bengal in 1925 also showed that the average peasant or artisan does not have work for more than 7 months in the year.

The other classes of the people fare scarcely better. Unemployment among the middle classes is a well known fact and has already received the (as yet fruitless) attention of several provincial governments. The Governments of Bengal, Bombay and Madras have the reports of their commissions on unemployment under consideration.

Nothing is definitely known about the extent of unemployment among workers in organised industries. But some idea of it may be had from a few facts. First absenteeism has been found by the Bombay Labour Office to amount to 10 per cent or more in Bombay factories. Second labour turn over amounts to about 100 per cent in some of the mills at Madras as noted by the present writer in *Factory Labor in India*. Third strikes and lockouts caused 270,423 workers a loss of 12,578,129 working days in 1925 i.e., an average of 46 days per worker (*Labour Gazette Bombay 1926 pp 779-82*).

It is thus seen that there exist both underemployment and unemployment among all classes of people in India and they have scarcely sufficient work for more than 6 or 7 months in the year. It may be very conservatively said that the average man or woman in gainful occupations in India loses about 4 months in the year. In other words out of 92 million men and 46 million women engaged in gainful occupations only 612 million men and 306 million women might be said to be actually employed throughout the year.

10 SICKNESS AND DISEASES

The prevalence of diseases in India is an acknowledged fact. Epidemics like cholera, small pox, and influenza are always present in some part of the country or other. But the most common diseases debilitating India's manhood are endemics like malaria, hookworm and tuberculosis.

Malaria, which was once restricted to the districts of Lower Bengal has now spread almost all over the country, causing the death of 1,300,000 persons per annum.

Tuberculosis is found in large industrial centres, especially in the overcrowded slums. The prevalence of hookworm has been revealed by investigation, and it has been found that practically all the rural population in Madras and 70 per cent of the population in Bengal are infected with hookworm (*Report of the Indian Industrial Commission 1916-18, p 162*). To these must also be added the weakness or sickness arising from insufficient nutrition or starvation on the part of the majority of the population, which has been variously estimated to be one third to two thirds of the entire population, as noted before.

Aside from death what is the annual loss of India's man power resulting from sickness and starvation, is hard to determine. But there are instances in the Ceylon and Darjeeling tea gardens showing that the output of the labour forces has increased by 25 per cent, as the result of the hookworm treatment with vermifuges (*Report of Indian Industrial Commission 1916-18 p 162*). Considering the prevalence of starvation and sickness throughout the country, it may be very safely estimated that at least one fourth of man power is lost to the country from these causes. This means that out of 612 million men and 306 million women nominally employed in the production of national wealth in India, only 45.9 million men and 23 million women are actually and efficiently employed.

11 IGNORANCE AND INEXPERIENCE

Attempts have been made to show the industrial inefficiency of the workers in India as compared with those in other countries. It has been pointed out that 2622 factory workers at Madras would produce the same thing as 932 factory workers at Lancashire thus indicating that 263 Indian workers are equal to one British worker (*Govt. Parl. Papers, 1909, Vol 63, Cd 4519 pp 313-14*). It has also been shown that in 1923 the average production of coal per worker in mines was 98 tons in India as against 226 tons in England thus proving that 23 miners in India are equal to one miner in England (*Indian Coal Statistics, 1924 p 40*).

Now, the present writer has shown in his book on *Factory Labor in India* the fallacy of such comparisons without taking into consideration the conditions of work, raw material, machinery management and social

and other conditions in the two countries. Regarding mining labor, it might be pointed out that if 23 Indian miners be equal to one English miner on the basis of production, the same argument would make 29 English miners equal to one American miner, as the annual production of coal per miner, is 665 tons in the United States as against 226 tons in England—a conclusion which would be regarded as absurd. The present writer has also shown in his book on the *Hindustani Workers on the Pacific Coast* that the Indian worker is as efficient as any Japanese, Chinese, Mexican, American, and Canadian worker.

The fact remains, however, that owing to ignorance and inexperience, the production of an Indian worker under the present conditions does not amount to more than half of what is generally produced in America or Europe. In the same way, it has been pointed out by the present writer in his *Production in India* that agriculture in India is only 86 per cent as efficient as the average production in the world. But compared with most of the European countries, it would be scarcely more than 50 per cent as efficient. It might, therefore, be roughly concluded that the per capita production in India is only half of that in other advanced countries.

Now apart from ill health, the fundamental cause of inefficiency is the lack of education and training, as indicated by illiteracy. The total number of literate persons in India in 1921 was 226 millions. If it be assumed that 83 million students in that year were among the literate and that the remaining 143 millions belonged to the class between 15 and 60, still out of 178 million workers 1637 millions or 92 per cent were illiterate. In comparison with the workers in other countries, the Indian workers are the most illiterate as shown below. It will be seen that the percentage of illiterate persons between 15 and 60 varies from 03 in Germany to 306 in Italy, as against 92 in India.

Illiterate Persons between 15 and 60 in

Various Countries *

Country	Year	Percentage of illiterates
Germany	1910	03
Holland	1910	10
France	1910	47
Belgium	1910	89
Italy	1905	306
India	1921	920

* Annuaire Statistique, France, 1924, p. 214.

The loss of 25 per cent. of efficiency has already been ascribed to ill health or sickness and diseases. The other 25 per cent must be ascribed to ignorance and inexperience or lack of education and training. That is, out of 612 million men and 306 million women engaged in productive processes, the work of another 153 million men and 76 million women must respectively be subtracted.

12. HOUSEHOLD WORKERS

Out of 86 million women between 15 and 60, 40 millions are household workers, as noted before. All of the household workers are regularly employed. The loss of their energy or labor arises from two causes. First, they are as much subject to sickness and diseases as the workers in other occupations in India. Second, they lose as much time owing to the lack of education and training as those engaged in so called gainful occupations. Husking, milling, washing and similar other household works are so primitive in India that the women in India can scarcely accomplish half as much work as the women in other advanced countries during the same period of time. Anyway, they cannot be expected to be more efficient than the men and women in other occupations in India. Thus partly owing to sickness and diseases and partly owing to ignorance and inexperience, the household workers lose about half of their efficiency. That is, out of 40 million women in household work, only 20 millions might be said to be effectively employed.

13. EXTENT OF WASTAGE

It is difficult to estimate with any pretence to accuracy the extent of India's total wastage in human resources including manpower. A very rough idea may, however, be had from a few chief sources of wastage.

First, the most important source of wastage is the lack of conservation of the physical strength and mental faculty of 124 million children, consisting of 40 millions under the age of 5, 47 millions between the ages of 5 and 10 and 37 millions between the ages of 10 and 15. That most of the children have no proper nourishment and care is seen by the annual death of 2 million infants before they reach the age of one year and also by the death of 10 million children between the ages of 10 and 15. Out of 47 million children between 5 and 10, only 6 millions receive primary education and out of 37 million children between 10 and 15

nly 16 millions receive secondary education. Thus, through lack of provision for proper nutrition and sanitation as well as for adequate education and training India loses a very large part of the physical strength and mental faculty of 124 million children, forming 39 per cent of her total population.

Second, India's womanhood consists of 86 million persons between the ages of 15 and 60, thus forming 54 per cent of her 155 million women of all ages. Of these 86 million women, 46 millions are engaged in gainful occupations and 40 millions in household work. Of the 46 millions gainfully occupied insufficiency of work causes a loss of labor equivalent to one-third of the total number i.e., 153 millions. Of the remaining 306 millions in gainful occupations and 40 millions in household work sickness and diseases cause a loss of labor equivalent to one-fourth or 176 millions and ignorance and inexperience another one-fourth or 176 millions and useless motherhood still another 25 millions. In other words, out of 86 million women the labor or energy resources of about 60 million women might be said to be lost.

Third, of the total number of 92 million men between 15 and 60, there occurs a loss of labor or energy from several causes and this loss might be estimated to be equivalent to the following amounts: (1) insufficient work—one third or 333 millions (2) sickness and diseases—one fourth of the remainder or 161 millions, (3) ignorance and inexperience another one-fourth or 161 millions. In other words, out of 92 million men India loses the labor or energy of 67.5 million men.

It is thus seen that out of the total man-power of 178 million persons, consisting of 92 million men and 86 million women India loses annually the labor or energy resources equivalent to 459 millions through insufficient work 329 millions through sickness and diseases another 329 millions through ignorance and inexperience and 25 millions through useless motherhood, as shown in the table below. In other words, the labor or energy resources of 114 million persons, or 64 per cent of the total man power, is annually lost to the country.

WASTAGE OF INDIA'S MAN-POWER

Causes of wastage	Men in millions	Women in millions	Total in millions
Insufficient work	306	153	459
Sickness and diseases	173	176	349

Ignorance and inexperience	153	176	329
Useless motherhood	"	25	25
Total	612	531	114.2

In this must also be added the loss of the major portion of the energy of 7 million persons between 60 and 10 whose valuable knowledge and experience could be very well utilised for social benefit through adequate means. The last but not the least wastage of India's man power comes through premature death. The mean length of life in India is about 24.7 years as against 50 years in several advanced countries and as compared with these countries India thus loses 112 per cent more of her energy in order to preserve her social population. But what is of the greatest importance is that the average period of activity for India's man power is only 11 years as against 36 years in other countries.

14 CONCLUSION

India is immensely rich in natural and human resources but still she is the most indigent, illiterate and helpless country in the world. The fundamental cause of her backwardness in social, political and industrial development is the inability to conserve and utilise her human resources including man power. Practically the major part of the physical strength and mental energy of her children remains undeveloped and about two-thirds of her man power are unutilised. Moreover, the average active period of the life of her men and women is only 30 per cent of that in other advanced countries. It is the wastage of her human resources which have led to her moral, mental and material degeneration.

The reason why India still holds an apparently high position in the world is threefold—First, the richness of her social heritage, which once made her a leading country in the civilised world still carries some prestige. Second the vastness of her area and population has made her important as a market for the purchase of raw materials and for the sale of finished products. Third, the control of her government, industry and education by an advanced and powerful nation.

But the ancient civilisation including folkways, lore, institutions, laws, religions, philosophy and art, have become antiquated and obsolete and can scarcely equip her men and women for the struggle of modern life.

The abundance of her raw materials has invited foreign exploitation rather than led to the prosperity of her own people. And foreign domination can scarcely be helpful to the development of her national life.

The most important problem of India

is that of the conservation and utilisation of her human resources. It is the development of the physical strength and mental faculty of her population upon which depend her national prosperity, political development and social progress.

THE REVIVAL OF INDIAN ART AND THE LUCKNOW SCHOOL OF ARTS AND CRAFTS

By SUNITI KUMAR CHATTERJI M.A. (CALCUTTA) D.LIT. (LONDON)

Khaira Professor of Indian Linguistics, Calcutta University

IN the heat and hurry of our endeavour to win political emancipation we are very often apt to lose sight of a great many vital problems in our national well-being. In the present disturbed and unbalanced state of our country we cannot view anything except from the stand point of politics or of economics which is the basis of politics. Our political leaders great and small are in the forefront, and they want to insist on us a sense of our right to live and to be free and they are eager to take us with them in striving to realise this right. We must get along to get on. We are lacking in the world's goods, we are poor, we are not masters in our own home. We have lost enough time already, we cannot afford to waste any more time in thinking, we must take up the obvious that presents itself to our eye and promises immediate return. A superficial education and that to not on any sane line has given us an enormous confidence in our own ways of thought and action. We do not care to reflect on our true needs and requirements, viewing them both absolutely and in the light of history. Our political leaders to whom we have largely abandoned the power to shape our courses for us have to our delight generally proved themselves to be truly democratic in accompanying us and pushing us along to where we drift in our inertia, and but rarely trying to draw us away to where we should go. The result has been that with our apparent political education and our wide-spread political movements we have achieved precious little in the constructive work of nation building

even in those spheres where there is no question of external forces over which we have no control. We are gaining in political consciousness perhaps, but we seem to be losing in cultural sense and in real national consciousness. Our notions of the life and freedom which is our aim are now not of the clearest. Catchwords now dominate our thoughts and direct our plan of action. Under the hypnotising influence of these catchwords we put, for instance, literacy above culture, and machines over man. But fortunately we have had the blessing of God on us in the guidance of a number of clear visioned men, our saints and sages and thought leaders who have told us each according to his lights and with reference to his own special field what we should strive for for the profit of our soul. Their views generally are ridiculed, and occasionally they are given a tardy and a chilly reception not through conviction but through an embarrassing appreciation from the West, the valuations of which we consciously or unconsciously all accept. Sometimes the personal appeal of a teacher compels the homing of the mass which can never properly appreciate his teachings. Whether they succeed in this way in gaining a hearing from the people or not is a different question but all honour to these men who cry halt to us in our aimless advance to these true nation builders who force us to ponder on our ideals and thereby to conserve as well as to break and build anew in a discriminating spirit.

Life is not a simple thing, especially civilised life, it is a blend of many complexes.

and many forces, and it mirrors itself through many and various expressions which again reflect upon it in its further development. Among these forces and expressions Art is one of the most obvious and most important. But unfortunately in India more than in any other country no other element of culture has been more neglected than this one. In literature there has been a certain amount of progress in the modern Indian languages—especially in Bengali and the Indian spirit in literature did not undergo any brusque check or decay rather it has obtained a fuller life and has transfigured itself by a vivifying contact with the modern spirit of the West. The story has been different with regard to the plastic arts it has been one of decay and degeneration both on the fine and the industrial sides. The harmony of Indian life and culture the good and the beautiful and the true in it—found its most natural and beautiful expression through line and form and colour in painting in architecture, in sculpture and in the objects made by the hand of man which we require for our daily life—in the stuffs that we wear in the pots and pans that we cook in or at room in the temple furniture with which we carry on the ritual of our faith and in the thousand and one other articles big or small which civilised man has evolved to live in comfort. But all that beauty is fast becoming a thing of the past. Want of the power of appreciation of what India achieved in the realm of Art which was largely engendered in us by our Western Art teachers both by their contemptuous silence or active condemnation of Indian art and by our being brought face to face with the very obviously successful Renaissance and post Renaissance art of Europe undermined the necessary faith in a national art among our *intelligentsia* and commercialism and competition from the West which began to pirate our Indian motifs and flood with cheaper and inferior machine made copies of the articles of daily use our markets which so long used to be supplied with superior and truly artistic hand made goods, gave the death blow to our industrial arts. In the general decay the great folk art that we possessed could not but vanish. The result has been that while we think we are advancing in nationalism we have been becoming bankrupt in our national culture. In her Art India has well nigh become a province of Europe and a very eighth rate province too—instead of

remaining if no longer the inspirer of other lands, at least independent and original maintaining the stamp of her national ideals and her culture and his cry in her Art as much as Japan and China have continued to do. To have to acknowledge our inferiority in this most beautiful expression of our national life even where the inferiority does not really exist, is a very great humiliation indeed. It only requires a true training in Art a new perspective which is not at all blindly national but is also the perspective for viewing all art, no matter of whatever age or nation—to realise the greatness that is in Indian Art. But this is a matter which does not give any qualms to the conscience of our political leaders who are all burning with a great zeal to see our motherland great and glorious and above all free from all humiliation. It does not seem to occur to the majority of people that for a nation otherwise handicapped by absence of political freedom her greatest source of strength is her National Culture. But we do not have the eyes to see where this culture finds her abode.

Fortunately however the much needed change in the angle of vision has come into our country. It was late in coming—but better late than never. The attempt to conserve all that is good in our national art traditions and to revive it by studying and assimilating both the spirit and the technique instead of throwing it overboard by cold neglect has manifested itself in several groups of artists art critics and art lovers in India. The history of this picking up of a great national heritage is not a very old one and the tale may be told some day by those who have been intimately connected with it. The inspiration came from two men and their names deserve to be enshrined in the records of India's culture as of two of her greatest benefactors who helped her to know herself and to find herself. They are E. B. Havell and Abanindranath Tagore. We have a saying *Daitya kule Prahlad*—a miracle of a saint like Prahlada may happen even in the tribe of the avowed foes of the Gods. E. B. Havell's great name in the study of Indian Art was Principal of the Government School of Art in Calcutta and he was unlike the usual run of Principals of art schools in those days in India (and outside India) who pinned their faith on the dogma that there was no true art outside of Ancient

Greece and Modern Europe. In the early years of the first decade of this century he sought to wean his Indian students from an unintelligent, slavish spirit of homage to European art in his school to the serious study of the neglected and maligned ancient art of their country to act as a magnet to draw out their own latent powers. Mr Havell approached the problem in the spirit of a true lover of Art who was convinced of the value of Indian Art as a great heritage of humanity that deserved to be fostered for equally great or even greater achievements in the future. But strange to say his endeavours were misunderstood, and our intellectual snobdom took up a hostile attitude, and a strong opposition even from some of our nationalistic organs was all the co-operation he met with for a time. In Abanindranath Tagore the founder of the New Indian School of Painting however, and in a number of art lovers and critics both Indian and European in the city of Calcutta that Havell found staunch supporters. Dr Abanindranath Tagore who had obtained previously a very good training in European methods under some English artists joined the Calcutta Art School as Vice Principal, and in this way he obtained an opportunity to co-operate with Havell in the new reform. In the year 1907 was founded in Calcutta the *Indian Society of Oriental Art*, which quickly obtained an influential membership both among Indians and Europeans, and which became the premier organisation for encouraging Indian Art and for reviving it, by its publications of books pictures and metal objects and its annual exhibitions and by maintaining a small school of art and art-manufactures. The establishment of the society as representing the activities in India on behalf of the national art took place some ten years after the foundation in 1897 of a similar society in Japan by that rare artistic spirit Okakura Kakuzo—the *Nippon Bijutsuin*—to bring the Japanese people back to a sense of the greatness of their own art, as well as of China and incidentally of India. In 1903 Havell published his epoch making book, *Indian Sculpture and Painting* the first enthusiastic vindication of Indian Art, and other critics came forward notably Ananda Coomaraswamy and Ordhendra Coomar Gangoly. Havell had also made the efforts of Abanindranath and his pupils at recreating the modern Indian School of Painting known to the

artistic world of Europe by a number of sympathetic articles in the London *Studio* from 1902 onwards. The appreciation of Europe produced by reproductions in Havell's articles and by exhibitions in European art centres of the work of Indian artists did a great deal to allay the prejudice of the Indian *intelligentsia* against the national art of their own country, ancient, medieval or modern,—a prejudice which the *Modern Review* and its Bengali counterpart the *Pravasi* have been successfully combating for the last twenty years. Meanwhile Abanindranath Tagore was carrying on his work, nobly assisted by a band of young artists who had acknowledged him as their master. They were silently working a renaissance in the world of Art in India and their influence slowly but surely was being felt. Apathy and even hostility have now given place to a sort of toleration in most quarters, and with many, the Modern Indian School has been able even to call forth enthusiasm. The movement, which started in Bengal with Abanindranath Tagore and his pupils and was for some time regarded as a craze or at the best as mere phase in experimentation in Bengal, has gradually been able to evoke proper sentiments in artists and art lovers outside of Bengal and the ideas behind it have been taken up in many a centre of art education in India. The pupils of Abanindranath, the most prominent of whom are Nandalal Bose, Asit Kumar Haldar, Samarendranath Gupta, Kshitindranath Majumdar, and the late Surendranath Ganguli who met an early death after showing great promise, have been carrying on the work of their master themselves and through their pupils in Calcutta and elsewhere. That adopted daughter of India Sister Nivedita, whose life was truly one of dedication to the cause of Indian religion and culture was an enthusiastic supporter of the movement. Abanindranath retired from the Government Art School in 1910 after officiating as Principal for some time, and the present Principal Mr Percy Brown (who succeeded Mr Havell), well-known as the author of the excellent little book on *Indian Painting* and of the standard work on *Mughal Painting* is in complete sympathy with the aims and ideals of his predecessor in office. In 1916 was formed at the instance of Abanindranath Tagore the *Vichitra* Society at the family residence of the Tagores in

Yuan Chwang Explaining the Chinese Scriptures by Mr Asit K. Halder

Calcutta, a society of literature and art, with a school of art attached. The *Vichitra* found its fuller life in the *Visva Bharati* University at Santiniketan, Rabindranath's educational institution, and the *Kala bhavana*, the Art Department of the *Visva Bharati*, under the direction of Nandalal Bose, now has become the heart of the movement in India. The Indian Society of Oriental Art continues to flourish and do good work, and Abanindranath Tagore continues to take a personal interest in the *Visva Bharati* *Kala bhavana* and in the Society, and in his residence maintains a small school where a few youngmen including some members of his family (some of whom have already shown good promise) are being trained by the master.

Calcutta is a modern city which has no place in the annals of pre-British India. The artistic traditions of Jaipur or Delhi have not been among its inheritance. The Santiniketan *Kala bhavana* is but an offshoot of Calcutta, so far as its personnel is concerned. The result achieved in Calcutta and at Santiniketan among a few Bengali artists and a few of their pupils from outside Bengal has been primarily with people who are not members of castes or guilds of hereditary craftsmen who are in possession of a tradition in a particular line. When the idea behind the movement is given the opportunity of working in those places which still continue to preserve relics of the old artistic tradition, either in fine art or architecture or in the crafts Indian Art may be well assured of a new and glorious career. The plant which seemed to be withering away would then be counted upon to produce fresh flowers in the garden of Art. Hence the encouragement of Indian Art in such old cultural and artistic centres should be hailed with acclamation as an auspicious omen of a rebirth of the artistic soul of India. And already there is ample evidence that such encouragement is forthcoming. Exhibitions of Ancient Indian Art—Rajput and Moghul painting old art ware etc., as well as of the works of the Modern Indian School have stimulated curiosity as well as appreciation. Pupils of Abanindranath Tagore and their pupils, who have obtained inspiration at the mainspring of the movement, have been sought and asked to take up work of teaching and organising instruction in Art in most places they have been successful in creating interest, and even in starting the

nucleus of local types of the revived Indian Art. The *Amultra Jatiya Kala-sala* at Rajmahendri, the State School of Art at Jaipur, the Government School of Art at Lahore, the Art School of the Ananda College at Colombo, the *Kala bhavana* at Baroda and the Government School of Arts and Crafts at Lucknow are among the institutions, old and new, which now show the working of the new spirit.

The work done by each of the above institutions, and the promise of future good to come out of them would be an interesting and instructive study in the history and prospects of the building up of the artistic culture of New India. In the present paper, I shall try to give some idea of the work that is being done in the Government School of Arts and Crafts at Lucknow which I had the pleasure of visiting last autumn.

I have seen the Government School of Art at Calcutta and I know intimately the *Kala bhavana* of the *Visva Bharati*. The Lucknow School is easily ahead of the above institutions in its equipment and its arrangement and it speaks well of the interest taken by the Government of the United Provinces in its upkeep and its expansion. The Lucknow School was originally started in 1911 as a 'School of Design, as a result of an industrial conference held in 1907 at Nainital by Sir Harcourt Butler when he was Revenue Secretary to Sir John Hewitt, then Lieutenant-Governor. Among the objects of this school was 'to provide instruction in those branches of art, design and handicraft which bear on the more artistic trades and professions now practised or which may be developed in the province. The name was altered to the present one of 'School of Arts and Crafts', and the school was stabilised as a permanent institution in 1918. Among the usual artistic crafts followed in the province it was decided at first to teach carpet weaving and stone carving and sculpture as a matter of course but these were abandoned, and the Government wanted to concentrate on some special crafts only. But there was arrangement to teach painting in addition to crafts and a painting class was also started. Mr Nat Heard, A R C A, was the first Principal. It was his interest that gradually made the school the well equipped and efficient institution it developed into, into one of the finest art schools in India. But he seems not to have been interested in the

preservation of the traditional character of Indian Art the atmosphere brought in during his regime was primarily of *imitation* of European designs and motifs rather than preservation and adaptation of the old Indian ones which had centuries of history behind them or of creating new things on the basis of the old ones. This is to be deplored as the artistic traditions of the Indian craftsman are not dead and effete because they are old but still are living although languishing for want of support. Craftsmen of the old school were appointed at first to train up pupils in the school and these latter

After Mr Heard, the principalship was held for short periods by three English artists (1923 1925) and in February 1925 Mr Asit Kumar Haldar was placed in charge of the institution. To have a personality in Art like Mr Haldar is to ensure the maintenance of the best ideals in an art school as results have amply shown. Dr James H. Cousins in his penetrating note on Mr Haldar's art in the volume devoted to the latter in O C Gangoly's series of monographs on *Modern Indian Arts* says of Mr Haldar that he has earned a distinctive place in the hierarchy of Indian Artists as a painter who

Carved Teak wood Couch with Shot Silk Cushion and Bolsters
Designed by Mr Asit Kumar Haldar for the Hon. Minister of Education U P

gradually replaced their masters. This sort of recruitment of teachers was fraught with effects both good and evil. On principle however, there should be closest sympathy and co-operation between the master craftsmen of the old type and the artists trained along modern lines and there should be nothing to suggest exploitation of the former in the interests of the latter any more than there should be exploitation in the academic world of *Pandits* and *Maulanis* of the old school by scholars acquainted with modern methods, and the relegation of the former to an inferior cadre as regards pay and position.

whether dealing with mythology and symbolism with history or with humanity and nature invests his work with a pervasive sense of the intermingling of the human spirit with the Divine Spirit. With the resources of a well equipped and flourishing institution at his command and backed by the moral support of the men of culture of the province amongst whom the most illustrious is the Minister for Education for the United Provinces the Hon. Mr. Rajeswar Bahadur Sahib and ably supported by his subordinates, Mr Haldar has raised the Lucknow School of Arts and Crafts into one of

The Ajanta Pavilion
Designed by Mr. Asit Kumar Haldar and Executed by the Government School of Arts
and Crafts, Lucknow

the other extreme of applied art, and the achievement of Mr Haldar here has been most unique. There has been a department of Architectural Drawing and Designing which used to train students for the Public Works Department and the municipalities and for the feudatory states. The practice used to be to confine their work to Anglo Indian architecture, and also to the later decadent architectural style of Northern India. The quality of the teachers and students judging from their drawings seemed to be astonishingly high. Mr Haldar has taken fullest advantage of it, and has brought in the study of purer and robust Indian styles with a view to their adoption for modern buildings, and he has been eminently successful in it. He made this department prepare a design for the Town Hall of Oran in the Hindu Buddhist Style and Mr Sbab the Collector of the place was so pleased with it that he introduced Mr Haldar to the Maharaja Bahadur of Tehri (Garhwal) and this enabled him to demonstrate in a striking manner what his artistic genius can do as an architectural designer and a town planner. In the state of Tehri there is a good old custom that when a new Raja ascends the *gadli* he builds a new town in his own name. The present Maharaja's accession is to be commemorated in this way by founding the new city of Narendra nagar. This city will be on the site of an insignificant village called Orathali in the Himalayas at a height

so that these designs were hardly satisfactory. Mr Haldar was then entrusted with preparing a plan and in paying strict attention to the nature of the ground and by employing the local style of architecture and proposing a harmonious distribution and setting of the various buildings, he has achieved an artistic triumph which is also a feat from point of view of

Silver Image of Sri Lakshmanji Executed in the Govt. School of Arts and Crafts Lucknow for the Raja Sahib of Jaunpur after a Painting by Mr Sailendra Nath Dey

Elephant in Brass Repousse.

of 4000 feet between Hrishikes and Lachmao Jhola, near Haridwar. The terraces invelled on the slopes of the mountain for rice fields will form the terrain of the town. The Maharaja, who is an orthodox Hindu had plans made for the town by a number of learned *Pandits* who prepared their designs following the theories and descriptions given in some medieval Sanskrit work without any reference to the actual

engineering. The town will rise tier upon tier along the terraced sides of the hill. It will in general effect remind one of Borobudur in Java. The highest of the tiers or terraces will be occupied by a temple and the houses and shops will form a sort of entourage for the temple. The temple has been given the dominating position in the new town, the city with its homes for men and its houses for their meeting and trafficking and pleasure—the town hall, guest house, home members' quarters, high school, hospital, market place and park will seem to nestle at the foot of the house of God and be commanded from its spire. The generous provision for roads lanes will prevent the congestion of

medieval city. The planning of this town as an artistic thing not losing sight of engineering and sanitation would seem to be an achievement of which any similar institution may be proud. Here is creation in the truest sense of the word and not the soulless copying which has largely been the lot of this branch of the Fine Arts in India. Thakur Kalyan Singh and the senior students of the Architectural Decoration and Drawing class executed the architectural drawings under the guidance of the Principal. For the encouragement of a national architecture support from the state is essential and even a small state like Tehri is in a position to work wonders with the cooperation of a true artist. We can contrast the plight of Mr. Sri S. Chandra Chatterjee in Calcutta that enthusiastic worker for a revival of Indian architecture whose voice has until now been a voice in the wilderness to which few indeed have paid heed—although it is hopeful to see that a few have heard and have sought to put into practice his preaching.

The Brass Foundry department of the School is showing similar activity under the touch of the new spirit and the artistic metal work done at the school is quite in keeping with the excellence of the best old brass work of the province. A very high level of craftsmanship in artistic metal work which was praised very much was shown in a solid silver image of Lakshmana made from a design by Sailendra Nath De an artist of the Modern Indian School for the Raja Sahib of Jaunpur and so no other specimens of brass work which the present writer purchased at the School show both in the choice of the design by the Principal and in the execution a remarkably high degree of excellence. Mr. Haldar has introduced

suitably to the circumstances of the times the new craft of preparing half tone line and three colour blocks for printing. There was a department of lithography and photogravure printing which has had a fine record in

Plan of the Projected Town of Narendra Nagar in Tehri (Garhwal) designed By Mr. Asit Kumar Haldar

poster and other printing and the addition of the other and commoner processes now followed in reproducing pictures shows that progress is not divorced from the attempt to

the best and most efficient schools in India. It struck me that with the newly founded University, the School of Arts forms a great centre of culture in Lucknow. And when the proposed College of Indian Music is started through the munificence of both Government and the *Talukdars* of Oudh, Lucknow will become once more a premier culture city of India, conserving and distributing through these three institutions the intellectual and scientific culture of the West in combination with the best that the intellect and the artistic spirit of India can show. Mr. Halder at the helm of affairs of the school has proved himself to be no mere dreamer of dreams, no simple artist of

imagination who only puts into wonderful visions of line and colour the spirit divine showing itself through the human form and through the forms of nature. It was a delight to see how he has put into practical shape, for the benefit of both art lover and art student, his enthusiastic love for the Art of the past and his creative instinct for newer forms of artistic expression. Imagination, and the innate feel for the Art which is the product of the civilisation of the people, have been wedded to 'hundred per cent' efficiency.

Thus in the Crafts Departments, the old subjects have been infused with the spirit of Indian Art, and besides, some new crafts have

been introduced. Students in the Carpentry class are producing beautiful furniture in the old Indian Style, adapting them for modern requirements wherever necessary, instead of only turning out, as before, furniture to suit the Mid Victorian taste as found in English catalogues. The Ironsmith class was hitherto turning out workmen and apprentices for the railway loco shops, a very necessary function no doubt, but hardly within the scope of a school of arts and crafts. The artistic spirit has now been invoked by the artist

the brilliant red of Jaipur could never be produced at Lucknow, blue being the only colour which they could produce there well. A teacher of the Jewellery department was sent

Figures of Kalpa and Sirpesh

for the Municipality of Benares*

to Jaipur for training and he has learned the craft well and it is hoped that he will be instrumental in introducing the art of making enamels as fine as those of Jaipur into the city of Lucknow thus creating the nucleus of another centre of the art in India. From Enamelling and Jewellery Architecture presents

*Tiger
Ornamental Tree-guard in Iron
Designed by Mr. Asit Kumar Halder*

Principal and we have among other things fine tree guards or fire screen frames in wrought iron which while being Indian in subject will rival the work of Japanese designs along similar lines. The Coppersmith and Jewellery sections were occupied in essaying imitations of English designs in copper ware and silver ware but here there has been a restoration of old Indian designs, and a real attempt to keep up the high artistic traditions of the Indian jeweller. The local (Lucknow) art of Enamelling is a lustrous craft and moreover it was not up to the mark beside the more famous enamels of Jaipur

get back the Indian spirit in Art. Teachers have been sent to Calcutta to learn the art from some of the leading firms there, and in future the United Provinces will be able partially at least to meet her growing demand for craftsmen in this line of printing. Along with this branch of Art Printing has been added the craft of Artistic Book binding and a young Teluga artist, Chitra Virabhadra Rao who obtained his training at the Santiniketan Kala bhavana has recently been placed in charge of the teaching of this new craft.

The Fine Arts section used to devote itself to the teaching of the usual subjects

artists, and he is very optimistic in making the Lucknow School a centre of artists. He has got an able collaborator in a highly talented young Bengali artist, Mr. Bireswar Sen, who is cultured and is an M. A. in English. (Some of Mr. Sen's work has already been published in the *Modern Review*.) Mr. Sen joined the School in February 1926 as Head Master—the former Head Master Mr. M. Ghulam Husain becoming the Vice Principal. The enthusiasm of the masters has infected the pupils, and it was a great pleasure to see how a distinctive school was growing up at Lucknow under the inspiration of these two artists. The work produced by the Lucknow students

Proposed Design for the Bazar
at Narendra nagar The Front Elevation of Shops and Gateway

modeller of Lucknow, is a teacher at the school. Mr Haldar here has brought in his artistic consciousness in the selection of subjects and he is always watching with a careful eye lest the banality or even vulgarity of the design would make the conscientious execution of the craftsman suffer, and is seeking here to make the craftsman have the artist's keenness of feeling. He has been quite successful here also. A clay model of Nandalal Bose's great picture Siva mourning for the death of Uma has in spite of certain minor divergence succeeded in reproducing the spirit of the original with creditable fidelity.

Crafts Emporium. The latter has now been removed from the school building and under the new arrangements with Mr Haldar gradually building up a collection of old Indian paintings the Lucknow School of Arts and Crafts will in due time be in possession of a Museum of the Fine Arts as well as Industrial Arts as important as that of Calcutta or any other place.

There are other institutions connected with the School two in the city of Lucknow itself—the evening schools of wood work and jewellery and repousse work at Aminahad and the Chowk—and three in other towns—a brass work school at Benares and

Front Elevation of the Temple at Narendra-nagar designed by Mr Asit Kumar Haldar

At the All India Fine Arts Exhibition held at Lucknow in January 1926 Mr Haldar demonstrated what he could do with his colleagues and students in the way of reconstructing the vision of India's past glory in architecture and painting by designing and executing a magnificent Ajanta Pavilion which now forms one of the permanent exhibits at the School Museum.

The School has been in possession of a good collection of art objects—ceramics, brass, ivories etc.—which has been made the nucleus of a Fine Arts Museum by Mr Haldar. The value of a museum for an art school seems not to have been properly understood. The school collection could not be fully utilised previously since it formed practically a part of the United Provinces Arts and

the industrial schools at Nagina and Moradabad.

From the account given above of the activities of the Lucknow Art School it would be apparent that it has already become a real centre of Indian Art education in Northern India, thanks to the enlightened zeal and energy of its Artist Principal. The United Provinces Government has done a great deal more perhaps than any other provincial Government has done in this line but one can never do too much for such a good cause. The institution is giving training of the best kind in the Fine as well as Industrial Arts to over 200 students. It is an educational institution and one of the most efficient. But it is curious to find that the school has been placed within the

Department of Industries Uptil 1919 the School was under the Director of Public Instruction but why the United Provinces Government should decide suddenly that Education in Art properly belonged to Industries and Manufacture is beyond comprehension Training in arts and crafts which has its primary aim in producing objects of beauty for those who have the taste and the means to enjoy and possess them—at least such is the case in India—has been relegated in no other province of India to the Director of Industries who has quite a distinct field of work Industry in the modern sense of the

Asit Kumar Halder

term aims at mass production Artistic Craftsmanship has far other ideals—it aims at the production of an article of both beauty and usefulness in which the joy of the maker's creation is evident and in the formation of which the maker has not been hustled either by hunger or by fear To regard the handmade artistry which such institutions propose to teach and foster from the point of view of the large scale manufacturer who wants speedy output would be to kill the

very institution The most successful Arts and Crafts schools—to name two—the Royal College of Art in London where the crafts are also taught, and the Sir Jamsetjee Jeejeebhoy School of Art in Bombay—are administered by the Education Department No government should regard an art school as an industrial concern to be controlled by an Industries Department and it should not expect it to be a paying concern either under ordinary circumstances The necessity of art education has been recognised in all schemes for general education The United Provinces Department of Education maintains a class for training drawing teachers for schools and this class conducted by an ex-student of the Lucknow School of Arts and Crafts, Mr L M Sen ARCA is held in the Arts School which is officially under the Department of Industries This anomaly which certainly disguises from the administrators and the public the real character of the School should be removed at once and the School of Arts and Crafts should once more be restored to the Education Department.

Institutions like the Visva bhareti Kala bhavana the Lucknow School and a few similar places help to bring back the self respect of those who are sensitive to our growing denationalisation in the matter of Art—these institutions bring to us the message of hope that after all we are not developing into confirmed beggars living on the charity of Europe but we can if we only will take our stand on our own assimilating whatever is necessary for us from foreign peoples Such institutions as a rule do not occupy a big place in the national vision especially where the atmosphere is Philistines But nevertheless they are owing to the subtle spiritual influence they exert on the nation's mind potent factors in moulding the character of the people And those silent workers who are teaching us to realise ourselves—our Indianness in all its sweetness and nobility and truth and profundity—through Art deserve the best gratitude of the nation

EARLY RECOLLECTIONS

BY NAGENDRANATH GUPTA

III

KING EDWARD IN CALCUTTA

THE first time I saw Calcutta was at the end of 1875, when King Edward VII then Prince of Wales visited India. My farther had to go to Patna where the Prince was to hold a Darbar but he permitted me to join a party proceeding to Calcutta. We arrived in the metropolis on the same day that the Prince landed at Prinsep Ghat from the troopship *Serapis*. I remember how the first sight of the great city impressed me from the Howrah side of the Hugly and how my feeling of wonder grew as I drove through the crowded streets to the northern part of the city. Calcutta was *en fete* on account of the Royal visit and there was a great rush of visitors to the city. Our first move after leaving our luggage and taking some food was to Theatre Road where a house had been taken for the Maharajkumar of Betiah who wanted to see the grand sights in Calcutta and then proceed to Patna for the Darbar. The Bengali tutor of the young nobleman knew us and he was to get for us permits to visit the *Serapis* and the *Osborne*, the Royal yacht that was accompanying the troopship, and the palace grounds and menagerie of the ex king of Oudh at Metiabury, Garden Reach. As we were sitting with the tutor the Maharajkumar rolled in. He was an enormously stout boy of about eighteen gorgeously dressed in brocade robes, and was about to go out somewhere. We left with the permits in our pockets. We witnessed the magnificent display of fireworks by Messrs. Brock & Sons, the famous pyrotechnists of Crystal Palace, London, on the maidan. On the night of the illuminations we engaged a hackney carriage but were held up at Lalbazar a little beyond the Police Court. There were long queues of carriages of all kinds on the main roads leading to Chowringhee, for the police barred the roadheads and no carriage could be let through until the Royal procession had passed. We left our carriage and slowly

worked our way through the press of humanity on the footpaths round the Great Eastern Hotel to the Esplanade junction, which offered a fine vantage ground. There were no staring unwinking electric lights in those days. Coloured lamps of blown glass were twinkling in the more pretentious buildings, while the humble *chirag* was flickering elsewhere. Gas lights were used at the entrances of houses and in some of the arches on the roads. On the roof of the Museum which had not been quite completed was a silver canopy reflecting dazzlingly a powerful light that was being played upon it. Chowringhee Road was kept clear by troops and the police. Slowly the procession came in view passing northward from the southern end of Chowringhee. First came an escort of British Hussars followed by the full squadron of the Viceroy's brilliant and stately Bodyguard with jingling spurs and nodding pennons of light lances held in rest. The Viceroy's State coach and four, with English outriders drew all eyes and cheers burst out as the Prince of Wales passed sitting by the side of Lord Northbrook the Viceroy. The two figures presented a striking contrast: the Prince, short of stature but of broad girth with a beard carefully trimmed and a full round and jovial face; the Viceroy, long and lean, pallid and austere looking. The prince was in uniform with gold lace and wore a gold-braided cap with a brim; the Viceroy was in plain civilian clothes. No one had any eyes for the carriages containing the Lieutenant Governor of Bengal and the British noblemen who had come out to India with the Prince of Wales. On another night I saw the Prince driving to the Seven Tanks Villa at Belgachia, where the Indian gentry had arranged an entertainment for him. The Prince drove along Cornwallis Street and the route through which he passed was illuminated.

The Visit to the *Serapis* and the *Osborne* marked a red letter day in my calendar. I had never seen a steamer, let alone an

immense troopship like the *Scrapis* and I do not think another yacht like the *Osborne* has ever again been seen in any Indian harbour. The big liners and the floating palaces that are now seen belong to another type. An intelligent and courteous sailor showed us over the *Scrapis*, and the size and dimensions of the monster vessel filled me with amazement. The big engine room was like a great underground cavern dark and silent though the fire had not been drawn and was glowing in the furnaces like the eyes of a gigantic afrit. I imagined that when the huge piston rods and the machinery were set in motion they must resemble the gambols of the jinn of the Arabian Nights. The *Olorne* was as big as a fair-sized steamer and as both she and the *Scrapis* were painted white from the plimsoll line upwards they could be easily distinguished from the other vessels lying at anchor in the river. The Royal yacht was a thing of beauty and a joy to the beholder, upholstered and furnished in perfect taste with a beautiful and harmonious blending of sober colours. The cushions and linens were embossed with the Royal Arms and bore the monogram A & V (Albert and Victoria). The *Osborne* was built in the lifetime of the Prince Consort.

The public were not admitted into the grounds of the ex-king of Oudh except for a single day in the year but in honour of the visit of the Prince of Wales to Calcutta the grounds were thrown open to the public for three days but passes had to be obtained for admission. There was a large number of visitors on the day that we went to Garden Reach. There were four or five palaces and the ex-king divided his time between these mansions. Only part of one palace was shown to the visitors and we saw some gorgeous furniture and large collection of curios. The palace occupied by the ex-king at that time was indicated by a cloud of pigeons circling over it. Wajid Ali Shah was very fond of watching the flight of pigeons and there were several thousands of them. They were so well trained that when one of the keepers waved a flag over his head the pigeons came fluttering down and settled on the ground. A few minutes later another flag was waved and the birds rose in a body and resumed their circling flight.

When we passed near the palaces the ladies of the harem peeped shyly from

behind the venetians. There was a large collection of wild animals kept in good condition. I was particularly struck by a number of pigeons occupying the same large cage as a cat. They were on the friendliest terms. The cat was mewing and purring and moving about the cage among the pigeons while one of the birds would sometimes perch on the back of the cat without a trace of fear.

With the passing of Wajid Ali Shah the glory of Mafia Buriy has departed. The palaces and grounds have become the sites of jute mills, and the magnificence of the dethroned and exiled king is now only a memory.

WAJID ALI SHAH

Wajid Ali Shah was the last reigning king of Oudh. He has left sons but he was the last ruler of the dynasty of which the founder Sabdar Jang lies buried in Delhi in a splendid mausoleum beyond Raisina on the way to Kutub Minar. Owning nominal allegiance to the Moghul Emperor at Delhi the kings of Oudh were virtually independent sovereigns, but they ceased to be vigorous rulers in a few generations. The corrosive canker of luxury which was eating into the vitals of the Moghul capital at Delhi rapidly extended to Lucknow and the city became the last word in effeminacy. Wajid Ali Shah was a feeble ruler who could scarcely hold the reins of a kingdom, but he was not without accomplishments in the gentler graces. He was an excellent musician and a fine dancer, and he was reputed to be the author of an opera called *Indra Sabha*. The language of the play is Hindustani, but it contains some beautiful Hindi songs. There is one about the Hori (Holi) that I can recall even now. "*Pan lagon lara jori, mouse jhelo na hori*—a Gopi is saying to Krishna, 'I bow down at your feet with folded hands, do not play hori with me.' Wajid Ali Shah was the composer of the well known tune known as *Lucknow thoomri*. He was so enamoured of his own invention that he set to this lively tune a tragic song that he had composed of his deposition from the throne. "*Angrez bahadur sulam lia mera mal mulla sub loot lia*—the brave British have committed an act of oppression, they have looted my treasure and kingdom." It were as if a funeral threnody had been set to jazz music. It is said—I repeat the story as it

used to be told—that when the British troops forced their way into the king's palace at Lucknow to remove him as a State prisoner to Calcutta Wajid Ali Shah was sitting on his bed and wanted to come out of the room when he heard the outcry of the women and the servants. But he discovered to his consternation that his slippers were not properly arranged and it would be necessary to turn them before he could put them on. He shouted for his servants but they were already under arrest, and when the political and military officers entered the room they found the king sitting helplessly on his bed because it had never occurred to him that he could turn his slippers and put them on himself.

I saw Wajid Ali Shah once later on in Calcutta. It was the last day of the Durga Puja and the ex king had come out of his seclusion to see the images of the goddess being carried to the river. I had a good look at him while he drove slowly in a large brouche escorted by a nondescript troop of bodyguards riding indifferently on horses. Wajid Ali Shah was placidly smoking his hookah while behind him on the syces' seat sat his *hookaburda* (hookah carrier), holding the hookah. The ex king was an old man but very well preserved and fair as a ripe mango (to use an admirable Bengali idiom). I looked at fallen Majesty and pondered over the gyrations of the whirligig of Time.

THE DUKE OF CONNAUGHT

When the Duke of Connaught first came to Calcutta on his way upcountry to join his appointment in the army at Meerut he had a warm reception. There were some illuminations and decorations although not on a lavish scale. I was standing outside the Presidency College when the Duke passed one afternoon and the students and the populace cheered him. In acknowledgment of the plaudits the Duke took off his hat and waved it. I saw him and the Dukeless again at the Lahore railway station. The third time I saw him at Karachi where he laid the foundation stone of the Victoria Museum. I was then a Municipal Commissioner of Karachi and along with the other Municipal Commissioners received the Duke of Connaught on his arrival with the Commissioner in Sind. After performing the ceremony the Duke read out with very

clear enunciation a short speech which was afterwards handed to me for publication. It was written on an ordinary note-paper in a clear, bold hand and I noticed that the strokes and lines of the letters were heavy. At that time the Duke was Commander in Chief of Bombay with a seat on the Governor's Council. I saw the Duke of Connaught for the last time in Bombay when he came out to open the new Legislatures on behalf of the King Emperor. I happened to be passing by and saw the silent procession passing along deserted streets. The young Prince I had seen in Calcutta had aged with the years while the manner in which his last visit to India was ignored by the people presented a melancholy contrast to the warmth of the reception given to him on his first visit.

OWEN MEREDITH

Lord Northbrook was succeeded as Viceroy and Governor General of India by Lord Lytton the son of Bulwer Lytton the famous novelist. Lord Lytton did not come out to India with a great reputation as a statesman or an administrator and he created a good deal of dissatisfaction in this country by his hurried passing of the Vernacular Press Act. He presided at the Delhi Durbar on January 1st, 1877 when Queen Victoria was proclaimed Empress of India. Lord Lytton was the author of a number of poems which he wrote under the *nom de plume* of Owen Meredith in imitation of the style and manner of Tennyson but he did not achieve literary distinction. I saw him for the first time at Wilson's Circus in the Calcutta maidan but I had a closer view of him on another night in the Town Hall. There was a conversazione arranged by the Mahomedan Literary Society of which Nawab Abdul Latif, Police Magistrate of Calcutta, was the Honorary Secretary. Lord Lytton came up to a table near which I was standing watching some interesting chemical experiments by Dr Tara Prasanna Ray, Chemical Analyst to the Government of Bengal. Lord Lytton affected slightly the Bohemian manner of the man of letters and his hair instead of being parted or brushed was roughly tousled on his head.

DR. ATKARAM PANDURANG

Dr. Atkaram Pandurang was a well known medical practitioner of Bombay a

used to be told—that when the British troops forced their way into the king's palace at Lucknow, to remove him as a State prisoner to Calcutta, Wajid Ali Shah was sitting on his bed and wanted to come out of the room when he heard the outcry of the women and the servants. But he discovered to his consternation that his slippers were not properly arranged and it would be necessary to turn them before he could put them on. He shouted for his servants, but they were already under arrest, and when the political and military officers entered the room they found the king sitting helplessly on his bed, because it had never occurred to him that he could turn his slippers and put them on himself.

I saw Wajid Ali Shah once later on in Calcutta. It was the last day of the Durga Pujah and the ex king had come out of his seclusion to see the images of the goddess being carried to the river. I had a good look at him while he drove slowly in a large barouche escorted by a nondescript troop of bodyguards riding indifferent horses. Wajid Ali Shah was placidly smoking his hookah, while behind him on the 'syces' seat, sat his *hookaburdar* (hookah carrier), holding the hookah. The ex king was an old man, but very well preserved and fair as a ripe mango (to use an admirable Bengali idiom). I looked at fallen Majesty and pondered over the gyrations of the whirling of Time.

THE DUKE OF CONNAUGHT

When the Duke of Connaught first came to Calcutta on his way upcountry to join his appointment in the army at Meerut he had a warm reception. There were some illuminations and decorations although not on a lavish scale. I was standing outside the Presidency College when the Duke passed one afternoon and the students and the populace cheered him. In acknowledgment of the plaudits the Duke took off his hat and waved it. I saw him and the Duchess again at the Lahore railway station. The third time I saw him at Karachi, where he laid the foundation stone of the Victoria Museum. I was then a Municipal Commissioner of Karachi and along with the other Municipal Commissioners received the Duke of Connaught on his arrival with the Commissioner in Sind. After performing the ceremony the Duke read out with very

clear enunciation a short speech, which was afterwards handed to me for publication. It was written on an ordinary note paper in a clear, bold hand, and I noticed that the strokes and lines of the letters were heavy. At that time the Duke was Commander-in-Chief of Bombay with a seal on the Governor's Council. I saw the Duke of Connaught for the last time in Bombay when he came out to open the new Legislatures on behalf of the King Emperor. I happened to be passing by and saw the silent procession passing along deserted streets. The young Prince I had seen in Calcutta had aged with the years, while the manner in which his last visit to India was ignored by the people presented a melancholy contrast to the warmth of the reception given to him on his first visit.

OWEN MEREDITH

Lord Northbrook was succeeded as Viceroy and Governor-General of India by Lord Lytton the son of Bulwer Lytton, the famous novelist. Lord Lytton did not come out to India with a great reputation as a statesman or an administrator, and he created a good deal of dissatisfaction in this country by his hurried passing of the Vernacular Press Act. He presided at the Delhi Durbar on January 1st, 1877, when Queen Victoria was proclaimed Empress of India. Lord Lytton was the author of a number of poems which he wrote under the *nom de plume* of Owen Meredith in imitation of the style and manner of Tennyson, but he did not achieve literary distinction. I saw him for the first time at Wilson's Circus in the Calcutta maidan but I had a closer view of him on another night in the Town Hall. There was a conversation arranged by the Mahomedan Literary Society of which Nawab Abdul Lahif Police Magistrate of Calcutta, was the Honorary Secretary. Lord Lytton came up to a table near which I was standing watching some interesting chemical experiments by Dr Tara Prasanna Ray, Chemical Analyser to the Government of Bengal. Lord Lytton affected slightly the Bohemian manner of the man of letters and his hair, instead of being parted or brushed, was roughly tousled on his head.

DR ATMARAM PANDURANG

Dr Atmaram Pandurang was a well-known medical practitioner of Bombay, a

leading citizen and was at one time appointed Sheriff of Bombay. He was a social reformer and a member of the Prarthana Samaj. One of his daughters married an Englishman a missionary of the name of Littledale. Dr. Atmaram was a great friend of Satyendranath Tagore in Bombay and a man of considerable culture. I once saw him in Calcutta at the Albert Hall where a reception was held in his honour. He was a fair man somewhat below the medium height, with a pleasing and benevolent expression on his face and bore some resemblance to Ramtann Lahiri. He was dressed as a Deccani and was wearing a *dhoti* and Deccani shoes with a Poona turban on his head. He made a short speech in simple and graceful English. One of his sons Mr. Ramchand Atmaram is my neighbour at Bandra. He reads Bengali and is a great admirer of Ramkrishna Paramahansa and Swami Vivekananda whose Works and Life he keeps in his library. He has given Bengali names to his sons one of whom is named Rabindran.

THE THREE PEDESTRIANS

Towards the beginning of the eighth decade of the nineteenth century several well-known people in Calcutta were in the habit of taking a morning constitutional on the streets or along the riverside. On the Cornwallis Street between Mookhtaram Bazar Street and Grey Street the most familiar figures seen every morning were those of Dr. (afterwards Raja) Rajendra Lal Mitra, Kristo Das Pal and Raja Digambar Mitra. The two first were constant companions while the third was occasionally Maharaja Durga Charan Law. The dress was the *chapan* and pantaloons with the head either bare or covered by a cap or puggree. Rajendra Lal Mitra was always well and carefully dressed while Kristo Das Pal was the reverse. They were good sized upstanding men and would have attracted attention even if their identity were unknown but of course every one in Calcutta knew them by sight. They used to walk abreast along the street, never availing themselves of the footpath. It was interesting to watch them pass by. Rajendra Lal Mitra was hard of hearing and Kristo Das Pal had a stentorian voice which could be heard some hundreds of yards away. The conversation was usually about high politics. Once I heard Kristo Das Pal discussing the Rent Bill with Dr.

Rajendra Lal Mitra and I could hear every word from the footpath. I doubt whether such a trio has been seen in the streets of Calcutta after the passing of these distinguished men.

THE VERNACULAR PRESS ACT

I was in Calcutta in 1878 when Lord Lytton's Vernacular Press Act was passed. Sir Ashley Eden was Lieutenant Governor of Bengal and he was the real author of the measure. The genesis of the Act may be given in a few words. Sir Ashley Eden was the personification of a paternal Government, and he resented the criticism in the Indian section of the Press. The chief offender was the *Amrita Bazar Patrika* which was at that time a bilingual paper part English and part Bengali. Sir Ashley Eden sent for Sisir Kumar Ghose the renowned editor of the *Patrika* and told him that the constant criticism of the Government in the Indian Press must cease. I find no difficulty he said in getting on with Kristo Das Pal (the Editor of the *Hindoo Patriot*). If you have any grievance you can come and see me at any time you like and if it is a just grievance I shall see that things are put right. But the Government cannot tolerate these repeated attacks on their officers. Sisir Kumar Ghose did not fall in with the views of Sir Ashley Eden and the result was that the Government launched their thunderbolt. The Vernacular Press Bill was galloped through the Governor-General's Legislative Council in a week, and another week was allowed for the Act to come into operation. So far as I can remember Maharaja Sir Jotindra Mohun Tagore was the only Indian member in the Council and he did not have the temerity to vote against the Bill. The *Amrita Bazar Patrika* circumvented the gagging Act with admirable resourcefulness and adroitness. In the week's grace given by the new Act it shed the Bengali portion of its garb and the next number was all English from cover to cover so that the paper became at once outside the scope of the new law. The big game that Sir Ashley Eden wanted to bag was undoubtedly the *Amrita Bazar Patrika* but his shot missed fire and the laugh was against him. There was a protest meeting against the Vernacular Press Act in the Calcutta Town Hall and I heard Surendranath Banerjee for the first time thundering again.

the iniquity of that measure I heard kristol Bas Pal also at another meeting and I was greatly impressed by his powers as a debater. There was no claptrap, no perfervid rhetoric but he marshalled his facts and figures with consummate skill while the steady flow of his balanced speech was full of dignity and eloquence.

CALCUTTA THEN AND NOW

Fifty years ago Calcutta was a very different city from what it is now. The streets were ill lighted, many streets had no footpaths, the lanes were mostly filthy and the huts were an eyesore everywhere. There were open drains and ditches in many places, stagnant ponds and pools covered with water hyacinth and surrounded by a dense undergrowth were common sights and jackals had their lairs behind many houses. Snakes were by no means rare and once I

saw a large cobra which was killed in Masjid Bari Street. In the afternoons and evenings tall columns of mosquitoes buzzed overhead if one happened to be out for an airing in any of the gardens. And now Calcutta is the best lighted and the cleanest city in India. The Municipal Market is one of the finest markets in the world while the large and well arranged markets that are springing up in every part of the city form one of the most attractive features of Calcutta. No less satisfactory is the public health of the city. The Chittaranjan Avenue, the Harrison Road, the Red Road, the widened Rossa Road are magnificent main arteries of public thoroughfare while the Improvement Trust is busy changing Calcutta almost out of recognition. The Chitpore Road alone stands as a relic of old Calcutta though its widening is essential for the safety of traffic and the opening up of congested areas.

7 A THEISTIC INTERPRETATION OF SANKHYA PHILOSOPHY

EXTERNAL EVIDENCES

III

By PROF ABHAY KUMAR MAJUMDAR

(a) The Yoga Philosophy

LET us now turn to the Yoga Sūtram of Patañjali. This system of philosophy is admitted on all hands to be the most important supplement to the Sankhya System and is regarded also as a Sankhya Philosophy. For instance, it is said by the great sage Vasistha (see the Santiparva of the Mahabharata, chap. 30b) that "That which the Yogins behold is exactly what the Sankhyas strive after to attain. He who sees the Sankhya and the Yoga Systems to be one and the same is said to be gifted with intelligence. The same view is repeated in chap. 3f7. Verily the precepts that have been explained in the Sankhya treatises are at one with what have been laid down in the Yoga scripture. The same thing is said by the great sage Yagnyavalkya (see chap. 31b). There is no knowledge like that of the Sankhyas. There is no power like that of Yoga. These two prescribe the same practices and ought to be remembered as immortal or as destroyer of death. Those men who are not intelligent consider the Sankhya and the Yoga Systems to be different from each other. We, however, O king, certainly regard them as one and the same. What the Yogins have in view is

the very same which the Sankhyas also have in view. He who sees both the Sankhya and the Yoga systems to be one and the same is to be considered as conversant with the truth. It is therefore needless to add that thorough knowledge of the Yoga Philosophy is an indispensable requisite for the proper understanding of the Sankhya System. The elaborate commentary of Yoga Sūtram by Vyasa is generally recognised to be an invaluable and not only to an accurate and thorough comprehension of it but also of the Sankhya System as a whole. And some regard that commentary as the best one. The Patanjala Darśana is generally called the *Saiva Sankhya* i.e. the *theistic Sankhya*, to distinguish it from the *Avastara Sankhya* i.e. the *atheistic Sankhya*. But it is difficult to understand the reasons for such a distinction for we have already shown conclusively that Kapila's Sankhya is not *atheistic*, and the texts quoted above from the Mahabharata also show that there is no distinction between the Sankhya and the Yoga—they teach the same precepts. Perhaps the reasons are these that such a distinction is either due to the misleading and erroneous interpretations of some aphorisms of the Sankhya Pravachana Sūtram which we have already dis-

cussed or to the fact that in Kapila's Sankhya Isvara has not been recognised as necessary for the liberation of the human soul of purusa, which is the primary theme but in Patanjali's Sankhya (i.e. the Yoga Sutra) such recognition has been explicitly and emphatically made. Therefore by 'Nirishvara Sankhya' we should mean if we accept the phrase that which does not recognise the need of Isvara for the liberation of the human soul and by 'seshvara sankhya' that which recognises such need. In several places the Patanjala Darsana emphasises such a need we are now going to consider them.

(1) Or by virtue of the worship of Isvara with a special kind of devotion meditation and its results can be attained within a shorter time. (2) Who is that Isvara over and above Prakriti and Purusa? (3) Isvara is that particular Purusa who is untouched by the vehicles of affliction action and fruition or eternally free from pains actions fruits of actions and the desires or instincts arising therefrom. Here mark the phrase *Purusa visesa* i.e. that Particular Purusa. Vyasa comments upon it in this way (The significance of calling Isvara that particular Purusa) is that there are many liberated Souls who have attained liberation by freeing themselves from the three kinds of Bondage, but Isvara is not like them for He had no such Bondage before nor will have it in the future liberation implies that there was bondage before but no such Bondage was possible for him—He never had any Bondage. Moreover those Purusas who become absorbed into Prakriti attain some sort of liberation from pains etc. but they too return to a state of Bondage but that is not possible for Isvara—He is eternally free and established in himself. (4) In Him the seed of the omniscient is not exceeded. (5) He is the Teacher of the Ancients too not being limited by time' (Samadhipada, aphs. 23-27). There is reference to Isvara in other aphorisms also as for instance in the aphs. 1 & 32 of Samadhi Pada and in the aph. 6 of Bibhuti Pada but they need not be quoted here. The aphorisms quoted above are sufficient to show that Patanjala Darsana recognises the existence and the need of Isvara for the liberation of the human souls it is also evident that it recognises two kinds of Purusa—the Absolute Purusa and the Individual Purusa. What is the relation between these two kinds of Purusa we shall consider in the sequel. But it should be noticed here that the Patanjala does not assert that Isvara is indispensably necessary for the liberation of the human souls but only that worship of Him with special devotion helps them to attain liberation within a short time. Mark the word *vaire* or which signifies that there are other means to liberation of which worship of Isvara is one. In this connexion read specially the aphs. 21 & 22 of the same Pada. Thus really there is not much difference between the Sankhya and the Patanjala in this respect.

(The Mahabharata)

A very good account of the Sankhya Philosophy is found in the chavs. 31-318 of the Santiparva of the Mahabharata. In chap. 301 the Sankhya System is extolled in a very much elevated tone and the Sankhya knowledge is described in

very eloquent words and even identified with the Brahman Himself. Let me quote those verses.

The Sankhyas O King are lifted with great wisdom. They attain the highest end by means of this kind of knowledge. There is no other knowledge that is equal to this. About that the knowledge described in the Sankhya is considered as the highest, you must not entertain any doubt. That knowledge is said to be immutable, eternal and the perfect Brahman itself. It has no beginning middle and end it is above all dispute and the eternal cause of the universe it stands fully and without decrease of any kind it is uniform and everlasting. Thus are its praises recited by the wise. The Srutis say O son of Kunti that the Sankhya System is the form of that Formless One. It is said O Bharata, that the knowledge taught by the Sankhya is the knowledge as taught by the Brahman. It is high knowledge O King which is in persons conversant with the Brahman and that which is in the Vedas and that which is seen in other scriptures and that in yoga and that which may be seen in the various Puranas are all O monarch derived from the Sankhya Philosophy. Whatever knowledge is seen to exist in great histories whatever knowledge is O King in the science of Economics as approved by the wise, whatever other knowledge exists in this world—all these originate O great King from the high knowledge that is found in the Sankhya Philosophy.

From the verses quoted above it is manifest that far from denying the existence of the Brahman or Isvara the Sankhya System identifies the knowledge described in it with Him and declares itself as the very form of Him, even the knowledge as exists in the Vedas which are admittedly theistic is described to be derived from the Sankhya System. This is further confirmed by the following verses embodying what the great sage Vasistha said. Above the twenty-four categories already referred to is the twenty-fifth called Vishnu (or Isvara). That Vishnu on account of the absence of all *gunas* is not a category though as that which permeates all the categories. He has been called so by the wise. The Unmanifest Twenty-fourth (i.e. Prakriti) caused all that are mortal and manifest and exists in the *r* forms or bodies. But the Twenty-fifth (i.e. Purusa) is formless. Though a Soul He exists in all hearts and in all forms. He is free conscious eternal and though himself formless assumes all forms. Uniting with Prakriti which is the cause of creation and absorption He also assumes the agency of creation and absorption. And on account of such union He who is eternal exists in time and though in reality shorn of all *gunas* yet comes to be invested therewith. It is in this way that the Great Soul through *ig* orance thinks Himself the cause of creation and destruction (really absorption) changeless and identical with Prakriti (Chap. 301 Vers. 33-42). In these verses it is evidently admitted that Purusa who is described to be the twenty-fifth category or principle is really Vishnu or Isvara for He is not in reality a category. He exists in all hearts and forms not in a particular heart or form only. He assumes all forms and the agency of creation and absorption. Thus it is declared that the individualised purusas or the human beings are not in but the Absolute Purusa or Brahman connected with different investments

and acting at different finite centres in different ways. This last fact is very clearly explained by an analogy in the following verse declared to be the saying of the same great sage Vasistha.

As the worm that makes the cocoon binds itself completely on all sides by means of the threads it itself weaves so the Absolute Purusa, though really above all the *gunas*, invests Himself on all sides with them. (Chap 303 ver 4)

Let us also consider what the same great sage Vasistha says in the following verses in which the existence of the Absolute Purusa or Isvara is more explicitly admitted. When the individual Purusa comes to think those *gunas* as belonging to Prakriti then only on account of his conquering them he sees the Absolute Purusa or Isvara (Chap 303 ver 3). Again When one begins to study and understand properly the twenty five categories or principles one then understands that the oneness of Purusa is consistent with the scripture (the Sankhya System) and his multiplicity is opposed to it. These are the separate characteristics of the categories or principles and what is above and beyond them the wise have said that the categories or principles are the twenty five evolutes, what is not an evolute or what is above and beyond the evolutes is the twenty sixth i.e. the Absolute Purusa or Brahman or Isvara. The twenty five evolutes are called categories or principles and what is beyond them is the eternal Isvara. (Vide vers 37 38 39) It should be noticed here that even the twenty fifth category called Purusa (i.e. the individual Purusa) is also regarded as an evolute while he has been said before to be identical in essence, with the Absolute Purusa. The discrepancy is apparent only for the individual Purusa being the Absolute Purusa in so far as He is invested with the three *gunas* he may be viewed from two standpoints in so far as he is individualised he may be regarded as an evolute and in so far as he is viewed as apart from and shorn of that investment he is one and the same with the Absolute Purusa. The identity between the individual and the Absolute Purusa is more explicitly stated in these verses. The Supreme Soul alone is my friend I can make friendship with Him. Whatever be my nature and whatever I may be I am capable of being like Him and can become at one with him. I see my similarity with Him. I am indeed like Him. He is pure. It is clear that I am of the same nature. (Chap 307 vers 26 27)

The same thing we find in the conversation between the great sage Yajuravalkya and Janaka about the Sankhya Philosophy. For instance.

The Unmanifest Isvara transforms Himself diversely the inner Soul by Himself into hundreds and thousands and millions and millions of forms. (Chap 314 ver 2) Again O Kasisapa, if one conceptually reflects on the nature of the individual Soul and its connexion with the Supreme Soul he then succeeds in divesting him of the three kinds of pain and in seeing the Supreme Soul. The Eternal and Unmanifest Supreme Soul is considered by men of little understanding as distinct from the Individual Soul. But the wise see both of them as truly one and the same. Enlightened by repeated births and deaths the Sankhyas and Yogins consider the Individual Soul and the Supreme Soul to be one and the same. (Chap 318 vers 50-51)

From the above it is most plain that the Sankhya System admits the existence of the Absolute Purusa or Isvara. But in one verse it seems to cast some doubt upon that inference. That verse is this. In the Sankhya System no category or principle above the twenty fifth is admitted. That which the Sankhyas consider as their highest principle has been duly described (by me). In the Yoga System it is said that Brahman which is the very essence of knowledge becomes the Individual Purusa only when invested with ignorance. In the Yoga Scriptures therefore both the Brahman and the Individual Purusa are spoken of. (Chap 307 vers 4 & 16). It is here positively asserted that the Sankhya System does not recognise the existence of any other principle above and beyond the Individual Purusa. It is only the Yoga System which does so positively. But we have already shown that in numerous other verses it is clearly admitted that the Sankhya System recognises the existence of the twenty fifth principle called Brahman or Isvara. How can we then reconcile these two contradictory assertions? The reconciliation is possible in many ways. In the first place the true reading of the verse may be different in the second place it may be an interpolation in the third place it is not wholly inconsistent with the verses previously cited. This verse may mean that the Twenty fifth (i.e. Purusa) is the highest category or principle and what is above and beyond it is not a category and is called by a different name to wit Brahman or Isvara and therefore if the Sankhyas do not read a category in addition to the twenty five no inconsistency will be committed by it. Moreover having regard to the fact that all the categories or principles (even the Individual Purusa) are evolutes or manifestations of the Supreme Purusa, as has been distinctly stated in the preceding verses it is no fault with the Sankhya System if it omits to enumerate the latter as a category or principle. Again it has been distinctly said in the previous verses that the Individual Purusa who is the twenty fifth category is none but the Supreme Purusa as invested with the three *gunas* and that he is therefore able to be one and the same with the latter after casting off that investment now after stating all these facts if the Sankhya on its to mention the name of the Supreme Purusa an additional category or principle there is not much fault with it still less does it involve any inconsistency in its assertions. Still again it should be remembered that in the previous verses it has been repeatedly and emphatically said that the Sankhya and the Yoga systems are one and the same that is whatever is taught by the one is also taught by the other but the Yoga System speaks of the Supreme Purusa and this is sufficient to show that even though the Sankhya System does not directly speak of Him (which is not true as we have shown before) it at least indirectly does so and still less does it deny or fail to recognise His existence. These considerations dispose of the apparent contradiction mentioned above.

(c) The Bhagavadgita

In the Second chapter of the Bhagavadgita which is a part of the Bhishmaparva of the Mahabharata the doctrine of the Sankhya philosophy with regard

The situation in China today is somewhat similar to what was happening during 1919-23 in Turkey under the leadership of Mustapha Kemal Pasha and his supporters then trying to uphold the National Pact of Turkey. It was Britain who then tried her best to destroy Turkey by aiding Greece and other anti-national forces openly and secretly. Turkey was saved from a war with Britain because France and Italy deliberately refused to side with Britain and Russia was ready to aid Turkey while the people of India, in spite of the opposition of the British government, started the movement in favor of Turkey. Britain changed her course in Turkey because of the international situation in Europe and to curry favor with the Indian Moslems. Turkey was united and this change of attitude on the part of Britain led to the real diplomatic victory at the Treaty of Lausanne.

What Turkey tried to do—getting rid of every vestige of Foreign control over Turkish affairs—China, the Nationalist China is trying to accomplish now for the Chinese people. China is unfortunate to have a Civil War and Britain is taking advantage of the situation. Britain can concentrate her formidable navy and army in China because her position in world politics is more favorable than what it was at the time of Britain's Turkish adventure. During the Imperial Conference, British statesmen took stock of Britain's strength in World Politics and found that America would be on their side. In Europe, all the important nations are somewhat subservient to Britain's foreign

policy, *except France and Soviet Russia*. Britain has taken care to tie the hands of France by entering into a closer understanding if not an alliance with Italy. It is the Italian navy and manpower that will protect British interests in the Mediterranean, in case Britain needs any assistance. Britain has no fear of Turkey or Russia as long as Italy, Rumania and Greece are willing to do her bidding. Britain now feels free, that she can muster her forces in the Orient. Britain is rather in haste to make a show of her strength because she feels that in case Japan, Russia and China come to an understanding even with American support she will not then be able to subjugate China.

Indians must not forget that they fought against the Germans and Turks during the World War to make the world safe for the British Empire and they have received their rewards in the form of the Amritsar Massacre, the Rowlatt Act and discrimination against Indians in the very African territories which they protected for the British Empire, and above all it had been decided by the Imperial Conference that India will not enjoy equal status with the dominions. Why should the Indians fight for British militarism, Imperialism and anti-Asianism? Mahatma Gandhi once recruited for the British during the World War; the time has come for him and others to preach that no Indians but traitors to the cause of Indian freedom and Asian Independence and Racial Equality should fight for the British against China or any other nation.

"twenty one demands" in 1915 were a grievous mistake, she has on her side a good many complaints to voice against the way China has treated her. But let bygones be bygones. China and Japan, admittedly the leading nations in Asia, should not go on squabbling. They should, by harmonious co-operation and interdependence, inspire other Asiatic peoples.

The first requisite in establishing Sino-Japanese relationship upon a solid foundation is recognition on both sides of the plain yet often ignored fact that it takes two to make friendship. Japan alone cannot establish friendly relations with China any more than China alone can establish such relations with Japan. Each must respond to and reciprocate the good will of the other.

Then there must be a sincere desire on either side to understand and sympathize with the difficulties and problems of the other. Such understanding and such sympathies naturally create a wish to help each other. At the bottom of it all is the question of sincerity. Without sincerity no two nations can be friends.

If China and Japan act upon these fundamental truths there is little reason why they cannot adopt a common policy of mutual helpfulness—why they should not inaugurate something of a regional understanding, to avoid the historically unsavory term of alliance.

First, let us see how China may help Japan. Everybody knows that of all modern industrial nations Japan is the most unfortunate. The country, already overcrowded, has to provide for a population increasing at a rate of 800,000 a year. More and more she has to rely upon foreign food supply. To add to her predicament, she is destitute of raw materials essential to modern industry. She has no colony where she may send emigrants, or where she may obtain raw materials.

If China appreciates and sympathizes with this plight on the part of Japan who is in a position to help the Japanese. China's territories are not merely vast but have enormous and varied resources in store. Some of these territories are still untouched by either the plough or the axe let alone the locomotive or the power engine. China has almost everything that Japan needs and has not, except perhaps oil.

How, then, should China help in this

respect? To answer this question—to present definite and detailed plans of how China may help alleviate Japan's economic predicament is not my province. I wish only to point the way. Those who have made a special study of the matter know how difficult it is for the Japanese to launch any important enterprise even in South Manchuria under the present arrangement, or rather lack of arrangement. The Japanese are not even allowed to engage in farming across the Korean border.

If China had a genuine desire to help Japan in solving the pressing problem of overpopulation and lack of raw materials, the ways and means could easily be found. The essential thing is as I have said, sympathy and sincerity.

I presume that British and American "liberals" will criticize, even condemn, Japanese enterprise in Manchuria as imperialistic. A Bertrand Russell, a H. G. Wells, a John Dewey or a George Bernard Shaw would have a good many things to say against Japanese aggression. These liberals seem to have forgotten that their own Governments were not so long ago busily engaged in the happy game of landgrabbing. Now that their territories are so vast and so full of resources they look down from the Olympian heights of Mammon upon unfortunate peoples whose economic plight they so utterly fail to understand as to offer them birth control or pacifism as the remedy. Let them be born and live in a country where the people are compelled to go abroad to find food and clothing, coal and iron, wool and cotton and what not, and they will understand a little better. The millionaire however charitable and benevolent and liberal, can never divest himself of the psychology of the rich, which makes it wellnigh impossible really to understand the poor. This is what I think when I hear British or American liberals upbraid what they call Japanese aggression.

Now let us see how Japan may serve China. I wish our high batted, kid-gloved diplomats had the wit to see the importance and necessity of entering into immediate negotiations for the purpose of inaugurating new diplomatic relations with China upon a basis of equality. Perhaps some of them do have the wit. Foreign Minister Shidehara says that his Government is prepared to enter into such negotiations whenever China has evolved

to the true nature of the human soul and its relation to the Supreme Soul is clearly described. Let us now consider those verses wherein that doctrine is expounded. This Soul cannot be cut into pieces cannot be burnt cannot be moistened and dried up it is eternal all pervasive immovable unchangeable without beginning unmanifest, unthinkable and superensible (Ver 24) Such a description as this is appropriate only for the Supreme Soul for only the Supreme Soul is truly all pervasive while the individual Soul is connected with only a particular investment (i.e. the body and its adjuncts) (verse 24) and this interpretation is confirmed by the following. This Soul which is present in the bodies of all creatures is always indestructible for this reason you should not O Bharata lament their death (Ver 30). Along with this read also the verse 17— know that Soul by which the universe is pervaded to be indestructible none is able to destroy it which is not capable of any increase and decrease. It should be noticed here that the commentators like Sankara and others agree that the terms *tat* and *yena* refer to Brahman or the Supreme Soul. In the last verse of that chapter the whole thing has been made completely clear. That verse is this. O Partha such is the rest in Brahman and he who attains that state does not get again into the bewilderment of the world he who rests in Him even at the time of death attains complete union with Him (Ver 72). Similar verses are met with also in the thirteenth chapter for instance. The Purusa (Soul) who exists in this body is said to be above and beyond Prakriti the seer sagacious and permissive the lord who enjoys the Supreme Isvara and the Supreme Soul (Ver 22). Similarly He sees an-*ant* who sees the Supreme Lord (Purusa) to be indestructible even in destructible things and to be existent equally in all things and beings (Ver 27). The following verses in the fourteenth chapter are more emphatic. Prakriti is my (i.e. of Isvara) womb wherein I throw my semen from that O Bharata spring all beings and things O son of Kunti of all those Prakriti is the mother for the material cause and I (i.e. Isvara) am the father (i.e. the efficient cause) of all the forms that are generated in all classes of things and beings. (Vers 3-5). Thus, according to the Bhagavad-gita also the Sankhya System acknowledges the existence of the Brahman or the Supreme Soul of whom the individual souls or purusas are only differentiations or individualised or specialised forms or in other words the individual purusas are *not* the Supreme Purusa or Brahman in so far as He is invested with the three *gunas*.

(d) The Bhagavat Purana

In the course of conversation between Kapila and his mother Devahuti about the Sankhya Doctrine as recorded in the Bhagavat Purana, we find a similar assertion with regard to the existence of Brahman or Isvara. Consider the following verses. "When the chitta becomes free of the impurities caused by lust, greed, etc., arising out of such consciousness as this is I that is mine, etc. and thereby becomes pure and remains undisturbed in both pleasure and pain then the individual Purusa is known the Supreme Purusa (Brahman or Isvara) who is above and beyond

Prakriti free from the three kinds of pain always self-revealing subtle indivisible with a mind filled with wisdom dispassion and devotion and he indifferently sees also Prakriti who has now become powerless (Skanda 3 chap 20 vers 15-17). Consider also the following verses. Purusa is the infinite Soul which is divested of the three *gunas* above and beyond Prakriti supersensible self-revealing and by which the universe is manifested. That Purusa out of play only freely enjoys the subtle and divine Prakriti who possesses three *gunas* and is united with Him. Behold him who creates various self-like creatures. He at once becomes stupefied through ignorance. In this way, by thinking her as His self He comes to regard Himself as the performer of the actions which are really performed by the *gunas* belonging to her. On that account He who is not the agent but only the witness the lord and full of bliss comes to undergo the process of migration and to be put under bondage and subjection (Ibid chap 96 vers 3-7). In this connexion one thing should be carefully noticed. Prakriti has been called *divine* and Purusa has also been called *above and beyond* Prakriti. Sridhara Swami the eminent commentator of Bhagavad-gita makes the following remarks on those two words. On account of her possessing two different powers of covering and projecting Prakriti is of two kinds. By virtue of her capacity for covering she is the investment of the creatures (*jivas*) called *ignorance* and by virtue of her capacity for projection she is called *divine power*. On account of his having two distinct forms such as those of *jiva* (creature) and *Isvara* (the Supreme Soul) Purusa too is of two kinds. He is called a *jiva* when He migrates from body to body through His identification with Prakriti and He is called *Isvara* when He evolves the world by subduing Prakriti. The other commentators have not questioned the reasonableness of those remarks. Therefore they may be accepted as true. Now from those verses it is very plain that Isvara exists and that He is the real cause of the world while Prakriti is only His instrument and the individual Purusas (*jivas*) are none but Himself as invested with the three *gunas* through *ignorance*.

The following verses are more emphatic on the existence of Isvara. Those (twenty-four) categories or principles enumerated (by the wise) have been said by me to be the abode of the Brahman as qualified by the three *gunas* the twenty-fifth is called *kala*. Some say that *kala* is a power of Brahman or the Supreme Soul which causes dread in the mind of creatures that are confused by self-consciousness arising out of their connexion with Prakriti. Some others say that He who prompts Prakriti when her three *gunas* reach the state of equipoise, to creative activity is Isvara and is also called *kala*. Isvara may be defined to be that who, by His own supernatural power exists in the inside of all creatures as their guiding principle without being Himself touched by their affections and outside as *kala*. (Ibid vers. 14-17). The Upanishads which derive their metaphysics from the Sankhya, also further corroborate the fact that the Sankhya does not teach *agnosticism* at all but positively and emphatically admits and declares the existence of Isvara or God.

Summary of results After this long and

elaborate discussion that the Sankhya System preaches the non existence of Isvara or God or at least, the non existence of the proof of the existence of Him. We have shown that the real ground for such an impress on is the misinterpretation of some aphorisms in the Sankhya Pravachana Sutram and after giving their correct interpretation and adducing numerous other corroborative evidences we have come to the conclusion that the Sankhya Pravachana Sutram does not teach anything of the kind. But we have not rested content with merely negative evidences. We have

proceeded further and adduced many positive evidences both from the Sankhya Pravachana Sutram and especially from the Sankhya Karika the 10th Sutram the Mahabharata the Bhagabata Gita the Bhagbater Purana and the Upanishads which also speak of the Sankhya doctrine to show that the Sankhya positively affirms the existence of Isvara or God as one Absolute Purusa and also the existence of numberless individual Purusas as His modes moments or differentiations.

(Concluded)

ENGLANDS WAR AGAINST CHINA—A LESSON FOR INDIAN NATIONALISTS

By TARAKNATH DAS Ph D

THERE is no doubt, that from the standpoint of the practice of International Law England is in actual War with China, without formally declaring a war. In this war Indian soldiers are being used against Indian interests to fight China a sincere friend of the Indian nation.

We learn from the scraps of news that have been allowed to percolate through British news control that Indian Nationalists in the Indian Legislative Assembly and Indian Nationalist papers have protested against sending Indian troops to fight China. Of course the Indian nationalists have been told by the British Indian Government officials that the Foreign Relations and military and naval affairs of India are within the strict control of the Imperial Government and the people of India have nothing to say about them. They are to obey the orders, pay the bills for British Imperialist wars and allow the Indians to be used as British cannon fodder.

When the Locarno pact was signed it was pointed out by me that in case Britain got into trouble Russia with the support of her allies might attack India. I also had the occasion to point out that when the Singapore Naval base would be fully completed, and Britain would launch in some wars she would use Indian soldiers economic resources and strategic positions against some Asiatic nations, particularly Japan and China and possibly against Russia. This forecast

has come to its fulfilment earlier than I expected. Indian soldiers are sent to China as British watch dogs to fight against the Chinese people struggling to assert their national sovereignty.

In the last Imperial Conference India's position was definitely defined as inferior to that of the self governing dominions where the policy of anti Indianism and anti Asianism reigns supreme. It was decided that India would have no voice in the Foreign relations of the Empire while the Dominions would have the right to follow an independent foreign policy. If ever India wishes to assert her independence then Australia, New Zealand, Canada, South Africa will certainly make a common cause with England and oppose the people of India. Yet, when the anti Asianism of Britain and her partners in the Empire leads to a war against an Asian nation a friend of Indian aspiration it is the Indian slaves that are sent as advanced guards of the British Imperialistic forces. Is it for India's interest to submit to this kind of arrangement? If not what should be done to change the condition? Indian statesmen worthy of national leadership will have to devise means by which they will be able to put an end to the practice of the British authorities using Indian man power Indian resources Indian strategic position against Indian consent and against Indian interests and India will be sole arbiter of her external affairs.

The situation in China today is somewhat similar to what was happening during 1919-23 in Turkey, under the leadership of Mustapha Kemal Pasha and his supporters, then trying to uphold the National Pact of Turkey. It was Britain who then tried her best to destroy Turkey, by aiding Greece and other anti-national forces openly and secretly. Turkey was saved from a war with Britain, because France and Italy deliberately refused to side with Britain and Russia was ready to aid Turkey, while the people of India, in spite of the opposition of the British government, started the movement in favor of Turkey. Britain changed her course in Turkey because of the international situation in Europe and to curry favor with the Indian Moslems. Turkey was united and and this change of attitude on the part of Britain led to the real diplomatic victory at the Treaty of Lausanne.

What Turkey tried to do—getting rid of every vestige of Foreign control over Turkish affairs—China, the Nationalist China, is trying to accomplish now for the Chinese people. China is unfortunate to have a Civil War, and Britain is taking advantage of the situation. Britain can concentrate her formidable navy and army in China, because her position in world politics is more favourable than what it was at the time of Britain's Turkish adventure. During the Imperial Conference, British statesmen took stock of Britain's strength in World Politics and found that America would be on their side. In Europe all the important nations are somewhat subservient to Britain's foreign

policy, except France and Soviet Russia. Britain has taken care to tie the hands of France by entering into a closer understanding, if not an alliance, with Italy. It is the Italian navy and manpower that will protect British interests in the Mediterranean, in case Britain needs any assistance. Britain has no fear of Turkey or Russia, as long as Italy, Rumania and Greece are willing to do her bidding. Britain now feels free, that she can muster her forces in the Orient. Britain is rather in haste to make a show of her strength, because she feels that in case Japan, Russia and China come to an understanding, even with American support, she will not then be able to subjugate China.

Indians must not forget that they fought against the Germans and Turks during the World War, to make the world safe for the British Empire, and they have received their rewards in the form of the Amritsar Massacre, the Rowlatt Act, and discrimination against Indians in the very African territories which they protected for the British Empire, and, above all, it had been decided by the Imperial Conference that India will not enjoy equal status with the dominions. Why should the Indians fight for British militarism, Imperialism and anti-Asianism? Mahatma Gandhi once recruited for the British, during the World War, the time has come for him and others to preach that no Indians but traitors to the cause of Indian freedom and Asian Independence, and Racial Equality, should fight for the British against China or any other nation.

JAPAN SEEKS RE-ADJUSTMENT WITH CHINA

By K. K. KAWAKAMI

Author of "Japan In World Politics", etc

IT is a far cry from Washington to China. But the reason why I am writing this article is because I feel that a man, looking at the stirring events in China from this side of the Pacific, is in a position to take a detached and dispassionate view. A man who is in the midst of those events, is likely to miss the wood for the tree.

The first thought that comes to my mind

in observing the Chinese upheaval is that China and Japan should readjust their relationship upon a new basis. The present is the psychological moment to attain this end. Much to our regret, relations between the two countries in the past have been far from satisfactory. For this it is futile to blame either nation and entirely exonerate the other. Though Japan's celebrated

"twenty one demands" in 1915 were a grievous mistake, she has on her side a good many complaints to voice against the way China has treated her. But let bygones be bygones. China and Japan, admittedly the leading nations in Asia, should not go on squabbling. They should, by harmonious co-operation and interdependence, inspire other Asiatic peoples.

The first requisite in establishing Sino-Japanese relationship upon a solid foundation is recognition on both sides of the plain yet often ignored fact that it takes two to make friendship. Japan alone cannot establish friendly relations with China any more than China alone can establish such relations with Japan. Each must respond to and reciprocate the good will of the other.

Then there must be a sincere desire on either side to understand and sympathize with the difficulties and problems of the other. Such understanding and such sympathies naturally create a wish to help each other. At the bottom of it all is the question of sincerity. Without sincerity no two nations can be friends.

If China and Japan act upon these fundamental truths there is little reason why they cannot adopt a common policy of mutual helpfulness—why they should not inaugurate something of a 'regional understanding' to avoid the historically unsavory term of alliance.

First, let us see how China may help Japan. Everybody knows that of all modern industrial nations Japan is the most unfortunate. The country, already overcrowded, has to provide for a population increasing at a rate of £60,000 a year. More and more she has to rely upon foreign food supply. To add to her predicament, she is destitute of raw materials essential to modern industry. She has no colony where she may send emigrants, or where she may obtain raw materials.

If China appreciates and sympathizes with this plight on the part of Japan she is in a position to help the Japanese. China's territories are not merely vast but have enormous and varied resources in store. Some of these territories are still untouched by either the plough or the axe, let alone the locomotive or the power engine. China has almost everything that Japan needs and has not, except perhaps oil.

How, then, should China help in this

respect? To answer this question—to present definite and detailed plans of how China may help alleviate Japan's economic predicament is not my province. I wish only to point the way. Those who have made a special study of the matter know how difficult it is for the Japanese to launch any important enterprise even in South Manchuria under the present arrangement, or rather lack of arrangement. The Japanese are not even allowed to engage in farming across the Korean border.

If China had a genuine desire to help Japan in solving the pressing problem of overpopulation and lack of raw materials, the ways and means could easily be found. The essential thing is, as I have said, sympathy and sincerity.

I presume that British and American "liberals" will criticize, even condemn, Japanese enterprise in Manchuria as imperialistic. A Bertrand Russell, a H.G. Wells, a John Dewey or a George Bernard Shaw would have a good many things to say against Japanese aggression. These liberals seem to have forgotten that their own Governments were not so long ago busily engaged in the happy game of landgrabbing. Now that their territories are so vast and so full of resources, they look down from the Olympian heights of Mammon upon unfortunate peoples whose economic plight they so utterly fail to understand as to offer them birth control or pacifism as the remedy. Let them be born and live in a country where the people are compelled to go abroad to find food and clothing, coal and iron, wool and cotton and what not, and they will understand a little better. The millionaire however charitable and benevolent and liberal can never divest himself of the psychology of the rich, which makes it well-nigh impossible really to understand the poor. This is what I think when I hear British or American liberals upbraid what they call Japanese aggression.

Now let us see how Japan may serve China. I wish our high batted, kid-gloved diplomats had the wit to see the importance and necessity of entering into immediate negotiations for the purpose of inaugurating new diplomatic relations with China upon a basis of equality. Perhaps some of them do have the wit. Foreign Minister Shidehara says that his Government is prepared to enter into such negotiations whenever China has evolved

an authority with which Japan may deal. Why not negotiate simultaneously with Peking and Canton for an identical treaty, if such a course is 'satisfactory to both? Perhaps it will be satisfactory to them, for both the North and the South have the same view as to China's foreign relations.

In considering unequal treaties, China perhaps attaches a greater importance to tariff autonomy than to the extraterritoriality question for the former has an immediate and material bearing upon her finances. At the International Tariff Conference, which unfortunately adjourned without results last June, Japan came out for China's tariff autonomy on the very first day. Later the day for the restoration of tariff autonomy to China was set at January 1, 1929. Would it not have been best for China to have accepted the Japanese proposal without wasting so much time on futile arguments and bickering, even if the Japanese proposed tariff rate for the interim period, that is, up to January 1, 1929 was not as high as China wanted? It was on October 26, 1925, that Japan made that proposal. Had China accepted it and brought the conference to a speedy conclusion, she would have had only three short years to wait for the complete recovery of tariff autonomy. Why, we have already passed the threshold of 1927. In less than two years China could have attained the goal. To my mind, it was a great pity that the Chinese Government wasted too much time in bargaining for interim rates with the result that the conference had not been finished when the Feng Yu hsiang Wu Pei fu *coup d'état* of April, 1926, disrupted the Cabinet and brought about a state of chaos at Peking and thus furnished the Powers with a plausible excuse to adjourn the tariff parley. As I understand it, Japan was desirous of resuming the conference as soon as a new cabinet was set up at Peking, but certain of the other Powers preferred adjournment.

Japan, being China's next-door neighbor and dependent to a large extent upon China's raw materials and Chinese trade, will be more profoundly affected than any other nation by the abolishment of extraterritoriality and the establishment of tariff autonomy in China. Japan's share in China's foreign trade to-day is greater even than Great Britain's. Japan is the greatest buyer of Chinese goods as well as a great seller to China. Of all foreign populations in

China the Japanese is naturally the largest—something like 153,000 as compared with 12,000 Britishers, 9,000 Americans, etc. Consequently the abolition of unequal treaties is bound to hit Japan hardest. This, however, should not deter Japan. She should be the first to enter into new relations with China upon equal footing. China and Japan belong to the same ethnic and cultural group. The Japanese ought to be able to reside and conduct business in China without recourse to the protection of extraterritoriality. They certainly can adjust themselves to Chinese surroundings more readily than the Occidentals.

In the present crisis in the Yangtze region it is a singular, and to us exceedingly gratifying, phenomenon that the Japanese have been comparatively, almost entirely, free from the harm incident in the anti-foreign agitation. I hope that this is not merely due to the strategy of 'Divide and rule'—to a policy to keep Japan apart from England until the latter is out of the arena. I hope that it is largely due to that feeling which is expressed in the old Anglo-Saxon saying that blood is thicker than water. Are not the Chinese and the Japanese made the common objects of discrimination and persecution at the hands of Western nations? Certainly China and Japan should not be quarrelling but should be helping each other.

I cannot conclude this statement without saying a few words about Manchuria. I can well imagine that our presence in Manchuria is not pleasing to China. But even here China can afford to be lenient, patient and generous, if she has a genuine desire to help Japan—if she has a genuine sympathy with Japan's economic difficulties which I have already discussed. Moreover if you look at the Manchurian question through historical perspective, you certainly will admit that Japan alone is not to blame for what Manchuria is to-day. Did not Li Hung-chang commit China to an alliance with Russia in the now celebrated Li-Robanoff secret agreement of 1896, and thus abet the Czarist ambition to crush Japan and then to annex Manchuria? No historian can deny that had Japan cowardly kept out of the arena Manchuria would have long since become a Russian territory. If Japan emerged from the titanic struggle with a few concessions in Manchuria, China's territorial integrity was saved. And it must be admitted that the Japanese attitude towards the Chinese

in Manchuria has never been so brutal arrogant and overbearing as was the Russian in the palmy days of Czarism. In 1900 General Gribsky Governor of Brangovest chensk massacred 5000 helpless Chinese and threw the bodies into the Amur. That was indicative of the Russian attitude in those days. If our railway enterprise in Manchuria is not entirely pleasing to you it must at least be conceded that this enterprise has made it possible for hundreds of thousands of Chinese laborers to emigrate from Shantung and Chih into the rich yet undeveloped regions of Manchuria where they make money and prosper. It has increased South Manchuria's exports mostly agricultural products, through Dairen, Antung and Yingkow from a negligible quantity to 200 000 000 Harkwan taels a year and the beneficiaries of this increased trade are mostly Chinese for the Japanese are not engaged in farming there. Could this have been possible had Russia been permitted to slice off the whole of Manchuria for herself or had not the Japanese assumed the management of the railways in South Manchuria after they had checked the Russian onslaught? Can anybody deny that all the Chinese railways Peking Hankow Tientsin Pukow Wuchang Chongshu and Peking Suoyuan are physically wrecked and financially bankrupt because of reckless exploitation by mercenary militarists? I do not doubt that time will come when China will rid herself of these pestiferous militarists but in the meantime ought not we—both the Chinese and the Japanese—to thank

Heaven that there is at least one railway in China which has not been wrecked by militarists? Nor do I doubt that sooner or later—rather sooner than later—China will be united and unified under an able and efficient government, administering justice and enforcing laws along modern lines. And when that time comes China certainly will be in a position to talk business with Japan on the readjustment of Manchuria. If China keeps in view the unfortunate circumstances which forced Japan to enter Manchuria—if she recognizes that Japan needs the help which she with her vast territories and enormous resources is in a position to give and approaches Japan in a generous spirit—then there is no doubt that Japan will meet China half way. Just how the Manchurian readjustment shall be made is immaterial. The essential thing is the spirit of accommodation on both sides. As I said at the outset, it takes two to make friendship. Friendship means mutual sacrifice as well as mutual benefit. China and Japan if they are to be genuine friends must be prepared to make sacrifices each in the interest of the other. Both must be broad minded far seeing big-hearted generous and tolerant. Above all they must remember that they are the leaders of Asia and that the destiny of Asia depends largely upon how they will adjust their relations and their problems. Thus and only thus will the two nations be able to help each other and act in unison not only in their own interest but also in the interest of Asia and of the world.

Washington D C

ENGLAND ON THE WAR PATH AGAINST CHINA

AN APPEAL TO JAPAN AND INDIA

BY THOMAS MING HENG CHAO,

Editor-in Chief "The Chinese Student's Monthly"

ONCE more the "Big Parade" in England. What for? Thirteen years ago the boys marched through cheering crowds in Southampton embarking for France. The Germans were then irritating the nerves of Downing Street. Who are troubling John Bull now?

To date 21 000 troops have been ordered for service in China. They comprise brigades armored car companies and auxiliary machine gun artillery and airplane units. At the mouth of the Yangtze will soon be assembled the "most formidable array of British fighting ships brought together outside of home

waters since the Great War" What for? To suppress the "coolies" at Shanghai?

Whatever alibi the British spokesman may give, Great Britain is out for war. At the same time she wants her military movements to appear justified in the public mind. Through her gigantic news distributing agencies alarming reports of "riots" in Shanghai were circulated, thus creating uneasiness as to the safety of foreigners in China. These "riots" proved nothing more than "slight disturbances attending workman's parades". The crowds were easily handled by the police without casualties.

When the Cantonese took over the British concession in Hankow, Great Britain yielded without any retaliatory action. Ordinarily she would have bombarded China with protests and heavy artillery fire. She kept quiet not because she had come to love China. That she never will. She wanted to strike but was not ready. She only cursed the Cantonese silently.

Almost overnight reports of anti-foreign riots in China spread over the world like wild fire. From what sources did they come? The Lord only knows! But immediately the evacuation of foreigners from the interior of China took place. Great Britain does not want to make the same mistake as she did in 1900. British subjects must first be taken away from South China before she starts any aggressive action.

Any careful follower of the recent developments in the Far East will agree that Great Britain no longer enjoys the commercial and political leadership in China. The systematic boycott by Canton of British goods costs John Bull between 5 and 7 millions sterling per month. It cuts down the British opium traffic in Hongkong. It has been reported confidentially that last year Japan's exports to China exceeded those of the British. Now this is a serious problem to John Bull when you consider that Great Britain's position as the leading commercial power in China was never challenged.

If there is any party they hate most in China it is the Cantonese. The Southern Government has really made the country too hot for the British merchants and Imperialists. What made Downing Street stay up nights were the reports that the Northern troops crumbled before the advance of the victorious Cantonese army. Once the Cantonese faction gets into power, what it will do to the British is only too evident.

The only way to restore Great Britain to a position where she can once more dictate terms to China is to crush her enemies there by armed force. And this she is determined to do. She will land troops at Shanghai on the pretext of protecting foreign lives and properties in that city, thus aiding Chang Tso lin in checking the advance of the Cantonese army.

Most likely Great Britain has some sort of an understanding with Washington. The two countries may have agreed to co-operate in their relations against Russia and Japan. Great Britain has adopted the policy of giving America a free hand in Mexico, Central America, South America and the Philippines; and America feels bound not to interfere with British policies in China. A powerful American fleet under Rear-Admiral Williams is in Chinese waters supposedly to protect American lives and property. But they are expected to side with Britain, in case Britain is opposed by other than the Chinese. England's virtual alliance with Italy leaves her interests well taken care of in the Mediterranean region. In a word, Great Britain is ready. She can concentrate her forces for military operations in the Far East.

All eyes will, therefore, turn to Russia and Japan for possible opposition. Russia will help China of course. But her help won't be much. Aside from sending advisers and experts to the Cantonese, she can do nothing. Japan has always stood up against the dominance of any European power in China. Russia once tried to control Manchuria, and the result was the Russo-Japanese war. Will Japan step out and stop Britain in her tracks? It is very improbable, because she might be faced with a war with England backed up by America and other powers. Japan is not in a position to fight such a fatal combat, and she will not act alone. Nevertheless, this situation will serve as an excellent acid test whether Japan and China are willing to co-operate against British imperialism in Asia. For their national interests, for their racial pride and for the cause of Asian independence, they should come together.

India, no doubt, will be sympathetic towards the Chinese. Already nationalist members of the Indian Legislative Assembly and nationalist organs throughout the country have protested against the sending of Indian troops for service in China. The people of

India have no control over their Foreign Affairs, Army and Navy and Finance. So it is true that they cannot do anything militarily in favor of China. But their genuine sympathy and support to the cause of China—a Pan-Asian cause—may serve as an effective check against British aggressive policy against China and other parts of Asia. China confidently expects that India will at least take a similar stand in favor of Chinese sovereignty to what she did to aid Turkey in her struggle against British Imperialism. Indians must not become cannon fodder for Britain and fight against China who has never injured India during the centuries of her international intercourse and commerce.

China herself is not in a position to fight Great Britain. She has a good chance to outlast the British forces, if Chang Tso lin will combine with the Nationalist army. But this is almost impossible. Great Britain will not declare war against China. It won't be necessary for her to take that step. All she has to do is to attack the Nationalists when they come anywhere near the British concession at Shanghai. Her forces may go as far up the Yangtze as Hankow, if necessary. By that time, the Nationalists will be so hopelessly crushed that they will be unable to contest Chang's leadership in China's political life. And you can be sure that Great Britain's share of the spoils will be nothing negligible.

All far-sighted men and women of all nations should realize that armed intervention in China by Britain will not be to the interest of peace and international amity. A bitter hatred to all foreigners will be the result, all friendly relations will be impossible between China and the Powers which are now in a conspiracy of silence in favor of England's war against China. Let me be explicit: Foreigners will have to trade in that country at very few ports where their warships can give them full protection. In a word, the situation will be most unfortunate.

In the long run by making a war against China, Great Britain has nothing to gain. Her trade relations in China will not improve. The other powers may not interfere with her military movements in China at the present moment. It does not mean that they do not object to British domination in the Far East. British control of Chinese commercial and political life will always be a sore spot in future international relations in that part of the world.

Great Britain is sending her formidable fleet and 21,000 men over to Shanghai, and America apparently approves it, because she does not protest against this outrage. But America would have taken a different stand if Japan decided to send any similar forces in the region of Manchuria. However, none should forget that once the British fleet and forces are in China, Britain is not going to take them back on her own accord. These men and the fleet will stay there for some

Chang Tso-lin

time. The same situation happened after the Boxer troubles when Russian troops refused to evacuate Manchuria. A large British fleet in Chinese waters is a menace to Japan. Russia will not like it either. France will not support any move which will make Britain more dominant than she is now in the Pacific. America may find it later on that it would not be to her real interest to play the role of a satellite of Britain in the Orient. This international rivalry and suspicion in the Far East may bring about another world conflict which will be even more disastrous to the world civilization than the Great War.

Japan should not be a partisan in a

civil war in China, but she cannot remain indifferent to England's deliberate aggressive war on China. Is it too much to expect that Japanese statesmen for the best interest of their own country, for the sake of future Sino-Japanese friendship and Asian independence, should make all possible efforts to induce Great Britain to recall her troops from China? Will they not invite China and other Powers to immediately negotiate for a new treaty relationship on a fully equal and reciprocal basis? Let us hope that Britain's

policy of war against China will be frustrated by international action, under the leadership of Japan. Let us hope that the Indian people will agitate effectively against Britain's anti-Asian Foreign Policy. Japan's friendly attitude towards Chinese national aspirations will be a great step forward towards future peace in the Far East and the world, through an effective "regional understanding" between Japan and China.

"SIDELIGHTS ON THE SPIRIT OF MODERN GERMANY"

Dr LEMUEL SADGEC, M.A. PH.D.

'German majesty and honour
Fall not with the Prince's crown
When amid the flames of war
German empire crashes down
German greatness stands unscathed'

Schiller (In 1797)

NO country in the world for some years past, has loomed so large in the mental vista of the citizens of the world, as Germany, not only because of the role she played in the Great War, but chiefly because of her valuable contributions to Science, Religion, Philosophy, and Art, expressed in the word Culture or Kultur—the equivalent German word familiarised to the English knowing public during the War. Though her detractors delineated and denounced her as a veritable incarnation of uncounted brutality, atrocity, and devilry,—subsequent revelations and disclosures have proved the baselessness of these calumniating caricatures. The following impressions penned in the form of an article, are gleaned from the diary of one who has had the privilege of remaining in Europe for a long time, and of especially studying the German people, at very close quarters, for a considerable period. They do not profess to be an appreciation of the so-called Prussian Militarism, or an exculpation of the military policy of the Hohenzollerns but only an attempt at vindication of some of the characteristic traits of real German mentality and culture, bound to remain

unimpaired even by a cataclysm of national disasters.

The first and foremost feature which strikes a student of German mentality, is the liberty and universality of the German spirit, constituting the main spring of her culture and having not only a national, but a cosmopolitan importance. There is no country in the world which so harmoniously unites the freedom of the intellectual with the restraint of the practical life as Germany, which has always been the exponent of free thought and standard bearer of intellectual freedom, pouring out her heart's blood in a ceaseless struggle against mental, political and religious slavery.

Their ideal of self-determination has, time and again, disengaged itself from the inner life of the people and extended into world-historical significance. The Reformation destroying the yoke of slavery imposed by the fetters of the Roman Church and the Critical Philosophy of Kant, checking the idiosyncratic leaps of philosophical speculation, mark an epoch, not only in the history of Germany, but also in the intellectual and moral development of Christendom, which had been labouring, for centuries, under philosophical and religious thralldom.

The Germans are a very hardworking people and the endurance and strenuousness of the German labourer are incomparable. Germany owed her pro-war greatness to hard

work consistently maintained. They are born businessmen, possessing the rare gift of combining philosophical vision with a healthy practical common sense. Hence their magnificent scientific investigations and artistic culture have been going hand in hand with their marvellous industrial and commercial vitality and technical achievements.

In defiance of an aftermath of incalculable misery and wretched starvation following the trials of the great war—Germany is heroically trimming her broken sails. Through the tremendous capacity for hard work possessed by her sons and daughters, daily grinding away like galley-slaves, she is making gigantic strides for coming to the forefront and proving herself still a power to be reckoned with. German goods are flooding the world-markets with an astounding acceleration. Perhaps no other nation could have ever lived and flourished after having been so ignominiously worsted as she had been, and her survival can only be attributable to her innate vitality and energy of character. Her love of independence heggars description.

There is a peculiar pride of nationality, which characterises the Germans, but this pride need not be mistaken for that high-handed haughtiness true of some other Europeanism but is a laudable patriotic pride, which every one ought to cherish for his fatherland.

Their love of independence is expressed in their appreciation of the dignity of labour. Even aristocratic ladies and gentlemen do not consider any honest work, beneath their dignity and I have seen some of them in whose veins runs the bluest of Tonic blood, earning their daily bread, in the capacity of wood cutters, waiters, porters, maid-servants and typist girls. It would not be irrelevant to cite an instance which came to the personal knowledge of the author. An aristocrat, with an ancient line of noble ancestry behind him, lost his all during the war, excepting his palatial villa, which he, yielding to the machinations of a wily foreign speculator, and handicapped by the sting of poverty, sold away for a few thousand marks (amounting to about Rs 100, calculated according to the course of the German mark on the day of the sale). He put away the money somewhere, thinking it will keep off the wolf from the door. But, imagine his grief, when, after a fortnight, that money could hardly buy him a loaf of bread! Such had been the terrible depreciation of the German mark,

in the memorable days of the fluctuation of German currency! The miserable man, in a fit of frenzied despair, rid himself of poverty for ever—by flinging himself in the river! He was but only one of a thousand, who preferred to adopt any desperate measure, rather than stoop to the humiliating indignity of begging alms. Thus Germany is far more fortunate than India and has not to face any of those sadhu problems which present an unravellable Gordian knot to Indian reformers.

Although their religious consciousness is very alive and they are imbued with a strong faith, yet they are sane enough not to allow the cancer of Communalism undermine their constitutional, political and national destiny. 'Freie Bahn dem Tüchtigen' (free road for the hardworking) is the motto strictly adhered to, in every sphere of life.

Legally and socially, all denominations, and beliefs enjoy equal rights, and no one, endowed with brain and brawn and real worth need forfeit his claims of preference, simply because he happens to be guilty of professing a creed different from the favoured underlings of the Government of the day.

Real merit is the only standard of judgment in the matter of appointments and preferences in various departments. Here is a hint to those in India who are still advocating the pernicious and well-nigh exploded dogma of Communalism, which is detrimental to national advancement.

The spirit of self-sacrifice and patriotism is very dominant among them. Fichte was not far from truth, when he judged his countrymen by saying that a German can never wish for a thing by itself—he must always wish it for his country also. An unquenchable flame of patriotism burns in the heart of every man and woman, who believe in the truth of the Byronic words that—

"... Freedom's battle once begun

Bequeathed from bleeding sire to son,
Thou'st baffled oft, is ever won."

It is interesting to note with what intrepid determination they have been willing to sacrifice on the altar of what they sincerely suppose to be patriotism, not only life and property, but also private views and preferences in the common interest of national welfare.

Their power of organization is marvelously subtle and effective, and none who has actually lived in close contact with them can remain blind to this elasticity of German disposition, which enables them, under

tactical guidance to concentrate their manifold interests and tendencies for the achievement of an identical goal

Their adaptability to changed political environment with is in perfect conformity with the evolutionary law of development and through a strange irony in their case, not seldom unmixed with a fatalistic resignation in the inevitable! The common populace and the masses voluntarily abandon their individuality, under the domination of their representative mind and give up their personal likes and dislikes petty differences of opinion and trivialities of sectarianism, and unite with one mind, whenever their national honour is jeopardised and the integrity of their homes is threatened

Physical culture has always been recognised as an indispensable element of true education in Germany. The institution of compulsory military service before and during the war, contributed largely not only to the physical vitality and well-being of the nation but also to the development of mental and moral powers of self reliance, readiness of action, and expeditious decision—accustoming the German youth to order and subordination for a common end—elevating self respect and courage and stimulating a capacity for every kind of work. Thus military training has always played an important part in Germany, standing on the same level as the school. Their chief contention at present for the reconstruction of their army and establishment of compulsory military service which, most of them are clamouring for is actuated, among other reasons, by a haunting fear of physical deterioration of the coming generation which, it is feared, will commit Germany to eternal perdition unless they are early taught the lessons of hardihood and discipline the fruits of military training. Still in absence of any military service and regular

army, the Universities keep alive a spirit of chivalry (as they have always done) in the form of Fencing Clubs, where the young Germans practise fencing, slashing at each other's faces, a youngster's education being incomplete, unless his face is ornamented with a scar or two,—the visible proof of his fearlessness of danger! These scars are looked upon as pride of manhood and, a face, however otherwise ugly, can still claim pretensions to handsomeness and inspire the softer sex of Germany with admiration provided it bears this hall-mark of courage. These scars play no contemptible part in often settling the final trend of the affections of a girl, courted by more gallants than one

The importance of military education cannot be over emphasized, and it is hoped that those who are responsible for education in India will take early steps to introduce this as a part of University curriculum. The materialisation of the Sandhurst scheme and a prompt institution of compulsory military training in Indian Universities in which the Calcutta University has taken lead, is sure to keep alive that flame of chivalry, for which India had been famous in times gone by

The tenacity of purpose for the realisation of their vaulting ambitions reigns the heart of every German. Every one, from the humblest to the highest, would risk his life and limb, in the pursuit of what he considers to be worth the winning believing with Goethe that—

The man of sense will by the forelock clutch
Whatever lies within his power,
Stuck fast to it and neither shrink
Nor from his enterprise be thrust
But, having once begun to work
Go working on because he must.

Goethe

LABOUR WELFARE AND CITY IMPROVEMENT IN INDIA

By RADHAKAMAL MUKERJEE, M.A., F.R.S., PH.D.

*Professor & Head of the Department of Economics & Sociology
University of Lucknow*

CONGESTION AND INFANT MORTALITY

THE efficiency of the labour force of a country ultimately governs its economic status in the world. In India there is cheap supply of labour both for the fields and the factories. In agriculture, farming is not conducted on scientific lines and hence labour is cheap relatively to capital and machinery. In fact the introduction of scientific methods and investment of capital in agriculture are retarded by the abundant supply of agricultural labour. In manufacturing industry however, the shibboleth of cheap labour can no longer apply, for as a matter of fact, Indian mill labour in relation to quality and quantity of production is not cheap. Labour is inefficient and dear in relation to the capital and the machinery which it handles. It is a sociological paradox that where man is cheap quantitatively he is dear qualitatively. In our industrial centres nothing is cheaper than human life, nothing dearer than good living and sanitary conditions.

There is no clearer index of bad environmental conditions in an industrial city than a heavy infant mortality. On the other hand, there can be no surer criterion of social efficiency and sanitary administration than the lowering of this mortality. The infant mortality of our chief industrial towns is appalling. In Bombay and Cawnpore more than half the number and in Calcutta, Ahmedabad, Nagpur and Rangoon nearly one out of three children die within a year of their birth. In industrial towns in England only one out of ten children die in the same period. If we take into consideration the child mortality in those wards of our industrial cities which are inhabited by the lower middle and labouring classes the effects of overcrowding and insanitation will be most clearly apparent. In some of these wards 8 or 9 out of 10 children die within a year. There is also a close relation between

house accommodation and child mortality. The greater the congestion, the higher the mortality and *vice versa*. In Bombay the study of the infant mortality rate by the number of rooms occupied has distinctly shown a correspondence between house room and infant welfare. The extent of overcrowding also is much more serious in the Indian cities than in the cities of the West. Of the total population of Bombay 66 per cent live in one room tenements as against 64 per cent in Cawnpore 6 per cent in London 5 in Edinburgh 9 in Dundee and 13 in Glasgow. The average number of persons per room in the one room tenements is 4.03 in Bombay, 3.25 in Glasgow, 3.2 in Cawnpore and 2.5 in Edinburgh. In the worst section of Bombay the Sewri section, no less than 96 per cent of the population live in one-room tenements with five persons per room. In Karachi the overcrowding is even worse than in Bombay, the percentage of persons living in rooms occupied by 6 to 9 and 10 to 19 persons being 32.3 and 12.4 there as against 22.1 and 10.8 in Bombay.

It is estimated from Glasgow figures that in a one room tenement a child loses at least 10 inches in height and 12 lbs. in weight as compared with a normal child.

The improvement of housing conditions in our industrial cities has thus come to the forefront of our industrial programmes. It is now realised more and more that the whole future of our industrial development is bound up with the question of improving the living and hygienic conditions in our mill towns and industrial centres.

GARDEN CITIES

The work of Professor Patrick Geddes and Mr Lanchester in reviewing the conditions and requirements of city improvement and development in different parts of India has contributed to arouse the Indian civic conscience in this regard. Garden cities

have been planned here and there though the people who benefit are not always the labouring classes. There are fine Railway Settlements at Kanchrapara, Jamalpur and Alambagh which, however, are meant to cater more to the needs of the higher employees. There are workmen's villages attached to the Buckingham and Carnatic Mills in Madras while there is a big scheme of a Labourer's colony at Indore in Nagpur. These are mostly villages comprising a large number of huts and if they are isolated and properly drained and linked up into an orderly road system, the result will be inspiring to others. Jamshedpur with her well laid out roads, parks and different grades of houses is now a beautiful city but its future is uncertain on account of the growing increase of population and demand upon living space. A few miles from Lahore a garden city for the middle class is being built, the beauty and the symmetry of the plan deserve the highest praise. Apart from these tentative or imperfect attempts at building garden cities, there are in several of our mill towns labour settlements built by the employers. In some the living and sanitary conditions are satisfactory, to many Prof. Geddes' appropriate description 'standardised slums' applies.

As a general rule mill towns and industrial centres are still allowed to be built and to grow in India without reference to any plan or to the possibilities of industrial development and expansion of population.

Calcutta with her large number of single huts or bustees compacted together and Bombay with her immense back to back tenement houses represent two characteristic types of bad housing which are gradually spreading to every smaller industrial town in India. The colossal problems of sanitation, sewerage and transport in such big cities can be solved only by the adoption of Western methods of town planning, industrial housing and means of communication. For cities like these the system of zoning and development of industrial suburbs as well as cheap suburban transport have long been felt as essential to relieve the congestion, and progress in these directions will await education as well as the adaptation of national habits to meet the demands of new development schemes.

INDIGENOUS TRADITIONS IN CITY IMPROVEMENT

On the other hand in many of the smaller industrial towns and villages, which are

becoming as closely packed as some of the labour bustees of Calcutta, Cawnpore or Nagpur, there is great scope of improvement if we can only renew the traditional practices under the new conditions. Many of the mill towns and municipalities are unable to provide the costly systems of sanitation in vogue in the West, and instead of waiting for long for better finance, it will be economically sound if we can develop along the lines of indigenous tradition.

In India the most important problem of drainage is to get rid of the surface water during the monsoon rainfall. One often notices the labour quarters on the banks of the Hooghly, in Madras, Madura, Nagpur or Cawnpore flooded during the rains spreading filth and disease all around.

A system of organised drainage for the smaller mill towns remains prohibitive in cost, for many of the smaller municipalities suffer from financial straits. The traditional Indian method has been to construct a series of tanks on a lower level which act as safety valves in cases of sudden rainfall. In a tropical climate the tank equalises the temperature and affords facilities for bathing and washing the lack of which has been so trying to the Indian factory hand in his new environment.

Municipalities can also ill afford to undertake costly engineering works to bring water from a great distance. In too many of our factory towns and villages the enormous crowds which gather at water bydrants as long as water is available indicate the inadequate supply. In mill centres one occasionally comes across a definite restriction of the quantity of water which a labourer's family may obtain. In such cases a tank on the higher site of the mill village or city deepened and embanked for purposes of cleanliness will ensure the supply of good drinking water. Other tanks might be constructed at lower levels to provide facilities for bathing and washing.

TANK AND RIVER

The tank has played a very important part in Indian social and religious life. Temples and guest houses are built on its banks while its waters are regarded as sacred and saved thereby from pollution. In many of the garden cities of Southern India, the tank is as much an object of worship as the god in the temple itself.

while the floating boat and water festival assures its periodical purification. If we can revive the respect for tanks in our present day industrial environment not only will the labourers get a more stable and copious supply of water but there will also be far greater facilities of bathing and washing than what they can enjoy at present.

A tank or a river is always a source of delight and pride for an Indian. Unfortunately, the modern Indian city development seems always to begin with the abolition of the tank and to ignore the advantages of river transport. In the jute mill villages along the banks of the Hoogly the provision of a canal system will be economically sound. The canals instead of being neglected as at Bally or Triveni should be systematically linked up with factory and storage areas. The possible developments of waterways are seen in the Netherlands as well as in Malabar and Cochin where the coast from Quilon to Cannanore is fringed with garden cities.

A further instance of disregard of opportunities will be seen in the shallow pits along the railway lines dug for earthwork. These excavations might be used for drainage channels, so that the water would not stagnate as now thereby causing malaria. Such channels might be used for irrigation or form a part of extended canal system connecting the factories and goods sheds with the villages where the factory hands live.

On the banks of the river big industrial cities like Cawnpore and Ahmedabad or smaller mill towns like those of Bengal are ceaselessly polluting the stream while the problem of water supply which is much simpler here is seldom tackled with care and respect of Indian attitudes.

The pollution of rivers in America has raised most indignant protests and called for colossal schemes for the disposal of city refuse and sewerage while in England even sanitary authorities are not permitted to pollute a natural stream by sewerage matter.

This brings us to the question of the removal of refuse in our mill towns which must also be suited to the habits and traditions of the various classes of the Indian community. One of the main reasons of the accumulation of filth and dirt in the labour quarters of our industrial cities and mill towns is the absence of an adequate number of latrines. In some of the mill villages on the river Hoogly I found one latrine for 50

families. In Nagpur there are 14,456 houses in which there are no latrines at all. Not less than 56 public latrines were to be provided for with about 1100 seating arrangements. Yet the provision is inadequate and people respond to call of nature at each and every place. Similarly in Ahmedabad more than 60 per cent of the houses are without latrines. In most of our smaller mill towns, the evil is serious, and calls for urgent measures. The long period of waiting before a public latrine as well as a heterogeneous group of men, women and children answering the calls of nature in open meadows constitute a picture where there is no decency, no regard for others and finally a callous indifference to the laws of hygiene. Most of the streets and byelanes of labour quarters everywhere are strewn over with night soil. It is very often that the sewerage is ill-collected and ill-removed with the result that myriads of dangerous germs pollute the atmosphere of a slum which aggravates the dangers of congestion.*

In India the field latrine is the existing practice in the villages and even to-day in the small industrial towns and villages, the provision of open space with some degree of privacy will not only be cheaper but also safer than elaborate sewerage schemes. We might here refer to the suggestion of a very eminent sanitarian Dr Vivian Poore who thought "that house and garden might be a self-contained sanitary system," and he did by experiments prove that a house with a garden of about half an acre could deal with its own refuse of all kinds and that a perfectly sanitary arrangement could be made without any drains going outside the limits of the garden itself so that it will be realised there are possibilities in this direction. There is no doubt that in many homes of the Indian Middle Class, we find an orchard and garden utilising the refuse of the household for fruit and vegetable gardening which makes the family more or less self-sufficient in this respect.

COMMUNITY LIFE

Another feature of Indian life which needs utilisation in the new industrial environment is the strong group or communal spirit. Often in the slums of a hetero-

* For the above facts I am indebted to Mr. Raj Bahadur Gupta, Research Scholar, Lucknow University.

geneous city like Calcutta or Bombay, we find men belonging to the same caste congregate together in separate quarters of their own, and we have in addition their punchayats as well as their communal temples installed in slumdom. With the provision of more liberal space and of a tank in the middle with beautiful steps and a temple on its bank, there will be a revival of the community life, the discontinuity of which has been the chief cause of deterioration of the villager in his new environment. The caste punchayats which now deal with social disputes and observances may be utilised for labour organisation and welfare. Co-operative societies may utilize the caste spirit while common canteens, stores as well as welfare associations may take the place of village institutions.

A hundred families belonging to the same caste may be grouped into a village within the city which will thus be split up into several natural areas dominated by common attitudes and sentiments. Each such natural group will have a common meeting room, a common well, a common canteen, a common latrine and a common school. To bring the village into slumdom is possible under this arrangement. Co-operative housing and public utility societies, as well as community centres should be initiated to develop the civic consciousness and enlist the co-operation of the people themselves in the solution of their problems of housing and social welfare. The different natural areas into which a city may be divided will have its characteristic type of houses so that the chief difficulty of the Indian town planner, arising from the fact that every grade of house from the chamar's hut to the landlord's mansion is wanted everywhere, may be obviated to some extent. As we recognise the distinction between administrative and natural areas we can grapple more easily many of our municipal and educational problems, the tasks of community organisation, zoning as well as housing and sanitation.

In India the village is often found split up into self-contained caste wards each with its temple, its communal fund and its municipality as well as its own recreations and festivals. The traditions of handicraft and trade still support the tendencies of segregation and decentralisation to a large extent. This characteristic national trait may be utilised in schemes of city development and extensions outside the present urban areas.

Nothing has contributed more to the deterioration of the Indian mill operative than the barrier of thought, feeling and action between urban dweller and villager. The development of civic institutions in line with those which preserved his *morale* in the village can also rescue him from his selfish, improvident and unrestrained life. The mill hand is a villager and a villager he will be. The reason why he loses *morale* in the city is that he is divorced from his group scheme of values, his institutional setting.

REGIONAL PLANNING

Our mills and factories seem as conservative and stay-at-home as our villagers. The factories should go a certain distance, exploit new opportunities in the interior of the country and reach labour nearer home. Industry and cultivation of the land have to a large extent entered into partnership in Belgium. A high proportion of its workers in factory, mine, office or shop continue to live on the land, to cultivate their own plots in their spare time with the assistance of their wives and children. That this has been possible is due to the high development of the vicinal railway system, light railway or tramways laid at comparatively small expense along the roads and now reaching a total length of 2,706 miles. The development of light railways, of canal, water as well as motor transport might create new industrial centres in the country, each with its zone of influence from which every morning the net work of cheap communications may gather in the mass of labourers and exchange the goods of the town for those of the village. The labourers will go where there is employment. They will not bring down the wages of field labour by competition. The standard of living in the villages will be raised. On the other hand, the growth in numbers of a floating immigrant population will not perpetuate the present deplorable living and hygienic conditions in the industrial centres. Industrial development in India is gradually assuming a form of nodal congestion, and the present distribution of railway communications as well as neglect of waterways and of cheap transport on the country side are contributing to it.

Thus the costly schemes of town planning and industrial housing are baffled by the continuous drift of unskilled labourers to the

HIDE AND SEEK

(From a Modern Japanese Colour Print)

city. The wages of the labourers cannot rise on account of increasing competition. Both housing and sanitary conditions are lowered, while the labourers also find it increasingly difficult to maintain connection with their village and their family. Thus

they become habituated to slums and their slums bring in their train other slums. Without an integration of the interests of town and village, region by region, neither town nor village can be saved from deterioration.

I INDIA AND CHINA

By PRABODH CHANDRA BAGCHI, D Litt (Paris)

ANCIENT ROUTES OF COMMUNICATION

TO understand exactly the role of India in the history of her relation with China it is necessary to say a few words on the means of communication between these two vast countries of Asia. Though India, at present, touches the south-western limits of China it did not do so in ancient times. The trans-Gangetic regions of India, Assam and Upper Burma, were not so much Indianised as they may appear to day. The Chinese control on the different barbarian tribes on the south-western borderland of the Empire was not an established fact for a long time. Besides the earlier centres of cultural and political activities were confined to the north of the Yang tse-kiang, the cradle-land of the Chinese civilisation.

How could these two countries wide apart from one another, come to meet each other on a common platform and work together for a common cause? The problem is not a simple one. If India became known to the Chinese people and if Indian Buddhism influenced and gave a new turn to the Chinese life the whole credit does not go to India. Many other countries of Asia worked for the cause of India and India owes a deep debt of gratitude to them. The question of these countries, many of which do not exist any longer, is involved with that of the routes of communication between India and China. We will therefore begin with a description of these routes.

(1) *The Routes of Eastern Turkestan*—The Tarim basin is surrounded on the north and the south by lofty mountains (Altai and Kouen-louen). In the middle, the Tarim river traverses the plain. Rising on

the east near the Chinese ports of Yu-men and Yang-loan the Tarim river extends towards the west up to Pamir-Holur. It receives the waters of two principal rivers, that of the Yarkand and the Khotan. This region was divided into 36 small kingdoms in the time of the Han dynasty which were situated along the two great routes of communication between China and the West. The two principal routes parted from Tounen-hoang, in the province of Kan-sou and one passed by the gate of Yu-men-loan towards North-West and the other by that of Yang-kouan directly westward.

Tounen-hoang, we know, played a great part in the history of China's relation with the West. Like Purushapura, situated on the highway leading to the undefined west, Tounen-hoang began to be a centre of foreigners, from the beginning of the Christian era. Already in the middle of the second century, the Buddhist pilgrims found a place of shelter there on their way towards the capital of China. In the third century A.D. we hear of Indian families settled down in Tounen-hoang. It had already become a great centre of Buddhist missionaries at that time. In the centuries following the dynasty of Wei the great patron of Buddhism and Buddhist art determined to bring about a transformation of the place, so important for the diffusion of Buddhist culture. It was at this time that the construction of Buddhist temples began and grottoes were cooped out in the surrounding hills. The number of grottoes were multiplied and a thousand of them in number, contained many works of art and statues of Buddha. It is these grottoes of *T'ien fo t'ang*, long fallen in oblivion, that cherished silently for about a thousand

years a wonderful library of the middle ages. The vast number of Manuscripts it contained discovered mostly by the French archaeological mission of Pelliot and preserved partly in Peking partly in Paris show amply what a great centre of learning Touen hoang was in the glorious time of the Tang dynasty. The diversity of the languages in which these Manuscripts exist Kuchean Khotanese Syriac, Tibetan Sanskrit etc show that Touen hoang was really a great meeting place of China and the West.

The southern route starting from Touen hoang passed by the gate of Yangkuan and proceeding westward reached the country of Shao Shan (to the south of Lob nor). From Shan Shan it went along the course of the river Tarim up to Sou kiue (Yarkand) and crossing the Pamir (Kizil rabat) reached the country of the Yue tche (Balkh) and Parthia (Ngao si). The route of the north passed by Kiue she Tour fao the ancient capital of the kingdom of Leou lao it followed the Tarim right up to the west to Shou lei (Kashgar) and continued across the Pamir (Kizil art) up to the country of Ta wan (Sogdia) Kang kiue (Samarkand) and other countries in the valley of Oxus.

But the route to India followed a little different course. Fa hien the first Chinese pilgrim to India, notices in detail the way he followed from China to India. Starting from Singan fou in 399 A.D. He with other monks passed by the principal localities of the province of Kan sou viz Lan tcheou Leang tcheou Kan tcheou Sou tcheou and Touen hoang and arrived at Shan-Shan to the south of Lob nor. They visited the countries of Yen li (Karashar) Yu tien (Khotan) Tseu ho (Karghalik) Kiuan Yu mo (Tach kourghan) and Kie cha (Khasgar). They passed by To li (Uarel in Dardistan) and then crossing the Pamirs they reached the valley of Gilgit which leads to the region of the Indus.

A century later Song yun visited India. He has left us a fairly detailed account of the route he followed on his way to India. It is also the southern route which he followed. But from Tach Kourghan (Tsu mo) he went to Pa lo (Wakhan) and passed by Po tche (the mountainous region to the north of Chitral) to She i (Chitral). But instead of following the route of Gilgit to Kashmir he directed his course southwards

to Udyana, in the valley the of the Swat and then to Gandhara (Peshawar).

Huan tsang in 629 followed the northern route. From Kan sou he went to Kao tchang (Yarkhot near Tourfan) then he visited the countries of A lin Karashar) Kiue tche (Koutcha) Pa lou lia (Yak aryk) to the south of the Tien shan he crossed the Tien chan by the Bedel pass passed by the north bank of Issyk-Loul where he met the Tokmak Turks. Shortly before the arrival of Huan tsang, the country had been visited by an Indian monk of Nalanda Prabhakaramitra who went to China later on to receive the highest honour from the Emperor of China. Huan tsang then passed by Sogdia crossed the Iron Gates to the south of Kesch (schahr in sahz) and reached the country of Tukhoarestan. The capital of the country was at that time Houo (Koupsoudouz) to the south of the Oxus. Huan tsang descended by the pass of Bamian to the valley of Kapisa. Twenty years later on his way back to China he followed the southern route. From Kapisa he crossed the Hindukush by the valley of Panjshir and reached Koupsoudouz. He then passed by Badakshan (Pa tu tch ouang nn) Ying po kien (Yamgan the valley of the Koksha) and Houen to lo (Kandont). Then crossing the Pamir he visited the countries of Tach Kourghan (Kie pan tin) Kie she (Kashgar) Tche kiue kia (Karghalik) Kiu sa tan an (Khotan). From Khotan he followed the usual route by the south of Lob nor to Si ngan fou the capital.

The last Chinese pilgrim who has left a somewhat detailed notice of the route he followed for going to India by Eastern Turkestan is Wu k'ong. He left China in 751 A.D. at the head of an official embassy sent to the kingdom of Kapisa in order to bring a Chinese ambassador. Wu k'ong passed by Kucha which was at that time the seat of the protectorate of Ngan si, Sou le (Kashgar) the five Ch'e-ni (Shighnan) of the Po-mi (Pamir) and the Hu mi (Wakhan) and reached the Indus region by the valley of Yassin and Gilgit, known as Po lu lo (Bolor) the most frequented route for entering India. Wu k'ong visited Udyana (Valley of the Swat) and Kapisa. He followed a little different route on his way back to China. He passed by Ku tu (Khotail) Kiu-mi che (Kumedh now harateg n) She-ni (Shighnan) and reached Sou lei (Kashgar), and then Yu tien (Khotan). He passed by Wei jong

(Yaka-aryak), Kiue tsen (Kucha), (Yen-k'i (Karashar) and Pei t'ing (Tsi-mou-sa, near Ku tch'eng) and returned to Ch'ang anan in 790 A D

It is unnecessary to mention other unimportant details, on these routes, which were frequented for a few centuries more. The itineraries which we have just mentioned are sufficient to give a rough idea of the routes of Eastern Turkestan followed by the Chinese travellers, who came to India and the Indian monks who visited China. On account of the growing difficulties in the political situation of Central Asia the land routes were gradually given up and with the progress in the technique of navigation, the sea route began to be more and more frequented till they were left to be the only way of communication with China.

(2) *The Route of Assam*—Another route of communication existed from very early times by Assam, and Upper Burma. The difficulty of the route did not encourage very much this trade and it was thus frequented only by the barbarians of the south western provinces of China, viz Sse-tchouan and Yun-nan and the hill tribes of Assam and Upper Burma. In the middle of the 7th cen (642 A D) when Hsuan tsang was invited by Bhaskaravarman, the king of Kamarupa, he started from Magadha, passed by Champa (Bhagalpur), Kojangala (Kankol—Rajmahal) and Pandravardhana (Rangpur) and going eastward reached Kamarupa. This was the most usual route from the capital of Magadha to Kamarupa at that time. But though Hsuan tsang did not visit any country on the other side of the kingdom of Kamarupa he heard from the natives of the place about the existence of a route leading to south-west China. "To the east of Kamarupa," he says "the country is a series of hills and hillocks without any principal city, and one can reach the south-west barbarians (of China), hence the inhabitants were akin to the Man and the Lao. The pilgrim learnt from the people of Kamarupa that the south-west borders of Sse-tchouan were distant about two months journey, but the mountains were hard to pass, there were pestilential vapours and poisonous snakes and herbs." When Bhaskaravarman came to know from the pilgrim that the latter's country was Maha-Cina he enquired about a song which came from China but was very popular in Assam at that time. "At present in various states of India a

song has been heard from some time called the music of the cooquests of Ts'in wang of Maha-Cina." He then related how he had heard of the Devaputra, prince of Ts'in of Mahacina who had brought that country out of anarchy and ruin into prosperity, made it supreme over distant regions to which his good influences extended. All his subjects, the king continued, having their moral and material wants cared for by this ruler, sang the song of Ts'in wang's conquest and this fine song has long been known there tcheou (ie Kamarupa). The song referred to was the song of the victory of the second son of the Tang Emperor Kao-tsou Prince of Ts'in over the rebel general Liu Wou-tcheou in 619 A D. This points out to the intimate intercourse that existed between the eastern countries of India and China and it is even more surprising when we take into consideration the fact that a Chinese music composed after 619 A D had penetrated the region of Kamarupa in 638 A D when Hsuan-tsang visited the country. But the existence of this route is attested even at an early date. The Chinese of Sse-tchouan knew since long that India was accessible from the south west of Yun-nan. The evidence of Chang K'ien that he found in the markets of Bactria merchandises of Sse-tchouan and Yun nan brought by caravans that passed along the country of Shen ton (India) points out without doubt to the existence of this route. Coming to later times in 97 A D, Yong Yeou t'ao, king of the Shan state (situated in upper valley of the Salween, accepted the suzerainty of the Chinese Emperor, received a sort of imperial investiture and sent in 120 A D as present to the Chinese court musicians, and jugglers, all natives of Tu ts'in. A tradition current in the province of Yun-nan would have us believe that the first Indian missionaries, Kasyapa matanga and Dharmaratna went to the capital of China by this route. The history of the Wei dynasty (Wei Ho) speaks of a route from Tu ts'in (Roman orient) to China by way of Yong tch'ang and Yunnan. Yi tsing in his biography of eminent monks who visited India in the middle of the 7th cen, records a tradition which would have us believe that Sri Gupta the king of the Gupta dynasty built a "temple of China," near the Mahabodhi, in the end of the 3rd Cent A. D for twenty Chinese monks who came to India by Yun nan and Borneo, during his reign. But when the route of Central Asia and the sea route were

well established commerce received a new impetus and the comparatively difficult way of Upper Burma was given up. It was only in the 7th century under the great Tang dynasty there were proposals of reopening the route. In 627-649 Lien Po-ying the governor of the upper valley of Kien-chang proposed that the barbarians should be put down and route of the *Si-eul-ho* (Tah) and India should be opened. The constant fight with the Tibetans the danger of the Southern route of Central Asia compelled the governor of Cheng-tou to make the same proposal in 698. But nothing important was done towards it. It was at this time that the kingdom of Nan-chao came to be founded and it kept the route in its control for a long time.

An itinerary preserved in Kia-tan of the end of the 8th cen. A.D. describes in detail the route in question. Starting from To-kin the southern centre of all commercial activities of China the route passed by Yunnan-sen, Yunnan-fou and Tai-h-fou. Going westwards it crossed the Salouen at Yong-tchang (Yong-tchang-fou) on the west of the river. Going westward it reached the town of Chou-ko-leang (to the east of Momein) between the Shweli and the Salouen. The route bifurcated there: the principal one descending by the valley of the Shweli to join the Irawaddy on the south west and the other continuing directly to the west. Starting from Chou-ko-leang the principal route crossed the frontier of Piao (Burma, near Lo) the frontier town of Nan-tchao and passing through the country of mountain tribes it reached *Si-h* midway between Ta-gaung and Mandalay. *Si-h* (or *Si-h-yi*) though it cannot be exactly identified now, was an important town at that time as in 802 *Su-nan* to (Snnanda) the brother of the Burmese king sent to the Chinese Court with musicians was the Prince of *Si-h-yi*. The route then passed by Tou-min (Pagan?) and reached the Capital of Burma Sriksetra (Prome). Starting from Prome and crossing on the west a range of black mountains (the modern Arakan range) the route crossed Kamarupa (Assam). Here it rejoined the second route.

Starting from Chou-ko-leang the second route went right westwards to *Teng-chong* (Momein) then crossing at *Ma* the mountains it reached *Li-shouen* on the Irawaddy (Bhamo or near about to the north). Then crossing the river *Long-tsuau* (Mo-

hoyin or Mogaung) it passed the town of Ngan-si near which lived the small Brahmins of Ta-tsin and going westwards crossing the river Min-no (Chindwin) reached the country of the great Brahmin of Ta-tsin. Then crossing the mountains it reached Kamarupa. Going northwest from Kamarupa and crossing the river Karatoya it reached the country of (*Pen-na-fa-tan-no*) Pundravardhana (modern Rungpur). Proceeding south-west, it reached Kajanigala (*Kie-tchou-wou-lo*?) on the right bank of the river Ganges and further to the west it reached Magadha. This is exactly the route which Hiuan Tsang followed when going from Magadha to Kamarupa.

This is the route which the Chinese knew even in XII century although the kingdom of Tai-h had cut off all communications of China across Yun-nan. Even in the time of Mongols Rashid-oddin studied the two routes from India to China one by the straits, Canton, Zaitoun, Hang-tcheou and the other by Burma and the country of Zardandan and Karayang.

In 1406 we hear of a Chinese political mission sent to Burma by this route. When in 1406 the King Anuruddha (*A-lo-ta*) conquered the small state of Mong-yang (modern Mo-hyin to the north west of Bhamo and to the south of the lake Indogyi) dependant on China the Emperor of the Ming dynasty despatched a mission guided by Chang-hong to the Burmese King asking him to evacuate Mong-yang. The route followed by the mission is the same as that described by the itinerary of Kia-tan.

Last of all when in 1652 Mir Jumla conquered Assam he boasted of opening that way the route to China.

Almost all the accounts mention particularly the dangers and difficulties of this route. Thus the report of the political mission of 1406 says: The climate of this country (the region of Upper Burma) is extremely bad. When a mission arrives there, even in the first night half of the people falls ill on the morrow almost every body is ill and from the third day onwards the cases of death increase without interruption. In spite of all these difficulties the way was frequented now and then as it was the only short route connecting south western China with Upper Burma and Assam. Indian influences were exerted in early times in Upper Burma Yun-nan and Sse-tchouan and some

factors in the Indian colonization of Indo-China, can be only explained by this eastern way of communication, the sole connecting link between eastern India and this unexplored region.

(3) *The Route of Tibet*—Lastly, a third land route of communication between China and India was opened in the beginning of the 7th century A.D. when the Tibetan Empire was founded and its Charlemagne the famous Srong tsan sgam po contracted marriage alliance with China and Nepal. Though the occasional hostile attitude of Tibet towards China did not prevent the Chinese travellers to follow this route for a long time, yet during the 7th century when Tibet remained a faithful ally of China, Chinese ambassadors and pilgrims found this road an easy one. The first Buddhist pilgrim who seems to have gone to China by this way is a famous monk of Nalanda—named Prabhakaramitra. The date of his departure from India is not known but his presence in Tibet and in the country of the Western Turks is attested in the year 625 A.D. He was taken to China in 627 A.D. by a Chinese embassy was greatly honoured there and was asked to organize the work of the translation of sacred texts. At about the same time in 627 A.D. Hsuan chao a pious Sramana followed this route to India. Leaving the frontiers of China he crossed the desert, passed by the iron gates (Derheed, modern Bozqola khana), traversed the country of *Tou ho-lo* (Tokharestan) passed by the country of the barbarians (*kou*) and at last reached *Tou fan* (Tibet). Here he met the Chinese Princess Wen tcheng the queen of Srong tsan Sgam po and according to her orders Hsuan chao was safely conducted to India and reached Jalandhara (*She lan-tou*). A few years later on his way back, in the company of Wang Hsuan tso he passed by Nepal (*A po lo*), payed another visit to the queen Wen tcheng and followed the direct route to the capital of China.

The mission of Wang Hsuan tso in 647-648 to the court of Emperor Harsha followed the route of Tibet and Nepal and the history of his victory over the successor of king Harshavardhan, at the head of Tibetan and Nepalese army is now a well known fact of Indian history. It shows what an intimate relation, China was entertaining with Tibet in this period. In 657 A.D. he was sent again to India with an official mission and this time too he passed by

Tibet and Nepal. So in this period of friendly relation between Tibet and China this route of Tibet was much more frequented than the northern routes, which were in the hands of alien peoples.

But after the death of Srong tsan sgam po (650 A.D.) there was again a rupture and continual war was carried on between the two countries. Tibet found an ally in the Turks who occupied at that time a great part of the eastern Turkestan region. The most convenient route from China to India, therefore, was the sea route.

Towards the end of the 10th century a Chinese monk seems to have followed this route on his way back to China but his itinerary is not very clear. Ki ye came to India in 966 by the route of eastern Turkestan, but a few years later on his way back to China, he passed by Nepal and a place which he names *Mo yu li* (probably Mayurata near Tibet?) and visited the temple of *San yue* (?)

Lastly with the foundation of the great Mongol empire of Kubilai khan in the 13th century, regular relation was re-established between Tibet and China. We will speak later on of the great role played by India in this period in the history of Sino-Tibetan Buddhism just before the advent of a dark age which witnessed the cessation of all relation between India and China.

(4) *The Sea Route* It is possible that a sea route was already traced out long before the Christian era by the hardy Polynesian people who occupied and still occupy the countries of farther India and Insulinia and it is possible also that this was the route which was later on followed by the Indian colonisers. But we have historical evidence of the existence of this route only from the 1st century A.D. when the Hindu settlers reached the countries of Indo-China. Chinese records would have us believe that the Kingdom of Fon nan (Bhoun preserved in the name Pnom penh), on which was built up later on the Cambodian empire was Hinduised by a Brahman named Hounen tien (Kaundinya) as early as the 1st century A.D. The original ruler of Fon nan" says the tradition, "was a woman named Ye-ticou. There was a foreigner named Hounen tien (Kaundinya) who practised a mystic cult. He was given in dream a bow and an arrow and received the order of embarking on a junk of commerce and to

take to sea He discovered the bow in the temple and decided to follow the merchants across the sea He reached Fou nan and submitted and married the ruling queen The earlier kings of Fou nan were descendants of this Hindu The genealogy of the dynasty as given by these Chinese records would place this first Hinduisation of Fou nan—Kamboja in the first century A D

Towards the end of the first century A D the *Periplus of the Erythrean sea* mentions the existence of a sea route to China Beyond the country of Chryse (Indo China) the ocean (navigation ?) extends up to the country of Thin In this country in the north there is a great inland city called Thinæ From that city by the land route the silk passes by Bactria towards Barygaza (Breach) and by the Ganges up to Lamuria (Damirica—Tamilaka) But the land is not easy of access because there are very few men who come back from there Ptolemy when mentioning Kattigara (identified by some with Tonkin) the port of Sinai speaks of the existence of navigation between Kattigara and the West In 166 A D the king of *Ta tsin* An tun (Marcus Aurelius Antonius) sent an embassy to the Chinese Court It landed in Je nan (Tonkin) which was the port of China at that time

The foundation of the Indian colony of Champa which occupied almost the whole of modern Annam is placed unanimously in the 2nd century A D The Sanskrit inscription of Vo can (near Khan hoa) the oldest Sanskrit inscription discovered in further India cannot be dated later than the end of the 2nd century A D It presupposes an already well established settlement of Indians on the coast of Annam

In the Won period (222-280) the *Frankan* king of Fou nan sent one of his relatives, Su wu as ambassador to India He left Fou nan and embarked at the port of *Tcou lou-li* (Takkola Talai takkola of the *Ira* malai inscription of Rajendracola 1030 A D which was situated near the Isthmus of Kra) The vessel followed the course of a big bay of the vast Ocean and reached the mouth of the river of India the Ganges after a long sailing They went up the river for over 7000 li and reached the capital of the Murundas The Murunda king was very pleased to receive the envoy of the king of Fou nan and sent in return one Cho song as ambassador to the court

Fou nan with the horses of the Yue che country as present It was at this time that the Chinese emperor sent two envoys Kang tai and Chou ying to Iou-nan. They met the Indian envoy Che song there and collected detailed information from them on India.

All these point out to the existence of a sea route in the 2nd and 3rd century A D which connected India with the Far East It is not improbable that the port of Iakkola which is mentioned by Ptolemy too was at first the port beyond which the vessels from the West did not go

The Indian colonisers of Fou nan and Champa probably proceeded to the inland region by the land routes from Takkola But the vessels soon proceeded farther and following the Coast line reached Tonkin

At the time when the sea route was opened Tonkin became the distributing centre Tonkin (Kiao tche) was annexed to the Chinese empire in the second cen BC during the rule of the former Han dynasty But became a real Chinese province in the end of the 2nd cen A D The embassy of Marcus Aurelius disembarked at Kiao tche in 166 A D Shortly after the trouble of the Yellow Bennets which desolated China towards end of 2nd cen A D compelled many peace loving Chinese to take refuge in Tonkin which was comparatively calm Amongst them we find Meou tseu author of a famous text, called the dissipation of doubts Mou tseu belonged to the nobility and once filled up some high rank in the state and as such was a devout confucianist. But Buddhism fascinated him more and during his stay in Tonkin he wrote his treatise in defence of Buddhism In the beginning of the 3rd cen A D the parents of a famous monk Seng hui came to Tonkin They were of Sogdian family long settled in India The father of Seng hui came to Tonkin for his commerce and was established there with his family Seng hui was born there The official mission of Kang tai and Chou ying to Fou nan started from Tonkin When in 296 a merchant coming from the confines of the Mediterranean Orient, Ts in louen arrived in Tonkin the governor of Tonkin sent him to Nanking The Chinese governor Lu tai sent some officials in propagate Chinese civilisation to the south to Lin yi (Champa) and Founan (Kamboja) the mission started from Tonkin

Thus from the time of the latter Han dynasty all the kingdoms of the south sea

followed the way of Tonkin and did not go up to Canton

However the navigators began to take little by little the more direct route from China and Canton prevailed on Tonkin. It is at Canton that Yi tsing disembarked in the 7th cen. But the displacement did not take place without a fight. Canton really was a Chinese Province whereas Tonkin was a sort of protectorate and the people of Canton pretended to monopolise to their profit the benefits of the foreign trade. In 192 the governor of Lingnan (ie two of the 2 Kouang, Koung tong and Kouangs) sent a

report to the Emperor complaining that the foreign vessel had begun to go to Ngan nam (Tonkin) and requested him to issue orders forbidding commerce in Tonkin. The demand was rejected. But the geographical situation of Canton did what the administration failed to do. From the 8th cen. Canton became the principal port of disembarkation of the Arab merchants of the 9th cen. Independence of Annam in 968 spoiled all possibilities of the exterior commerce of Tonkin. Canton prospered till the arrival of the Europeans during the last century.

REVIEWS AND NOTICES OF BOOKS

[Books in the following languages will be noticed Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses etc. will not be noticed. The receipt of books required for review will not be acknowledged nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer etc. according to the language of the books. No criticism of book-reviews and notices will be published.—Editor M R.]

ENGLISH

THE RELIGION OF ANCIENT GREECE by Tadeusz Zieliński. Translated from the Polish with the author's Co-operation by George Papall Noyes. Published by the Oxford University Press. Pp 104 + 235. Price 7s 6d.

There are nine chapters in the book under the following headings: (i) Introduction (ii) The Deification of Nature (iii) The consecration of work (iv) The Revelation of God in Beauty (v) The consecration of Human Society (vi) The revelation of God in goodness (vii) Religious Philosophy (viii) The Revelation of God in Truth and (ix) Conclusion.

The author has at the outset formulated the following principle—As a man bereft of artistic feeling cannot understand Greek art so one who lacks religious feeling cannot understand Greek religion (p. 13).

He has tried to enter into the spirit of the ancient Greeks and to feel their feelings. The interpretation of Greek Religion by such a man cannot but be convincing. But fanatics can never be convinced.

The plan of the book and the treatment of the subjects are excellent. The author has carefully separated the essential features of Greek Religion from its non-essential features and has clearly described its fundamental Principles. His exposition of the Deification of Nature is so beautiful that one is tempted like Wordsworth to turn Pagan

and to see oneself surrounded by friendly deities.

The ancient Greek writes our author "felt and saw God in the road itself in the yellowing meadow in the fragrant grove in the ripening grace of the garden. He surrounded himself and his human life with a whole swarm of deities of nature now kindly now threatening but always sympathetic. And what is most important, he succeeded in establishing a spiritual union with those deities" pp 16-17.

But where is the God of so called mono-theistic religions of the world? In the heavens? Our author asks why in the heavens? He remarks—

Here one feels the poison introduced by Judaism into Christianity. Thus in very truth the religion of the Old Testament violently tears our natural feeling of gratitude away from that which immediately calms and caresses us and diverts it to a hypothetical Creator p. 16.

Judaism, Christianity and Mahomedanism have banished God from this earth. If God were in the heavens we would rather be Pagan. The author's remarks on fetishism are worth quoting. He writes—

When Portuguese sailors who in their own country worshipped the Lord Jesus the Mother of God and the saints on the canvases of their masters, became acquainted with the formless blocks of the savages. They gave them the name *feturo* or *feticus* (idus) that is (gcd) made with hands for the reason that in their opinion (whether correct or not is a matter of no consequence) the given tribe of savages beheld in such a block not

an image or symbol of a deity existing outside it and independent of it but the deity itself. Otherwise we should have to term fetishists even the Christians and not only the Catholics and the Orthodox but also the Protestants who admit that the crucifix is something holy or else the very term 'fetishism' would lose all value as the expression of an idea, and would retain value only—as an insult. p 374.

In describing idolatry the author says that the statue is only the image of the deity and not the deity itself. p 70.

Yet writes the author the Greeks bowed down to their statues. To be sure but absolutely in the same sense in which faithful followers of the old Christian faiths bow down (the phrase is of no importance here) to the images of Christ, the Mother of God and the saints and an Athenian who burned incense before the statue of his Pallas did so with absolutely the same feeling with which today a Catholic or an Orthodox Christian on Saturday evening lights a lamp before the image of the Most Holy Virgin. Pp 70-76.

The author has vividly described how work and Human Society were sanctified by the ancient Greek. To him life was full of joy. Our author rightly says—The Greek religion fully deserves the name of the first and only religion of joy in the history of humanity. p 60 (*Italian authors*).

Where shall we find the Religion of Beauty? In Greece and Greece only. Our author says—

God reveals himself in beauty—Such is the faith of the Hellene, blasphemously forgotten by his heirs p 89.

In the chapter on Revelation of god in goodness—The author describes the gradual evolution of morality and spirituality. In this connection he quotes the following prayer of Socrates—

Lord Zeus grant us good even without our request grant us not evil even at our request (Alcibiades v 143 A) p 139.

The author deplores the fatal gift of intolerance which Christianity had received from Judaism. p 216. Christianity gradually became Hellenized and still it could not free itself from that intolerance. p 218.

To be sure—writes our author—the Hellenization of Christianity advances hand in hand with the destruction of Hellenism. The struggle of the two religions which begins in the third century is accomplished by frightful losses of the cultural values of humanity at the very thought of which the heart bleeds. Amazement seizes us at the sight of that senseless suicidal fury with which a people turned against all the most beautiful and most noble creations which it had itself fashioned from the very beginning of its existence on earth. The pagan temples might have been adapted to Christian services—the example of the Parthenon proved this. No the abodes of devils must be destroyed. The fruits of the inspiration of Phidias, Praxiteles and other artists might have been preserved as museum curiosities, an edict of the most Christian Emperor Theodosius even required this. No the statues of devils must be demolished. This visual beauty perished and there perished also a whole literature that was related to the pagan worship all the liturgical hymns all the writings of the theologians and exegetes. Pp 218-29.

The book is well written it is popular and

interesting and is at the same time scholarly. There can be no plea now that there is no popular book on the religion of ancient Greece.

THE DOCTRINE OF THE BUDDHA THE RELIGION OF REASON. By George Grimm. Printed in Germany and published by the Offizin W. Drigulyn Leipzig in 1926. Pp xxiv + 336. size 9 1/2 x 6 1/2. (Price not printed in the book)

The author has tried his best to enter into the spirit of the Buddha and being thus inspired has expounded The Four Most Excellent Truths. These truths are—

(i) The most excellent truth of suffering
(ii) The most excellent truth of the arising of suffering

(iii) The most excellent truth of the annihilation of suffering

(iv) The most excellent truth of the path leading to the annihilation of suffering

In the Appendix the author has compared the Doctrine of the Buddha with that of the Upanishads.

According to Grimm 'Nirbana' is a positive state and the I also is something unchangeable. He writes—

Everything is Anatta not the I and does not belong to my inner essence the whole external world as little as my corporeal organism with consciousness I am beyond all this beyond the world. This was one of the truths which the Buddha had to tell us. P 299.

In another place he writes that in the Discourses of the Buddha everything circles round the Atman the I. This Atta is the unchangeable centre to which all the Discourses of the Buddha point or from which they proceed. P 496.

Then he compares the method of the Upanishads with that of the Buddha. He writes—And as we can hardly read a page in the doctrine of the Upanishads without coming upon the Atman, in the same way there is hardly a Discourse of the Buddha which does not deal with the Atta in some form or other. When the Upanishads are therefore simply characterised as the doctrine of the Atman this qualification is not less true of the doctrine of Buddha. But with the Upanishads and thereby with the general mode of Indian thinking the Buddha is also in harmony inasmuch as he sought to find the Atta by taking away from it everything inessential to us to our I to our Atta and thereby separable from it. He even has brought this method to its highest perfection by substituting for the fundamental question—What is Atman? What is my I?—the other one, What is the Atta in my case not? What is in any case not my I? What is Anatta? P 496.

Thus the Buddha, says our author has not become untrue to Indian thinking rather is his doctrine the flower of Indian thought. He is the true Brahmin who has completely realised the ideal of the Upanishads. And precisely because this is so India will again greet him as her greatest son as soon as she again shall have recognized this. P 502.

The author's conclusions may seem to be startling to some but are nevertheless true.

We have quoted from this book only a few passages relating to Götama's Anatta Vada (the doctrine of Non Ego). We cannot make room for

any passages relating to *Nibbana* and other subjects. The readers are referred to the original book.

We have not seen for years such a scholarly production. It is based on Buddhist canonical scriptures and is, on the whole a reliable book. No Buddhist scholar should be without a copy of this book. It is a book to be bought and carefully studied. (Mr Arthur Probstham 41 Great Russell street, will supply the book for 16s.)

THE CHRIST OF THE INDIAN ROAD *By F Stanley Jones* Published by Holder and Stoughton Ltd London. Pp 254 Price 3s 6d.

The book is written by an American who has come to India as a Christian Missionary. Being an American he cannot directly have any political motive for Christianising India. So what he writes is worth reading and moreover he has some new ideas to impart.

He finds three current methods of preaching Christianity—

(1) The old method of attacking the weaknesses of other religions and trying to establish your own on the ruins of the other (2) The method of Doctor Faquir which was to show how Christianity fulfils the ancient faiths—a vast improvement on the old method (3) The method of starting with a general subject of interest to all and then ending up with a Christian message and appeal. p 32

The author felt instinctively that there should be a better approach than any of these three. He says—Christianity must be defined as Christ not the Old Testament, not the Western civilization not even the system built around him in the West but Christ himself and to be a Christian is to follow him. p 33

Here he makes a distinction between his Christianity and the Christianity of the Christian churches and his Christianity means following Christ. But what does he mean by following Christ? The word Christ does not appeal to many minds. The word is appellative though originally it meant the anointed and was applied to kings, priests and patriarchs, it has now come to mean The Messiah or The saviour of the world. If this be the meaning of Christ there is little hope for educated Hindus becoming Christians. Among Hindus the idea has become almost instinctive that every one is by God's Grace, to work out his own salvation. There is no place here for a Saviour.

Though a Christ may not be acceptable Hindus will gladly accept Jesus. They will accept not only Jesus but also Hillel and Philo Socrates and Epictetus Jaina Valiya and Buddha, Chaitanya and Rama Krishna and in fact every one who has a message to give. Hindus leave their doors ever open. There is a vast Hospitality. They invite every message-bearer and hear his message.

God reveals himself in every country and in every age. But he is inexhaustive and inexhaustible. Even the whole universe past, present, and future, temporal supertemporal spatial or super spatial imagined imaginable or unimagined cannot reveal all the aspects of his nature. How can then one nation or one man be said to have known him fully and totally? To know him we are to go to all our fellow pilgrims to all the message-bearers torch bearers and mys-

tics to all the reformers prophets and saints. We invite them to our own house and we go to their houses uninvited. We consider no one to be a foreigner. The whole world is one family and we are all brothers and sisters.

This is why we accept all the world teachers and reject none. But this acceptance and rejection can never be absolute. When we say—we eat a mango does this eating mean eating its skin and stone also? Does the fowl eat the fowl entire—the feathers bones beak claws and intestines with the ingesta? In the religious world also we accept what is valuable ignore what is non-essential and reject what does not conduce to morality and spirituality. We have freedom of choice.

Now what is the message of Jesus? What are his contributions to the religious history of the world or of his own race?

The subject has been thrashed thread bare and the conclusion is—there is nothing new in his message and he makes no new contributions to the religious history of the world or of his own race.

Yet there are some points in his teachings and some traits in his character which are worthy of consideration and acceptance.

We may give a brief summary of what we accept and what we reject.

(i) We accept Jesus when he asks us to love God but we reject him when he attributes anger, fickleness and vindictiveness to God. He describes him as living far off in the heavens and assumes a Rival Being the very Satan ever contending with God for supremacy.

(ii) We accept him when he asks us to pray for those who hate us and persecute us and we reject him when he himself refuses to pray for non-believers. (John XVII 9)

(iii) We accept him when he asks his disciples to take no thought for the morrow and we reject him when he asks them to pray every day for their food for the morrow. (Mt vi 11 Lk XI 3)

(iv) We accept him when he says that God does not want sacrifice and we reject him when he himself offers animal sacrifices. (Mt 26 17 ff Mk 14 12 ff Lk 22 7 B)

(v) We accept him when he enjoins us to love our neighbours and we reject him when he says that our neighbours are only those who are our benefactors. (Lk x 29-37)

(vi) We accept him when he asks his disciples to love their enemies and we reject him when he denounces unbelievers and non-believers as does swine vipers for Satan and children of Satan.

(vii) We accept him when he asks his disciples to preach the gospel and we reject him when he positively enjoins them not to preach to the Gentiles. (Mt 10 a vide also 13 24)

(viii) We accept him when he feels for the poor—the sheep without shepherd—and we reject him when he says that he speaks to them in parables with a view to deluding them. (Mt xiii 13 15 Mk iv 12 Lk viii 10)

(ix) We understand him when he asks his disciples to follow him and we reject him when he asks them to hate their father and mother, wife and children brothers and sisters. (Lk xiv 26)

(x) We accept him when he preaches non-resistance and we reject him when he makes

arrangements for buying swords and for armed resistance. (Lk xxii 36-38)

(xi) We accept him when he asks his followers not to be afraid of what kills the body and we find him waiting when he flees for life is terror-stricken, sweats a bloody sweat and prays for removing the cup.

(xii) We admire him when he does not hesitate to break the sabbath laws and we reject him when he wants every one to fulfil even the least of the Jewish commandments (Mt v 18-19 vide also xxiii 23).

We unhesitatingly reject his mediatorship his theory of Eternal Damnation and the salvation of the elect only and also his theory of moral actions which is based on reward and punishment. But he preached two principles which are of permanent value.

The first is the Fatherhood of God. The idea was borrowed from Judaism and had also been prevalent long before Jesus among Hindus and Greeks. But this antiquity of the principle does not detract from the value of Jesus preaching it. A truth bears repetition.

The second is—(a) Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind and with all thy strength and (b) Thou shalt love thy neighbour as thyself.

These ideas also were prevalent at the time of Jesus and were quoted by him *verbatim* and with acknowledgment from the Old Testament (Deut vi 5, Leviticus xix 18).

Now these are the essence that we extract from the teachings of Jesus and we cordially accept them.

What is not found in Jesus must be sought for elsewhere.

Who teach us that God is *Satyam*—Immutable Reality *Jnānam* consciousness *Anantam* Infinite *Anandam* Joy *Santram* Tranquillity *Svām* Blessedness? Not Jesus but the Rishis of India.

Who teach us that He is *Sundaram* the—Beautiful? Not Jesus but the seers of Oreece.

Who teach us that He is One without a second one without a rival (i.e. a rival like Satan or a second God)? The Rishis of India.

Who teach us that He is our *Antaryamin* (Inner guide and controller) The Self of our self our inner self? The Rishis of India.

Who teach us that He is our *Bandhu* and *Sakha* (friend and companion) and *Sukrid* (good hearted sweet heart)? who teach us that He is Dear and is dearer than everything in the Universe—father mother a brother sister husband wife—may even one's own child? The sages of India.

Who teach us that He is to be worshipped as Dear? Who teach us how to commune with Him and to perceive Him directly and immediately? The Rishis of India.

Who exhort us to rise above not only worldliness but also Other worldliness? Who teach us that pleasure of Heaven (Heaven as popularly and scripturally understood) are not the highest Good and Perfect Bliss? The seers of India.

Who teaches us Universal love—love for every creature? Who teaches us *maitra* (Love) *Karuna* (compassion) and *Mudita* (sympathetic joy)? The Buddha.

Who teaches us *Atatuk Bhakti* (Uncaused and spontaneous devotion)? Sri Chaitanya.

Who teach us *Aislama Dharma* (work without any desire for fruits)? The seers of India.

Who teach us self conquest and equanimity? The Buddha and Socrates.

We are indebted to all the seers of the world.

There are sages and saints, prophets and reformers torch bearers and mystics in all countries. Though of different countries, they belong to one Brotherhood and Jesus belongs to this Brotherhood.

MAMESH GHOSH

THE OCEAN OF STORIES BEING C. H. TAWNEY'S TRANSLATION OF SOMADEVA'S KATHA SARIT SAGARA NOW EDITED WITH INTRODUCTION FRESH EXPLANATORY NOTES AND TERMINAL ESSAY—H. J. N. M. Penner, M. A. F. R. G. S. F. G. S. etc. Vols VI and VII Published at London MCMLXVII for circulation among subscribers only by Chas J. Saucy Ltd. Grafton House W. 1

We have already written from time to time about this superb edition of the late C. H. Tawney's translation of the Katha Sarit Sagara. Vols VI and VII which have come out recently are in general get up and wealth of notes appendices etc. similar to the volumes previously published. In the present volumes we get the famous stories of the *Uttaravancharyasat* eight in vol VI and seventeen (really sixteen) in Vol VII.

Vol VI is enriched by a valuable introduction by Mr. A. R. Wright president of the Koli Lore Society. His words on the transmission of folk tales and on the importance of making the Katha Sarit Sagara available to western students are well worth quotation. He says

One of the many interesting problems in connection with the transmission of folk tales is the exact part played by literary versions. It is a common place to say that folk tales have passed with changes—now and then becoming something rich and strange in the alembic of genius—into literature and thence they have again descended amongst the common people the folk and have been worked over once more by the popular taste and fancy which have selected what appealed to them and have effected still further changes and adaptations. In later ages the literary vehicle has probably been the most effective of the means of transmission from people to people where in earlier ages the captured warrior and wife the slave passing from hand to hand and the trader and traveller were the *colporteurs* of folk tales to fresh fields and pastures new. The gypsy also has played his part though he has not yet received the full credit due to him as the spreader of folk lore and it could be shown if need be that drolls or stories with a humorous appeal have naturally leaped national or racial boundaries more easily than stories depending for their point on custom or belief. Several writers have already pointed out the obvious influence of the wide circulation and popularity of Perrault's *Contes* upon the genuine *Maerchen* or neighbouring countries but the general questions of the effects and extent of literary transmission of tales have hardly yet been intensively studied or appreciated, even in the case of the greatest of all literary disseminators Boccaccio and Straparola. The Katha Sarit Sagara will now be available for the

study of its relation to popular tradition and the influence of its contents chiefly through Persian Arab and sometimes Jew sh recensions upon the folk tales diffused through the West and reconverted into popular *Märchen* by medieval jongleurs pilgrims preachers merchants and pedlars

The introduction to Vol VII which has been contributed by Prof Maurice Bloomfield of John Hopkins University is a striking statement of the methods and principles of the scientific study of folk lore. He hopes that the day is not far off when the scientific study of the themes round which fiction grows up will produce an Encyclopaedia of Fiction to which students will in the future turn for information regarding the origin transmission and modification of fiction *motifs*. Thus Fiction will develop into a self-centred science whose real philosophical or psychological meaning is as yet unstated. A prerequisite is obviously the collection assortment and critical appraisal of all the materials that appertain to the subject. Mr Penzer's elaborate foot notes and appendices will we are perfectly certain contribute greatly to the rapid and healthy growth of this Science of Fiction. In this field as in all others the greatest enemy of proper development is *dilettantism*. A scholarly work like Tawney and Penzer's *Ocean of Stories* will help largely to inspire awe into the smatterer and stimulate the serious student of culture-history

A DICTIONARY OF MODERN ENGLISH USAGE by H W Fowler published by the Oxford University Press in oct 1928 42 + VIII cloth. Price Sh 6 net

The writing of correct English depends to a very great extent on knowledge of Usage. You can write a good many but is it allowable to write a good few? How did we come to use the word happening in English to signify an event? And is it good English to write the happenings of the day instead of the events of the day? Most of us have doubts regarding the use of words and phrases and this Dictionary will help us to tide over our difficulties. To the possessor of this volume the dictum When in doubt, leave it out will lose much of its infallibility and the confidence it will give to writers will surely improve the style of many who never go out of their way to find a suitable word to brighten up their composition

The book is well printed and got up and cheap at 6 Sh.

OXFORD UNIVERSITY PRESS, GENERAL CATALOGUE 1926

This is the latest catalogue of publications on all subjects by the Oxford University Press. It contains a descriptive list divided into six sections, (General Literature Modern History English and Modern classics The Ancient world Natural science, medicine and technology and Oxford Bibles and Prayer Book.) and an alphabetical list. The volume consists of nearly six hundred pages and is well printed and got up. Oxford publications cover practically every field of human thought and as such this complete catalogue should be of the greatest value as a reference book giving information about good books on all subjects.

A. C.

HOLIDAY FICTION

We have received some very good books of fiction from Messrs Hodder and Stoughton St. Pauls House Warwick Square London EC 4. Most of them are by well known authors e.g. E Phillips Oppenheim Edgar Wallace, B W Sinclair Zane Grey and others. Even the most serious of minds have to seek relaxation from time to time. At such times nothing could be better than a voyage on the uncharted oceans of imagination. Tumultuous affairs with cyclones and typhoons, desperate fights with buccaners, relentless pursuits by secret gangs exploits of the fearless and the reckless moonlit lagoons—the natural abode of romance dark intrigue and bloody secrets, wild zones where men never step such things cannot be supplied by tourist agencies nor by department stores. The only way probably to get them is to obtain a supply of the latest fiction from H & S and to lock oneself in for days and days and days. The following are some of the best books we have received

WILD WEST By B. W. Sinclair Price Sh 7 6
A book in which one gets a vivid picture of the rancher's life in the western states of the U.S.A.

ENTER A MESSENGER By Richard Blaker Price Sh 7 6
The story of a man who was interested in all the world and a woman who was interested only in him

THE GOLDEN SCARAB By Hopkins Moorhouse Price Sh 7 6
A mystery story

HARVEST By Peter Deane. Price 7/6
Sir Philip Gibbs contributes a fore word to this novel. The novel deals with the problems of the men and women peace-time victims of war who are expected to hate one another but cannot. Pictures of Allied soldiers feeding rickety German babies and of love overriding barriers of racial prejudice raise this novel above the level of the average time-killing sort.

WARDS OF THE AZURE HILLS By Guy Morton, Price Sh 6

DAYS OF 49 By Gordon Young Price Sh 7 6
A really good book.

THE HOUSE OF JOY By Christine Orr. Price 7 6
THE RECTOR'S GATE A thrilling book by Edgar Wallace. Price Sh 6

THE DARK DAWN By Martha Ostenso Price Sh 6

UNDER THE TOTO RIM A new Novel by Zane Grey Price Sh 6

THE BELOVED RAJAH A brilliant first novel by J. E. R. Craig A love story with a good plot.

THE CHALKY SYNDICATE By E. Phillips Oppenheim Price Sh 3 6

MADAME By E. Phillips Oppenheim Price Sh 3-6

MR. BILLINGHAM THE MARQUIS AND MADELOX An extraordinarily clever book by E. Phillips Oppenheim, Price Sh 3 6

HARVEST GARDENS CRIME By E. Phillips Oppenheim. Price Sh 7 6

Quite upto Phillips Oppenheims Standard

THE LIGHT THAT LIES By Mrs Victor Price Sh 7 6

has got the oldest and the most intelligent democracy in the whole world. Even so it is there are quite a number of our Council Members whose treatment of financial questions in the Council is well above the ordinary level of perfection—and this is a fact which has been repeatedly acknowledged from the Treasury Benches. To talk of extravagant diction and hyperbole highly coloured phrases and habitual waste of words (p 80) in connection with the Indian budget debate is certainly, in our opinion very much in excess of the needs of the situation and we are afraid such remarks of the author will cause wide resentment. In the next chapter the author gives us a very lucid account of the relations of Central and Provincial Finance—a subject on which unfortunately there has been no end of interprovincial jealousies and quarrels in recent years. In this connection the author very lucidly explains (at pp 167-9) the difficulties of present provincial finance in as much as the resources assigned to the provinces are already inelastic and will become more so with the lapse of time. This aspect of provincial autonomy will demand the most serious consideration from the Royal Commission that will meet in 1929. The remaining chapters of the book deal with financial administration—the collection of the revenue the working of the treasury system Ways and Means Balances and Reserve operations accounts and audit, public debt and local finance. In the several appendices also, the author gives much valuable information that will be of great use to all students of Indian Finance.

ECONOMIC ORGANIZATION OF INDIAN VILLAGES VOL 1 DELTA VILLAGES By N G Ranga B Litt (aron) Andhra Economic Series no 1 Price Rs 2-

This present book is the first outcome of a study of Indian village economy proposed to be made by the author who claims to be an agriculturist himself. In this monograph Mr Ranga has taken the Guntur district in the Madras Presidency as his objective and has dealt rather elaborately with every phase of the agricultural life there—dry crops wet crops cattle breeding position of ryots condition of labourers, farm budgets domestic budgets, agricultural indebtedness and so on. Although the book shows signs of much labour on the part of the author yet the arrangements have been far from satisfactory the chapter on farm cost enquiry being the only one worthy of some note. The book has thus failed on the whole to justify the comprehensive name that it bears. We hope however that the author's labours will soon fructify into more attractive and instructive contributions towards the solution of our village problems which are the greatest problems of the hour.

THE SCIENTIFIC STUDY OF HUMAN SOCIETY By Franklin D Giddings Professor of Sociology in Columbia University Published by the Oxford University Press Price 2 dollars 1924

As the name indicates this is a work on the application of rigorous scientific methods to the study of human society. Prof Giddings the distinguished author of this volume by his important contributions, has more than any one else in recent

years brought the study of social institutions to its present advanced position. It is therefore fitting that he should indicate the lines in which social phenomena can admit of verification. Societal forms unlike physical and biological ones are less definite and more variable and are therefore more difficult for accurate and precise study. But even here much can be achieved by the application of statistical methods and sociological generalisations can be brought to the same level as those of other sciences. But the measurement of societal facts has limitations and these should be thoroughly understood before really profitable results can be expected. Prof Giddings has carefully laid down these limitations and ably shown that while the ultimate object of Sociology is the discovery of social constants in the sense of approximations e.g. the ratio of population and food formulated by Dr Raymond Pearl the most fruitful domain at present, in which precise scientific methods can be applied is the measurement of social variables specially their correlations.

The present work consequently is not to be regarded as a treatise on Sociology but rather as a work on methodology of that science. Being the only work of its kind and admirably written it is eminently fitted to be used as a text book and in fact no study of human society can be said to be complete until the problems discussed in this volume are thoroughly mastered.

HINDI

SRI PRATYACHANASAR TILA PART II By Brahmacari Satiprasad the Editor Jumnitra Surati Published by the Digambar Jain Pustakalaya Chandanwar, Surat 1925 Pp 396

Brahmachari Satiprasad is well known for his enthusiasm in the diffusion of Jain literature. He has done a service by publishing this old book on Jain philosophy by Kundakundacharyya who flourished in 4th Vikrama era. This book written in Prakrit is named *Sri Pratyananasa* and is much appreciated in the Jain circle. The editor has spared no pains in elucidating the abstruse problems of Jain philosophy.

SRANAKACHARA PART II—Translated by Pandit Nandlal Vaidya Published by the Digambar Jain Pustakalaya Surat 1925 Pp

This book on the conduct of the Jain *Sranakachara* was written in Sanskrit verse by Gunabhusanacharya. The subject is fully explained in the body of the book and the appendix gives the Sanskrit original.

ENGLAND KE SANGATHANIK KANYU—By Suparsuadas Gupta B A. Published by A Kumar & Sons Arrah. 1925 Pp 107

The constitutional laws of England are presented in Hindi following the English work by Dicey.

SINHA SAMASTA—By Srimad Sankaracharya Maharaj of the Govardhan Math. Published by Jainprasad & Bros. Agra Pp 71

Swami Bharat Krishna Tirtha who is the Sankaracharya of the Govardhan Math is vastly learned in Sanskrit and Western lore. He delivered an

address to the students of the Jwalapur Mahavidya laya in Sanskrit dwelling on the drawbacks of the present system of education. He has touched upon many important points and shows how education is suffering from the contact of the European method of teaching.

Alexander the great is placed at 700 B.C.—but that is not borne out by the existing materials of history.

PURTA LOKA—By Pundit Ramnarain Pathak. Published by the Radhesyam Pustakalaya Bareilly 1926 Pp 156

A discourse on spiritism and a collection of the anecdotes of some well known disembodied spirits.

VEDANTA MAX. MULAR—By Surendranath Turi. Naval Ashore Press Lucknow Pp 93

A short life sketch of the world famous Indianist.

Tikhi Siksha—By Maganlal Klu Gandhi and Roharl B. Greg. Published by the Siksha Bibhag Charkha Singh Sabarnati Pp 72

A useful and illustrated hand book on spinning. **RAMES BASU**

GUJARATI
